Appendix

Address by Hon. Theodore Francis Green, of Rhode Island, at Brown University

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address which I gave at the under-the-elms exercises at Brown University on Friday, May 31, 1957.

This address, entitled "A Sense of Balance," I believe may be of interest to the Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SENSE OF BALANCE

(Address of United States Senator THEODORE FRANCIS GREEN at the Under the Elms exercises, Brown University, Providence, R. I., May 31, 1957)

It means a great deal to me, a great deal more than I can easily express, to meet with you Under the Elms today.

I first saw these trees, at least most of them, when I was a little boy. I have seen them year after year ever since—excepting 2 years when I was a student in Germany. The most memorable occasion for me, under these elms, was in 1887—just 70 years ago—when I graduated and bade them "goodby" and read them a farewell poem. You see it took a long while for them to recover from that shock—but I am grateful for their ultimate forgiveness.

Most of these stately elms have stood here for a long time, in cold and in heat, in dry seasons and wet, in wartime and peace, quietly pursuing the business of being elm trees, undisturbed, so far as we can observe, by recurrent crops of frightened freshmen and solemn seniors hurrying by, or by the great and fundamental changes which have taken place in this world since they were seedlings.

We humans can learn from all of nature. We can learn from these trees. The secret of much usefulness and success, of good health and a tranquil mind, lies in this capacity to go quietly ahead with the business of existence, undisturbed and undismayed by passing stress and turmoil. Yet, such is the balance in nature that we cannot be wholly insulated from our surroundings, any more than a tree can be. In dry country a tree will send its roots far down, searching for water. It is well known that a sapling will push its way through cracked rock in order to survive. A tree in dense forest will become tall, reaching upward toward the light.

If it is the part of tranquillity to be properly unconcerned with the world around us, it is the part of survival to be properly concerned. It is this balance we must cultivate, and it is of this balance I wish to speak today, particularly as it relates to matters of American foreign policy, which has gradually become my chief concern as a United States Senator in Washington.

There are certain areas of this country which question whether foreign policy should ever have been invented in the first place. I am happy to say that the record shows that Brown University is by no means such a place. During my undergraduate years here and later, here and abroad, I became increasingly impressed by the contribution my alma mater has made to this subject which has become probably the most important subject our Government has to deal with. Let me give you some of the highlights.

William Learned Marcy, Brown class of 1808, had his first taste of foreign affairs when he led an attack which captured a Canadian outpost in the War of 1812. Apparently this whetted his interest in matters beyond our borders, for in 1853 he became United States Secretary of State, and greatly distinguished himself by the handling of important and delicate matters, including the Gadsden Treaty of 1853 with Mexico, and the Reciprocity Treaty of 1854 with Great Britain.

Richard Olney, who received his degree from Brown in 1856, served as United States Secretary of State from 1895 until 1897. He induced the British government to submit to arbitration its dispute with Venezuela over the boundary between Venezuela and British Guiana, and wrote a remarkable official note, sustaining the right of the United States to interfere, and giving a wide interpretation to the Monroe Doctrine.

John Hay, of the class of 1858, after serving as private secretary to President Lincoln, was given posts as a diplomat in Paris, Vienna and Madrid, later became Assistant Secretary of State, then Ambassador to Great Britian, and finally served as United States Secretary of State from 1898 until his death in 1905. Among his services were the signing of the first Hague Conference Treaty for World Conciliation, negotiating the original treaty for the Panama Canal, and assisting with the settlement of the Russo-Japanese War. John Hay, by the way, was the author of his class poem, which was considered quite above the average. You see, a class poet may go far. I hope today's may do so.

Charles Evans Hughes, class of 1881, was Secretary of State from 1921 until 1925. He negotiated more than 50 treaties, presided over the Washington Conference on Limitation of Armament, was chairman of the United States Delegation to the Sixth Pan American Conference in 1928, and was a judge of the Permanent Court of International Justice from 1928 until 1930, when he was named Chief Justice of the United States Supreme Court.

This is a good record for Brunonians, but it is by no means the end of the story. Secretary of State Dulles informs me that at last count there were 28 Brunonias on present active service with the State Department, including John Joseph Muccio, Class of 1921, formerly Special Representative of the President to the Republic of Korea, winner of the Distinguished Service Award, and now Ambassador to Iceland.

Over the past 3 years, Mr. Dulles tells me also, that Brunonians have won appointments to the Foreign Service at the rate of two a year. I feel confident that this interest and this service will continue.

No account of the contributions of Brown to foreign affairs would be complete without a mention of our former President, Dr. Wriston. There is no need for me to enumerate his achievements before this audience. You know them well. You know that his courage, his breadth of outlook, his progressive spirit, his ability to command confidence and respect have been given unstintingly to the Nation and the world, as well as to this university, which cordially returns the devotion he has bestowed upon it.

Dr. Wriston's central achievement here at Brown was, I believe, to strengthen in all its aspects the tradition of liberal learning. One of the chief products of this learning is the balance of which I have spoken, the inner guide that distinguishes an educated, civilized man; that gives him the capacity to thread his way among dangers and difficulties and to chart a course of honor and safety through unknown waters. I hope that some of you here today may follow the same path trodden by our fellow Brunonians, some of whom I have mentioned.

Let me review with you a few of the ways in which our foreign policy today must achieve a vital balance. We must, first of all, know to what extent we must be involved, and to what exetent we should be involved, in the destinies of other nations. If our own survival depends upon the survival of certain other lands, and if they in turn must have our help in order to survive, then the most elemental self-interest, if nothing else, demands that we do what is required, and not less than is required, to insure their survival and strength. There is little room for hair-splitting here.

But, the fact that we must necessarily cooperate with other peoples does not give us license to run their lives for them, nor to squander our substance in doing things for them they should be doing for themselves. There is a balance between too much and too little, and we must seek that balance.

In the second place we must make it clear to ourselves, and to the world, not only to what extent we are involved, but also why we are involved in these matters in lands far away. Our legitimate interest in surviving causes us to help others to survive. We have also a legitimate interest in prospering, which causes us to desire that others be prosperous also. These things are related.

We have interests, and we also have obligations. We have obligations to abide by the terms of the promises we make, the treaties we sign, the rules and customs of international law, the Charter of the United Nations. We have obligations to live up to the heritage of freedom, which breathes from the traditions, from the monuments, from the very lands around us here. We must remain true to the religious faith upon which our freedom is founded. We must be true to our very humanity, which we share with other humans, whatever their race or station.

Our honor as well as our survival hang upon maintaining a proper balance, between our legitimate interests and our inescapable obligations. Upon that proper balance depends not only our peace of mind, but also peace among the nations.

So, clear thinking is needed about why and to what extent we must become involved in the affairs of the rest of the world. But, knowing why we do a thing, and knowing how much of it to do, still leaves us with the most troublesome problem of all—how to get it done. It is easy enough to become involved in an argument over a coming football game. But, then you have to win it, and that requires something more than second-guessing and armchair quarterbacking.

First and foremost of all, we must learn patience in our foreign dealings. We are living in a time when changes in the atti-

tude of the Soviet Union, which may well be coming, will come slowly; when problems such as beset the Middle East will require a generation or more for solution; when development such as the young nations seek is slow to the point of anguish, difficult, and often disappointing.

But, for all our patience, we cannot yield the initiative. We must be restlessly probing for avenues to move ahead, and when we find them we must exploit them, not with timidity or penury, but with energy and vision, with courage and will, and if possible with good humor, even when now and then we make a mistake.

Just as we must be patient, so we must be bold. But, as we must be bold, we must be cautious. The Soviet Union is waving the olive branch of disarmament again, and it appears this branch may possibly have a little more substance than the same old stage prop they have waved before. Yet our foreign policy has been and must continue to be a leading from strength, not weakness, because weakness does not prevent wars, it invites them.

But, even though we must be cautious, we still must trust—and hope—and continue to negotiate because we know there is as much danger in too little disarming as there surely would be in too much.

So, we must sail our ship of policy between the devil and the deep sea between the whirlpool and the rock. We cannot drop anchor where we are; we cannot turn back. Either we sail on, or we sink.

And, just as there is balance in our methods, so there will be balance in our moods. We know the fear of awful destruction, and know there is no shame in such a fear. We know the thrill of winning a gamble that must be taken, of meeting a challenge as it comes. We know the joy of creating, not merely a poem or a painting, but a nation, a civilization, a new world. We know the reward, beyond all other rewards, of giving our best to people we love, to a Nation we love, to values we love; of being true—in the highest sense—true to ourselves.

I wish you well, you seniors, as you go out from here. In your childhood and student days you have seen the birth of a perilous and wonderful age. Now go out and share in its maturing. And, I pray that you may keep your balance.

May your lives and the life of the world you are joining grow as this Nation and this university have grown. May they flourish and endure, and become strong and beautiful, like these old elm trees around us here this afternoon.

Steps Taken by Automobile Manufacturers Association To Promote Highway Safety

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. JOHNSON of Texas. Mr. President, early in this session I introduced a bill to establish a division of highway and automobile safety in the Department of Health, Education, and Welfare.

The experience of recent years has indicated with increasing emphasis the need for such a step. Highway deaths are the No. 1 killers of our country.

The New York Times this morning carried an editorial commending the Automobile Manufacturers Association for steps it has taken to promote highway safety. The article stresses some of the factors involved in accidents.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR AUTOMOBILE SAFETY

The Automobile Manufacturers Association has just done a sensible and highly commendable thing. It proposes to take the emphasis off automobile speed and put it on safety and reliability. A first step is to put an end to stock-car racing, competitive acceleration tests, and promotion based on such events. A second step is a planned emphasis in advertising on factors other than speed and horsepower. The National Safety Council calls this a big step toward greater safety and the council, of course, is right.

In recent years the trend in American automobile production has been hazardous. Superhighways have invited cars with superspeeds and the industry has provided them. The death toll has climbed steadily and it is naive to suggest that high speeds and high-powered cars have not been a major factor in this grim rise in fatalities.

The industry has now taken a sound move to break the cycle. It is incumbent upon the motoring public, in turn, to do its responsive part. Advertising will help when its emphasis is right. But in the long run there needs to be something of a change of mind on the part of the American motorist. He must somehow come to realize that 200 horsepower is not necessary for good car performance and that cruising speeds of 80 miles an hour are absurdly dangerous.

Still further steps will have been taken toward greater automobile safety when the purchaser learns to ask a different set of questions. If he will insist upon economy, reliability, and safety as the first qualities in an automobile, the industry will not be unresponsive.

Evaluation of General Education Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "An Institutional Self-Study," by Dr. George S. Reuter, Jr., director of institutional self-study, at Arkansas Agricultural and Mechanical College.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN INSTITUTIONAL SELF-STUDY

(By Dr. George S. Reuter, Jr.)

On September 1, 1956, Arkansas A. and M. College began their institutional self-study. An advisory board headed by Dean James H. Hutchinson as chairman and the writer as cochairman and composed of Dr. Claude Babin, Dr. Milton L. Baughn, Dr. B. J. Fletcher, Mr. A. H. Boyd, Mr. Tom Coleman III, Mr. J. D. Moore, Mr. P. L. Harmon, Mr. Leon V. Vawter, Dr. Scott Boyd, and Mr. C. K. Sandifer planned the program. Mr. Coleman and Mr. Moore were on leave part of the time, and Mr. Edward P. Ryan and Dr. Ralph Wickstrom were on the preboard.

The stated purpose was to provide a basis for future modification of the college program by evaluating the general education program and examining its relation to the major fields of teaching, and by determining the effectiveness of the student services initiated or expanded under the Arkansas experiment in teacher education.

The Fund for the Advancement of Education aided the college financially in the study, but the scope of the study was reduced to omit the study of the student services. Approximately $17,000 of combined funds and services went into the study.

The following factors thus became a part of the scope:

1. To what extent and by what procedures have the objectives of the program been achieved?

2. To what extent has participation in the AETE affected the previous program?

3. To what extent does the current program promote the development of A. and M. college students?

4. To what extent can these gains be preserved, and what should be the future goals of the college?

5. To what extent can the college achieve future goals without additional support?

In the execution of the study, a variety of methods were used in order to achieve both a broad and a detailed view of the college program. Some of these were: Examination of the stated goals of each course, examination of the subject matter in syllabuses and texts, interviewing instructors, observation, student-faculty-patron polls, utilization of guidance and counseling records, and pretesting and posttesting.

The faculty, the students, and the patrons listed the attributes they desired students to possess. Each is noted in order of interest. Here is the faculty ranking:

1. Have achieved moral and spiritual values by which to guide his life—including honesty.

2. Have an ability to work with people—human relations—including concepts of group participation, leadership, followership.

3. Achieve a realistic understanding of himself—his potentialities and abilities as well as his limitations.

4. Be prepared to earn a livelihood or have selected a plan that is valid for him—including a vocational choice which will bring satisfaction to him and make it possible for him to contribute to others. This will involve the achieving of at least the initial vocational skills and competence for those who are seeking employment following graduation.

5. Be able to communicate effectively with other people through writing, speaking, reading, listening.

6. Achieve an "at homeness" in the world of ideas.

7. Be prepared for mentally healthful living and personal adjustment.

8. Have a respect for the dignity and worth of the human personality.

9. Recognize that learning is a life-long process—in a sense college is a spring board to life-long learning.

10. Be prepared for the responsibilities as well as the privileges of citizenship.

11. Know and have desirable ideas toward practical principles of healthful living consistent with his own personal physical health.

12. Be prepared for effective leisure time activities—hobbies and the like.

13. Have achieved the ability to push ahead, show initiative, be energetic.

14. Be prepared for the responsibilities as well as the privileges of family life.

15. Be able to perform arithmetical skills in necessary day-to-day living.

The students used the following rating:

1. Ability to cooperate and work with people—human relations.

2. Valid moral and spiritual values by which to guide his life.

3. The ability to cope successfully with the unexpected—new problems and situations consistently arising in the life of individuals as well as of the world.

4. Have a plan for his life that is valid for himself and consistent with the requirements and needs of society.

5. Mental health and personal adjustment.

6. Have a realistic self-confidence and faith in himself—self-understanding.

7. The ability to look at problems objectively—have a scientific attitude.

8. Ability to prepare for the responsibilities as well as the privileges of citizenship.

9. Knowledge of the world in which he lives—plants, animals, natural phenomena and the like.

10. Understanding of problems and practices of healthful living that apply to him.

The patrons used the following rating:

1. A sense of moral and spiritual values by which to guide his life.

2. The ability to think clearly—scientific attitude, objectivity.

3. Ability to work with people.

4. Be prepared for the responsibilities as well as the privileges of citizenship.

5. Be prepared to earn a living or have a valid plan for him to achieve such preparations.

6. The ability to communicate effectively through writing, reading, and speaking, for example—spelling.

7. Recognize that at the conclusion of college his learning has just begun.

8. A realistic ability to adjust (without losing one's own personal values) to the unexpected ethics and practices in business, the ethics and practices in government and society in general.

9. An introductory knowledge of the varied fields of learning, a knowledge of which can stand him in good stead throughout life.

10. An understanding of varied social and human problems—even if the solution is not clear.

11. A respect for and pride in his college.

12. The ability to perform mathematical skills needed in everyday living—the ability to figure well enough to keep other people from cheating him.

The full report will be available by August 31, 1957. It will be a copyright publication of about 300 pages. There will be 2 copies on file in the Library of Congress.

Foreign Aid Waste

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the recent column by George Sokolsky entitled, "Too Much Foreign Aid Waste."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOO MUCH FOREIGN AID WASTE

(By George Sokolsky)

It cannot be said that foreign aid is unpopular in the United States because Americans are not a generous people. It can be said that foreign aid grows increasingly unpopular because too much of it is being wasted and there are no results in such a tangible form that the people can understand what is being done.

For instance, this country has given plenty of foreign aid to Great Britain and the relations of the two countries have not been worse since 1812, except for a short period during the Civil War. True, the British government has to face its own internal problem which is not to be thrown out of office because of the awful mess of Suez which Britons believe John Foster Dulles made for them; on the other hand, the British policy of selling obviously strategic materials to the Red Chinese and the Red Koreans and the Tibetans can only lead to a collapse of relations between the United States and Great Britain. The Tai-pei riots were not accidental and they were timed for international relations.

Whatever is done in any field requires intelligence, and apparently that is where we have been weak. Our operators are just not smart. For instance, that one the Reader's Digest tells about is not unusual enough. Our Government built a $128,000 cowbarn in Lebanon to demonstrate to average farmers living on $100 or less a year the equipment they should provide for themselves in order to get ahead. The dopes. The Levantine farmers who looked at that barn must have wondered what kind of a faker built the impossible.

And if the truth must be told, how many American farmers own a $128,000 cowbarn? Up in my part of Massachusetts, I can only think of one farmer who would have the money to build such a thing for the cows. Most of my neighbors just call in a couple of fellows who know how to put a hammer on a nail and before long there is a barn. What do cows need—mink carpets?

This goes on all over the world without rime or reason. What American foreign aid is really trying to do now apparently is to bring the whole of mankind to the very highest mechanical proficiency of the United States at one jump. It was believed, at one time, that if Harold Stassen were relieved of association with foreign aid there might be an improvement, but there has been no improvement under John Hollister, who before he took on this work was most vehement in denouncing the spenders. In fact, he was a member of the Herbert Hoover group of moneysavers, but since he has settled on the Potomac there is no evidence that he is any longer interested in saving the American taxpayer's money.

The Reader's Digest quotes an ICA man—the giveaway agency—as follows: "After all, this is the air age. We'll give the Afghans an airline and an agency like our Civil Aeronautics Administration to regulate air traffic. American technicians will have to stay there to run the show, of course; we'll have to teach the nation to read and write before it can begin to produce technicians to replace ours."

At first, I thought this was a joke because about 96 percent of the Afghans cannot read or write and most are nomads or simple farmers. It was like the old phrase: "Come the revolution you'll eat strawberries mit sweet cream—and like it." So this is the size of the job this bureaucrat would like to undertake at the expense of the American taxpayer. Of course, this means that large numbers of Americans will live in Afghanistan, converting dollars into local currencies which is a grand way to live and to save money.

Why return to the drab life of the United States where the women do their housework which despite all the mechanized devices that seem so good in the advertisements are such a problem afterwards? No. It is better abroad, where a native woman will look after a child and baby-sitting is not such a complicated family affair.

Foreign aid is unpopular because it does not make Americans proud of achievement. In fact, Americans are often ashamed of the stupid things we do in the name of foreign aid, and being ashamed, they would like to cut it to shreds.

The Basis of America's Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Basis of America's Foreign Policy," which I delivered before the St. Paul's Guild of St. Joseph's Catholic Church, on May 26, 1957, at Huntington, W. Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BASIS OF AMERICA'S FOREIGN POLICY

(Address by Senator REVERCOMB)

I speak to you today on a problem that may well be uppermost in the minds of every American. Stated simply, it is this: "How can the United States contribute most to conditions that give greatest assurance of peace in the world and security for our own people?"

This problem is not new, to be sure, but the conditions that confront us today are quite different from what they were only a few years ago. Therefore, we must be prepared to think anew and act anew.

However much we may wish to wash our hands of the responsibility that is thrust upon this country, we cannot escape the grave task with which we are faced. However much we might prefer to take comfort in our economic and military strength, the inescapable fact remains that we cannot afford to go it alone. Alliances with other nations have become as essential to our own security as the hydrogen bomb or the intercontinental missile. The security of our own shores depends as much on preventing the Communists from taking over the Middle East as from taking over the Philippine Islands.

The reason for this new set of conditions on which world peace hinges is obvious when we consider the facts. The advent of the air age, and with it the hydrogen bomb and the guided missile, has brought all nations into such close proximity that every part of the world has become a potential battlefield. When one pauses to consider the fact that it will soon be possible for an enemy power to direct guided missiles with unerring accuracy upon our cities from points thousands of miles away, it becomes graphically clear that the nation which seeks to stand alone is inviting its own destruction.

In the face of these indisputable realities, unpleasant though they be, it becomes abundantly clear that 19th century policies are inadequate to meet 20th century conditions. And we must either rise to the occasion and accept the responsibility that is America's or risk the danger of losing all that we hold dear.

I need not remind you that there is still abroad in the world an ideology that is alien to the beliefs of every person who gives allegiance to God. I need not remind you that if the perpetrators of this evil design carry out their avowed aim, which is

world conquest, the way of life that you and I cherish will be lost.

There are those who say to me, "But why should we be concerned with what is happening in the far-off Middle East?" I say to you, in reply, that what happens in that distant part of the world may well determine whether or not we are able to keep communism from engulfing our own shores.

We know that if a forest fire is burning in the direction of our homes, we do not wait until the flames are lapping at the doors before moving to check its advance. If a flood is descending upon us, we do not stand idle until it has engulfed our homes before taking action to avert the danger. By the same criteria, we must acknowledge that it is folly of the worst sort to sit idly by, taking comfort in our own strength, while nation after nation is being absorbed into the Communist camp. In my judgment, the greatest danger from these aggressors lies in their well-conceived plan of taking over country after country until America is left isolated and standing alone. This must not be permitted to happen. Whatever the cost, we must bolster the strength of those free nations which are resisting the Communist tide. The moral and financial support we give them now may well save us billions of dollars, to say nothing of American lives, at some future day when the danger has swept much closer home.

I subscribe wholeheartedly to the basic tenets of the foreign policies on which the leaders of this country have embarked. It is an altruistic policy, to be sure, founded on the high moral conception that the dignity of man requires that he be permitted to enjoy certain inalienable rights, not the least of which is the right to exercise a voice in his government. This is not to say that this country should seek to impose its way of life on any nation, but rather that our deep love of human freedom compels us to employ a part of our substance and strength to help prevent the people of other nations from being enslaved against their wills.

In the main, however, our foreign policy is based on the simple expedient of self-preservation. So long as Communism poses the threat that it does today, self-interest demands that we join forces with every nation which is resisting this evil force. It is an obvious fact, certainly one well known to our military leaders, that should the oil-rich Middle East fall to the Communists, our own security would be lessened by an incalculable degree. By the same token, should all Asia fall to the Communists, we know that it would be only a matter of time until the aggressor would be moving from island to island across the Pacific. Such is the nature of the evil force we are called upon to resist in the interest of our own self-preservation.

I am convinced that if war is to be averted, if civilization is to be spared the horrifying experience of an atomic conflict that is certain to engulf the whole world, communism must be stopped before it has made great new advances. Every gain they make, wherever it may occur, will inevitably increase the chances of war. On the other hand, if we stand firm, if we lend our support to those nations now actively resisting this aggressive force, war may be averted.

I believe that security is better defended by standing together with those who fight against a common enemy than by staying neutral on so dangerous an issue until one by one our friends are destroyed. This is not a time for neutrality. We cannot be neutral in the face of proven danger. Where would Christendom be today if Christ had been neutral on the subject of the moral life of man?

No one can say that the policy this Nation is pursuing will guarantee conditions of peace. The results that already have come from that policy, however, are encouraging. I cite a recent example.

Only a few weeks ago it looked as though the little kingdom of Jordan was ripe for a Communist coup. Internal dissenson had created conditions ideal for that purpose. What was the result? President Eisenhower, implementing the principles embodied in the Middle East doctrine, threw the full moral support of this country behind Jordan. The United States Sixth Fleet was moved into a strategic position in the Mediterranean—not as a threat of war, mind you, but rather as a warning to those who would exploit Jordan's internal difficulties that this country would tolerate no outside intervention. The result of that action has been to keep Jordan's Government in the anti-Communis alliance.

The basic aim of our whole foreign policy, then, is to deter aggression. This is true in eastern Europe, in the Middle East and in Asia. This policy has already paid off in all three areas. Only a few days ago, in an address before a join session of Congress, the president of the 2-year-old Republic of Vietnam, a strategic south Asian country, emphasized that American foreign aid had been largely instrumental in preventing his country from falling to the Communists. I quote from his address:

"In the face of increased international tension and Communist pressure in southeast Asia, I could not repeat to often how much the Vietnamese people are grateful for American aid, and how much they are conscious of its importance, profound significance, and amount * * *. This action has contributed to the defense of southeast Asia and prevented the raw materials of this area from falling into Communist hands."

It is only reasonable, in considering he task we have undertaken, to ask: "How long and to what extent must America extend aid to other nations?" I think we must advance military aid until such time as the free world is sufficiently strong that the Communists will not dare risk starting a war. As for economic aid abroad, I am convinced that the time has come when such aid should be in the form of loans rather than gifts. It is to our interest, of course, that the nations of the free world be both economically and militarily strong. However, nearly all foreign nations outside the Communist orbit are now in a stronger economic position than ever before, and such help as they require should not be at the expense of endangering our own economy.

The burden of maintaining strong defenses here at home and of bolstering the military strength of nations which subscribe to the basic principles of human freedom is heavy, to be certain. A large percentage—more than 60 cents out of each tax dollar—is going for that purpose. I say in all earnestness, however, that so long as this menace remains a threat to America's security, we must stand prepared to make whatever sacrifice may be required.

I deplore the high cost of this policy—but it is less costly than war. I deplore the necessity of the policy itself—but we cannot ignore realities.

A few weeks ago, it was my privilege to talk at some length with a foreign correspondent who has covered wars and uprisings in nearly every part of the world for the last two decades. The man I refer to is Larry Allen, a former West Virginia newspaperman, who had only recently returned from Vietnam. He had experienced firsthand the tactics of the Communists in Indochina and other Asian countries. He said to me: "If the day should ever come that the American citizen is required to pay 80 cents out of every dollar he earns to provide this country with adequate defenses against communism, I would say that it's a small sacrifice to make." He went on to say that no one who has not witnessed firsthand the horrors of Communist enslavement can begin to imagine what life is like under that totalitarian ideology so alien to all that we in this country hold dear.

We must continue on in the task that world circumstances has assigned to us. We must not falter in the world responsibility that is ours. We must cast aside partisan politics at the water's edge and stand united in our defense of American liberties. We must earnestly, seriously seek the pathway that leads to conditions of peace.

It is my conviction that if we do not falter, if we do not let down our guard, if we do not show signs of weakness, the time will come when the threat of enslavement will have passed away. Then the vast sums of money we are now spending for defense purposes can be used for internal improvements here in America or turned back to our people in the form of tax relief.

Indeed, there are already heartening signs that the strength of the free world is reaching a point where the aggressor nations are growing more wary. We know that the peoples behind the Iron Curtain are growing more and more restive, and there is reason to believe that the time will come when the deterrent influences of the free world will more than balance the warmaking potential of would-be aggressors.

Until that day comes, however, we must stand firm against further Communist aggression in any part of the world. Any other course can well lead to disaster for free peoples everywhere, our own included.

Address by Hon. Barry Goldwater, of Arizona, Before Wisconsin Republican State Convention

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the address I made before the Wisconsin Republican State convention on June 8, 1957, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR BARRY GOLDWATER BEFORE THE WISCONSIN REPUBLICAN STATE CONVENTION, JUNE 8, 1957

For many reasons I am pleased by this opportunity to come to Wisconsin tonight.

First, and quite naturally, it is a privilege to meet with your outstanding State Republican organization, as it is an honor at any time to join with those of our citizenry who are actively dedicated to the cause of good government through the enunciation of basic Republican principles.

Second, and of particular importance to the party of Abraham Lincoln, it is good to visit the State in which, just over 100 years ago, the ideal of Republicanism was transformed into the reality of the Republican Party.

We are fortunate today in recalling our first century of service to this Nation, to be able to acknowledge that those same ageless precepts and purposes which guided the men in the little schoolhouse at Ripon still provide the motivation for our party's efforts.

The Republican Party is now, as it was in the beginning, committed to the proposition that man, as a child of God, is a free being, and that governments are created among

men to serve and protect the liberties of the individual.

The Republican Party is today, as it was 100 years ago, a party dedicated to the goal of reserving to the States and to the people the power to regulate their own lives, unhampered by any semblance of Federal domination.

We believe that the thesis of individual incentive and private initiative is good—good for the country and good for all its citizens—and we are pledged, as always, to the strengthening of that economic and political system which enables men to realize and enjoy the products of their own labors through the sheer joy of personal accomplishment in a free and competitive society.

As Republicans, it is our historic obligation to preserve inviolate the principles embodied in the Declaration of Independence and the Constitution of the United States. And we vigorously reject any concept which suggests that these are no longer applicable to our governmental pursuits.

Indeed, for 20 long and painful years our Nation followed bureaucratic byways toward a collectivist goal under the devious direction of New Deal and Fair Deal administrations.

For 20 years the traditional Democrat philosophy of Jefferson and Jackson was subverted and destroyed, and all that remains of the foundation of that once great party is now desperately crying out for a restoration of loyal leadership which does not, because it cannot, respond.

Many times I have suggested to my Democrat friends that there is a place for them in Republican ranks, and that they would be welcome. For our party has not and never will write off the value of States rights and limited, conservative, economical Government.

Neither will we ever abandon the principles of Republicanism for the siren song of socialism.

Another reason that I am glad to be with you this evening is because Joe McCarthy, your Senator, was my good friend, and a man of whom all Republicans can be justly proud.

Joe and I became friends long before either of us entered the Senate and, with his usual good judgment, whenever the weather in Appleton or Washington got too cold for him, he used to come out to Arizona and enjoy some of our priceless sunshine which nobody has ever figured out how to put in bottles and ship back East.

During the time that I had the good fortune to serve with him in the Senate, I found further evidence of his distinction as a Senator, as a Republican, and as a friend. He was a faithful, tireless, and conscientious American. He fought just as hard for the things he believed were right as he did against the things he knew were wrong.

Joe McCarthy gave himself—his life—to the service of his God and his country. He did a job that no other man could, or would, do. He was completely selfless and his single motive was the preservation of those principles which make it possible for the Republican Party to proclaim now its fulfillment of the confidence of all Americans.

Because Joe McCarthy lived, we are a safer, freer, more vigilant Nation today. That fact, even though he no longer dwells among us, will never perish. And I know you will join with me in thanking God that while Joe lived he made a contribution to his countrymen that will forever redound to the credit of the people of Wisconsin and to your Republican organization.

Finally, I am proud, as a Republican, to come to this State which has twice accorded to Dwight D. Eisenhower such an overwhelming vote of respect. And I am gratified to be able to report to you that, with the passing of each day, this Republican administration grows in stature and in the sight of the American people.

To those of us who watched with alarm the chaos, corruption, and communism which was rampant under the New Deal and Fair Deal administrations, it is surely rewarding to know that, under Republican leadership, dignity, decency, and dedicated Americanism have been restored to the halls of our Government.

After 20 years of rule by a philosophy whose watchword was crisis, the affairs of our Nation are now directed by a leadership whose watchword is peace.

Now, we might ask, who is really responsible for these achievements? A modern Republican might answer: Arthur Larson or Paul Hoffman. But Arthur Larson did not even vote in 1954 and 1956, and Paul Hoffman, who was a member of the Truman administration, has not been conspicuous for achievement in political, or other fields.

To this question of who deserves the credit for the accomplishments of these past 5 years, a citizen for Eisenhower might reply that it is the President himself. Yet I know that he considers himself as only one member of a large team, and I believe President Eisenhower would be the first to deny the indispensability of any single personality in the overall effort to bring good government to our land.

You and I gathered here, of course, might say that the genius for these recent gains resides solely in the Republican Party; and, indeed, comparatively speaking, it must be admitted that our party has succeeded in righting many of the evils perpetrated by the New Deal disciples.

Yet, to be completely accurate, may I suggest that it is the innate good sense of all the American people, and their increasing dedication to and understanding of our constitutional, free-enterprise way of life, that has provided the real impetus for this return to sanity and morality in government.

The Republican Party has always sought to reflect the combined, cumulative thinking and beliefs of men and women of good conscience who are devoted to representative government and committed to the maintenance of the dignity of the individual.

That is why there is, and always will be, room in our ranks for men of such widely differing personalities and viewpoints as Dwight Eisenhower and Joe McCarthy.

That is why, when we are in pursuit of a principle, we must divorce it completely from any considerations of personality; for to judge an ideal merely in terms of the individual who propounds it is to insult both the ideal and the individual.

It is this capacity of Republicanism to embrace the honest disagreement of honest men that gives our party its best opportunity for future achievements for the good of all. And there is no place among Republicans for the use of compulsion or other inducements to enforce a specialized will or belief upon the party as a whole.

Indeed, we have never subscribed to that collectivist conclusion that the sum is greater than the total of its component parts.

Right and justice and honor and truth and devotion to the cause of mankind are not the products of an organization. They are and always will be a reflection of the principles of the men and women who are members of that organization.

In the Congress today the Republican Party is engaged in debating the merit and wisdom of the proposed budget for fiscal 1958. There is a wide divergence of opinion and belief. I am among those who think that this budget can and should be cut in the interest of preserving the economic freedoms and fiscal integrity of this Nation. There are others who think that any reduction in this budget would imperil our future security.

May I submit that this disagreement is a healthy situation. It is an expression of the sincere conviction of each individual. And out of this debate there will be produced a final conclusion, strengthened and tempered by the cumulative wisdom of those contributing to that decision.

I suggest, too, that the Republican Party will be stronger and more unified because of this experience. The President's position of leadership will be enhanced. For history teaches us that when men of conscience have disagreed and have resolved their disagreements in a climate of mutual respect the cause of representative government has been well served.

There are some members of the opposition party who think they, in this struggle, are witnessing the disintegration of the Republican Party. They are, I think, extremely shortsighted and engaging, perhaps, more in wishful thinking than in objective analysis.

They are, I suggest, incapable of recognizing the dynamic strength of this political faith which has grown so steadily in wisdom and stature and in its ability to serve the people by virtue of its constant rejection of the feudalistic concept of a political organization which requires subservience and acquiescence of its members.

You and I, as Republicans in 1957, can be grateful to this administration for having repudiated the thinking of those who urge the concept of one-man rule, for having reaffirmed our ancient faith in the tripartite system of government, and for having enlisted in this cause of freedom those who would serve rather than those who would master.

Strong in the faith of Lincoln and in the proven record of our party of principle, we can answer now and for all time the cynical demands of those who would divert us from our chosen course by reaffirming these highest concepts of Republicanism.

Rider College Commencement Address by Hon. Alan Bible, of Nevada

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. SMITH of New Jersey. Mr. President, on Sunday, June 8, Rider College in Trenton, N. J., had its 92d commencement. On that occasion honorary degrees were conferred by the college on our distinguished colleagues, the Senior Senator from New Hampshire [Mr. BRIDGES], who because of his recent indisposition was unable to be present; the junior Senator from Nevada [Mr. BIBLE], and myself.

In Senator BRIDGES' enforced absence, Senator BIBLE made an outstanding and significant commencement address. It was a great pleasure for us in New Jersey to have Senator BIBLE with us, and I ask unanimous consent that his address be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH GIVEN BY SENATOR BIBLE AT RIDER COLLEGE, TRENTON, N. J., JUNE 9, 1957

It is an honor and a privilege for me to appear at the commencement exercises of Rider College.

This day belongs to the graduates of the class of 1957 and to the parents whose sacrifices have made it possible for this goal to be reached. I hope that every one of you will pause to sufficiently appreciate and to say thanks for the help you have received.

Graduates of Rider College have much of which they can be proud. Since 1865, Rider has grown from a small business college to the fine institution which you know today. It is my understanding that Rider is embarking on a $10 million building project which will give your school one of the finest campuses in the East. This is a significant sign of the progress being made by Rider. You can face the future confidently with the realization that you have received excellent preparation here at Rider College.

The word "commencement" which is used to describe these ceremonies means a "beginning." In this sense, today is a beginning for you who are about to be graduated. I do not intend to impose on your time. I promise to be brief. I well remember my college days, and I think I know the part of the program for which you are waiting.

You are a selected group. You were selected for admission to this college. You were screened through 4 years of study. You have been given an opportunity. You have attained an objective. At the same time, you have assumed a responsibility, which you cannot lightly disregard. As Thomas Huxley said, "The greatest end of life is not knowledge but action."

The faculty of this college has equipped you with the knowledge. Sometimes at considerable pain to you and, I suspect, some irritation to them. Your equipment is excellent. You cannot plead ignorance to your fellow men. You must accept the duty and responsibility which, although not contained in the wording of your degree, is, nevertheless, clearly your obligation.

As you leave this campus and seek employment in different parts of the United States or, indeed, the world, the direct test of what you have learned here will be demonstrated by your daily actions. All of you are intelligent or you could never have completed the course of academic studies which has been presented in the seminars and lecture rooms of this college.

I suggest to you, however, that your distinguished faculty has not been teaching subject matter alone. They have been teaching young men and women. They have been instilling in you the principles of fidelity, honesty, moral courage, industry, integrity, and loyalty. These facets of your education are eternal. The subject matter changes—the learning process is constant if one would keep apace in today's world. But a freeman who thinks like a freeman, who talks like a freeman, and acts like a freeman will remain a freeman in prosperity, in adversity—whatever the future may bring.

It is fashionable today to decry the times in which we live. I hold to the theory, as expressed by the English historian Macaulay, that: "Those who compare the age in which their lot has fallen with a golden age which exists only in imagination, may talk of degeneracy and decay; but no man who is correctly informed as to the past, will be disposed to take a morose or desponding view of the present."

Personally, I know that the present is a great improvement over the past; I am confident about the present, and I am optimistic about the future. This is my belief, and I have dedicated what talents I have toward it. I hold no brief with those who beat their brests and say that our civilization is going to Hades in a hand basket and that the decline of the West is in progress.

To me the future of this Nation belongs to the youth. As I have witnessed, throughout the length and breadth of this land, the education of young men and women, dedicated to love of country and service to humanity, I am personally confident that the future is in good hands.

I do not mean to suggest that the road which you will travel in the years ahead is an easy one. You will face adversity in many forms. There will be moments when your courage is shaken and you will be torn with indecision. These are facts which you must recognize.

I do suggest, however, that during those moments of doubt the spiritual quality of you, as Americans, achieves its greatest significance.

There is no one among us who can deny that the affairs of men are guided by the hand of a Creator. It is inconceivable—as a matter of personal philosophy—that this spiritual hand which guides us will permit the destruction of this Nation before its mission to humanity and God is achieved. I draw strength from this concept, even in the darkest hours of decision.

Whatever the sacrifices, I have no doubt as to the ultimate outcome in the struggle between a philosophy dedicated to the improvement of man as opposed to one which seeks only to destroy him. H. G. Wells once said: "Human history becomes more and more a race between education and catastrophe." To me, this is a race which can only have one outcome. Education will conquer.

To avoid despondency and despair, one has only to consider the progress that has been made in the last century in human relations. Less than 100 years ago, there was human slavery in these United States. Today, that very thought is intolerable. Women were regarded as chattels without political equality. That, too, has disappeared.

The concept of attempting to seek solutions to world problems on a world basis had not yet been born. Today we have the United Nations. It remains our responsibility to be constructively critical of the United Nations in the hope that it can be made to work better. There is no doubt that without the deliberately obstructive tactics of the Soviet Union much more progress toward peace could have been made. You probably know that of the 81 United Nations vetoes in the last 11 years, 78 were cast by Russia. Perhaps by a realistic appraisal of the situation, we can go forward despite the Communists. Imperfect though the United Nations is today, it is a vehicle for the exchange of ideas and discussion of mutual problems. We are at least trying.

In the field of medical science more specific achievements have been made. What would Abraham Lincoln and his wife, Mary, have given for $5 worth of antibiotics when their son died? What would Calvin and Grace Coolidge have given for a few dozen sulfur tablets when the precious life of their son was being drained away by septicemia? What would thousands of parents have given for the miracle drugs of today which were not available while their children were being stricken with diseases of diphtheria, pneumonia, tetanus, and others which are almost unknown to modern parents. Perhaps today with the Salk vaccine we are on the threshold of a new victory of man over disease.

Each generation feels as though it has not done a proper job in the conduct of its affairs. Each generation feels as though it has burdened its children with its own mistakes. This eternal conscience which never lets us rest is in itself an indication of the striving for improvement which characterizes our society.

Of course, there are problems, and very serious ones. Today's problems are perhaps the most complex the world has ever known. They do not yield to simple solutions.

There is the problem of communism. I regard this atheistic philosophy not as a government in any sense of the word but as a great international conspiracy aimed at world conquest and domination. It challenges the very survival of this Nation and all the people of the free world. I would not appease communism by any action which sacrifices 1 inch of free land, 1 human life or 1 American principle.

I believe that whenever any free individual is forced into bondage, to that degree America becomes enslaved. So long as I am able, I shall oppose communism with all the resources at my disposal.

If the world is to be free, young men and women like you must carry on the fight long after I and others like me have disappeared.

As a citizen, aware of the dangers which threaten our way of life, you young men may be called upon to serve in the Armed Forces of your Nation. Just as the pioneer Davy Crockett instructed his sons in woodcraft and in the handling of weapons for their own protection against hostile savages, your country must train you for your own safety and the security of your loved ones.

It would be pleasant if the world had reached the point where no danger existed. It would be desirable if you men could be allowed to get on with your chosen careers and not have to devote a portion of your time to military training. The present necessity, however, is not one of our making. You must, therefore, accept your civic responsibility of military service with the realization that its ultimate purpose is your self-perpetuation. This is one of the realities of the times in which you live.

There is also the problem of atomic energy. This powerful source of energy is viewed by some as a threatening monster which will destroy the world. We know that the "atom" has no morals, no ethics. It is a natural force like any other which can be used for good or evil.

It is man directed and its use will reflect the character of those who guide it.

I personally feel that the possession of nuclear weapons, and the ability to deliver them, by the United States restrained the Communists from overrunning all Western Europe, and allowed sufficient time for free people to raise their own defenses.

I envision great strides in the benign applications of atomic energy in medicine, biology, agriculture and industry. I am convinced that as the years go by the benefits to mankind will be enormous and will dwarf into insignificance the weapons aspect of this physical phenomenon.

If my vision is to be realized, there must be dedicated realistic men who have enough common sense to protect us from destruction while we forge ahead in the cause of humanity.

There is the problem of individual responsibility. There has grown up a cult throughout the world, and to a considerable degree in our land, of those who believe that government should accept the complete responsibility for the lives of its citizens.

Those people all have one thing in common. They want something for nothing. They want to spend more than they make; reduce taxes and increase benefits.

Their beliefs are in direct opposition to the political philosophy which made this Nation great. The new order which was given to the world in 1776 was based upon the philosophy that man was a rational animal, that given opportunity he could take care of himself without injuring his neighbors; that he had certain inalienable rights which government could not diminish or circumscribe.

The only true security is in the daily satisfaction of a job well done. One has only to read the daily paper to realize that no man knows when he will die. Life is not measured in years alone or by material acquisitions, rather in terms of service, accomplishments, and spiritual rewards. Better to have lived for 50 years enjoying fully every second of the time; doing great deeds; winning the love of friends and neighbors; than to eke

out a miserable existence for a century where life was an empty pulp.

The problem basically has been stated in the Scriptures, "Bread cast upon the waters returns a thousandfold."

It was also said: "Give and you shall receive."

If you give of yourself in the service of others, you will be rewarded accordingly.

I get very restless with those who constantly apologize for the American system. Of course there are inequities and injustices which should be corrected. Americans should support every constructive suggestion for the refinement of our social system. Nevertheless, I am conscious that our society has provided more opportunity for spiritual and material development of humanity than has ever before been possible.

Destructive critics of our way of life annoy me. They are so busy looking at the few spots of mud that they never lift their eyes and observe the blue sky above.

Every privilege in this world carries with it a responsibility. Every opportunity implies an obligation. Every possession has affixed a duty.

Whether or not the sphere of righteousness extends rapidly or slowly in your lifetime, will ultimately depend on the attitude each of you adopts. Never were there greater challenges. Never was there more opportunity.

It has been said that there are three ingredients in a good life: Learning, earning, and yearning.

Here at Rider, you have been given the opportunity and the equipment of learning. When you leave this institution you will begin the process of earning—earning not only material things but earning the respect, the love, and the friendship of people with whom you associate. To a tremendous degree, your future, and the future of your generation, will depend upon the things for which you yearn. If you yearn for freedom, individual responsibility, and opportunity, you and your children shall have it. You can transmit the legacy you inherited. It is within your power to make future generations refer to the last half of the 20th Century as "the golden age."

This country and the free world needs leadership. We don't need people who are willing only to become one of the crowd; we need men and women who are individuals and who stand for individual principles. God give us wisdom to profit from the mistakes of yesterday; God give us courage to face the problems of today; God give us vision to plan for the challenegs of tomorrow.

Report by Texas Newsman From Europe on USIA

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. JOHNSON of Texas. Mr. President, one of our most distinguished Texas newspapermen, Mr. Wes Izzard, editorial columnist for the Amarillo Daily News, is currently touring Europe. Mr. Izzard took with him to Europe the inquiring mind and the keen powers of observation that have made him eminent in his profession.

Recently Mr. Izzard sent to the News from Paris a report on his personal, on-the-spot investigations of the work being done by the USIA. I believe his report will be of considerable interest to Members of Congress, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

USIS: IS IT WORTH ALL THOSE MILLIONS?

(By Wes Izzard)

PARIS, FRANCE.—Is the United States getting its money's worth from the USIS?

LYNDON JOHNSON and a majority of his fellow Senators thought not; so they voted a deep cut in next year's appropriation for the sprawling information agency that reaches around the world.

What is the situation in the field?

In Europe I have visited three USIS establishments and have heard indirectly about others. But first, let's look at the general picture.

The United States Information Service is autonomous. It is not an agency of the State Department.

Each director in the field has authority to set up his own program and run it as he sees fit, except for overall policy made in Washington. In this respect he has more autonomy than an ambassador.

The USIS has a dual function. It provides information about the United States to foreign politicians, editors, business leaders, and, where possible, to just plain people. In addition, it is supposed to interpret American culture to other countries. World competition in the field of culture is terrific. It seems to have been started by the Russians.

These functions are carrier out in various ways.

In Rome, for example, USIS puts out a daily mimeographed summary of Washington news with the official American viewpoint. It goes largely to Italian newspapers. No such service is provided in Paris, although feature stories are distributed to the press.

Most USIS offices issue a magazine of some sort. In Paris, a bimonthly called Informations and Documents is published. It is attractive but not too elaborate; modestly printed by offset with a profusion of black and white photos.

In the June issue, just out, is an article titled "Texas," mostly about rodeos. It starts with the old story of the Sweetwater oilman who thought the Eiffel Tower was a drilling rig.

Other articles have to do with the migration of industry in the United States; the American Indian; Longfellow. The editorial is a letter from the New York Times, Capitalism and Democracy. There's a letters-to-the-editor department called Franco-American Forum.

This magazine has a circulation of 110,000, of which 85,000 are hand-picked men of affairs, such as members of the assembly, bureau chiefs, editors, feature writers, college presidents, businessmen, and so on. The remainder represent requests to be put on the mailing list.

Morrill Cody, director of the USIS here is a one-time magazine man who has spent 17 years in Paris. He explained that the editor of Informations and Documents is a Frenchman. His copy is gone over carefully by an editorial board and by Cody, himself, to check every implication that might be misleading or irritating.

Practically all USIS establishments use radio freely. This is about the only way masses of ordinary people can be reached.

In Paris, a choice 20-minute segment of time on the government network, 7:30 to 7:50 p. m., is given over daily to the American program, which consists of news, commentary, features, and music.

Also each USIS office is a distributing center for films depicting American life and culture. These films are shown at meetings of various sorts on request.

The larger offices have an American theater or auditorium at their disposal. While I was in Rome, a lecture by an Italian-American professor was given in the theater in the basement of the consulate, adjoining the Embassy.

Practically all USIS offices have libraries and reading rooms. In Rome, a large library with attractive display windows is maintained across from the Embassy. I passed it several times and saw only an occasional Italian pause to look.

A few days after I left Rome, I saw in the paper that a crazed Italian youth had dashed into the center, shouted "down with Americans," and stabbed an Italian woman attendant.

I asked Cody for some figures on the setup in France. He said USIS hires 52 Americans and about 250 locals to staff its Paris establishment, as well as officers in seven other cities, and suboffices in two.

In Paris, USIS is scattered over four locations, including a group of buildings around an ancient court on St. Honore Street, behind the embassy, where the print shop, photo lab, and storage are maintained. Headquarters are three floors of a building adjoining the Embassy.

The director for USIS in Rome is Alfred Jacobson, with offices in the old Twin Palace building next door to the Embassy. The consulate occupies the other twin with a garden between. He was busy getting acquainted with the new ambassador, and when I went to see him, he was in the process of distributing mimeographed copies of a speech Mr. Zellerbach had made in Naples.

In Bern, I talked to George Freymark, a foreign service career man who was moved over to USIS a few years ago. Manhattan born and reared, Freymark looks, acts, and talks like a Madison Avenue advertising executive.

He has a tight, low-budget operation that might well serve as a model for the more extravagant jobs.

His chief concern is that the budget cut might result in the closing of the office in Switzerland altogether.

This happened in 1953, and he was elected to come back and reopen it in 1955, when the appropriation was restored.

If it happens again, the Swiss are likely to get the idea that Americans can't make up their mind.

Cody's Paris operation is the largest in Europe except for Bonn. There, USIS has a vast establishment designed to hold the Germans steady in their allegiance to the United States.

While we taxpayers are maintaining this great public relations setup in Germany, the Bonn government is hiring an American public relations firm to popularize the Germans in America. And if the French Government could afford it, they say they would hire a New York public relations counselor, too.

USIS has offices not only in Europe, but around the world. Thus a visit to three European offices, and conversation on the subject with various embassy and consular people, are hardly enough to qualify one as an expert.

However, I do have some definite impressions.

The staffs in the field are performing well the program laid out for them by Washington.

But is this program effective? Is it worth the money?

Are we reaching the people who should be reached?

Can the hundreds of thousands of dollars going into tax-supported magazine publishing ventures around the world be justified?

How much influence do these publications have, and is it actually important that such influence be provided?

Is USIS getting to the millions of people who really would like to know about the United States, or is it concentrating too much on politicians, editors, and big businessmen—the sort of people who are hardened to propaganda, and could find out for themselves the things they really want to know?

Is it essential that we spend millions trying to make people like us and understand us?

Can such respect and understanding be forced through films and radio and magazines and similar channels?

It seems to me that our information service should be just that, and nothing more—a service to provide information for those who want it.

A small, competent staff could be maintained in major cities around the world to whom the people could go when they wanted to know something about the United States. Perhaps a modest publication containing only vital current information could be distributed to those who asked for it; and radio could be used sparingly and effectively.

Is it necessary to spend tens of millions of dollars on magazines, movies, special wire services, costly books of colored photoes, elaborate downtown reading rooms, and the like? Will all this buy the good will we Americans seem so determined to create?

It hasn't—and we doubt that it can.

LYNDON JOHNSON, we think, is on the right track. Information for those who seek it—yes. A vast cultural and propaganda machine—why?

It is my observation that the infiltration of Europe by American business is having more influence on the attitude of the people toward us than all the tax-supported ventures we maintain.

Coca-cola is the best propaganda we have over here, and it doesn't cost the taxpayers a cent.

The President and the Budget

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fight for It," published in the Washington Post and Times Herald on May 21, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHT FOR IT

It is too soon to say finally whether President Eisenhower's belated efforts to muster support for his budget have succeeded or failed. All indications on Captiol Hill, however, are that the Chief Executive's appeals have not made much of a dent upon legislators hell-bent for economy. This is not a very reassuring background for Mr. Eisenhower's message to Congress and address to the Nation today on foreign aid, which is in some ways the most crucial single part of the budget. The President's performance had better be good if it is not to be disastrous.

Much of the trouble has stemmed from the fact that Mr. Eisenhower himself has seemed very unsure of his budget. A situation in which a President has invited Congress to cut what is supposedly his most responsible estimate of the costs of operating the Government is virtually without parallel. Even after Mr. Eisenhower began to take a different tack publicly, others in the administration continued to hint that a cut in the budget would not be unwelcome. It is little wonder that Members of Congress have asked who is in charge. Some legislators who might be inclined to support the President with any show of determination in the White House may be honestly perplexed about his real feeling. He has given them scant reason to go against the protests from constituents which he himself has abetted.

Added to this uncertainty has been the curious matter of the President's tactics. Mr. Eisenhower has given Members of Congress the impression that if they repudiate him and his program he will do nothing except think dark thoughts. He has conveyed a sense of political pacifism.

The basic question here is one of attitude toward the Presidency. Mr. Eisenhower has made it apparent on a number of occasions that he takes a different view from some of his predecessors. He has a deeply ingrained respect for the separation of powers, and he is fearful of overstepping. He has seemed to consider his position more as that of a reigning monarch than as that of an active political leader with responsibility for obtaining enactment of a program.

Now, this position above the battle has had its utility in a certain range of national affairs. For awhile it was refreshing, and no doubt it accounts for some of Mr. Eisenhower's popularity. But popularity is valuable only when it serves some useful purpose. The situation is not quite the same as that during World War II, when General Eisenhower displayed great ability as a military commander to conciliate disparate factions and keep members of a team working together. Members of Congress are not responsible to Mr. Eisenhower, and there is not the wartime danger to keep them in harness.

Can there be a successful political leader who does not practice political leadership? Sometimes Mr. Eisenhower has displayed a very subtle knowledge of the art of politics. But it is questionable realism to expect to persuade Members of Congress to do what they don't want to do without something more compelling than half-hearted beseeching.

The alternative to sitting on a cloud is not wallowing in the gutter. It is not necessary for the President to engage in name-calling or to wield a truncheon, or to shout his intentions. The Presidency has available to it many powers and techniques, ranging from consultation and political endorsement to patronage and (if necessary) the elimination of projects favored by legislators who fail to cooperate. The office is diminished when these tools are not used.

It is very late for Mr. Eisenhower to be asserting this kind of leadership for the budget and for the other parts of his program—such as refugee and immigration legislation—on which there has been monumental inaction. Mr. Eisenhower has, lamentably, failed to support his supporters in Congress, and he has gone out of his way to propitiate a Republican leadership which is insatiable. Mr. NIXON has been strangely quiet. There is real danger, since Mr. Eisenhower has not exerted all his powers and cannot himself be a candidate again, that he will find himself repudiated by men who think his endorsement to be of little further political value.

Still, the foreign aid program, particularly the economic part of it, is the heart of what Mr. Eisenhower has been stressing since his days in NATO. No one can be so sure of each item in the program as to justify every penny, but the President, as the representative of all the people, is in the best position to bring understanding of and action upon the overall need—if he uses the power at his command. What Mr. Eisenhower does to follow up his words today will be more important than the words themselves. Americans, and history too, we think, will gage their respect for a President by whether he is willing to fight for what he believes.

Address by Hon. Clifford P. Case, of New Jersey, Before New Jersey State Federation of Labor

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent that there be printed the Appendix of the RECORD a most distinguished address delivered by the junior Senator from New Jersey [Mr. CASE] before the annual convention of the New Jersey State Federation of Labor, at the Traymore Hotel, Atlantic City, on Monday, June 3. In the address the Senator from New Jersey dealt with the implications to American labor of the current hearings by a special Senate committee; and also pointed out the great responsibility of labor leadership today to provide for internal grievance machinery and other safeguards which will be self-generating within unions themselves, as an obligation to trade union membership, and as another opportunity—so many of which have been availed of in the past—further to advance real trade union statesmanship.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the current wave of discussion about organized labor, there may be some who might be tempted to try to make the names of Beck and Brewster synonymous with all the 15 million Americans who belong to labor unions. I think it would be useful to take a look at the situation and attempt to bring the matter into proper perspective.

Testimony developed thus far before the McClellan committee indicates that the officers of one of the major unions have abused their power and misused their trust. This is a grave matter and it is good to know that law enforcement officials have been taking action and that the leadership of the labor movement has acted promptly to condemn and remedy such abuses.

Further steps are necessary and I suggest these:

1. Establishment of a program by union leadership to bring democratic procedures and protections to all members.

2. Enactment of adequate legislation to protect the health and welfare funds run by unions and managements alike, so the hard-earned money of union members and their families are protected. But, let me emphasize, I do not mean legislation aimed at burning down the whole home of labor in order to roast a few pigs.

At the heart of this corruption problem lies the need for making unions the democratic institutions which the founders envisioned. Clearly, the best insurance of

honest unionism lies in an alert and informed membership.

There is much that the leadership of the labor movement can do to assure that the rank and file of locals actually, as well as theoretically, make the decisions. Business has the problem of bringing adequate facts before the stockholders so that they can make the proper decisions. It is just as important in unions that members have full information.

I urge the AFL–CIO Executive Council to consider setting up a code of minimum standards of self government for its member unions.

The AFL–CIO, even before the current revelations, took a firm and frank stand on ethical practices in the labor movement. In December 1955, long before the Beck-Brewster hearings, the AFL–CIO convention noted that "the vast majority of labor union officials accept their responsibility and trust. They endeavor honestly to carry out the democratic will of their members and to discharge the duties of their office. Yet the reputations of the vast majority are imperiled by the dishonest, corrupt, unethical practices of the few who betray their trust and who look upon the trade union movement not as a brotherhood to serve the general welfare, but as a means to advance their own selfish purposes or to forward the aim of groups or organizations who would destroy our democratic institutions."

And, in June 1956, the executive council established a committee on ethical practices to help keep member units "free from any and all corrupt influences" and last month the council spelled out a recommended code of financial and certain democratic practices for member unions.

My suggestion today is that the executive council of the AFL–CIO take further steps to strengthen the stewardship of funds and improve the decision-making process within unions. Since our unions have developed in varying ways, they now have varying degrees of democracy in their procedures. It is important to put a floor under these procedures so that certain minimum protections are provided to union members.

Present, I am told, about a half billion dollars a year is paid by members in dues. The executive council has suggested a number of fiscal checks, including outside audits and bonding of disbursing officials. In addition, there should be ample opportunity for union members to have a voice in the determination of all major policies including those involving expenditures and to receive full and accurate reports of union activities including financial transactions.

The provision for election of officers varies. Some are chosen by national conventions, some by referendums of the membership, some for 1-year terms, some for 5-year terms. In some cases, voting is by show of hands, in others by secret ballot. The executive council has recommended that election of officers be held at least every 4 years, but other provisions for elections should also be spelled out. Surely, members should be assured of a right to regular and not too far apart elections of officers by secret ballot.

There should be an opportunity for individual members to appeal from arbitrary action by union officers. The nature of the appeal could be defined better by the leadership of the labor movement. No union members should be afraid to speak out for fear of losing his membership, or his job.

No union should have any objection to these requirements and I recognize fully that many unions already have such safeguards.

Unfortunately, there are some who do not want to admit this. The Beck-Brewster revelations have been seized on by groups which have long—and unsuccessfully—urged restrictions on labor. Now they say they are acting on behalf of the union rank and file who have been abused by such leaders. It is interesting to note that these suggestions have been put forward by national groups who have been quick to oppose any increased regulation of their own interests, but who feel that more regulation is better for unions. Their theory seems to be that in order to make union members stronger, it is necessary to make all unions weaker.

From such sources has come a recommendation for new legislation to prohibit present union security arrangements. They demand a national right-to-work law. This has a ring reminiscent of those who 20 years ago argued against child labor legislation on the grounds that it interfered with a 10-year-old's right of contract. This legislation would mean unions and managements that have peacefully negotiated contracts for union shop agreements would have to cancel them. Such a law would be a major step toward disintegration of labor unions. I agree with Secretary of Labor Mitchell that down this road lurks labor-management chaos.

Even the late Senator Robert A. Taft, coauthor of the Taft-Hartley Act, stated during the congressional debates that he was opposed to such legislation. He said: "I have hesitated to support the complete outlawing of the union shop, because the union shop has been in force in many industries for many years and to upset it today would destroy relationships of long standing and probably would bring on more strikes than it would cure."

Such sources have made other legislative suggestions, which although less direct, are not really aimed at protecting individual members but rather would have the effect of weakening unions and their position. Let me remind you that such proposals would affect not merely Messrs. Beck and Brewster, but all decent, honest union members as well. In the long run, the process of collective bargaining would be severely hampered and one of the major forces in achieving the world's highest standard of living would be hindered and hurt.

On the other hand, there has been some useful legislation proposed in the Senate to help safeguard union members against the raiding of immoral union leaders in collusion with cooperative employers. The legislation of Senator PAUL DOUGLAS and Senator IRVING IVES for reporting on the estimated $25 billion of union pension and welfare funds deserves urgent and earnest consideration. The amendments proposed by Secretary of Labor Mitchell should also have quick action. The union members who count on the life insurance, sickness pay, hospitalization, medical and pension benefits should be protected from the shysters and sharpshooters attracted by these large sums of money.

Another legislative proposal which deserves prompt consideration is that proposed by Secretary Mitchell to make public financial statements now required under the terms of the Taft-Hartley law and to provide penalties for any false items reported.

Unions were not organized to provide a few privileged individuals with fast horses and fancy haberdashery. They were, and are, men and women who join together to bargain more effectively than they could individually. They sought, and seek, to give the working man a position of respect and dignity in the community; to help him give his children a more abundant life; to protect him against oppressive employers, the sweatshop and other hazards.

Philip Murray described it this way: "Organization fundamentally means but one thing and that is clothing and bread and butter and pictures on the wall and carpets on the floor and music in the home and enlarged opportunities for children to receive the benefits of better education."

Inevitably, some who rose to power in the labor movement have been corrupt, selfish men, less interested in the workingman's welfare than in their own. Unions were not alone in attracting men of this kind; their parallel has been found in those who have organized vast corporate empires, bled them and let them crumble, destroying the savings of thousands of Americans.

In the ranks of selfish men who have abused the trust of their fellow men, the names of Dave Beck and Frank Brewster will have an unenviable place. Their disregard for the rights of the membership of the teamsters union and their contempt for the entire labor movement have been demonstrated before the Senate Select Committee on Improper Practices in the Labor or Management Field. The committee has had evidence of the use of members' dues for mansions, costly automobiles, racing stables, and other luxuries which has put all unionism under a cloud.

Mr. Brewster says there was a gift for the rank and file, too—the health and welfare funds negotiated in contracts. But he did not mention that the collective-bargaining efforts of the teamsters' western locals and their hard-earned $5 a month dues had something to do with this. The hundreds of employers who contribute to this fund and the milk drivers, long-distance drivers and others who work hard to earn it must have winced when they heard Brewster's statement.

Once before some unions were infiltrated by unscrupulous individuals, then bent on perverting the legitimate activities of union members to assist Communist propaganda. Courageous and perceptive leaders in the labor movement saw the challenge, forced the issue, and drove these unions out of the responsible house of labor.

George Meany and the AFL–CIO executive council have acted quickly and unanimously in regard to Beck.

There have been several hopeful signs that the membership is reviving interest in the affairs of the union and in the transactions of the treasury of its western conference. I have read of Beck's proposal for a union fund to help defend himself, and of a million dollar public relations fund to tell his side of the story. That these have been rejected are good signs. A wiser use of members' dues would be for a full-scale audit and legal accounting of the western conference, as well as the general treasury. In this way the members could recover any moneys improperly taken from the treasuries, as well as any profits derived by persons using such moneys.

The major role in dealing with malfeasance of the officers must be taken by the 1.4 million members of the teamsters union. The future of the union, as well as the role of all organized labor, will depend in large measure on them. They are the parties directly aggrieved—it is their money. Even more, it is their union.

Finally, in the interests of further putting this situation in perspective, let me quote to you from an editorial in a current issue of a national publication:

"When the McClellan committee began looking into the affairs of Dave Beck and the teamsters early this year, it was widely observed that the labor movement was at last getting the sort of hard senatorial scrutiny that business had been subjected to in the 1930's. Such a scrutiny was certainly long overdue—as the seamy revelations in the Beck case attest—but events of the last few weeks have also made it abundantly clear that business practices will be, and should be, a major part of the investigation into improprieties in the field of labor-management relations. Indeed, it was clear before this committee began its public hearings that

unethical and just plain crooked deals between businessmen and union leaders were commonplace in many industries. In retrospect, the most surprising thing about these deals is the complacency with which they were widely regarded. What the McClellan hearings have done is dissipate the notion that labor relations in the United States are in good shape today just because there is relatively little violence.

"Just how much responsibility do businessmen bear for Beckism in labor relations? The problem involves only a small proportion of businessmen, of course—just as it involves relatively few labor leaders. But certainly there are some United States businessmen who are in no position to assert any moral superiority over their union opposite numbers. There are some cases, to be sure, in which businessmen may almost be forgiven for making a dishonest deal. When a small retail store is hit during its busy season by pickets who do not represent any employees, and who are interested principally in getting paid off, the proprietor may often face a practical choice between making a deal and going broke. But all too often the employer who portrays himself as a hapless victim of union racketeers is, in fact, merely an opportunist, who would rather pay off a crooked union leader than incur any economic hardship. In unions, the improprieties are apt to stem from racketeering; in business management, they stem principally from moral laziness."

The editorial concludes, "The problem of Beckism in business is not merely a question of strengthening labor law; it is also a challenge to business ethics."

This may sound like an editorial from a labor publication. But, actually, it comes from the June issue of Fortune, the distinguished business journal. To the views expressed, I say "Amen."

Public opinion should not aim the blame for misconduct at a few labor leaders and ignore the culpability of a few businessmen. It takes both to make a dishonest deal and it takes both to keep an agreement honest.

Dedication of New Facilities at Francis E. Warren Air Force Base, Cheyenne, Wyo.

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. BARRETT. Mr. President, on May 25, last, the Wyoming congressional delegation attended the dedication ceremonies of three new dormitories and a dining hall at Francis E. Warren Air Force Base at Cheyenne, Wyo. The dormitories and the dining hall are as modern and up to date as any that can be found anywhere in the country. During the past few years 4 barracks, a service club and a dining hall have either been constructed or are under construction at a total cost of $2,338,000. We are very hopeful that funds totaling in excess of a million dollars for 3 additional barracks will be provided in the next fiscal year's appropriation bill.

The dedication ceremonies were conducted under the supervision of Col. H. F. Muenter, the commander of Francis E. Warren Air Force Base. Hundreds of people from Cheyenne and throughout the region attended the ceremonies, and it was apparent that the consensus of opinion among all was that Colonel Muenter was not only an effective and efficient commanding officer at the base, but that, in addition, he was doing an excellent public relations job for the Air Force. I was very pleased to note that my good friend, Lewis E. Bates, the editor of the Wyoming State Tribune, published an editorial entitled "He Gets It Done" which appeared in his newspaper on June 6, last.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HE GETS IT DONE

Ceremonies that seemed to fit the occasion were arranged by Col. H. F. Muenter, Warren Air Base commander, to highlight the opening of new dormitory and dinng hall facilities at the Cheyenne military installation.

The new structures, part of an impressive building program, are of significant importance to base training and operations, and this fact was graphically highlighted for the public by the ceremonies.

Colonel Muenter's arrangements extended all the way from Cheyenne to Washintgon, D. C. They ifcluded transportation of the State's congressional delegation—Senators J. C. O'MAHONEY and FRANK A. BARRETT and Representative KEITH THOMSON—and a representative of the Pentagon, to Cheyenne by air.

They were joined at a luncheon, at the new dinning hall, by Gov. Milward L. Simpson, other State officials, and Cheyenne's Mayor Val Christensen.

Speakers at the luncheon included Senator BARRETT, Representative THOMSON, and the Governor. Senator O'MAHONEY was heard at a dinner closing the daylong observance.

A fine attendance from Cheyenne featured all events and the base visitors were impressed by the way public convenience was served, by the tours through the new buildings, as well as by the standout bill-of-fare featured at the new eating facility.

The smooth organization centering on the rites opening the new base buildings came hard upon the heels of the standout job turned in by the air base, again under the direction of Colonel Muenter and his staff, at Cheyenne's observance of Armed Forces Day. The latter was the best and most expansive on the record at the capital city, including whopping and unprecedented attendance at base exhibits set up at the new Frontier Park pavilion.

The public interest, of course, is served by the efficient and cooperative way the base, under Colonel Muenter's direction, gets a job done. It is pleasant to be able to say so.

Career of Colton Meek, Principal of Grant High School, Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. NEUBERGER. Mr. President, men and women who dedicate their careers to teaching are among the most useful members of our entire Democratic society. Such an outstanding person in the city of Portland, where I was born and raised, is Mr. Colton Meek, who has just retired as Principal of Grand High School—which is one of the largest and finest secondary schools in our entire State.

Both Mrs. Neuberger, who is a former schoolteacher and a former chairman of the Oregon State House of Representatives education committee, and I have a high opinion of the academic qualities and personal character of Colton Meek.

Because education problems loom so large in this session of the Congress, I think it is appropriate that an editorial in tribute to the educational career of Colton Meek be included in the Appendix of the CONGRESSIONAL RECORD. The editorial was published in the May 24, 1957, issue of the Grantonian, the student newspaper of Grant High School. The editor of the Grantonian is Mile Legerwood, and its faculty adviser is Mr. A. A. Alexandre. The editorial was called to my attention by my long-time personal friend, Mr. David V. Buchanan, who is another member of the Grant High School faculty. I ask unanimous consent that the entire editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOODBY, MR. MEEK

The generals' general is retiring, and, although much of what is now Grant High will go with him, much of what is Colton Meek will stay in this building, its occupants, and, most important, in its graduates.

In February of 1943 there was a slight reshuffling in administrative positions in the Portland school system, and Colton Meek, who was then principal at Roosevelt, was assigned to Grant. Grant's fate was decided at the meeting of the school board in early 1943. Grant was destined to become, with the leadership of one man, the finest high school in the Nation. That man was Colton Meek.

Mr. Meek has many fine qualities, and perhaps every student would cite a different one, but most outstanding among them are his humility, his humor, his friendliness, and his love for Grant.

Humility is expressed in many ways, and every great man has it. Perhaps Mr. Meek's humility is best expressed in his statement to Pageant magazine in 1954, when that publication selected Grant as the best high school in America, that the credit for Grant's success belonged to the parents, the students, the faculty, the administration, and everybody else except himself. Not that those groups shouldn't be given some credit, but the majority of Grant's success can be placed at Mr. Meek's door.

Everyone who has listened to Mr. Meek speak at a banquet, has talked to him for very long, or has worked with him on a project can attest to his humor. He is very jovial and full of interesting stories. No one can accuse him of being a dour-faced stuffed shirt, like many principals.

Mr. Meek expresses friendliness in many ways. The ready smile as he walks through the halls, the friendly greeting to all students who address him, whether student body officer or a problem student. He is always ready to stop and discuss a problem with any student.

His love for Grant knows no bounds. This is love not for the building itself, but is rather for the students, the traditions, the scholastic and athletic records, and the spirit

that is Grant. Seldom can a Grant football team me found playing without Mr. Meek being found in the stands. Likewise he attends all the basketball games and after every game, win or lose, he comes to the locker room to congratulate the team on a game well played. Each player is congratulated individually, also. Mr. Meek officiates at track meets and joins the crowds at the baseball diamond. It is these appearances, expressions of interest, that have won him respect and admiration from Grant's student body.

Very seldom, in fact only twice in the last 4 years, has Mr. Meek appeared before the students to inform them of a situation which he would like to see corrected. Both times, without any further mention from him or without any policing or prodding from the faculty, the poor situation has been corrected by the students. Such is their respect for his wishes.

Mr. Meek, Grant can never repay you with anything but respect and love for what you have given the school and its occupants, but Grant would like to say, "Thank you. Good luck, and God bless you." You have given to us that which we can never repay. Our only wish is that you will not forget Grant, its teachers, and its students. We shall certainly never forget you, and the flame of greatness which you kindled shall burn in these halls forever.

Adventures in Job Hunting—Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Meyer Pertcheck, entitled "Adventures in Job Hunting," before the annual meeting of the President's Committee on Employment of the Physically Handicapped, as well as a biographical sketch of Mr. Pertcheck.

There being no objection, the address and biographical sketch were ordered to be printed in the RECORD, as follows:

ADVENTURES IN JOB HUNTING

(Remarks by Meyer Pertcheck, placement counselor, Ohio State employment service, before the afternoon session of the annual meeting of the President's Committee, May 23, Departmental Auditorium, Washington, D. C.)

I'm going to take you with me today on my Adventures in Job Hunting. I first began to think about a job at the age of 13 when I completed elementary school and was told that my physical condition would not permit me to attend high school because my inability to climb stairs, and difficulty in getting around on crutches, which I had just learned to use, would create a hardship and make me prone to accidents. I tried selling papers on a street corner. In 2 days I sold 13 papers and made 10 cents profit. I decided that I would go to high school and did so without any difficulties, graduating in the top third of my class.

I had studied bookkeeping and hoped to get some simple clerical work that would use this training. Two years of looking resulted only in disappointments; many employers would not even talk to me. When I was 20, one of my friends suggested that I open a billiard parlor in the neighborhood and against my parents' advice, I made plans to do so. With the investment of $300—my entire savings account—I did open this business and for the first 2 months I did very well financially. Then, because of my lack of business experience, and a strike in the factory where most of my customers were employed—I was soon extending credit to my customers who had no money to pay me, and four months later my business days were over—I had run out of money.

I tried to enroll in the Toledo Secretarial School, a local business college for handicapped young people to learn more bookkeeping or study accounting. The instructor refused to accept me, as it was thought my physical condition would not permit me to do such work. Even though both of my hands were severely deformed, my handwriting was very legible, but I did not have sufficient strength in my hands nor my arms to lift and carry the large journals and ledgers that are used in accounting work. After pressure brought by friends, I was accepted. Here I received good basic training in accounting.

Part of my interest in bookkeeping dated from my years in high school when a relative had promised me employment if I became either a bookkeeper or an accountant. Yet, this relative refused to even talk to my business school instructor so that my skills could be explained. He referred her to the personnel manager of his firm, who said that there was no place for me in the organization. Two days later a young man from the University of Toledo was hired as a trainee in the accounting department of this firm, and a friend learned that my relative had stated he did not "want to hire any cripples." I'd like to tell you, though, that during the war years, this same relative came to appreciate the value of a handicapped worker. He was engaged in nonessential industry, and he learned that handicapped male workers who had difficulty in finding employment could be used on nonessential occupations without changing the male ceiling which had been established for the firm. Today, one of the handicapped workers who was sent to this firm, is its personnel manager and this relative of mine has learned that cripples are good workers and uses them wherever possible.

A friend of mine arranged an interview with a local educator so that I might discuss job possibilities with him, but a lengthy discussion produced no results, except his promise to try to "figure out something." As I was leaving I overheard him say to my friend that he felt I was unemployable. Once again, just 6 years later, another friend of mine arranged for me to speak to one of this educator's classes in personnel training on "Placing Handicapped Workers" because he had heard of the work that I was doing in our local employment office. When I appeared to make this talk, I was immediately recognized, and during the introduction, this teacher apologized openly to me, and told his pupils that he would never again consider any handicapped person as "unemployable."

Let's go back to 1938, though, when I was very despondent over my inability to find work. In the daily paper, I read where a man whom I had known in my high-school days was elected the county clerk of courts. In 1934, when I had won a city checker tournament, he congratulated me and asked me if I thought I was a pretty good checker player, to which I answered "Yes." Then and there, he set up a checkerboard, and before I had made 5 moves he had given me the worst beating of my life. Then he smiled, said, "That is just to teach you a lesson," and refused to play any more with me. I went to his office and he remembered me, and I told him that I needed a job and that the actual income, so long as it provided spending money for me, was not too important. He asked if I would consider part-time employment with the National Youth Administration and made an appointment for me with the local director of this organization, and 1 week later I reported to the Toledo Vocational Guidance Center in the local office of the Ohio State Employment Service, where I was put to work scoring tests for the wages of $18 a month for 80 hours of work. After 2½ years I was earning $23 a month and was supervising 4 other scorers. I celebrated my 25th birthday—and lost my job—as no one was permitted to work on the NYA after the age of 25 years. Again, I was very low in spirit, even though my supervisor had told me that he would make every effort to get me back on the job. Much to my surprise, 6 weeks later I was asked to come back to the OSES and found that my supervisor had, with support of others in our local and State offices of the employment service, obtained a provisional appointment for me as a clerk, grade III. On April 15, 1941, I started to work on a full-time basis and received $70 a month. That ended my personal experience as a job hunter. For the past 18 years I have been in the Toledo office where I have made a sincere and constant effort to be a job earner.

Getting away from my own experiences, I will mention some of the pitfalls that other handicapped people have encountered in job hunting. Of course, there are the usual unfounded excuses, such as hiring a handicapped person would mean an increase in insurance rates, in accidents, absenteeism, and turnover, and a decrease in production. In addition to these, we still find—

1. Much buckpassing between management and labor when a request is made to consider a handicapped individual.

2. Some large firms state that operating policies are established by the parent firm located at some distant point, and employment of handicapped workers is contrary to company policy.

3. Large companies have agreements with their unions that new help hired in must start in the labor gang. This hiring practice bars many competent handicapped workers who could be hired into specific jobs.

4. Another obstacle is the practice of giving every new employee a general physical examination and using this as a bar to employment instead of as a tool to proper placement.

Actually most of the problems which face handicapped workers and their potential employers today are still those which can best be solved by constant efforts to improve communications, understanding, and appreciation of one another. We who are handicapped will be frank enough to say that we know there are many of us who demand recognition and consideration because of, rather in spite of, our individual limitations. On the other hand, many employers still have a mental block which falls into place at the very mention of the word "handicap," and before they are ever told what the condition may be, they have ceased to listen. There can be no pat answer, no immediate solution, no ideas which will be the overall decision, but we can strive to reach that end by learning—learning to work, learning to relax, learning to live—together.

In summarizing, prejudicial excuses, "buck-passing," labor gang hiring, wrong use of physical examination, are still prevalent and need correction. I would also like to say that the knowledge that we do have support at high levels is a constant encouragement to all of us—both in our daily living with our own individual handicaps and in our efforts to place the handicapped worker where he is a useful member of our social order, and I am proud to have had this opportunity to present the views of just an ordinary fellow from the great midsection of our country.

BIOGRAPHICAL SKETCH OF MEYER PERTCHECK, EMPLOYMENT COUNSELOR AND SERVICE-TO-HANDICAPPED REPRESENTATIVE

Date of birth: February 24, 1916.

At the age of 2 years and 4 months was afflicted with Still's arthritis which remained progressive until 13 years of age. This disease affected all body joints causing contraction and deformity of fingers, hands, legs, and so forth. Was confined to a wheelchair for 3 years and spent much time in the hospital. Attended and graduated from the Charles Feilbach Elementary School for Crippled Children. At the age of 13, through the efforts of two orthopedic surgeons and the use of leg braces, was able to get out of the wheelchair and walk on crutches. After 1 years of idleness, started in a regular high school on a full-time basis and graduated at the age of 18. In 1934 entered Toledo University in pre-law course and after the first semester suffered a fall which resulted in a broken arm and did not return to the university. Attended 15 months at Toledo Secretarial School, which is a business college for handicapped young people, majored in bookkeeping and accounting. Started to work on NYA on a part-time basis as a clerk, whose duties were scoring of aptitude, interest, and performance tests at the Ohio State Employment Service. After 2½ years received a civil-service appointed as a clerk II and through on-the-job training and actual work was reclassified to the following positions: Clerk, grade II, junior interviewer, senior interviewer, counselor I, and now counselor II.

In 1952 was named by the Junior Chamber of Commerce as 1 of the 10 outstanding young men in Toledo; also received merit award from Governor Lausche and a citation from the President's NEPH Committee.

Belongs to the following organizations: The Fraternal Order of Eagles, Indoor Sports Clubs, Inc., Ohio State Civil Service Employees' Association, American Federation of Labor, Lucas County Chapter of the Ohio Society for Crippled Children, National Vocational Rehabilitation Association, International Association of Personnel in Employment Security. Is a member of the board of directors of the Toledo BUC Credit Union and the Toledo Goodwill Industries.

Mr. Pertcheck is employment counselor and special service-to-the-handicapped representative in the Ohio State Employment Service in Toledo, Ohio, and has traveled through the United States of America. He has spoken before many organizations: civic, fraternal, and so forth.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Returning to the Marshall Plan Idea," written by C. L. Sulzberger, and published in the New York Times of Monday, June 10, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETURNING TO THE MARSHALL PLAN IDEA

(By C. L. Sulzberger)

PARIS, June 9.—Western Europe observed with notable restraint the 10th anniversary of our Marshall plan. But the manner of remembrance has no importance. The fact that Western Europe is here, a prosperous and independent entity, represents the real tribute to General Marshall's revolutionary departure in United States foreign policy.

This continent still has plenty of troubles. It remains ideologically partitioned by a cleavage running right across the heart of Germany. Its larger nations, such as Italy and France, have yet to solve the administrative aspects of efficient democratic government.

But Europe is again a vital force. Last year the countries banded in the Organization for European Economic Cooperation—created under the Marshall plan—had an average industrial production 74 percent greater than in 1939.

Only because of this renewed vigor has Western Europe again become an important military and diplomatic element. Without the Marshall plan there could have been no NATO, because there would have been no economic or political base upon which to erect the alliance. And without NATO the Soviet expansive thrust which extended to Berlin and Czechoslovakia in 1948 might have pushed onward to the English Channel.

President Truman, Secretary Marshall, and his then deputy, Dean Acheson, deserve vast credit for the program bearing Marshall's name. But an Englishman, Ernest Bevin, then Foreign Secretary, was largely responsible for inspiring the present OEEC countries to make the most of opportunities we offered them.

A CHANGE IN THINKING

The Marshall plan, in fact, represented a far more profound development in our thinking than was at first apparent. Even isolationist politicians have come to accept—since the Secretary of State's famous Harvard speech, June 5, 1947—the idea that it can be in our own interest to contribute aid to friendly nations overseas.

Unfortunately, however, the wisdom displayed in the Marshall plan has not been equally apparent in policy attitudes elsewhere in the world. In Western Europe we shrewdly set the regional economy on its feet before installing upon this base the necessary burden of a military alliance. All too often, in other areas, we have acted precisely in the reverse.

Thus we have either fostered or joined military pacts in the Middle East, Southeast Asia, and the Orient which did not have the initial foundation of economic health. The result has been, in certain instances, to create a debilitating rather than a strengthening factor.

Some poor nations have found themselves saddled with the permanent burden of keeping up a modern defense apparatus which their industrial and fiscal structure is inacapable of supporting. The result is a tendency toward internal weaknesses vitiating the value of an army.

During the years that followed the Marshall plan and NATO our policy experienced a form of pactomania. Weapons overbalanced welfare. This phase has, to a considerable degree, now been righted. But we have not yet been able to bring about the necessary nonmilitary programs in free Asia or burgeoning Africa.

ECONOMIC AID NEEDED

It is, of course, impossible to dream of ever accomplishing in those continents the same kind of success that we achieved in Europe with the Marshall plan. Europe is a dynamic, industrialized, highly educated region. It has a vast reservoir of technical skills that cannot be approached in underdeveloped areas. Furthermore, the countries joined in OEEC have a very considerable common political heritage. This does not exist elsewhere.

Nevertheless, as we appear to be discovering, it is now more important during this age of competitive coexistence to emphasize economic rather than military aid. Too much of our assistance still goes only to maintain arms. This is unproductive in terms of the poor people whose freedom we would protect.

It is time to return to the original philosophy expressed in the Marshall plan. We must help our friends abroad. But it is wiser to help them first in economic ways. For example, there is no point in continuing to increase our military assistance to Pakistan. If we could freeze it at its present level, and invest more funds in productive fields, we might do more to shore up that courageous but impoverished land.

If the emphasis of our Asian policy is thus adjusted, we will find ourselves on better terms with neutralist nations—above all, India. And this is vitally important.

It is in what President Eisenhower terms our own "enlightened self-interest" to see the free world strong. The free world includes many uncommitted nations—as well as those aligned with us as loyal partners.

We have now devoted much energy and money to the bolstering of foreign military defenses. It is time to pay more attention to the economic structure upon which liberty must in the end rely.

Union Welfare and Political Funds

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. GOLDWATER. Mr. President, the 1st of May, Mr. Roscoe Drummond wrote in the New York Herald Tribune a column concerning the welfare funds and political funds of labor unions. He contends that individuals in labor unions and corporations should make their contributions direct to the political party of their choice, and not have it done by their leaders out of their dues money or corporate funds. I agree with Mr. Drummond in this approach, and I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR: WELFARE FUNDS AND POLITICAL FUNDS

(By Roscoe Drummond)

WASHINGTON.—There is growing sentiment in Congress for some legislative action to deal with two aspects of the far-ranging power of union leaders.

This sentiment springs largely from the Senate racketeering and related investigations which showed among other things, how easy it was for teamster President Dave Beck to reach, uninvited, into the pockets of his union membership and lift $100,000 now and then, to use for unexplained purposes without the members knowing when or whether these touches were ever returned.

There are two objectives which the sponsors of new legislation have in view.

One is to protect the vast and mounting union-welfare funds from being dissipated or mismanaged.

The other is to make sure that the political funds of union members are used in accordance with the wishes of the contrib-

utors, not merely in accordance with the wishes of the union leaders.

Few, I suspect, appreciate the magnitude of the union-welfare funds, the joint labor-management funds, and the management funds. Already more than 75 million persons are directly or indirectly covered by these employee pension and welfare programs. The funded reserves total $20 to $25 billion and every year contributions add up to nearly $7 billion. The Securities and Exchange Commission reports that these reserves make up the largest single source of equity capital.

To safeguard these huge welfare funds Congress now has before it measures to require the registration and disclosure of all essential financial and management facts to the SEC and to limit investment to those securities permissible to insurance companies in the District of Columbia.

These protections have an excellent chance of being passed at this session.

A more controversial measure concerns the closer regulation of union political activity. Despite the fact that the Democrats would apparently stand to lose more than the Republicans by such regulations, it has considerable Democratic support.

An analysis by the Congressional Quarterly, for example, shows that the 52 congressional districts where more than 60 percent of the workers are in blue-collar jobs, elected 41 Democrats and only 11 Republicans last year—a 30-seat margin that just about equals the Democratic House majority.

Democratic candidates generally received most of the $2,020,123 contributed by labor. A Senate report says that almost all of it was used in behalf of Democratic candidates and the Congressional Quarterly estimates that 99.6 cents out of every worker-contributed dollar went to support Democratic candidates. This $2 million figure includes only the money raised by voluntary subscriptions from union members. It does not include any dues-supported political education funds.

Now, obviously, there should be no discriminatory restrictions placed upon union political activity. The rules which govern the political contributions of corporate business should also govern corporate labor, that is, political contributions should be made only by individuals, whether businessmen or workers, not out of company funds or union dues.

How it shouldn't be done was revealed by Frank W. Brewster, president of the Western Conference of Teamsters, who testified that local 174 in Seattle made political contributions of $99,999.65 from 1950 to 1953 from dues paid for other purposes by its 6,500 members. Much of it was handed out in cash under the counter.

It has apparently never occurred to Mr. Brewster that it should matter one way or the other which candidates the union members want their money to support.

He was asked by one Senator: "Do you believe it is right to make it necessary for a man, in order to earn a living for his family, to contribute by compulsion to the election of an official whom he prefers personally to defeat?"

Mr. Brewster first replied: "Yes, I think so." Later he added that "I never looked at it that way and I am going to have to do some thinking about it." Finally, he remarked: "I am getting a liberal education, to say the least. * * * This is a new thing to me."

This does not mean that the unions should not obtain money from its members for campaign purposes. What is sought is to make sure that funds are used for candidates whom the contributors want to support.

Address of W. Paul Stillman Before Advertising Club of New Jersey

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. SMITH of New Jersey. Mr. President, on June 4 at the Essex House in Newark, N. J., the Advertising Club of New Jersey held its annual dinner, for the purpose of granting an award to the outstanding citizen of New Jersey for 1956. At this dinner there were present more than 600 persons, including business, civic and political leaders of our State.

The award was made to Mr. W. Paul Stillman, one of our leading New Jersey citizens, who is chairman of the New Jersey Commission on State Tax Policy. Mr. Stillman is a banker of wide experience, and in accepting this award he delivered a notable address, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY W. PAUL STILLMAN, OF NEW JERSEY

Because the city of Newark is of such importance to the State, and because its future is so entwined with the future of the State, I would like to comment briefly upon a problem that is at the moment acute, and of paramount importance to both. No matter how worthy either a public or private project may be, its fulfillment will almost certainly depend upon finance. On the public side, this raises the thorny problem of taxation. On the one hand are the taxpayers, who must maintain their standards of living and protect the productivity of the bases from which taxes must be raised. On the other, are the service establishments, often represented by dedicated men and women who agree with former Justice Holmes when he said, "I like to pay taxes. With them I buy civilization." Each of us agrees with both points of view, but each of us has different responsibilities to fulfill; and it is, therefore, methods rather than objectives, that create the great dilemmas of public finance.

Our major difficulty is this: Basically speaking, the choice of methods is comparatively limited. By whatever names we may call them, or in spite of whatever refinements we may introduce into them, there are only four bases from which a State can raise substantial revenues—sales, income, property, and excises—and every State has a major base or bases that classifies it as a certain type of State. Whatever this major base may be, it tends to become a balancing item to meet increased expenditures. As service demands increase, the pressure on the major base increases; and taxpayers seek relief in some other base that will redistribute portions of the burden.

In spite of the heaviest property tax in the country, New Jersey has for many years resisted a shift to other forms of taxation. This resistance has been deep and genuine. It has been reflected in the platforms of both parties for 20 years. It has received full and continuous endorsement at the polls. Both governors and legislators have, on the whole, either respected, or learned to respect, this mandate. It is true that New Jersey is the only industrial State that has maintained this tax pattern. Indeed, only two other States—Nebraska and Texas—have neither income nor sales taxes. On the face of it, New Jersey appears in a somewhat irregular position, and there are those who continue to urge that we should get in step with modern tax practices.

After many years of association with this problem, there are three overall conclusions that seem plain to me:

First, New Jersey is one of the greatest industrial and residential areas in the world. It is, I believe, our destiny to intensify this development. In an environment such as this, perhaps, a property-tax base makes more sense than in an agricultural community where income is so closely associated with property.

Second, New Jersey is a small State in area, with great urban concentrations at both ends; great recreational facilities in every part; and great highway corridors that link it with the North, South, and West. Perhaps a broad use of excises and even selected sales, best reaches the tax liabilities of those who use our services.

Third, New Jersey is a State which develops on business competition. Taxes are an important element in competitive costs. We are generally regarded, taxwise, as a favorable State for business. We must maintain that advantage—and let us never forget this.

I am not unaware of the imperfections of our tax structure. The fifth report of the commission on State tax policy to which I subscribed, set these forth in considerable detail; and the sixth report emphasized a century of inequities in our property tax. These imperfections, I wish to see corrected; and I have been pleased with the progress made in this direction over the past 5 years. To some it has seemed slow and insufficient; but to me it has been steady, thoughtful and fundamental.

More progress has been made toward putting our property tax in order, than in all the preceding years of our statehood. Our grant-in-aid programs have been generously increased, both toward the improvement of our services and the restraint of our property base. Our competitive position has been maintained, and will, I am confident be strengthened, by further improvements in our property tax that are now so much before us all.

There is, however, the other side of this problem—increasing expenditures at all levels of government. It is the intensity and magnitude of these pressures that so often throw tax structures out of balance. But I have a few thoughts on this, also. The place to restrain large and untimely expenditure programs is at the taxing level. Once a major tax is adopted, its yield is the only limit to its use; and it will carry other bases along with it. Tax dollars raised at the local level are harder to raise and better spent than any other dollar in the tax economy. No matter how badly we may think we need a public service, it must never be purchased at the price of impairing the productive capacity of the community. There are things we cannot afford, and these things we must not attempt to acquire. A simple rule, but an often neglected one.

Both our State and our city are faced with the old, old problem: "How to maintain adequate services for their citizens and still maintain the competitive advantages that make such maintenance possible." New Jersey has, within our life span, been a well governed State. Our city has made great strides in the past few years. We are proud of what has been done, and look, with confidence, toward further improvements. We are a conservative State. We are not given to violent and erratic changes nor to un-

tried experiments. New Jersey is a good place to work and a good place to live. Let us dedicate ourselves to keeping it this way; and when we think of taxes, let us remember that they must fit our environment, be tailored to our capacities, be adequate to our services, and equitable among our citizens.

Graduation-Day Address by Judge Irving R. Kaufman Before FBI National Academy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a distinguished address delivered by one of our Federal district judges in New York, Hon. Irving R. Kaufman, incident to the graduation exercises of the 59th session of the FBI National Academy, in this city on June 6, 1957. The address is entitled "A Judge Looks at Law Enforcement." It contains some very feeling and pointed references to the judge's personal experience with the FBI when he sat in a very trying case in New York which contributed so much to his stature with the American people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A JUDGE LOOKS AT LAW ENFORCEMENT

(Address by Hon. Irving R. Kaufman, judge, United States District Court, Southern District of New York, before the graduation exercises of the 59th session, FBI National Academy, Departmental Auditorium, Washington, D. C., June 6, 1957)

Members of the graduating class, Director Hoover, distinguished guests, perhaps it is not in accordance with strict protocol that I mention those who are about to become graduates of this Academy before addressing the noted personages who have made this occasion possible and honored it by their presence. But it is to congratulate the members of this, the 59th graduating class of the FBI National Academy, that we are gathered here today—to congratulate them, and to thank them for the splendid spirit of dedication which brought them to this Academy.

To you graduates, perhaps the most important message I can bring is a reminder that you are the successors to a proud tradition of efficiency and integrity—a tradition, I must add, that has its roots in the vision, the courage, and the devotion of one man—the distinguished Director of the FBI who has led his organization to its present position of international eminence, and who has provided the law enforcement agencies of the entire Nation with the tools, the techniques, and the training which are vital in modern society's constant war against crime. In a very real way, Director Hoover is a part of this graduating class, as he has been a part of each and every class before it, and before addressing myself to you graduates whom we have gathered to honor today, I would like to pay tribute to the man who paved the way for this symbolic moment, and to the devoted members of his staff who enable him to translate his ideals and ideas into reality. Their road has not been an easy one. You have but to read Don Whitehead's book on the FBI to appreciate the difficulties which the Director and the Bureau had to overcome. Less dedicated men would have been snowed under by the avalanche of propaganda thrown at them. America owes Mr. Hoover a debt of gratitude.

Were I just the ordinary man on the street whose only contact with the FBI has been through the newspapers, and whose only benefit was that indirect but so vital benefit of knowing that my country, my community and my family are safer because of its existence, I would cherish this opportunity to publicly express my thanks. My contacts with Director Hoover and the Federal Bureau of Investigation, however, have been much closer than have those of most of us fortunate people who call ourselves Americans. During the long trying months of the Rosenberg case, as many of you know, there were deliberate attempts to intimidate the Court—personal threats to me and my family unprecedented in the history of our Nation's judiciary. And during those interminable months when I feared for the safety of my wife and my three boys during my every waking hour, my chief solace was the protection of the FBI, and the kindness and concern of the various members of the Bureau who were assigned to protect my family. I have never before had the opportunity to publicly say to those men—"I thank you from the bottom of my heart."

Turning my attention from the FBI as a whole to this National Academy which it sponsors and to this specific graduating class representing police officers from 37 States and 1 Territory, I am compelled to state that as a Federal judge, probably more familiar than most laymen with the work of certain of our law enforcement agencies, I was most astounded and frankly tremendously impressed when I scanned the list of subjects offered at this academy. They run the gamut from firearms to fugitive investigations, from spectrography to sociology, and from training techniques to traffic control with numerous courses in the sciences—chemical, physical, biological, and even mathematical. Reeling them off makes me feel like Gilbert and Sullivan's modern major general.

I find in this unique training program a startling reminder of how far we have come from the time, not too long ago, when the typical community provided its law officers with a shield, a gun, and a club, but no training.

A shield, a gun, and a club—that this is not enough for efficient police performance is, of course, an axiom to all of us who are gathered here today—but I would remind you that a prime reason that this is not enough is because ours is a society of free men, and of government under law. The Nazi's Gestapo, Soviet Russia's MVD, the puppet Hungarian government's hated AVO, the thought police, and secret police who function today in all the totalitarian countries which compose the Soviet sphere of influence—they can operate with a gun and a club. But in America this is not enough.

The men and women who fled the old world to establish this country had had their fill of the physical anguish of the torture chamber and the refined mental pressures of star chamber inquisitions; they had learned that the coerced confession is often false; they had fought against the indignity of a man's being forced to bear witness against himself, and they had rebelled against the presumption of guilt and the capricious search and seizure. Thus they wrote into our Constitution safeguards against all these abuses—safeguards which can only be preserved by being punctiliously obeyed.

It is sometimes a temptation to the most scrupulous law enforcement officer to bypass one or more of these safeguards when he just "knows" a man is guilty or that valuable evidence will otherwise be lost. And I would be the last to deny that to operate under law sometimes seems harder than to operate outside it, but it has been demonstrated time and again that, in the long run, police operations within the framework of these restrictions can be just as effective, and the results much more enduring.

The Federal Bureau of Investigation, for example, has achieved a worldwide reputation for high standards and for operating strictly within the framework of our democracy. Yet when matched up with the Nazi intelligence machine at the outset of World War II, it proved its superiority by breaking the leading Nazi spy ring in this country, and it is noteworthy that not one single major act of enemy sabotage was committed within the United States throughout the war years. And in more recent times, the work of the FBI has led to evidence of the Communist conspiracy in America, and we have every reason to believe that the Bureau has today's major internal espionage problem well in hand.

Furthermore, the FBI's outstanding record in the fight against the ordinary criminal has proved time and again that police brutality and procedural short-cuts are not a necessary corollary to effective law enforcement. Indeed, I would venture to say that the wise criminal of today fears the net which is closed about him by the scientifically trained FBI agent or police officer far more than he fears the third degree.

In this latter pragmatic vein, as a judge, I could regale you for hours with stories of criminals who could never be brought to justice because the evidence against them was illegally seized and of convictions which were reversed or set aside because key confessions and evidence had been illegally obtained. Indeed, one of the best possible ways to insure that a probably guilty man will go unpunished is to deprive him of the basic safeguards which our Constitution affords him.

But there is yet another argument for consistent observance of these constitutional rights, an argument which is, to me, much more fundamental, for it goes to the roots of the American concept of law enforcement. In our society a man is presumed innocent until proven guilty—and this presumption has special meaning for you law-enforcement officers who must face the seemingly guilty every day. First, it means that you must work to find evidence that may avert the pointing finger of suspicion even as you try to find evidence pointing to guilt.

I said to you earlier that I appreciated the temptation to ignore certain constitutional requirements when dealing with a man who you just "know" is guilty—and, of course, that word "know" must be in quotes. Neither you nor I nor any man can "know" that a person is guilty until a duly appointed jury has rendered its verdict or until a plea of guilty has been accepted by the proper court. Thus, when you trammel the rights of a man you think guilty, no matter how odious his character or record, you are trammeling upon all our rights—setting yourself up as judge and jury and proclaiming to the world that our vaunted constitutional safeguards are mere privileges to be dispensed to the worthy. This you may not do, and, I say again, you need not do.

On the other hand, I deem it only fair to state that a judge who places unnecessary and hypertechnical roadblocks, with no foundation in law or the Constitution, in the path of lawful prosecution because of an antagonism which the judge harbors toward law-enforcement officers, has rendered as great a disservice to the American people as the overreaching police officer.

For the past 12 weeks you have been intensively studying the latest techniques in all phases of law enforcement. If you apply what you have learned here, if you teach it to the other members of your respective agencies, if you constantly improve upon

what you have learned, and pass that information on also, the rising tide of crime in this country will be arrested.

For you graduates, dedicated as you are to your career of community service, seeing your efforts succeed will probably be thanks enough. As for myself, I strongly believe that you and the thousands like you should also be thanked by a grateful citizenry which increases in pay and in prestige, and it is gratifying to me to be able to note that when a citizenry is alerted to the splendid job a topnotch police force can do it will often respond with the vital financial assistance which will enable you to attract, to train, and to keep the high caliber of men which society needs for its own protection. As a native New Yorker, it is natural that I should single out the work of academy alumnus Stephen P. Kennedy as a prime example. His success in making New York City a safer place in which to live has recently led to success in his plea for more and better paid policemen.

I have talked to you today of several aspects of your many faceted roles as law-enforcement officers—of your duty to uphold the Constitution and laws of the United States and the several States in which you serve, and of your constant job as scientific detectors and efficient deterrors of crime.

Before concluding, I would like to remind you of yet another responsibility which you must shoulder. As law-enforcement officers in your communities, you are often the only point of personal contact between the ordinary citizen and his government. Your bearing, your conduct, and your professional skill will have a subtle but strong impact upon the confidence your citizenry has in its government, and our Nation is only as strong as its people's faith in it. In an era of conflicting world ideologies, at a time when our youth has never known world peace and stability, the survival of the free world may well depend upon the maintenance of our faith in free government, and the depth of that faith will depend in large part upon how we who are in public service conduct ourselves.

Were this a unified world and a peaceful world in which all countries adhered to the same moral values, I would still say to you that the manner in which you demean yourselves in the performance of your daily duties, will have an important bearing on the strength of our democracy. But in today's divided world, with the Communist press ready to seize the slightest opportunity to proclaim that America's boasted freedom is a fraud—every time you violate the safeguards of due process or perform any act unworthy of an officer sworn to uphold our laws, you undermine the very foundations not only of our democracy but of our security. Soviet-sponsored communism today has enveloped half the world in slavery, and it is seeking to ensnare the rest of the world by every means available to a highly mobilized totalitarian and Machiavellian government.

The Soviets ignore their depredations in Hungary, the riots in Poland, and the slave-labor camps spread throughout the Iron Curtain countries like dark blots of corruption—the Communist press slurs over these events or denies their existence. And then to take the heat off, so to speak, the Communists will point to asserted deprivations of liberty in America. Any slight incident of police brutality or veniality will be enlarged upon and utilized skillfully as propaganda in the underdeveloped, uncommitted countries of the world.

A free nation cannot hide its officials' misdeeds behind a veil of censorship as can a dictatorship and, of course, none of us would have it otherwise. But this freedom and this world spotlight impose upon those in positions of authority a tremendous responsibility—a responsibility of enforcing our laws in such a manner that there are no untoward incidents to report. This is a challenge we must never forget and I know that all of us will meet it with wisdom and courage.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Will Ike Now Fight for Foreign Aid?" published in the Arkansas Gazette of May 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL IKE NOW FIGHT FOR FOREIGN AID?

There were patches of eloquence in President Eisenhower's televised defense of that much abused commodity "foreign aid."

In the first place, as the President ably pointed out, most of what we refer to as "foreign aid" is simply defense spending by another name, armament placed in the hands of allies who are willing to stand up against the same enemy for less material reward than we ourselves are wont to demand.

But beyond that somewhat mercenary point, Mr. Eisenhower's remarks on the impossibility of national isolationism were evocative of John Donne's celebrated words on the impossibility of personal isolationism. At one point, for example, the President was moved to say: "America cannot exist as an island of freedom in a surrounding sea of communism."

At another: "We must recognize that whenever any country falls under the domination of communism, the strength of the free world, and of America, is by that amount weakened and communism strengthened."

Toward the end, the President sought to answer that considerable body of criticism which is always wondering why we should spend a single penny abroad so long as a single unfilled need still is felt at home: "We live at a time when our plainest task is to put first things first. Of all our current domestic concerns—lower taxes, bigger dams, deeper harbors, higher pensions, better housing—not one of these will matter if our Nation is put in peril. For all that we cherish and justly desire, for ourselves or for our children, the securing of peace is our first requisite."

This is one theme which keeps recurring throughout President Eisenhower's public utterances: Nothing much will matter if we fail to prevent Armageddon.

The President personally thinks that continuation of a meaningful mutual-security program will help prevent world war III. So does this newspaper.

What remains to be seen now is how hard the President will fight for his revised mutual-security budget and all the rest of his new spending recommendations in the private showdowns with congressional leaders, particularly with leaders of the President's own party. This is where Presidents of the United States usually have been able to do the most for their legislative programs.

So far, Dwight Eisenhower has been willing to do occasional battle with dedicated opponents of his program, but only in the most generalized and impersonal of terms.

The effect of Mr. Eisenhower's first TV appeal for the whole of his new budget was seriously diluted the next day when he said that he did not regard it as his duty to "punish anybody (in this context, such Republican congressional leaders as Senators KNOWLAND and BRIDGES) for voting what he believes."

Those GOP worthies were as unmoved by the President's second TV appeal as by the first, and so the President was asked again at yesterday's press conference what he proposed to do about the fact that practically every key congressional figure in his party is opposed to the program he himself had defended so vigorously the night before.

About all that Mr. Eisenhower would admit this time was that he was not so namby-pamby a person as not to have degrees of enthusiasm between those who stand with him and those who oppose him.

Question. What about Senator KNOWLAND, who is against more often than he is for?

Answer. Senator KNOWLAND is a man of very strong convictions.

This newspaper has made the point before that it cannot presume to speak for any part of the Republican Party.

We trust, however, that the leaders of the Democratic Party in Congress will react as Americans first and as Democrats second as they weigh the President's new mutual security appeal.

The early reaction from such leaders as Senate Majority Leader LYNDON JOHNSON and our own Senator FULBRIGHT, neither of whom is a soft touch for administration blarney, was most encouraging.

Price Increases in Steel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article in the June 7 issue of the Wall Street Journal reporting on a recent speech by David J. McDonald, president of the United Steelworkers of America, be printed in the Appendix of the RECORD. Mr. McDonald's comments on pending price increases in the steel industry warrant serious thought and consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MCDONALD SAYS STEEL FIRMS CAN ABSORB PAY RISE, MAKE GOOD PROFIT—STEELWORKER CHIEF SINGLES OUT UNITED STATES STEEL FOR USING UNION AS SCAPEGOAT FOR PRICE HIKES

WASHINGTON.—United Steel Workers president David J. McDonald charged the steel industry with a long history of irresponsility in its pricing policies that has resulted in higher costs to helpless consumers.

In an attack on what he termed "industry profiteering," Mr. McDonald singled out United States Steel Corp. for using his union as a scapegoat for unnecessary price boosts over the years.

The union chief declared the company could absorb higher labor costs coming soon under a long-term contract without raising prices at all and still show a substantial profit increase over last year.

"But despite this," he asserted, "the corporation is planning its second 1957 price increase and to hide the fact that it is solely to accumulate an even greater profit, its leaders have the affrontery to claim they are forced to raise prices."

Mr. McDonald delivered the criticism of steel-pricing policies, a subject he generally has avoided, in an appearance before a conference of the AFL–CIO Industrial Union Department.

He cited a long list of statistics designed to show that increased profits per man-hour worked in the steel industry have far outstripped higher wage costs.

"Wage increases in steel," Mr. McDonald said, "have not caused a single steel-price increase." This was the only conclusion that could be drawn from the rounds of price and wage boosts since 1945, he said, adding that price increases since then have yielded the industry more than $3 in revenue for each $1 of wage increase.

"The upward movement of steel prices through the years," he charged, "has been caused by the steel industry's determination to widen its profit margin by a consistent policy of imposing ever-higher prices on customers and eventual consumers of steel who are helpless to resist." He added:

"Year after year—and more often than not, twice a year—the steel industry hikes its prices in utter disregard of the welfare of all concerned. Despite pronouncements to the contrary, the price increases are not tailored to increased costs, nor do they bear any relationship to how well the industry is doing profitwise."

Steel management, "as exemplified" by United States Steel spokesmen, Mr. McDonald declared, "leads the field in the irresponsibility of its pricing policies which have contributed to the rising trend of prices for more than a decade." At the same time, he said, management "takes a back seat to no one" for the "sheer quantity of public utterances on the evils of inflation."

This "split personality," he charged, represented "a calculated strategy designed to enable the industry to accumulate even higher profits through continuous steel price increases at the expense of the consumer, and still escape the blame and public censure which such actions deserve."

Mr. McDonald estimated that the total cost of steelworker wage increases and other benefits that will go into effect on July 1 will cost United States Steel less than $51.5 million this year. Without considering any productivity increases, net profits will be reduced by $24.7 million, he said. This, he figured, would still leave the concern with a net profit for the year of $437 million, compared with $348.1 million in 1956, based on current profit rates.

Indian Welfare

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. THYE. Mr. President, there is now pending in the Committee on Interior and Insular Affairs my bill, S. 574, which would establish the Federal Government's responsibility for Indian welfare costs.

On May 27 there appeared an article by Jay Edgerton on the editorial page of the Minneapolis Star, commenting on the philosophy upon which this legislation is based. I ask unanimous consent that this article, together with a letter to the editor written by Deputy Commissioner Ray Lappegaard, of the Minnesota Department of Public Welfare, be printed in the Appendix of the RECORD.

There being no objection, the article and letter to the editor were ordered to be printed in the RECORD, as follows:

INDIAN WELFARE EFFORT TAGGED "RACIST"—NOVELIST OLIVER LAFARGE'S GROUP CLAIMS THAT NORTH CENTRAL STATES POLICY DECLARATION IS "JIM CROW"

(By Jay Edgerton)

One of the strange, almost unexplainable, storms that frequently envelop American Indian affairs is now blowing up around the vexed question of who shall pay the freight on Indian health, welfare and educational work in Minnesota, North and South Dakota and Wisconsin.

The Association on American Indian Affairs has taken out after what most of the upper Midwest considers a reasonable statement on Indian policy—the so-called North Central States policy declaration which lies back of Senate file No. 574, sponsored by Senators THYE and HUMPHREY of Minnesota, MUNDT and CASE of South Dakota, LANGER of North Dakota and WILEY of Wisconsin.

The AAIA is charging that this is a racist document, that it is in fact "Jim Crow."

The AAIA, headed by Novelist Oliver LaFarge, charges in its publication, Indian Affairs, that the North Central States policy declaration, adopted in St. Paul last year, attempts to lay the philosophical ground for denying Indians most of the rights of States citizenship.

It is dismaying, the article continues, to find Minnesota, Wisconsin and the Dakotas seeking Federal financial assistance through the expedient of having their Indian citizens set apart by Congress as a racial group.

To many upper midwesterners, who know AAIA's interest in the southwestern Indians of New Mexico and Arizona, the statement must come as a mysterious contradiction.

The LaFarge group never has had any objection to the Federal Government picking up the tab, or at least a large part of it, for Indian work in Arizona and New Mexico. But when it comes to the upper Midwest, things seem to change.

If one can follow the somewhat tortuous logic here, it develops that Federal payments in the Southwest are based on economic need while those in the upper Midwest are based on race.

"The Federal Government," says AAIA, "in Arizona and New Mexico pays 80 percent of the sums expended for assistance to Navaho and Hopi Indians; but, under the Navaho-Hopi Rehabilitation Act which applies here, the payment is based upon the State's and Indians' economic need, not upon separation of Indians by race."

In all fairness, it has to be said that many upper Midwest Indians go along with the LaFarge group's point of view. They look on SF 574 (which provides for 80 percent Federal payment—the same as in the Southwest) as racist and Jim Crow.

The Standing Rock Sioux tribal council of North and South Dakota has gone on record as opposing the measure and stating that they "bitterly resent the introduction of discriminatory legislation by their own Representatives in Congress and are strongly opposed to the passage of such legislation."

But the people who have to do the actual work of Indian relief—State administrators and welfare workers—can't see that what isn't Jim Crow in Arizona and New Mexico should suddenly become racial discrimination when it is applied in northern States. They argue that the whole problem is one of Federal responsibility—plus the fact that many countries in which large numbers of Indians live simply cannot pay the welfare bill.

A basic premise of this point of view, and it was so stated in the North Central States Indian policy declaration, is that Indian welfare is a Federal responsibility.

"Indians," the declaration said, "are located where they are as a result of Federal Government action and for this reason some States do not have an Indian problem. It is, therefore, unfair that certain States should be forced to assume large financial outlays for proper and necessary Indian services."

It is admitted that somebody will have to pay the bill on Indian welfare for many years. And in the upper Midwest the most heavily populated Indian localities simply are not able to do so. Why is it racist for Uncle Sam to foot the bill?

INDIAN WELFARE

To the EDITOR:

The article Indian Welfare Effort Tagged "Racist" in the May 27 issue of the Minneapolis Star was most welcome. Since it so ably expressed the viewpoint I and others engaged in Minnesota's welfare program, I should admit my opinion could be termed "biased." However, it is extremely refreshing to see the fundamental question of what level of government is responsible stated publicly in a clear, lucid, dispassionate manner.

I personally am convinced that most of the difficulties we encounter in attempting to provide equal opportunity to our Indian citizens stem from the fact that this fundamental question of who is responsible has not been resolved clearly and conclusively. You are doing a great public service by your contribution to public awareness and understanding of these difficulties. Without such awareness and understanding our efforts will continue to be relatively fruitless.

RAY LAPPEGAARD,
Deputy Commissioner, Department of Public Welfare, State of Minnesota.

ST. PAUL.

The Budget

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "What Happened When Ike Teed Off on Budget?" signed by "Hardscrabble," and published in the Arkansas Gazette of April 30, 1957.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHAT HAPPENED WHEN IKE TEED OFF ON BUDGET?

To the EDITOR of the GAZETTE:

"I wish to my soul Ike would make up his mind about the budget," said Timothy Peckworthy. "For the last 3 months, he's been jumping around like a cat on a hot stove."

"You're barking up the wrong tree," I told him, shifting to a figure of speech that I hoped might elevate the conversation. "It doesn't matter what Ike thinks about the budget. It's what the team thinks that counts. This might seem a little odd, for you lived so long under Roosevelt and Truman, that you expect a President to show some leadership in these matters. But we're in a different and more advanced age now. This administration believes in teamwork—

democratic teamwork. The team calls the signals, and the quarterback runs with the ball.

"All this budget trouble started on a day back in January, when the President was seated at his desk, turning a problem over and over in his mind. He was trying to figure out a way to outwit that water hazard on the seventh hole. 'Now, if I make my approach like this,' he muttered, 'and then take a No. 2 iron and * * *.' But at this moment in came the Director of the Budget.

"'What you got on your back?' Ike asked.

"'This is the budget, Mr. President. You might look it over before you recommend it to Congress.'

"At this point, Ike aimed his well-known executive ability at the problem.

"'This thing been through the usual channels?' he asked. 'Everything all wrapped up? No strings hanging out?'

"'Everything is in order, Mr. President.'

"Ike yanked out his pen, made a few preliminary flourishes in the air, signed the accompanying papers, packed all the stuff on the Director's back, and guided him to the door. Then he turned his attention again to that pesky water hazard on the seventh hole.

"But pretty soon, the air outside the President's office was filled with cries of pain and outrage, and Ike learned that the team had not been unanimous in calling that last signal. Secretary Humphrey declared that such an enormous budget would plunge us into a depression. This comment put the elder Herbert Hoover in a reminiscent frame of mind, and he threw off a few remarks that were about as cheerful as a ghost cracking his knuckles in a mausoleum. Prominent Republicans in Congress wrung their hands and beat their breasts as they paced off the measurement of the budget.

"Annoyed and distracted by all this racket, Ike sent messages up and down the channels, begging the team to get together on some signal that a man could understand. But he soon became reconciled to the fact that his administration is divided into two groups—little spenders and big spenders. So he's doing what any fair-minded, likeable President would do. He's giving each group equal time and facilities. On Mondays, Wednesdays, and Fridays, he's the spokesman for the little spenders. On Tuesdays, Thursdays, and Saturdays, he delivers the message of the big spenders. And on Sundays, he loafs, reads westerns, and does a little figuring on the use he's going to make of that No. 2 iron."

"I wish he'd spend less time on golf and more time on the Government," Timothy sighed.

"You leave Ike alone," I said sharply. "He knows what's best for the country."

HARDSCRABBLE.

CONWAY.

Retirement of Eli Lilly

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Lilly Ends 50 Years With Family's Firm," published in the Indianapolis Star of Friday, May 31, 1957; an editorial entitled "Fifty Years With Lilly," published in the Indianapolis News of Friday, May 31, 1957; and an editorial entitled "Fifty Faithful Years," published in the Indianapolis Times of Saturday, June 1, 1957.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Indianapolis Star of May 31, 1957]

TRADITION OF PROGRESS: LILLY ENDS 50 YEARS WITH FAMILY'S FIRM

Eli Lilly, one of Indiana's most honored citizens, tomorrow will complete 50 years of service with the world's biggest phamaceutical manufacturer, founded by his grandfather 81 years ago.

A philanthropist, civic leader and historian, Lilly is retired from active administration of the international firm, Eli Lilly & Co., although he has been chairman of the board since 1948.

The company magazine, the Lilly Review, in its May–June issue outlines the career and character of the Indianapolis industrialist in an article titled "Eli Lilly * * * Man With a Long View."

The family business, during Eli Lilly's presidency from 1932 to 1948, expanded its annual sales from $13 million to $115 million. More important to Lilly, however, was the preservation of the firm's reputation for ethical practice and considerate treatment of employees.

"We must not be too impressed by our size," he cautions, "because, after all, the question is not how big we are, but how good."

Eli Lilly's desire for the company to be "good" in a field sometimes exploited by promoters led to some startling actions, such as the opening of a $1 million research center in 1934, while the depression was closing corporate purses everywhere.

The Lilly firm had a tradition of advanced personnel policies which Eli Lilly continued. During the depression the firm devised a succession of measures such as tearing down and rebuilding machinery to keep people on the payroll.

The company set up a pension program in 1920 and a group insurance plan in 1927.

Throughout his life Lilly has found time for numerous other interests. A product of his research in local history is the volume, Prehistoric Antiquities of Indiana, published in 1937. For 14 years he was president of the Indiana Historical Society.

His grandfather is listed as one of the founders of Indianapolis, and the family has demonstrated continued interest in civic and philanthropic institutions.

The Lilly Endowment has donated in 20 years $18,500,000 to colleges, hospitals and other charities. The city's first United Fund drive this fall will have Eli Lilly as its honorary chairman.

Other interests in which Lilly indulges more freely since his retirement are boating, fishing, woodworking and travel. He and his wife, Mrs. Ruth Allison Lilly, spend much of the spring and summer at their home on Lake Wawasee.

This year they will interrupt the summer routine for a trip to Switzerland. Then Eli Lilly will come back to his current historical project—some notes on early Wawasee—and to his quiet works.

[From the Indianapolis News of May 31, 1957]

FIFTY YEARS WITH LILLY

Tomorrow a modest, quiet man will have completed a half century of service with Eli Lilly & Co.

Such an event is ordinarily of importance only to the individual and the corporation involved. However, the anniversary tomorrow has a significance far beyond the plants and offices of the Lilly firm because the man completing 50 years is Eli Lilly, the 72-year-old board chairman.

One reason we think the occasion is of community-wide significance is that in Mr. Lilly's 16 years as president the company's sales increased from $13 million annually to $115 million in 1948, the year he relinquished the presidency to his brother, J. K. Lilly.

In that same period the number of employees increased from 1,700 to 6,300. Floor space increased from 600,000 square feet to more than 2 million.

The impact of these statistics on a community fortunate enough to have such a vital manufacturing firm is tremendous.

Eli Lilly & Co. has, of course, continued to grow with undiminished vigor since he retired as president and became board chairman. Its sales are at the top of the world's pharmaceutical manufacturing firms.

Mr. Lilly, although he has played a leading role in that growth, is not impressed by sheer size.

"The question," he says, "is not how big we are, but how good."

In this statement is the secret of the internationally distinguished reputation of the Indianapolis firm. Perhaps it is why Lilly's devotes so much attention to research so that ways can be found to make only the best.

Eli Lilly is the grandson of the founder of the firm. Quietly, unobtrusively, he has accepted the responsibilities of his position in a manner by which the entire community has benefited.

He has been described as an industrialist, philanthropist and humanitarian. And he is all of these in the best meaning of the terms.

We congratulate Mr. Lilly, the company and the city on the occasion of his 50th anniversary of service.

[From the Indianapolis Times of June 1, 1957]

FIFTY FAITHFUL YEARS

Few men of power and such overwhelming modesty have made the mark on the community, and the wide earth, as has Eli Lilly, chairman of the board of Eli Lilly & Co., who today ends his 50th year in the service of humanity.

The Lilly family has been the sturdy hub of this community, in its exacting industry, its relentless search for new ways to preserve and improve human health, in its charities and philanthropy, through its long, pulsing growth.

Eli Lilly is a quite man. A boast has never crossed his lips. Pride is not in him. But there is something infinitely stronger, a kindness and a humility which from his childhood when he was baptized in Christ Church Cathedral on Monument Circle has been as much a part of him as the patient beat of his generous heart.

Mr. Lilly is a man who puts things in their proper order as few do. His church comes first, his family second, his business family third. But they are only fractions of an inch apart. Indeed, in one quick look at Mr. Lilly you see them all at once in the high integrity he has put into his products, his words and his deeds.

A man of many interests, he has kept himself mentally young. He is an authority on archeology, Chinese art, the study of the origin of man and the church from which man gets guidance for his spirit.

He learned early that Lilly products had to stand for the highest in character. He set up means of protecting their standards, never copies a formula for a medicine. Instead, he has all formulas blueprinted. There can be no mistakes.

He has held the highest honors in his profession. He has almost endless college and university degrees. He would never tell you so, but he has built his company into an unsurpassed pinnacle of perfection recognized the world over.

Through the Lilly family's charitable trust, Lilly Endowment, Inc., he has given

away $18.5 million in 20 years for his community. He has invested money everywhere in the intangibles of life, all those which promise permanent value.

He is one of the world's leading disciples of research, finding new and better ways. He knew long ago that if his company is to live it must lead. He has poured millions into finding unknown secrets of human health, agriculture and means of adding to the happiness of the human individual.

He is not without hobbies. A man thinks best when he works with his hands. He is a woodworker, a sailor, a farmer, an author. He is many things, all contributing to the dignity and majesty of his fellows.

This day with an effort at equal humility, we extend a congratulating hand to Eli Lilly, who has learned the secret of living every minute of his life to its fullest—but living it always for other men.

June Is Dairy Month

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. THYE. Mr. President, I ask unanimous consent that an article entitled "June Is Dairy Month," published in Wallaces' Farmer and Iowa Homestead, June 1, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUNE IS DAIRY MONTH—WHEN YOU BUY A GLASS OF MILK, ARE RESTAURANT OPERATORS REALLY COOPERATING WITH DAIRY FARMERS?

(By Dave Bryant)

The colorful poster on the restaurant wall proudly proclaimed: "June is dairy month—We are cooperating."

Fine.

I ordered my lunch from the menu—substituting milk for coffee.

Then came the bill. Sure enough. I was charged 5 cents extra for the milk.

Paying the bill, I glanced at the "We are cooperating" poster.

Who wouldn't want to cooperate with a program that would enable them to sell an 8-ounce glass of milk for 15 cents? That $30 per hundred pounds.

Somebody was getting a lot bigger chunk out of the price of that glass of milk than was the farmer who produced it and paid for the June Dairy Month poster with his check-off.

How did I get the 15-cent price? It's easy to figure. Coffee in most eating places now sells for 10 cents a cup. Coffee comes with the meal.

Substitute milk, and you pay for the coffee and add 5 cents. Total, 15 cents.

To be fair, it must be noted that some restaurants do permit you to substitute milk for coffee without extra charge. But they're too few.

Fortunately, some folks like milk well enough to pay the price. But why put a price penalty on milk?

The Nation's dairy farmers are spending a lot of money—about $6 million—this year to push the sale of dairy products.

Dairy farmers provide free posters promoting the sale of milk and other dairy products served in restaurants. And dairy farmers are pushing the idea of "milk with your meal—coffee later," another help for restaurant operators.

Is it too much, then, to ask the restaurant operator to sell milk for something less than 12 or 15 cents per glass—especially during June Dairy Month? Is it too much to ask that they put some meaning into the word, "cooperate"?

Another pet peeve. I couldn't begin to count the number of times that I've had a waitress suggest coffee as a beverage. But, so help me, I can't recall a single waitress who suggested milk.

What do dairy farmers think of restaurant milk prices?

The fact is: Most of them haven't given the problem much attention. They're producers—not merchandisers.

Most dairy farmers feel that they're doing their part toward promoting sales of dairy products when they contribute through the year-round checkoff—one cent per pound of butterfat during May and June, and one-half cent per pound of butterfat or 2 cents per 100 pounds of milk during the other 10 months.

Added to that, good dairy farmers eat most of their meals at home—close to the cows. Few of them have a chance to make their own surveys of restaurant milk prices.

And those who've spotted the problem find it rather baffling.

"I'll cuss all you want me to," says Eves Cadwallader, prominent Mahaska County, Iowa, dairy farmer. "But I don't know what else to do about it."

Then he adds: "It's the same old story. They set the price on our products at both ends—to us and to the consumers."

In Poweshiek County, Iowa, veteran dairyman Alvin Mann feels about the same way. "I've never been able to figure out why they charge more for milk when you substitute it, but most of them do," Mann says.

That's it. You can't tell a restaurant operator how to run his business—any more than you would let him tell you how to feed your cows.

"I don't know what we can do about it," says Claire Wemer, another Poweshiek County dairyman. "Except to commend the ones that don't charge extra for milk."

Maybe that's the only answer. Maybe it's time for dairy farmers and June Dairy Month committees to do a little checking up in their own committees—find out how milk is being sold.

Then express appreciation to restaurant operators who really are cooperating in the dairy-promotion program.

Maybe the dairy farmer can do more than contribute to dairy product promotion through the checkoff.

What results might be expected if every dairy farmer were to go on a little crusade of his own during June—visit some restaurants, ask questions about milk prices, and make commendations where they are deserved?

Resolutions Adopted by Sons of American Revolution

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, June 10, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of five resolutions adopted by the National Society of the Sons of the American Revolution at its recent annual meeting held at Salt Lake City, Utah.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

FALSE PHILOSOPHY OF EQUALITY

Whereas we hold the following truths to be self-evident:

Governments are often established by philosophers and it is generally the philosopher who takes a hand in their destruction.

ALL MEN ARE NOT EQUAL

The doctrine of human equality is to be found neither in the Declaration of Independence, the Constitution, the Bill of Rights, nor the Bible.

That doctrine is to be found in Das Kapital, the bible of communism.

It is a specious falsehood repeated thousands of times in school textbooks, newspapers, in television programs, and on the radio. We find it in the writings of Marxists and eggheads who have converted it into a propaganda weapon of tremendous power. It is now being used to support a Socialist interpretation of a nonsocialistic document—the Constitution of the United States.

It has been the basis of many recent decisions of the Supreme Court of the United States.

We deem it our right, and our duty to denounce this doctrine for what it is—a false interpretation of our basic law.

We, therefore, resolve and dedicate ourselves to the task of doing everything in our power to expose this falsehood, whenever, and wherever it may appear. We call upon other organizations and their members to do likewise until the force of public opinion will compel a return to the true philosophy on which our Government is founded.

We assert, and are prepared to prove, that all men are born with equal rights and are subject to equal responsibilities. They are entitled to equal justice under law. In all other respects, men are unequal. It was never the intent or the purpose of the framers of our Constitution to reduce all men to a dead level of mediocrity.

TO PROTECT THE RIGHT OF TRIAL BY JURY IN INJUNCTION CASES

Whereas the Attorney General of the United States has recommended to Congress that citizens be deprived of their right to a trial by jury in contempt of court cases involving an alleged violation of injunctions, orders, and other decrees and relating to situations where there is no obstruction to the orderly conduct of a trial, or other conduct where summary use of the contempt power would be justified.

It is proposed to accomplish this denial of the right to a jury by permitting the United States to intervene and become a party to pending litigation, or commence action in its own name in the first instance.

We regard this as a dangerous infringement of basic rights and recognize that it will inevitably lead to abuses affecting the people of all the States. This practice, if sanctioned now as a device to deal with a particular type of litigation, will inevitably be extended to other types of legal actions and in the end, government by injuction will be substituted for trial by jury: Now, therefore, be it

Resolved, First, that we declare our unalterable opposition to all legislative bills which will have the effect of denying the right of trial by jury in injunction enforcement cases.

Second, we call upon the Congress of the United States to take affirmative action, by statute, securing the right to a trial by jury

in all cases other than those involving use of the contempt power to maintain order during the conduct of a trial.

SUPREME COURT DECISION UPHOLDING RIGHT OF COMMUNIST TO PRACTICE LAW

Whereas the Supreme Court of the United States, in one of its latest decisions, lent its prestige and dignity in support of the proposition that the board of bar examiners of a State may not find and determine that a former member of the Communist Party is morally unfit to practice law.

We think it is time to direct public attention to this latest example of false philosophy on the part of the justices of our highest Court.

Now, therefore, be it

Resolved, That we do hereby exercise our unalienable right to criticize the Supreme Court of the United States, and the several justices thereof whenever such action appears justified. We suggest to other organizations, that they do likewise. We remind the justices of that Court of their solemn oath to support and defend the Constitution of the United States.

NONSENSE AND THE FIFTH AMENDMENT

Whereas we have been deluged for years with the propaganda of so-called "liberals" rushing in to defend the fifth-amendment witness and depicting his sad plight and self-imposed martyrdom.

Much nonsense has been and is being said on this subject.

Finally, the answer to this philosophical dilemma has been found by Professor Sidney Hook in his work "Commonsense and the Fifth Amendment" wherein he states that we are morally justified in demanding an answer to unloaded but devastating questions such as the following:

"Do you now, or have you ever beaten your wife?"

Now, therefore, be it

Resolved, That we commend Professor Hook for the contribution he has made to the cause of sanity and clear thinking by the writing of this book.

That we assert that it is now time to apply to the fifth-amendment witness the moral judgment so completely justified in the case of any man who, by his refusal to testify, shields and protects those who seek to overthrow our Constitution and form of government.

TO MAINTAIN FREE DEBATE IN THE SENATE

Whereas maintenance of freedom of debate in the United States Senate performs the same essential function as freedom of the press, under the first amendment, in keeping the people fully informed in respect to matters which may vitally affect their freedom and the security of constitutional rights.

In recent years various attempts have been made to bring about the enactment of restricted rules in the Senate of the United States which may endanger freedom of discussion in that House of Congress.

We recognize the possibility of abuse of the right of free debate in the Senate, just as we know that freedom of the press is, at times, abused.

The alternative, which is control of debate, and may lead to a condition equivalent to the censorship, is too dangerous to be seriously considered.

Now, therefore, be it

Resolved, That we express our unalterable opposition to the enactment of any rule in the Senate which will substantially alter the right to freedom of discussion secured by Senate rule XXII.

We call upon the Rules Committee of the Senate to protect this essential right when acting on pending proposals relating to the change of that Senate rule.

Administration of George M. Humphrey as Secretary of the Treasury

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Robert B. Anderson's Burden," written by J. A. Livingston, and published in the Washington Post and Times Herald of June 6, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROBERT B. ANDERSON'S BURDEN

(By J. A. Livingston)

George M. Humphrey may go down in the history of Republican administrations as a great Secretary of the Treasury. Certainly, President Eisenhower regards him as such. Yet, in cold statistics of Treasury finance, Humphrey will leave behind what some irreverent Wall Streeters call a financial mess.

To say that Humphrey failed as Secretary of the Treasury is too hard. A failure is a person who has the tide with him and doesn't use it. The tide was against Humphrey.

When he first took office, he made it clear that too much of the Federal debt was short-term—under 5 years. He was going to "lengthen it out." He selected W. Randolph Burgess from the powerful post of chairman of the executive committee of the First National City Bank of New York for that intractable task. If any man could, Burgess—with a background as a money-market specialist, author of the noteworthy book, The Reserve Banks and the Money Market—would succeed in spacing, simplifying, and systematizing the Federal debt structure.

Here are the results:

Five years ago, in December 1952, just before President Eisenhower took office, 34.9 percent of the marketable debt owned by banks, insurance companies, and other nongovernment investors was due in less than a year. Today (in February 1957), the percentage of debt due inside a year is exactly the same—34.9 percent. No improvement there.

Five years ago, 25.3 percent of the debt matured in 1 to 5 years. Today, 31.2 percent. Deterioration. More debt is coming up for early refinancing.

Five years ago, 17.2 percent of the debt matured in 5 to 10 years. Today, 12.5 percent. Again, deterioration. The proportion of longer-term debt is lower—exactly contrary to original intent.

Finally, 5 years ago, 22.5 percent of the debt matured in more than 10 years. Today, 21.4 percent. A slight deterioration in the percent of long maturities.

That's Robert B. Anderson's heritage as the incoming Secretary of the Treasury. Government maturities are closing in at a time when industrial corporations, public utilities, and State and local governments are calling for money. And the money market isn't exactly overflowing with cash-laden investors.

And Treasury financing costs are up. In December 1952, Government bonds were selling to yield 2.74 percent. Today, if the Treasury had to borrow, it would have to pay about 3.5 percent for long-term money. Interests costs, over $6 billion a year 5 years ago, now run to about $7.5 billion, a 25 percent rise.

How is it, then, that in a letter expressing "profound regret" President Eisenhower thanks Humphrey for his "extraordinary talents"? The answer is that Humphrey is honored for his influence outside the Treasury more than for his work inside it. He was the man, as President Eisenhower himself said, all "listened to" at Cabinet meetings.

Humphrey was a dedicated servant to orthodoxy at a time when orthodoxy was costly. He was unwilling to pervert the Federal Reserve System into a Treasury handmaiden. He did not press the Reserve to buy Treasury bonds and so support the Government market. That would have enabled the Treasury to sell long-term issues and thus elongate its maturity schedule.

But that would have amounted to monetizing the debt, creating money by Government fiat. It would have increased demand for goods and services, added to inflationary pressures. It would have undone the victory of former Reserve Board Chairman Thomas B. McCabe over former Secretary of the Treasury John W. Snyder in the Truman administration.

Humphrey sacrificed ease of financing, cheap financing, to what he regards as the greater good—sound money. All the while his ambition was to pile up Government surpluses in the manner of Andrew W. Mellon and pay off the short-term debt.

But peacelessness—the war of nerves with the Kremlin—permitted no big surpluses. The debt he leaves behind is bigger than the debt he started with. And Treasury maturities come tumbling over one another in critical bunches.

That's Humphrey's failure—a failure that's a monument to his courage, character, and unflagging loyalty to his own and President Eisenhower's belief in a sound dollar.

Shocking Disregard of Basic Right

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Shocking Disregard of Basic Right," from the June 5, 1957, issue of the Metropolitan Herald of Atlanta, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOCKING DISREGARD OF BASIC RIGHT

The decision of the Eisenhower administration to surrender an American serviceman to a Japanese court for trial for an act committed while he was on duty has shocked most Americans and put fear in the hearts of the parents of all servicemen serving abroad.

If as Secretary Dulles and Secretary Wilson state the "firing of empty shell cases from the rifle grenade launcher was not authorized," then the young soldier should be tried by an army court-marital.

We can see no justification whatsoever in surrendering the youth to Japanese authorities, in this instance, even under the questionable "status of forces" agreement. The act for which the soldier is charged was committed while he was on guard duty on an American firing range.

It seems to us this is just another step of appeasing foreign nations at the sacrifice of the basic rights of an American soldier.

The sacrificing of the basic civil rights of an American soldier comes at a time when the administration's Attorney General is doing his utmost to get Congress to pass legislation which would deprive accused American citizens the right of a trial by jury when charged with violations of so-called civil rights measures.

Try as hard as they may, administration leaders cannot separate these two major acts. They are willing to sacrifice the rights of an American soldier to appease the Japanese government and they are willing to sacrifice one of the most basic civil rights—the right of a trial by jury—to appease a vocal political bloc vote minority.

We trust that the Congress of the United States will not fail to see the connection and the grave threat these actions pose to our fundamental liberties.

Billy Joe Mitchell of Warren County, Ky., Selected Kentucky Star Farmer by Kentucky Future Farmers of America

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "A Star Farmer Is a Testimonial" which appeared in the June 9, 1957, issue of the Courier Journal of Louisville, Ky.

Billy Joe Mitchell of Warren County was selected the Kentucky Star Farmer by the Kentucky Future Farmers of America. I take great pride in my fellow Warren Countian's accomplishments. At 17, Billy Joe has 11 years of practical farming experience, and his efforts have not gone unrewarded.

The editorial is as follows:

A STAR FARMER IS A TESTIMONIAL

The annual selection of Kentucky's Star Farmer from among the boys of FFA is practically a course of instruction in agriculture. Out of it comes information of the Star Farmer's farm plan, and this is bound to be good or else there'd be no point in the contest.

In the case of Billy Joe Mitchell of Smiths Grove (Warren County), who is 1957's Star Farmer, the winning program is a guide to suitable and profitable farming in Kentucky. There on an easily manageable 158 acres is the burley allotment, the 1.35-acre cash base. There are the 80 acres in grain, the 25 acres in alfalfa hay.

And this, naturally, brings us to the core of the Kentucky pattern. It brings us to the livestock, the indispensable substance—the mortgage raiser, the improvement factor, the home builder. Billy Joe Mitchell owns 13 head of registered Holstein cows. With his brother Smith, his partner in the program, he owns 120 feeder hogs.

The land, of course, is owned in the partnership. The two boys have come far. Billy Joe, this year's Kentucky champ, is living proof that industry and dedication pay, that the fellow who talks of farming as a depressed occupation does not know the likes of the Mitchells. Given intelligence and capacity, given love of land and experience with life on the productive land (Billy Joe's began at six), the farmer is the man who asks and needs no commiseration. Rather, the call is for envy.

Closing Statement by Loyd Wright, Chairman, Government Security Commission

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

CHAIRMAN'S CLOSING STATEMENT

As Chairman of the Commission, I have been privileged to hold a position in the central flow of the materials considered and in constant contact with the processes of our work. Having enjoyed this unique opportunity for observation, I am constrained to offer a comment by way of supplementation in this closing chapter of the report. The opinions expressed, which could not have been included appropriately elsewhere, are my own, and not necessarily those of my associates of the Commission.

My first purpose is to commend my fellow Commissioners for their tireless and objective dedication to our task. There could be no more eloquent testimonial to the best of American traditions than their devoted service, given at great personal sacrifice, in the effort to protect both the national security and individual rights.

To observe the impressive accomplishments of the entire staff and to witness the unselfish response of the citizens called upon for aid in our endeavor has been heartening. The experience proves fully the wisdom of the Congress in making use of commissions of this kind for study of its legislative programs.

For the citizen from private life, an opportunity for objective study of the work of the legislative branch in the vital field of protecting national security is both instructive and reassuring. As an American who has reviewed the reports of various congressional committees and who has been privileged to examine the Government files, I am convinced that the investigative function of the Congress is both constructive and essential, and that on the whole the function has been discharged with fairness by sincere men seeking to met a difficult responsibility. And I am grateful and proud that the Congress, despite the emotional stress of total war and uneasy peace, has proved able to enact legislation that in the main preserves without encroachment the principles of individual liberty and government by law.

The completion of the Commission's work does not bring to an end the need for continuing study of the demands of national security. The challenge which confronts the Nation is ever changing. In the short 18 months of the Commission's life, the 20th Congress of the Communist Party of the Soviet Union revealed a shift in conspiratorial strategy, raising new problems to be coped with. Recently, developments have made it clear that Mexico has become the unwilling center of Communist activity on this continent, imposing new burdens upon the American authorities who patrol the difficult terrain of this frontier, and suggesting the need for congressional consideration of additional safeguards.

Judicial decisions rendered during the past year have required modification of the security programs, and, apparently, similar changes can be anticipated for the future. Both the legal profession and an informed citizenry have found cause for concern in the judicial delays that have left in doubt many of the basic issues of the security system. Prosecutions under the Smith Act and the proceeding to declare the character of the Communist Party have been deferred. The log jam seems to be attributable to several causes. First, as recently noted by Justices Frankfurter and Harlan, the Supreme Court has appeared to direct its energies toward the disposition of "insignificant cases," thereby "doing injustice to the significant and important cases on the calendar." (*Ferguson* v. *Moore-McCormack Lines* (352 U. S. 521, at 546 (1957)).

A second cause of uncertainty on these critical questions is the apparent tendency of certain lower courts, both District courts and courts of appeals, to allow cases involving the security laws to lie dormant on the calendar pending clarification by the Supreme Court. Under our judicial system, the proper concern of these lower courts is rather to assist the upper court by well-reasoned decision than to build a good record of affirmance and reversal. The maxim that "justice delayed is justice denied" is no less true in the field of security. When the Government is a litigant, the interests not only of the particular defendant but of all 170 million Americans are involved. Every defendant, even a Communist, is entitled to a fair and impartial trial. In these cases it is well to remember that often the defendant has by his own actions brought about his plight. He is certainly entitled to no more consideration than the 170 million parties litigant whom he seeks to subvert. Delays not premised upon necessity, appropriate extensions of time, or the principle that unnecessary constitutional questions should not be passed upon, inevitably impair the effective protection of the Nation. It is not easy for the Attorney General, charged with representing the interests of the people, to make his case after delays of 3 or 4 years. In the face of these obstacles, the Department of Justice's Internal Security Division has done a commendable job.

As this is written to meet a publication deadline, confusion has been compounded by the decision of *Jencks* v. *United States*.[1] When we are striving to survive the insidious attacks of the Kremlin seeking to destroy our government of law, it is disheartening that "blind justice" is unnecessarily blinded to realism. I respectfully urge the Congress that if we are to keep pace with our enemies who seek to infiltrate our Nation to subvert us, immediate legislation must be passed to negative the grave consequences that will flow from this confusing decision.

Such problems of security will command careful attention in the future. Continued study of the workings of the program will be imperative, and deserved criticism should be encouraged. But baseless, carping censure can serve only to discredit the responsible legislators and officials and to undermine the confidence in Government that is essential to national security. In this respect the responsibilities of the public press assume a heightened significance. In a government built in a republican form superimposed upon the philosophies of a democracy, the

[1] United States Supreme Court, June 3, 1957. The staff of the Commission, after hours of study, could not reach an accord either as to the legal consequences or probable effect of this decision.

operations of its officers cannot be cloaked in complete secrecy. An informed citizenry is a major premise of our governmental structure. But that same structure may be destroyed if a potential enemy is supplied with information critical to national self-preservation. The final responsibility for the difficult decisions of what shall be secret must be confided in those loyal and devoted public servants who are qualified to make the judgment. No citizen is entitled to take the law, and the safety of the Nation, into his own hands. With near unanimity, the American journalism profession has conscientiously observed these limits. But there are a few exceptional cases, which for some reason have escaped prosecution. The purveyor of information vital to national security, purloined by devious means, gives aid to our enemies as effectively as the foreign agent. I commend to the special consideration of the Congress the Commission's proposal for unequivocal prohibition of such irresponsible and unauthorized disclosure and for vigorous prosecution of every offender.

In closing, I am pleased to report that through the aid of the President in making available to us detailed studies conducted by other agencies and through the excellent management of our executive secretary, Mr. Douglas Price, the Commission has been able to complete its work with a saving of approximately $150,000 from the $883,000 appropriated for the work by the Congress.

Michigan's Tax Policies

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. GRIFFIN. Mr. Speaker, press notices concerning Michigan's tax policies and their effect within the State upon industrial expansion, or lack of it, have reached all over the country.

There follows an article summarizing the situation which appeared in the June 6, 1957, issue of the Muskegon (Mich.) Chronicle:

(By William C. Kulsea)

LANSING, June 6.—The boyish grin is gone. The shoulders are stooped. The pout of the lower lip is more pronounced. Even the green-and-white polka dot tie has lost its swagger.

For the first time in nearly 9 years, Gov. G. Mennen Williams has been hurt politically.

From nearly all sections of Michigan, from California, from Texas, from New York, and from Massachusetts reports are coming in that Williams is driving industry out of Michigan.

His opponents are crying that the Governor's tax policies are chasing industry out of the State, and preventing new business from coming in.

The Governor has been shouting back—"It's libel on the reputation of the State"—"irreparable damage is being done"—"This is mass hysteria"—"This is politics both in Michigan and in Washington."

But his denials are coming into an echo-chamber, and so far are being heard only by his partisans.

And even some of them are beginning to wonder. Reports reaching the executive office are that Negroes in Detroit are asking "Why is Soapy chasing industry out of the State?"

The story is a prairie fire among many minority groups. Many are taking a backward glance at their 46-year-old favorite to see what all this means, why are so many losing jobs, why doesn't Williams come out and say it isn't so and make it stick.

"It's a bum rap," say his aids.

The peerless public-relations organization operated by Paul W. Weber, his press secretary, so far is stalled. It doesn't know how to fight back.

Here's the problem, as outlined by one of the Governor's aids:

"It's a hard thing to fight. Take a man who owns a plant in Michigan. He decides to expand. He spends some money for minor expansion of his Michigan facilities and then announces he's going to build a new plant in Kentucky. He says he's doing that because taxwise it will be cheaper for him to do that there than in Michigan.

"It's a personal matter. It's his plant, his money, and his problem with taxes. It's his own idea and there's no way you can disprove it. There have been so many of these cases lately that you can't begin to cope with them all.

"It's propaganda. We know it, but we can't fight it with the same formula we used in other cases."

It all began innocently enough several months ago. The governor said a University of Michigan study showed that taxation is not an important factor in having industry locate in a State.

The Republicans in the legislature screamed like they had just caught a burglar at the State treasury safe.

Leading the pack was house speaker, George M. Van Peursem, of Zeeland. He was aided by businessmen and industrialists who took issue with the governor's interpretation of the report. One of them was Harlow H. Curtice, president of General Motors.

Williams took off after Curtice on the theory that "his blast" was the most damaging, but he was too late.

Curtice deepened the wound with these phrases:

"* * * Even the present level of business taxation in Michigan has already led us to locate plants in other States, where the taxes per General Motors job are less than one-half of the present taxes per job in Michigan. This will also be taken into consideration in the placement of additional plants.

"Obviously, if the governor's plan of taxation is adopted the resultant excessive tax level will be even greater influence in our decisions with respect to locating new plants and providing new job opportunities."

This and a prior statement by Curtice triggered a reaction that has painted Williams as a tax-happy Governor.

For 7 of the 8 years he has been in office, Williams has been asking the legislature to adopt a corporate profits tax. It hasn't.

Editorial writers all over the country responded to Curtice's statement.

The Financial World warned: "His [Curtice's] words serve as a voluble reminder that no one State has a monopoly of natural resources or labor and it behooves State governments to be efficient and reasonable lest they lose competitive position."

The Buffalo Evening News: "Michigan * * * is risking the loss of industry to other States."

The Chicago Tribune: "The State that punishes industry with heavy taxes will not get new plants, other things being equal."

Tampa Daily Times: "It is equally true that industry will shy away from those States with inefficient governmental organization and heavy tax loads."

New Bedford (Mass.) Standard Times: "Every company must give major consideration to the tax factor when choosing a site for manufacturing facilities."

Omaha Evening World-Herald: "Obviously, there is a point at which returns from increasing tax rates and new forms of taxation begin to diminish. Michigan may be nearing that point."

Washington Evening Star: "There should be some reasonable balance between the tax burden and the advanges received in return. It is an area in which economic considerations, rather than political ones, should be prevailing."

In the governor's office, his aides have one thing to smile about. It's 18 month's before the next gubernatorial election next year, and the controversary may blow over.

Mr. Speaker, whether the charges and countercharges concerning Michigan's tax policies are true or false, the publicity attending them has not enhanced the State's reputation as a home for industry. Since I represent a congressional district where there is now considerable unemployment, I believe it is essential that an appropriate committee of the State Legislature get to the bottom of this matter as quickly as possible and straighten it out, if possible. There follows a letter which I mailed today to the presiding officers of the two houses of Michigan's Legislature:

JUNE 10, 1957.

Hon. PHILIP A. HART,
President, State Senate.
Hon. GEORGE M. VAN PEURSEM,
Speaker, State House of Representatives, The Capitol, Lansing, Mich.

GENTLEMEN: In recent weeks, national, as well as State-wide, attention has focused upon the tax policies of Michigan and their effect upon industrial expansion, or the lack of it, within our State.

I am very interested in this subject because at the present time there is considerable unemployment in northwestern Michigan, particularly at Muskegon and Traverse City. Several plants in that area have closed their doors during the past year, while at the same time, I am aware through conversations with some of my Ohio colleagues in the Congress, that Ohio is now flourishing industrially with many new jobs being created there.

The purpose of my letter is not to point an accusing finger or to pass judgment; but I believe that the many laboring people who are out of work, as well as the rest of the citizens of Michigan, are entitled to know some facts. If State tax policies or other conditions are causing industries to prefer other States to Michigan, then unfortunately it is the laboring people of our State who are the real losers—not industry. In view of the recent nationwide publicity, which has been very damaging to our State's reputation, I believe the charge that State and local tax policies are discouraging industrial expansion in Michigan, should now either be substantiated or discredited.

Accordingly, I wish strongly to urge that an appropriate committee of one or both houses of the State Legislature commence immediately to study and conduct a thorough investigation of the charge.

If I can be of assistance in any way, please let me know.

Sincerely yours,

ROBERT P. GRIFFIN,
Member of Congress.

Independent Airlines Set New Safety Record

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. LANKFORD. Mr. Speaker, it is with extreme pleasure that I call atten-

tion of my colleagues to the fact that the Nation's independent airlines have established a new passenger safety record for the air-transportation industry.

I am informed by Mr. Jesse F. Stallings, president of Independent Airlines Association, that the independent airline industry has completed over 18 months of fatality-free operations to surpass a previous record established by the scheduled airlines in domestic operations between March 26, 1939, and August 31, 1940.

The supplemental air carriers—formerly known as nonscheduled lines—have flown in excess of 2½ billion passenger-miles without a fatal mishap since November 17, 1955.

Restricted as to the amount of civilian common carriage business they may do, the independent airlines have developed the market for peacetime transportation of military personnel and are rendering a great service to our national-defense effort, as well as saving the Government considerable money in this respect. These lines also represent an essential element of the Nation's reserve airlift capacity available for use in case of national emergency.

So on the occasion of establishing this new safety record I offer congratulations to the Nation's small businesses in air transportation.

Alleged Post Office Subsidy to Railroads

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Herbert B. Brand, director, railway mail transportation division, Association of American Railroads. This statement was recently submitted to me as a supplement to Mr. Brand's testimony before the Senate Committee on Post Office and Civil Service.

Testimony alleging that railroads are enjoying a $100 million subsidy has recently been published across the Nation. In fairness, I think Mr. Brand's statement opposing this claim should be made a part of the public record. However, it should be distinctly understood that neither the chairman nor the committee has endorsed either side of this question. In fact, the committee has not yet completed its study, nor has it made any recommendations relating to the overall problem of postal policy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ALLEGED POST OFFICE SUBSIDY TO RAILROADS

The Advisory Council report says that by not enforcing the existing Federal statute, the executive branch has caused the post office to grant railroads a subsidy of $100 million a year.

It is difficut to imagine a more baseless, untrue, and irresponsible assertion. The facts are (1) the post office did endeavor to have the statute mentioned applied, but after investigation the Interstate Commerce Commission held it to be obsolete and incapable of application; (2) the railroads are paid on the basis of their mail transportation costs, as determined by the ICC in litigated proceedings; (3) the railroads receive no subsidy from the post office or any other agency of the Government, although their highway and air competitors do receive a substantial financial assistance from various Government agencies; and (4) the railroads are now spending more money to serve the Department than the Department is paying them.

Let us examine first the alleged $100 million subsidy. A subsidy is a payment—in cash, property, or service—in excess of fair compensation for services rendered. There is no statutory authority for the post office to pay railroads any subsidy whatsoever and it does not do so.

In general, the Department pays the railroads for the many services already described, rates and charges fixed by the Interstate Commerce Commission. The railroads cannot set their own mail rates. The Commission has never fixed rates and charges higher than the railroad cost incurred to serve the Department; it has fixed them below the railroad cost.

The Commission does not casually accept railroad figures as the actual cost; regular legal proceedings, including field studies, long hearings, and legal arguments are held to determine the cost. Post Office and Department of Justice lawyers and witnesses participate, and the entire Commission makes the decision in a quasi-judicial capacity. For example, in 1947 the railroads were forced by rising costs to seek an increase in mail rates. It was 1951 before the final increase was granted, the first since 1928. The Commission relied on its own cost study, and expressly stated that the increase would not cover the entire railroad mail costs as found by that study.

This increase did not, in fact, provide revenues sufficient to cover costs, and costs continued to rise. In 1953 an increase was sought to cover this deficiency. The railroads finally agreed with the Department upon a 10-percent compromise settlement and this was later aproved by the Commission. The Commission again found, however, on the basis of the evidence, that the 10 percent was not adequate to meet the increase in railroad mail costs. Because of subsequent changes in policies and practices of the Post Office Department, the railroads actually realized only a small part of this increase.

With rates already to low to cover costs, the rise in expenses since 1953 has increased the railroad mail deficit. The railroads are now before the ICC seeking rate increases to compensate them for the full costs being incurred to serve the Department.

The law requires railroads to serve the Department as it commands, and for that reason also provides that railroads are entitled to fair and just compensation as determined by the ICC. The Supreme Court has held that the Constitution entitles the railroads to recover from the Government their full cost incurred in furnishing services required by the Department. But, as I have explained, the ICC has conservatively fixed rates on the low side. In addition, the Department has successfully negotiated a number of railroad contracts for particular services at less than the Commission-fixed rates. For these reasons, along with constant increases in wage rates and other railroad expenses since World War II, the Department now pays far less to the railroads than they spent to transport and handle mail.

It is fantastic to say that a business is subsidized when it is not even receiving compensation sufficient to cover the cost of its service. The Department may not agree that our costs are as high as we believe, but the Commission will eventually resolve this question of fact. It is indisputable that present railroad rates are below cost, and, by performing mail transportation at a loss, the railroads are actually subsidizing the Post Office and the Federal Government. Ironically, the Government at the same time is subsidizing railroad competitors. Not only has the Post Office (now CAB) paid millions of dollars in cash subsidies to the airlines under the Civil Aeronautics Act, but in fiscal 1956 the Federal Government spent $790 million for highways and $263 million for cash subsidy and aviation aids and facilities. In addition, State and county expenditures for these or similar purposes were substantial.

Under these circumstances, how could the advisory council possibly conclude that the railroads are being subsidized? Ignoring railroad losses in carrying mail, the council says a subsidy exists through the failure of the executive branch to enforce the provisions of section 557 of title 39 of the United States Code. This section was enacted in 1916. It provides that from time to time the Postmaster General (1) shall request information from the Interstate Commerce Commission as to revenue received by the railroads from express companies for services connected with the transportation of express matter; and (2) may in his discretion arrange for the transportation of other than first-class mail at rates not exceeding those so ascertained.

In the first place, the council's basic premise is incorrect. The Post Office has made every effort to invoke this section. The Interstate Commerce Commission, which of course, is an arm of Congress, not part of the executive branch, has investigated and held that the 1916 provision is now obsolete, useless, and incapable of enforcement. The reasons are apparent.

The transportation of express matter by railroads is not now, and has not been for many years, performed under a rate system. It is therefore impossible to ascertain rates as directed by the statute.

Furthermore, there are no "express companies" in existence in the sense contemplated by section 557. In 1916 the express business was conducted by a number of independently owned and operated companies which did buy transportation from the railroads. These companies long ago ceased to exist. Since 1929 the express business has been carried on by the railroads through their wholly-owned Railway Express Agency. It acts for the railroads themselves in selling the complete express service, including air express and other service, to the public. The agency does not buy transportation from railroads and there are no railroad rates for express transportation. The only rates now involved are those charged the public by the agency. The agency collects the gross revenue from the public, pays its expenses, which include nothing for railroad transportation, and then hands the remainder over to the railroads. This remainder is not paid or received as compensation for rail transportation service for express. The amount of the remainder does not necessarily have any relation to what the railroads would charge the agency if it were buying rail transportation service; the amount may be considerably more or less than fair compensation. It is simply whatever is left over. Thus, the present organization and operation of the express business bear no similarity to the situation when section 557 was passed in 1916.

The Post Office itself, having originally sought enforcement of section 557, has ac-

cepted the Commission's determination that the section is unenforceable in the light of changed circumstances since 1916, and informed your committee of its views through the testimony of Mr. Stans on March 21, 1957.

The post office already enjoys advantages over express and there is no basis for the Advisory Council's statement that the Post Office pays the railroads 60 percent more than do comparable customers. A few facts will make this quite clear.

In the first place, the railroads serve no customers comparable to the Post Office Department. For no other customers are the railroads obligated (1) to undertake transportation in accordance with detailed regulations of the customer; (2) to build equipment, involving a large capital outlay, in accordance with customer specifications—equipment of no use to railroads except to serve that one customer; (3) to carry free of charge the customer's personnel while traveling in the performance of their duties for the customer even though such duties may not be directly connected with rail transportation; (4) to perform additional services such as spotting cars in passenger stations in advance of train movements so that the customer may use those cars as office space for his employees; and (5) to place that customer's requirements above those of all other customers, or be subject to fines.

In this connection, your committee may be interested in fact that, since 1939, percentage increases in mail rates have consistently lagged behind the increases in express rates. In fact the cumulative mail rate increase since that time is 35 percentage points lower than the cumulative increase in express rates. With the above facts in mind it should be clear that railroads receive no subsidy from the Post Office.

Charles Stewart Mott

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. CHAMBERLAIN. Mr. Speaker, I have just returned from East Lansing, Mich., where I was privileged to attend the annual commencement at Michigan State University and witness the conferring of the honorary degree of doctor of laws upon Charles Stewart Mott, an outstanding engineer, industrialist, humanitarian, and philanthropist.

Charles Stewart Mott's many business activities are matched by his record of public service as president of the Charles Stewart Mott Foundation, mayor of Flint, Mich., and service in the United States Navy during the Spanish-American War, to name only a few of his endeavors. While the real extent of his accomplishments are engraved on the hearts of his fellow man and are reflected in their higher standards of living, in an attempt to recognize some of these efforts, Mr. Mott was named Michigan engineer of 1956 on February 21, 1957, in a ceremony befitting the high esteem in which he is held.

Because of his tremendous contribution not only to those of Michigan but to all the people of America, I would like to include here the citation which accompanied his degree:

Charles Stewart Mott, engineer, industrialist, philanthropist. Your engineering skill and business acumen have been instrumental in providing employment and affording a greater measure of economic security for thousands of Americans. Highly motivated by the spirit of altruism and love of your fellow man, you have been generous in the use of your private means to promote the well-being of others. Education in particular has benefited from your philanthropy, which has supported wholesome leisure-time activities for adults and young people, community development, adult education on a wide scale, the junior college movement, and many other projects which have as their objective the elevation of the human spirit. Throughout your career, you have been guided by the principle that people should be encouraged to help themselves and a steadfast belief that our social system affords the world's best opportunity for individuals to achieve their legitimate ambitions. For these reasons, you are widely known and loved as one of Michigan's most illustrious and useful citizens, and for these same reasons, Michigan State University is proud to confer upon you the honorary degree of doctor of laws.

What Now? Pale, Slick Leaf in Demand

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial appearing in the Florence (S. C.) Morning News, which is my hometown daily newspaper.

I made a desperate effort last fall and early this spring to secure some definite information as to the author of a letter that was circulated from Germany and some other foreign tobacco markets, stating that they did not desire our bright, slick type tobacco. I have been unable to find out who wrote this letter but it is and has been my sincere opinion that the original author was from the United States and not from any foreign country. I know that some of our cigarette manufacturers do object to our heavy type tobacco which has proven to be of great benefit to our farmers.

I am of the opinion that we do not have too much tobacco in reserve at the present time as all tobacco should be aged at least 3 years before it is manufactured into cigarettes. Tobacco can be kept in good condition for at least 10 years and in my opinion there was no sound reason for the strenuous acreage reductions we people in the tobacco growing sections were required to take by the Department of Agriculture this year.

The stabilization bureau in Raleigh, N. C., and a number of other tobacco officials in North Carolina convinced the Department of Agriculture officials, who seem to depend on the North Carolina tobacco people for their information, that we were planting too much tobacco and, I believe, competing too favorably for certain types of tobacco.

I certainly do not believe that the tobacco industry, including the stabilization bureau, could successfully take a thorough investigation. The enclosed editorial appearing in my hometown paper bears out my statements and the contentions I have continuously made during the past year on this subject:

WHAT NOW? PALE, SLICK LEAF IN DEMAND

Just when tobacco farmers were preparing to plant their tobacco beds for 1956, the export trade began a hue and cry about pale, slick tobacco. It was the kind of tobacco they wanted none of. Unless the American tobacco market could supply them with old-line tobacco varieties with body and aroma, they'd get their tobacco elsewhere, they affirmed vigorously.

North Carolina State College joined in the cry. Don't plant varieties that produce pale, slick tobacco, they said. Specifically, don't plant Coker 139, the high-yielding, blackshank, resisting variety blamed for producing the pale, slick tobacco the exporters said they didn't want and wouldn't buy.

The big blow fell last fall when the United States Department of Agriculture placed Coker 139 and two other varieties on blacklist. This year, farmers, though unhappy about it all, knuckled under and didn't plant Coker 139.

And now comes the word out of Raleigh that the Flue-Cured Tobacco Stabilization has sold about 3,500 hogsheads of "LL" tobacco, the so-called pale, slick, neutral grades, since February 1. That's around 3,696,000 pounds, or almost 30 percent of the total amount of "LL" received by Stabilization from the 1956 crop.

Stabilization has sold its entire stocks of several "LL" grades from the 1956 crop, the Raleigh source reveals.

And guess who bought these pale, slick grades. The exporters—the very self-same people who said they didn't want it and threatened to boycott the American market if something wasn't done to force it out of production.

Why should they now buy the tobacco they said they didn't want? "It doesn't make sense," says Bill Humphries, agricultural editor of the Raleigh News and Observer. So say we.

Yet tobacco farmers have a right to ask that question and demand an answer to it. They should demand it of North Carolina State College whose staff fell for the export line and helped convince tobacco farmers that the exporters were on the up and up. They should demand it of the North Carolina Export Producers Association, of Tobacco Associates, of the Tobacco Division of the United States Department of Agriculture.

Assuming that the report out of Raleigh is correct, some reasonable explanation is in order, or some heads should fall.

Identifying Foreign Holdings

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Donald I.

Rogers, which appeared in the New York Herald Tribune of June 5, 1957:

WALL STREET, U. S. A.

(By Donald I. Rogers)

IDENTIFYING FOREIGN HOLDINGS

G. Keith Funston, president of the New York Stock Exchange, has come up with a solution to the problem of identifying foreign owners of American securities which, Wall Street leaders believe, merits serious consideration by Federal authorities.

It has been known for years that unnamed and unknown foreign interests possess huge holdings of American stocks. Only the extent of the ownership is known to the authorities, not the identity of the owners. It could be Americans who have deposited money abroad—usually in Swiss banks, where disclosure of depositors is not mandatory—and who thus avoid American taxes.

On the other hand it could be foreign industrial interests acquiring direct ownership of American enterprises. It could even be money from behind the Iron Curtain.

Speaking at the general management conference of the American Management Association, Mr. Funston proposed a broad program designed to strengthen the rights of stockholders in proxy contests and to give shareholders in all publicly owned companies the benefits of full disclosure.

Curb on voting

As part of the program, Mr. Funston recommended that the Securities and Exchange Commission be empowered to take court action to block the vote of any stock where the commission believes its disclosure rules are being violated.

This, he said, would provide an effective means, during proxy contests, of piercing the anonymity of foreign holdings.

At present the Securities Exchange Commission can enforce its disclosure rules governing proxy contests of companies listed with the stock exchanges, where domestic stockholdings are concerned. But where shares are held in the name of foreign institutions, either for American citizens or the nationals of other countries, the Securities and Exchange Commission finds itself thwarted in its efforts to get the facts. It has no enforcement outside the country.

Apparently he was speaking for the membership of the stock exchange when Mr. Funston said: "We believe that the Securities and Exchange Commission should be empowered to go to court and seek a temporary restraining order barring the vote of any stock in which it has reason to believe any proxy participant has an undisclosed interest, either direct or indirect."

Way of getting facts

It is solid reasoning, and it illustrates again the leadership the New York Stock Exchange has taken during the years in policing its own markets.

Mr. Funston's proposal, if adopted by Congress, will help get the facts, about purchases made through foreign banks without directly involving the foreign institutions.

It would have the effect of putting the true owner—the anonymous holder of American securities—right on the spot. He would have to decide whether to make full disclosure of his identity, or sacrifice his proxy vote.

This has the added charm of not invading unnecessarily the privacy of the many investors who register their shares in the names of banks or brokers—they call the practice registering in street names—and who do not participate in proxy contests.

Vice President Nixon's Michigan State University Commencement Address

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. CHAMBERLAIN. Mr. Speaker, the people of Michigan and the Sixth Congressional District were honored yesterday when the Vice President of the United States, the Honorable RICHARD M. NIXON, addressed the graduating class at the 99th annual commencement of Michigan State University at East Lansing.

The Vice President's analysis of current governmental questions in terms of permanent intellectual principles and each individual's civic responsibilities merit the attention of Members of Congress. The question now before the House, the civil-rights bill, is most particularly a case in point. Also, the clear and concise statements on foreign aid, labor legislation, and the Khrushchev challenge, should be carefully examined by each Member of the House as well as all citizens.

The Vice President's address follows:

ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE 99TH ANNUAL COMMENCEMENT, MICHIGAN STATE UNIVERSITY, EAST LANSING, MICH., JUNE 9, 1957

I hope that each member of this graduating class will make a personal and lifetime commitment to take an active part in the political life of your communities.

Some of you should run for office. Don't avoid your responsibility in this respect with the usual excuse that politics is a dirty business. If you believe it is, get into it and do something about it.

Those of you who do not make politics a career can participate on a volunteer basis in the political activities of the party of your choice. I can assure you that both of our major parties can use and need new blood and new leadership.

All of you can help create the intelligent and informed public opinion which is essential if a democracy is to survive. The two most dangerous enemies of successful democratic government are ignorance and prejudice. You are particularly qualified by your background and experience to fight and defeat them in the communities in which you live.

Those of you who become doctors, lawyers, teachers, engineers, businessmen, homemakers, will be tempted to adopt the attitude: Why borrow trouble? Don't take a position on controversial issues. If you do, always support what appears to be the popular side of the question.

I urge you today not to fall into that error. Have the courage to take a position on the great issues of our time. And in doing so, don't let a Gallup poll make up your mind for you. What may be the easy or popular answer to a hard question may not always be the right one. If you believe what appears to be an unpopular position is the right one, make it your business to make it the popular one.

Now I realize what I have just said amounts to nothing more than pious platitudes unless we get down to cases. Let me be specific by discussing some of the controversial issues on the Washington scene today.

You have been reading and hearing about the labor racketeering investigation being conducted by the MCCLELLAN committee. We can all agree that this investigation is serving a useful purpose in exposing the activities of union officials who broke faith with their union membership. The hearings are being conducted with dignity and fairness in the very best tradition of congressional investigations. They have served to remind us that no leader of government, business, or labor is so big or so powerful that he cannot be made to account for his actions before the elected representatives of the people.

Now, however, we come to the more difficult question. What legislation should be passed to avoid such abuses in the future? Public opinion at this moment would probably support legislation of the most drastic character which would have the effect of curbing legitimate union activities as well as the abuses that have been exposed in these hearings. The tendency for most people is probably to go along with this prevailing sentiment.

But what is the right thing to do? Organized labor today is going through a period of trial comparable to that endured by the business community 20 years ago. Its leadership is being scrutinized and tested. Some union leaders have been shown to have failed badly in their positions of trust.

But we should not repeat the mistake of 20 years ago and blame an entire movement for the blunders and crimes of a minority. Rather we should help outraged union members to restore honesty and integrity to their unions. The protection of the integrity of union welfare funds and the insurance of democratic procedures in the conduct of union business are among the objectives which Congress should properly consider in determining what legislation should be adopted. The aim of any legislation in this field must not be to weaken or destroy unions, but to give union members the tools they need to make all unions follow the good practices which many unions follow today.

I would go further and suggest that this is a golden opportunity for American business men to encourage and make friends of the honest and sincere men who constitute the great majority of union officers. Now is the time to build lasting good will in labor relations, rather than to ostracize all union leadership, good or bad, and create the conditions which would lead to bitter industrial strife in the years ahead.

Let us turn to the international field for our second controversial issue. We have just signed an agreement to send $95 million worth of surplus agricultural commdoities to Poland. Should the Congress appropriate the necessary funds to carry out this agreement?

The first reaction of perhaps a majority of people would be that to send aid to a Communist country is not only wrong but foolish. Why should the American people be taxed to help a nation which might be alined against us in the event of a conflict?

But how will the interests of the United States best be served in this instance? Let us look at the situation in Poland at this time. There is no question but that Poland is a Communist country. But the Polish people have been displaying increasing evidence of their determination to follow a course independent of the Soviet Union.

In response to that popular sentiment, the leaders of the Polish Government have been trying to soften the features of communism that do the most violence to human nature.

The churches of Poland have much greater freedom than in the past and the cardinal

primate of Poland is allowed not only to exercise his function but to leave the country at will. The powers of the secret police have been substantially reduced. While the Polish press is not free by any means by our standards, it has a greater degree of freedom now than it has had in many years. Some farmers have been allowed to own their farms—a marked deviation from strict Communist-theory practice.

These, then, are our alternatives:

We can drive the Polish people and Government back to complete domination by Moscow in the hopes that Poland will then be an economic burden on the Soviet Union. If we follow this course, we are, in effect, saying that there is no evolutionary road to independence for a people dominated by communism and that violent revolution is their only resort if they want to be free.

Our other alternative is to help Poland progress toward greater internal freedom and increasing independence from the Soviet Union with the hope that Communists in other lands will see that freedom, and freedom alone, brings out the best qualities in men. We do this not because we approve of communism, but because we believe that the explosive power of freedom is great enough to destroy communism once it is given a chance to flourish.

In making this decision we are under no illusions that our policy is certain to succeed. The Polish people and Government might still be forced back under the complete domination of the Soviet Union. But certainly here is a gamble worth taking. If because of our action the movement toward independence and freedom is enabled to remain alive and to grow in Poland, the other satellite countries will have an example which they in turn can follow.

We should favor any step that will promote freedom and event limited independence in a Communist state. By our action we will be announcing to the world that we are not writing off the Polish people or any of the other millions who are held in bondage behind the Iron Curtain.

A related controversial issue in the international field will soon be debated on the floor of the Senate. It is the question of what we should do about our foreign aid programs. Here again the snap judgment of many people might well be—why should the Congress appropriate our hard-earned tax dollars to aid people in other lands? We often hear the term "giveaway" applied to this whole program.

It is relatively easy to develop public support for the military phase of this program. When we realize that it costs on an average 5 times as much for the maintenance of an American soldier abroad as it does for a fighting man of the allies we aid, it is obvious that a vote to cut foreign military aid is not a vote for economy but is actually a vote for larger budgets in the years ahead.

It isn't a question of whether such countries as Korea, Formosa, Indochina, Pakistan, and Turkey, which have common borders with the Comunist world, should have adequat defense forces. We learned in Korea that if they are attacked, we will become involved.

The question is how the necessary forces can most economically and effectively be maintained.

Two and eight-tenths billion dollars in foreign military aid results directly in at least $15 billion worth of defense for ourselves and the free world. These conclusions, then, are inevitable. Cuts in our military aid program will result in more taxes and expenditures for the American people rather than less. And spending less for aid abroad would not only mean more dollars for defense at home but it would inevitably mean more American boys in uniform.

I am confident that the Senate will follow the lead of its Foreign Relations Committee in refusing to make substantial cuts in the amounts requested by the President for this program and that the American people, as they know the facts, will overwhelmingly support that decision.

But let us turn now to a far more difficult phase of our foreign aid program. The President has asked for a billion dollars for the purpose of foreign economic assistance programs. The greater part of this money will not go to nations allied with the United States militarily. Most of it will go to countries in Africa, the Near East and Asia which are uncommitted or neutral in the world struggle.

How can we justify spending the taxpayers' money in this way?

Let us examine the breakdown of the people in the world today. The world is roughly divided into thirds, both in area and in population—one-third free, one-third Communist, and one-third uncommitted. The Communists know that if they can win a substantial part of the 700 million people who live in the uncommitted areas of Asia and Africa to their side they will not have to fight a war in order to achieve world domination. If they succeed in this objective, the overwhelming majority of the world's people will be under Communist control and the free world will be denied access to economic resources essential for our survival.

I have visited most of these countries. I have talked to their leaders and to their peoples. After centuries of poverty they are determined to have economic progress which will lead to a better life. They would prefer to have this prgoress and retain their independence and freedom. But make no mistake about it. If we give them no other choice they will be forced to turn to the Communist world for help.

The Communists know this. That is why they are making every effort to meet the needs of these countries for education, technical assistance and political advice. And that is why we are spending a billion dollars a year for our economic and information programs.

I have seen our program in action. There has been some waste and inefficiency in their administration. But when we consider the tremendous stakes involved we can only conclude that the remedy for these difficulties and errors is to try to do a more effective job and not to give up and let the Soviet Union start taking over the world.

Mr. Khrushchev in his television broadcast to the American people last Sunday predicted that our grandchildren would live under socialism. By socialism he, of course, meant the communism we see in the Soviet Union today. But he significantly added that the Soviet Union would win the struggle for the world through other than military means.

The greatest danger the Free World faces today is not defeat or surrender in war. It is defeat by means other than war. When we consider the fact that the Communist world has gained 600 million people since World War II without the Soviet Union being involved directly in war we can see the danger that confronts us. If we allow the Communists to win the uncommitted areas of the world, the balance of power and resources and men will be such that the Free World will be strangled into submission by the Communist World.

The billion dollars we are spending for economic assistance to these uncommitted areas, therefore, is an investment in our own freedom and independence. It is the premium we pay to insure our survival as a free people.

May I turn finally to a controversial but vital domestic issue which has a far greater effect on our foreign policy than many of us realize. I have referred to the great battle which is going on in the world for the allegiance of the peoples in the uncommitted nations.

These people are alike in several respects. Their economies are underdeveloped. Most of them are newly independent. All of them belong to races which are not white. I can testify from personal observation and experience that even more than independence and economic progress the people of Asia and Africa want and deserve recognition of their equal dignity as individuals and as nations in the world community.

We can tell them, as we do, that we respect that dignity and that we consider them to be our moral, political, and social equals. But the impression people have of America abroad is determined more by what we do than what we say. And the question that is inevitably asked is: Do you really believe in equality when you practice racial discrimination in your own country?

Now the easy answer to this question is either to ignore the problem or to say "Let the Government do it." There are some things the Government can do in this field. The enactment of the civil-rights bill now before Congress would be an effective step toward living up to our democratic ideals.

But, in the final analysis, legislation will not solve the problem with which we are confronted. A law is only as good as the will of people to obey it. And this must come from the hearts of people themselves.

In every community where racial tensions exist today—and let me emphasize that this is not a problem which is limited to the South—there is need for moderate, constructive action by people of both races. We must not allow the extremists and demagogs to take over this field by default.

It is only through the willingness of public-spirited citizens in all walks of life to assume personal responsibility for removing the causes of racial prejudice that we can assure the progress that eventually will make the American dream of equality of opportunity a reality for all of our citizens.

In discussing some controversial issues today, I would not like to leave the impression that we should be skeptical or discouraged as to the eventual outcome of this great struggle which is going on between the forces of freedom and slavery in the world today.

We are going to win. We are going to win because we are on the right side, the side of freedom, justice, belief in God against the forces of slavery, injustice, and atheism.

I know that the members of this class will be a mighty force in your communities and in this Nation in developing the enlightened public opinion which will support our national leaders as they continue to work for the cause of independence, freedom, and peace.

Protest of Franco-American War Veterans, Post No. 12, Lynn, Mass., to Army Action in Japan Against Pvt. William Girard

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Roland J. Champigny, commander, Franco-American War Veterans, Post No. 12, Lynn, Mass., which condemns the Army action in Japan against Pvt. William Girard.

The letter follows:

FRANCO-AMERICAN WAR VETERANS,
POST NO. 12,
Lynn, Mass., June 5, 1957.

Hon. Congressman THOMAS J. LANE,
Washington, D. C.

DEAR SIR: The members of post No. 12, Lynn, Mass., Franco-American War Veterans, wish to protest the action of the Army in Japan pertinent to Pvt. William Girard.

At a meeting on Tuesday, June 4, 1957, a resolution was unanimously accepted which condemned this action. Furthermore, we believe action should be taken which would prevent such occurrence in the future.

Knowing your regard and concern for servicemen, the veterans of this post instructed me to make our feelings in this matter known to you so that you could take appropriate action.

Respectfully yours,
ROLAND J. CHAMPIGNY,
Commander.

The Pressure Upon Congress

EXTENSION OF REMARKS
OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Hon. Scott W. Lucas, former Senator from Illinois, entitled "Getting Through to Congress." The article was published in the Public Relations Journal, and I feel sure that most of us will find ourselves in agreement with Senator Lucas' views with respect to the pressures on Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GETTING THROUGH TO CONGRESS

(By Scott W. Lucas)

(Few men in public life have had as good an opportunity to participate in the workings of Congress as Scott W. Lucas, of Illinois, former majority leader in the United States Senate. Since Members of Congress are often regarded as an "audience" for public relations messages and statements, the editors of the Journal asked Senator Lucas to describe in his own way some of the pressures—good, bad, and indifferent—to which Congressmen are subjected, and to tell something of the methods they use to separate the wheat from the chaff. We believe that the Senator's resulting article is an extremely illuminating one.)

One of the letters I remember best, and one that I read with rapt attention, was a simple note from a constituent in Chicago. Its full text was:

"DEAR SENATOR LUCAS: Everyone where I am working are sending letters to their Senator. At present I have no complaint.

"One of your loyal supporters,
"GEORGE A. HARRIMAN."

Mr. Harriman had no doubt been told by his boss, or his union, to write a letter to his Senator about whatever matter was the project of the moment. He wrote a letter all right, and it got more attention from me than those thousands of letters written by his coworkers. I read it into the CONGRESSIONAL RECORD. Very rarely does a Senator receive such a gem in the bags of mail which arrive at his office. This is the only one of its kind I can recall receiving in the 16 years I served in the United States Congress, 4 as a Member of the House of Representatives from the 20th Illinois District, and 12 as a United States Senator from the same State.

As I look back on my years of representing Illinois, one of the largest and most versatile States in the Union, I cannot begin to describe all the numerous and complex problems and pressures which arose in a constituency comprising every walk of life. Illinois is half rural, half giant metropolis, and my constituents were of all races, nationalities, creeds, and colors and were engaged in every business, profession, and occupation. Inevitably, they had conflicting interests, different viewpoints on many subjects, and, in some cases, deep-seated prejudices.

In 1939 I left the position of Congressman from a downstate agricultural district to take up the work of a Senator from a State of nearly 8 million citizens. My staff and I had scarcely adjusted ourselves to the hundreds of daily demands and pressures which can be expected from a large State when Hitler marched into Poland and the country awoke to the danger in Europe.

Illinois, in the heart of the then isolationist Midwest, was the home of some of the most vocal and hysterical isolationist groups—America First, the German-American National Alliance, We the Mothers—which had offices in Chicago. The pressure from 1939 through 1941 in the way of letters, telegrams, and cards from the membership of these groups ranged from passionate appeals to my emotions to ugly threats, from patriotic demands for a fortress America to manifest sympathy for the Nazi regime. I mention this barrage against all the administration's proposals to aid our allies and strengthen our own defense because it was a classic example of everything effective lobbying should not be.

Obviously, there were many good, level-headed Americans in these groups, but their calmer voices were never heard, because they had made the mistake of permitting shrill and frenzied leaders to speak for them. Many of the visitors at my office were more offensive than the isolationist mail.

CLASSIC EXAMPLE

And, again to choose a classic example of everything lobbying should not be, the visit of Elizabeth Dilling and her screaming female cohorts holds an alltime record. The emotional women filled my reception room, and when I sent out word that I would interview every one of them, but individually, or in groups of 2 or 3, the Dilling woman refused to permit this, while whipping up the hysteria of her followers with the skill of an expert mob leader. I finally walked into the reception room where I was screamed at, threatened, implored, and mauled when two weeping women dropped to the floor at my feet and clutched at my legs. There were women in that crowd who tried to ask intelligent questions and obviously wanted factual information, but reason and discussion were neither desired nor permitted by the majority. When I held out my hand to say goodby to them, the Dilling woman backed away, shouting, "I won't shake your hand. I'd rather spit in your face."

OVERWHELMING PRESSURE

During those turbulent years, I was faced time after time with the soul-searing decision a representative must make when he chooses between yielding to overwhelming pressure or following the dictates of his own judgment and conscience. Judging from the preponderance of isolationist mail I received during the pre-World War II years, to go down the line in support of President Roosevelt's legislation would be political suicide. Yet, after attending all the committee meetings, listening to all the debates in the Senate, and studying and reading at every opportunity, I became convinced that if the Administration's foreign program failed, this Nation might eventually be added to the list of victims of Nazi aggression. Subsequent events have proved the wisdom of our course from 1939 to 1941, for, ill-prepared as we were on Pearl Harbor day, we would have been in much worse shape had we not taken the steps we did prior to that fatal day to bolster our allies. Unhappily, Senators and Congressmen are deprived of the benefit of hindsight when they cast their votes, and must make their decisions on the basis of all the information available to them at the moment, not the least of which is "pressure from back home."

That pressure is increasing annually in every way, shape and form. During my last 2 years in the Senate, as its majority leader, I experienced the brunt of pressure on a national scale, as do Senators who reach the level of committee chairman. It comes from every section of the country, from every interest in the economy, and from every individual or group interested in a "cause."

My opinion is that the great part of it is either ineffective or bad, some of it is helpful, and only a small portion achieves all the objectives desired by its promoter.

The wrong type of pressure takes many forms. Obviously, crackpot arguments and threats will not accomplish anything. To these categories may be added the "nuisance" lobbyists, and they are numerous. They never cease their tramping of the Capitol corridors, buttonholing Senators at every turn. They try to ingratiate themselves with Senators' personnel. I am certain that many of these ubiquitous characters are on the payrolls of various organizations, and feel it is necessary, in order to make a good impression on the boss, to report daily conversations with Senators and Congressmen on their staffs. They either do not know or do not care that there is a time element in the handling of all legislation, and that it is best to hold their fire for the right time. The fact is that by their contsant demands on the time of people at the Capitol they do their cause more harm than good.

BAD PUBLIC RELATIONS

Except in some unusual circumstances, it is bad public relations to contact a Member on a bill before committee hearings have been scheduled. He has too many things requiring immediate attention on his mind, and weeks or months later he may have forgotten the interview.

I daresay there isn't one citizen in a thousand who understands the responsibilities and the work of a United States Senator, or how pressed he is for time. But every citizen with a problem, large or small, is certain that his problem is the most important one to which a Senator could give his attention, and makes his demands accordingly. There was never sufficient time in any one day in my 12 years in the Senate to see all the mail which came to me and to meet all the people who wanted to interview me. To find the time to discharge the function of well-informed legislator and still take care of all the other demands which fall into the "personal service" or "errand boy" classification, a Senator must organize his time and his office carefully.

In an organization of this kind, a capable administrative assistant is of great value. It is most difficult for a Senator to decide personally which of the many requests for interviews he can grant, just as he cannot decide how many of the tens of thousands of letters he receives he should read and answer first. He must have someone on his staff capable of deciding priorities on the mail which will reach his desk first, and arranging to have the answers handled through the various Government departments by staff members trained in this highly specialized work.

His assistant must also, by the use of tact and diplomacy, transform requests for interviews with a Senator into conferences with staff members capable of handling the subjects in question. A conscientious administrative assistant will try to bring every matter worthy of the Senator's attention to his desk, while acting as a scapegoat for all the crackpots and unreasonable callers. It doesn't do a lobbyist's cause any good to antagonize the man or woman who holds that position.

When someone on a Senator's staff suggests to an out-of-State caller that he present his case to the Senator from his own State, he or she is not brushing off the visitor. It is customary for every Senator to give top priority to the requests of his own voters, and this leaves little or no time for out-of-State callers or mail.

Time is usually made available to non-voters if they represent persons living in the Senator's State, and men and women holding positions of national importance in various fields of enterprise can almost always gain an audience with a Senator. But the lobbyist who is not a constituent, and who cannot lay claim to a following in a Senator's home State, has little chance for a personal interview unless he can persuade one of his own Senators to sponsor him.

If you have a reasonable request or an intelligent opinion on legislation, the chances are good that it will have the Senator's eye or ear eventually. But it doesn't take a genius to distinguish between a responsible constituent and the phony who seeks to sell a pig in a poke. A keen administrative assistant can spot the latter the moment he opens the door and, if not that soon, certainly the moment he opens his mouth.

ORGANIZED PROPAGANDA

It is possible also to spot organized propaganda merely by glancing at a stack of envelopes, all the same size, all mailed at the same time, and often all addressed in the same handwriting. These, together with the thousands of printed cards and innumerable petitions on legislation, are usually turned over directly to an assembly line type of operation in the office for answering, and eventually the Senator gets only a total count of such communications for or against a piece of legislation. I remember sessions when my mail was coming in by the bagful several times a day, and my overworked staff suggested they could just as well weigh it instead of count it, and report to me by the pound pro and con.

There may have been a time when thousands of identical or similar letters and cards impressed a legislator by sheer volume, but no longer. Too often Members of Congress have replied to them, only to have their letters returned "Unknown," or to receive a letter in return stating that the writer had never sent a communication to the legislator in the first place. Many times I wrote to the senders of organized propaganda, asking them to give me in detail their reasons for opposing or supporting the legislation in question. Usually the answer was silence.

It is the mail which is not inspired, letters based upon the honest convictions of the writers, presented in a logical and convincing manner, to which serious consideration is given. Not infrequently would I find that the lay mind in the country town or city would demonstrate a knowledge and understanding of legislation which was truly revealing and helpful.

INSPIRING MAIL

Some organizations or groups have succeeded in inspiring mail to Congress which gave no indication that the correspondence had been prompted. Writers were instructed to state in their own language their opinions, or to discuss how a legislative proposal would affect them personally. It takes time and effort to originate such a mail campaign, but the results are usually worth the effort, for the letters appear to (and in the great majority of cases actually do) express individual viewpoints rather than organization propaganda.

Many proponents of a measure who came to see me brought wisdom and strength. They came prepared with sound arguments based upon facts. Whether or not I agreed with their position, they gained my ear, as well as my sympathy, through their sincerity and through knowledge of the subject matter at hand. In a meeting of this kind I could always learn something from the expert, and usually my time was his time. This type of pressure is a decided asset to any legislator and usually welcomed by the great majority of them. They all want to learn all they can on both sides of every piece of legislation, but they want unslanted and relevant facts.

LOBBYING

The Constitution guarantees to every American the right to petition the Government. The farmer asking his Representative to appropriate a few thousand dollars for a wall to protect his farm from flood waters and the National Association of Manufacturers asking Congress to reduce corporation taxes by hundreds of millions of dollars are both exercising the privilege Americans have enjoyed since the beginning of this Nation. By sanction of the Constitution, lobbying and pressure tactics are a legitimate part of the legislative process, and one that ,properly controlled, can lead to good legislative results. The sinister connotation applied to lobbying in the past has practically faded from the picture.

My experience on both sides of the lobbying picture bears out my conviction that there is no Member of Congress who does not feel that legitimate lobbying and reasonable and temperate pressure play an important part in shaping sound and constructive legislation. As a Member of the Senate, I was always willing to listen to lobbyists who were acting in good faith. As a practicing lawyer in Washington for the past 6 years, I have had no hesitancy in registering as a lobbyist for clients whose interests were affected by legislation in addition to other governmental action. I have found my former colleagues open-minded, fair and always willing to listen when I approached them with a client's legislative problem, even though all of them have not always agreed with me. I have tried scrupulously to avoid unnecessary demands on their time and the many other mistakes by which some lobbyists lose more votes for a cause than gain them.

I could not list in this article all the don'ts for effective lobbying, but another that comes to mind is inconsistency. I vividly recall a time when the chamber of commerce was running one of its campaigns to cut Federal expenditures and balance the budget. I was being bombarded with letters for local chambers in Illinois, requesting that I pare appropriations, reduce the Federal payroll, and economize, economize, economize. Some threatened me with political extinction if I did not heed their advice. One secretary of a chamber of commerce, who was prone to letter writing without urging, sent me his organization's stern resolution, complete with instructions to use the meat-axe and cut appropriations 10 percent across the board. Lo and behold, some 2 weeks later, I received a letter from that same secretary, demanding that I see to it that the $250,000 needed for their local airport be appropriated promptly and that no reduction in the amount be permitted. Consistency usually disappeared into thin air when a community began to sniff the aroma of Uncle Sam's bulging pocketbook.

ADVICE WELCOMED

Not often does one find a responsible organization riding off in 2 different directions at the same time on 1 horse. Most national organizations are not only consistent and responsible, but they have skillful representatives, trained in their subject matter, and experienced in the most effective way to present their interests. The respect which organizations such as the American Legion, the AFL–CIO and the National Association of Manufacturers command in the Congress is a tribute to their knowledge, skill and consistency.

Every member of the House and Senate Committees on Agriculture, on which I served for 16 years, welcomed the advice and counsel of the American Farm Bureau Federation, even though many disagreed with its concept of what was beneficial for the farmer. Whether the members believed in rigid or flexible farm price supports, they recognized that experts from the Bureau spoke from an unparalleled fund of knowledge upon every phase of agriculture. And experts of this kind always presented their information undoctored, with clarity and brevity.

When a member is seriously considering his decision upon basic national legislation, his thinking may well be guided by: (1) his political philosophy; (2) his own research and his study of factual information, from whatever source; and (3) the opinions of his constituents to whom he is responsible.

If an individual wants to influence a Member of Congress, he must be sufficiently familiar with the subject to reach a considered decision; he must present his opinion and the reasons for it briefly and without fanfare; and he must believe sincerely in the cause he represents. If the cause is just and the proponent is able to inspire Members' confidence in him, his chance of success is good. But, based upon 16 years of experience in the Congress, my conviction is that no amount of pressure, good or bad, will keep the majority of our fine public servants in the Congress from doing what they honestly believe to be the best for the general welfare of all the people.

Discriminatory Aspects of 10 Percent Tax on Leather Goods

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. NEUBERGER. Mr. President, I am calling to the attention of the Senate today a significant section from the report of the general secretary-treasurer of the International Leather Goods, Plastics, and Novelty Workers' Union to the Eighth Regular Convention of that organization, meeting this week in Atlantic City, N. J.

In the particular section to which I have reference, Mr. Norman Zukowsky, general secretary-treasurer of the union, has emphasized the unfair operation of the 10 percent excise tax which the Government still collects on all leather goods. This tax is discriminatory in the extreme. It cripples the people who supply hides for leather and it takes away jobs of the people in the leather-goods manufacturing industry. It chokes off trade in retail stores where leather goods are merchandised. A handbag for a woman, a wallet for a man, or a valise for a person of either

sex, are quite as essential as clothing, for example. Why should leather goods be singled out for this 10 percent excise tax?

Accordingly, I ask unanimous consent that this particular portion of Mr. Zukowsky's report to his union convention be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

OUR INDUSTRIES

Rapidly changing economic events in our country have affected the various industries in which our members work and have, as a consequence, had repercussions on the day-to-day life of our International and its affiliates. The significant changes began to make their appearances shortly after the past World War.

By degrees the consuming public began to favor so-called "hard goods"—machines, appliances, etc.—as against the so-called "soft goods"—wearing apparel, luggage, handbags, personal leather goods, etc. While the war was in progress, the "hard goods" were either in very short supply or completely unobtainable. With the end of hostilities came a startling resurgence of buying power. Our industries, unfortunately, did not garner an equitable share of the purchasers' dollars.

Large industries prospered. Workers in these industries were able to win greater benefits. Employers reaped additional profits and new jobs were created as industry after industry expanded.

This general prosperity bypassed our industries for many reasons.

Perhaps foremost was the amazing shift in living, working, and playing habits of the American family in the postwar period.

Informality became the keyword—informality in dress, informality in style. The handbag industry became the chief victim of this "less dressed-up" approach. And for the very obvious reasons.

A woman in slacks doesn't need a sleek handbag and, in fact, just won't carry one. Nor will a woman in a cheery, sleeveless cotton dress wear a formally styled bag or a clutch bag. More often than not she carries a knitting bag—or just a wallet.

Result was a serious slump in handbag sales.

The hard-pressed handbag industry struggled under two additional burdens—the unfair, harassing excise tax and the cutthroat competition from Government-subsidized, low-wage, foreign handbag producers.

This triple squeeze play saw many shops forced out of business. Many others were compelled to retrench; practically all of them experienced a serious falling off of profits. The workers suffered as a result through jobs lost, reduction to part-time status, inability to secure proper increases from a sick industry, and a subsequent cut in the total amounts of money received from the employers for the welfare fund.

This combination of pressures was disheartening, of course, but to the everlasting credit of Pocketbook Workers Union, Local 1, it closed ranks with the international to prevent these pressures from inflicting critical injuries upon its organization and hard-won standards. The members of our pocketbook locals helped the industry to regain its health after the early impact of the postwar changes in our industrial and economic life.

That the pocketbook workers succeeded in their efforts to bring their shops out of the economic doldrums has been conceded by industry representatives who admit that in 1956, for example, the handbag volume at wholesale was $193 million—an increase of $8 million over the 1955 figures which were, in turn, an increase over the totals for the previous year.

The United States Treasury Department also offered evidence of the build-up in handbag volume, a boost that could not have been possible without increased productivity by unionized handbag workers. It published figures showing that collection of the 10 percent retail excise tax rose from some $50 million in 1955 to $57 million in 1956, a gain of $7 million or about 15 percent.

These are encouraging signs but we must bear in mind that even with these increases there is still not full employment in the handbag industry. The problem of how to revitalize this, and other sections of our industries, is one that we will have to face up to seriously and imaginatively in the months ahead.

The handbag industry is not the only one to bear scars from the discriminatory excise tax of 10 percent still imposed on all leather goods. The luggage industry has been very hard hit as well.

One might expect that the very factors that led to the serious slump in handbag sales might have boomed the luggage industry. For, hand in hand with informality, there developed added travel by Americans, more leisure as unions won more and more free time for its members and their families through more holidays or vacations, and a general skyrocketing in package deals by air and railroad lines as they sought to induce Mr. and Mrs. America to get moving.

In roughly a 10-year period following World War II, steamship travel increased 164 percent; auto travel by 72 percent; airline travel by 164 percent; department store sales zoomed by 39 percent and consumer income rose by 59 percent. Yet luggage and leather goods sales dropped 5 percent.

In that same period of approximately 10 years, expenditures for luggage fell off by some $10 million. All this, despite the fact that luggage values at both wholesale and retail levels are the greatest in the industry's history.

As a consequence, in that same 10-year period, more than 100 luggage establishments have been forced out of business. Where more than 16,000 workers had been engaged in the manufacture of luggage, that figure has dropped by almost 20 percent. Wage averages have dropped as a result, and a small but essential industry in our economy is still faced with serious dislocation.

The impact on the luggage industry has been matched by the pressures these factors have exerted on the personal leathergoods, frames, novelties, and miscellaneous industries within our jurisdiction. The combination of the excise tax, acting as a deterrent to purchases, and the inroads of low-wage products from abroad have also pushed many employers in these fields to the wall. Some have gone out of business; many have been forced to work parttime. The injuries to our workers in these crafts is obvious.

Our twin fight against the tax and the unfair tariff is a fight to salvage all of our industries and to safeguard the standards of all of our workers in all the crafts.

The tax had been, as you will recall, 20 percent. It took many years of persistent fighting and lobbying by our international—sometimes with the cooperation of the employers; often on our own—to cut that figure down. We cannot and will not rest until we have eliminated the tax entirely.

This is the grossest form of discrimination imaginable. The tax on leather goods was initially imposed because there was a serious shortage of leather, steel, and related items during the war. So essential were these materials to the war effort that it was mandatory to impose some penalty on those who purchased such items. The war effort had to come first. No one argued with this concept during the emergency.

But it was clearly understood and made clear by the initiators of the tax at that time that this was no luxury tax imposed on a nonessential product. This was a desperate war measure designed to conserve vitally needed materials. We were led to believe that come the end of the war, the tax would be eliminated. This was the unmistakable implication of the sponsors of the tax.

The war ended. The shortage of supplies ended. The tax remained. Buyer resistance increased sharply and employers and workers alike suffered seriously.

The reduction of the tax to 10 percent only slightly reduced the resistance of the consumers. Thus we find today that the luggage industry, just to take one example, which should be enjoying the greatest prosperity in its history, is suffering critically.

The reason is the 10 percent tax. It must go. And the fight against it must be high on the agenda of our union in the months ahead of us. It is imperative that we save our industries from additional dislocations.

The fight against this tax must be matched by an equally vigorous drive against the dumping of low-wage handbags and personal leather goods items and frames on the American market from abroad.

At the moment, handbag manufacturers who are in contractual relations with our union are the hardest hit. But there are clear signs of mounting imports of all other items. No section of our industry is immune.

For years we have sought to have the tariff rates increased in order to protect the American businessman and the American worker. There are, even yet, organized efforts to have the tariff rates lowered. We cannot sit by idly as the menace to our crafts grows.

At the moment, Italy and France are the chief sources of competition. But Japan is moving up fast. In the case of all three countries, the question has gone beyond just imports. It is now a matter of actual dumping—the sale here of so many items that the markets are literally being flooded.

In the case of Italy and France, the handbag producers are subsidized by their government. In addition they have abominably low wage scales. Labor costs are no factor to them. Consequently, they can often sell their items here in America for what it would cost an American manufacturer to make comparable products. The difference is first in the slave-labor wages (with no fringe benefits), then in the subsidy by the respective governments and, lastly, in the breaks they get from our Government on tariff rates.

So we have the somewhat ludicrous picture of the American Government aiding foreign businessmen to put United States businessmen out of business. And, since the workers in the leather trades in France and Italy belong to Communist-dominated unions, we have the equally appalling spectacle of our Government helping to lose jobs for American workers and create problems for United States unions by perpetuating an unfair tariff structure that, in the long run, aids the Communists too.

The task of getting this message across to the American people, the task of enrolling sufficient congressional support to end this discriminatory setup, is one that must occupy our officers' attention. It is not just a question of public relations in this instance. In a very real sense it is a question of survival for large chunks of our industries. We will literally be helping to save American industries, small though they may be. We will be helping to save jobs for American workers. We will be protecting the standards we have had to fight so bitterly to establish through the 21 years of our existence as an international union.

Address by Secretary of Agriculture Before Wyoming Stock Growers Association

EXTENSION OF REMARKS
OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. BARRETT. Mr. President, I attended the 85th annual convention of the Wyoming Stock Growers Association at Lander, Wyo., on Thursday, June 6 last. Secretary of Agriculture Ezra Taft Benson delivered a forceful address to the 1,200 members and guests assembled on the occasion. The address received favorable mention in the press throughout the West.

I ask unanimous consent that a copy of Secretary Benson's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE THE WYOMING STOCK GROWERS ASSOCIATION, LANDER, WYO., JUNE 6, 1957

I consider it a high privilege as well as a challenging responsibility to meet with you today.

I want to talk with you as citizen to citizen, as farmer to farmer, rancher to rancher, sincerely and honestly about the agricultural situation. My only purpose is—as it always has been—to seek what is best for agriculture.

We must face facts with the utmost honesty. The American people want the truth, and I have supreme confidence in the good judgment of rural people, who are the salt of the earth—and a great bulwark for American freedom.

We need to take a good look at the livestock picture—and at the agricultural picture as a whole.

Where do we stand? What is our goal? What road should we travel to get where we want to go?

First, where do we stand as regards livestock?

Livestock production has climbed to a level higher than any previously known. Our people—on a per person basis—had more meat last year than in any year on record. In the past half century, our national population has almost doubled. Meanwhile the number of people engaged in agriculture has dropped 40 percent. Yet our meat consumption last year—167 pounds per person—reached the highest point in more than 50 years.

This was top performance production-wise. But it brought with it serious problems of unsatisfactory prices—problems that were compounded by drought.

Now the familiar cycle in cattle numbers has apparently turned. A 7-year expansion in cattle on United States farms has come to an end. After climbing from about 77 million at the beginning of 1949 to nearly 97 million head at the beginning of 1956, the cattle inventory this past January was down by 1.6 million. What is probably more important, the cow herd alone was reduced by 1.2 million from the high level of 1955. Hog production also has eased off for the present.

Market prices of cattle and hogs are now generally $2 to $3 per 100 pounds higher than at this time last year.

The decrease in cattle numbers may continue for a time. But we do not expect a big drop in numbers such as occurred in 1934 and 1947. We look for a gradual strengthening of prices for cattle—a moderate trend, not runaway prices, such as those of 1951, which brought an aftermath of trouble. A more permanent improvement is to be preferred, and that is what we hope is in prospect.

All in all, the longer range outlook for prices to cattle producers is brighter than it has been for several years.

This is good news, especially here in Wyoming, where beef cattle bring in a larger part of total farm income than in any other State except Nevada. Beef accounts for half of all your farm cash receipts.

Wyoming was one of the few Western States that did not reduce cattle inventories last year. You will benefit considerably if prices of feeder cattle this summer and fall retain a higher level than last year, as we expect they will.

The improvement in the cattle situation is part of a general trend in agriculture as a whole. Last year, as you know, the realized net income of farm operators rose about 4 percent—the first peacetime rise since 1947. We expect another increase of perhaps 4 percent this year.

So much for where we stand. Now, what is our goal, our objective, for agriculture? We have stated it many times. We seek an agriculture that is expanding, prosperous, and free—for the benefit of the entire American people.

What do these words mean?

Expanding speaks for itself. We are a dynamic people. Agriculture is a dynamic industry. It must expand to keep pace with the economy.

Prosperous, as I see it, means a constantly improving abundant life for farm and ranch people in fair comparison with that of other groups of our population.

By free, I do not mean freedom to exploit others. I do mean freedom for an individual to make his own decisions, to manage his own affairs. I mean freedom as conceived in the Declaration of Independence, constitutional freedom which so safeguards the right of choice of each individual as to provide the greatest possible opportunity for us all.

I wish I could report to you that the recent gains agriculture has made—and is now making—mean that this goal of an expanding, prosperous, and free agriculture is immediately in sight.

But I cannot. The basic problems have not been fully solved. The objective is not closed at hand.

We must not allow current progress to lull us into complacency. This progress has been achieved in large measure through temporary, emergency programs, and at great expense. These programs are relieving the pressure of surpluses but they do not remove the cause.

True, we have some of the major tools we need to deal with the current emergency—disposal programs, the soil bank, and the beginning of flexibility in price support. The Agricultural Acts of 1954 and 1956 were first steps in the right direction, and they were enacted with bipartisan support. But we have never contended that they were the complete solution to our farm and ranch problems.

We are still saddled with one requirement that we don't need—that price supports on the basic commodities be increased as soon as surpluses are moved. Under the price support formula in the old basic law, once the Government stocks in the warehouses are cleaned out, the door must be opened to build them up again.

The past consequences of this formula have been extremely damaging, not only for producers of the basic crops, but for agriculture as a whole. Both at home and abroad, markets have been lost. Foreign farm production has been increased. Exports of some American crops have declined. Foreign products have been attracted to our shores.

Shrinking markets have forced drastic acreage controls upon our farmers. But this has not solved our problems. It has merely spread them. Diverted acres were shifted to other crops—and the consequences onto other producers—until almost every farmer and rancher, regardless of the crop or the livestock he raises, has been hurt.

Many of the diverted acres went into oats, barley, and grain sorghums—the end products of which were more meat, milk, and eggs at a time when markets were already glutted.

We all agree that agriculture is entitled to a fair share of this Nation's record prosperity. The question is how does agriculture—how do you livestock producers—get a fair share.

In my belief you will get it out of efficient production—balanced production—and better marketing.

You will not get it out of Government.

You will not get it out of acreage allotments and marketing quotas.

You will not get it by Government price-fixing, and you never have.

You will not get it through research and education and cooperation and free initiative.

You will get it out of building new markets and strengthening the private and cooperative marketing machinery.

There is a new dimension in the farm picture that makes management of agriculture by rigid formula totally unworkable. I refer to the amazing technological revolution that has been, and is, going on in agriculture.

Since 1920 crop production per acre has risen fore than 25 percent. Tremendous changes have occurred in the livestock business too. Production per breeding unit—that is per cow, per sow, per hen on an aggregate basis—has gone up 72 percent. Even compared with 1935–39 we are now getting 40 percent more beef per cow of the breeding herd.

In view of this revolution, we cannot balance total supply and demand by acreage allotments on the basic crops. Farmers will not accept, legislators will not vote, and from a practical standpoint administrators cannot impose the kind of controls which, at the price objective specified by the old basic law, would be necessary to bring production into line with market outlets.

Nor can we build a healthy outlook for the corn, wheat, or cotton producers by steadily fencing them in. On a 55-million-acre minimum national allotment we now produce more than enough wheat for all our needs, domestic and exports. On an allotment calculated to produce 10 million bales of cotton, we grew almost 15 million. On the smallest corn acreage allotment we ever had, and with a drought in the western Corn Belt, and with the beginnings of a soil bank, 1956 corn production approached an all-time record.

For these three crops, plus tobacco, peanuts and rice, we have programs in effect to control production and support prices according to a legal formula. These six crops bring in only one-fourth of farm income. Yet for these six crops, surpluses are greater, costs are higher, infringements on individual liberty are more extensive, international relations are placed in greater jeopardy, and farmer complaints are louder than for all of the 200 or so other farm commodities combined.

I want to emphasize one fact above all: The basic rigid price support formula in the old law is directly contradictory to the objective of an expanding, prosperous, and free agriculture.

To expand, agriculture needs new markets. The application of the basic price support formula has caused markets to be lost. It will cause further loss of markets if it is applied in the future.

To be prosperous, agriculture must be able to compete successfully against foreign and substitute products. The restrictions of this formula have given agriculture's competitors an almost unbeatable price advantage. It would continue to do so in the future.

To be free, farmers must be permitted to make their own management decisions on their own farms and ranches. The application of this formula requires controls that transfer the management of agriculture into the hands of Government. It is doing so now and it will continue to do so as long as the rigid formula remains in the law.

This is the fundamental problem we face in agriculture. We must confront it. We dare not ignore it. I have testified before the Congress and I have emphasized before agricultural groups that we should further reexamine the old basic farm law—and that we should do so now.

I am not proposing that we scrap farm programs or that we scrap price-support programs. I am saying that we need to revise some of our programs so that they may better serve the needs of our farm people. We are now ready to take the next step in this direction. Let us use the time while the soil bank and the disposal programs are in effect to make the transition to a sounder price-support policy.

As you know, the cost of farm programs is much in the public eye. A key part of these programs is the acreage reserve of the soil bank. The acreage reserve is a temporary, emergency, costly, and voluntary program. We came to it reluctantly because of the emergency situation brought on by the war and by unsound price-support policy.

The acreage reserve did not have a fair trial last year. It was not authorized until after most crops had been planted. Now the attempt is being made to destroy it, even before we can measure the results of a full year's operation. The soil bank is being blamed for failures caused by the outmoded programs of the past which made the soil bank necessary in the first place. Except for these failures, there would be no need of a soil bank today.

The simple fact is that every acre in the acreage reserve—whether that acre is high yielding or low yielding—means an acre that is not adding to surpluses of the basic crops. If it is allowed to work, the acreage reserve can lessen the undue stimulus to livestock production which has caused your industry many of its present problems.

Though it is contrary to my philosophy to pay farmers for not producing, agriculture cannot be expected to bear the complete burden of adjustment in a situation which is a national responsibility.

Management of agriculture by fixed Government formula is assuredly not the road to a dynamic, expanding, and free agriculture. But is there another road?

Of course there is.

There is the road of more freedom for farmers and ranchers to produce, coupled with less reliance on price support by rigid formula. We should begin to move away from acreage controls while the soil bank and the surplus disposal programs are in effect. We must not wait until, having disposed of surplus stockpile No. 1, we have built up surplus No. 2. Let us not put off the making of necessary changes until they are forced upon us.

Let us price our products so they will sell.

Let us not price support our products at levels which make overproduction almost inevitable—which dry up markets and require severe controls on farmers.

Let us expand markets—markets for food and markets for industrial and nonfood uses of agricultural products.

Let us give special attention to the problems peculiar to small farmers. Our Rural Development Program is successfully launched. It can help open the doors of opportunity to more than a million farm families with incomes of less than a thousand dollars a year. We hope this program will grow in scope and effectiveness.

Let us, above all, build up our markets for livestock products—wholesome, tasty, nutritious foods that people can and will purchase in larger amounts if the price is attractive.

Increasing and decreasing the livestock population is the time-honored method of adjusting the food supply to changing needs. The amount of flexibility provided by this system is tremendous.

When we consume more of our food in the form of livestock products, we need the output of many more acres to produce feed.

Livestock condense about 7 pounds of dry matter in the form of grain and other feed to about one pound of dry matter in the form of meat, milk, and eggs. The other 6 pounds are converted into heat and energy or waste. Thus, far more agricultural resources are needed to provide a diet which contains a high percentage of livestock products.

The American consumer has been increasing his consumption of livestock and poultry products. But on a per capita basis he is still behind the Australian, the New Zealander, or the Argentinian in meat consumption. We can go farther in shifting consumption to milk, eggs, and other highly nutritious livestock products.

Of course markets for more animal products must be potentially available before we begin producing for them. Expansion in output of meat animals, poultry, and dairy products should occur only gradually. Sharp increases can be disastrous, as we found a little over a year ago with hogs. But we have been moving toward a greater animal agriculture during the past 20 years and we can move further.

From time to time livestock markets will become glutted and prices will be disrupted. In such periods timely and vigorous Government purchase and diversion programs should be used to help bolster prices and help producers adjust to market demands. Such programs have been undertaken by this administration.

Here are some of the things we have done. When we came to Washington in 1953 we found grading of beef compulsory and prices controlled and falling. We removed Government restrictions and we undertook a vast beef-purchase program to help stop the decline in prices. Since that time, we have reinstituted purchases whenever it appeared necessary. Last fall, for example, the market was almost swamped with cows and young stock from drought regions. We bought 72 million pounds of beef at that time to help move the big supplies into consumption.

We have worked with industry to market beef—and not only beef but dairy products, pork, and other plentiful foods.

Just a year ago, in support of the recommendation of the cattle and beef industry, we adopted USDA Standard as the newest grade of beef. Very recently the Department put out a new 1-minute TV film that makes the most of beef's best points—its flavor, its use in many appetizing dishes, and the generous supplies that are currently available. We produced this film in support of the livestock industry's campaign to merchandise beef.

We have expanded our export markets. Our shipments of livestock and livestock products in this current fiscal year are estimated at nearly $350 million—an increase of 50 percent over the total of 3 years earlier—and 10 times the amount shipped in prewar years. Under Public Law 480, we have sold or authorized for purchase about 125 million pounds of beef to Israel, Spain, and Turkey—a tonnage equivalent to about 250,000 head of cattle.

Special programs of an emergency nature have been provided to help livestock producers. For example, emergency credit and low-cost feed have been made available in drought areas.

What we have fought for, and what we are now fighting for, is sound and practical. It makes good sense. That has been the ultimate test to which we have subjected every program. I will not support any program that does not make sense.

I have opposed direct price support of livestock. I have done so because, in my judgment, it just won't work. It is not sound. It would hurt the livestock industry. That is why I resisted the pressures of the cattle caravan which came to Washington a few years ago. I will never advocate any policy or program which I believe is not in the best interest of farmers and ranchers and fair to all our people—regardless of pressure.

If livestock producers had been subjected to the kind of price controls and production straitjackets other segments in agriculture have had during the past 10 years, your industry would never have achieved anything approaching its present growth. You might have lost ground under the restrictive hand of Federal regulations and quotas—much as some other segments of agriculture have lost ground under these restrictions.

Tremendous opportunities beckon to animal agriculture in the longer range future. A strong economy is the basis for big livestock markets, and the economy of the United States is healthy and rapidly expanding. Compared with the 1951–53 average, we may have opportunity to increase production of cattle and calves by as much as 50 percent in order to meet prospective demand less than 20 years from now. We all remember the phenomenal rise in livestock production during World War II. This was accomplished under the incentive of an almost insatiable demand. To attain the livestock production anticipated for 1975, we would need to increase output at about two-thirds the annual rate of increase of the war years. For peacetime, this is a tremendous opportunity. It involves growth over a period of two decades, not a spurt of just a few years. It involves an annual increase one and a half times the rate of growth from the mid-forties to the early fifties.

Your is the most expandable part of our farm market. Our people will buy more livestock products if they are priced right and the quality is right.

We know that when the American housewife buys milk, meat, and eggs, she is not merely buying food for the family, she is buying taste and convenience as well. You as livestock producers are facing a real challenge. Your production efficiency will play no less a role in the market of the future than will be played by processing and marketing efficiency. You have got to keep up to date. You can no more rest content with outmoded farm and ranch management than a manufacturer can be content to go along with the management practices of prewar days.

Increased research on nutrition, disease control, better breeding, more profitable use of byproducts and improved marketing will help lower production costs and smooth the flow of livestock products into consumption.

Here in the West, cattle feeding has expanded rapidly and has taken on a distinctive character. The number of cattle on feed in the West this past January 1 was 3½ times the 1930–34 average. Nearly one-third of all fed cattle marketed in 1956 came from Western States. Your feeding is resourcefully designed to utilize a variety of feeds that take the place of the Midwest's plentiful corn. Feeding is a more specialized enterprise here in the West. Your cattle are fed faster for quicker sale, and the turnover rate in feedlots is higher. Through expanded feeding of cattle, western producers are taking advantage not only of their own fast-growing western market for beef but of the increased demand for fed beeves with finish

All of our farmers—all of our people—have a vital stake in reaching the objective—an expanding, prosperous, and free agriculture. But I can think of no group in America to which this objective is more essential than it is to you producers of livestock. We can have a more dynamic and prosperous agriculture. We can have a free agriculture. To achieve it we must plan ahead now. There is no room for complacency. The agricultural revolution has made the price support, acreage-control program obsolete. Let us reexamine the old basic law. We are now ready for the next step forward.

Here in America we have the world's highest level of material living—and it is the product of an expanding, prosperous, and free economy.

But the history of nations presents this shocking picture. As nations become more prosperous—as their standard of living increases—they become more interested in preserving luxuries and comforts than the ideals and principles which made them great. Any nation which would trade freedom for security deserves neither and will lose both.

God forbid that this should happen to our agriculture or to our Nation.

We are a prosperous people today because of a free enterprise founded on spiritual, not material, values. Free enterprise is based on freedom of choice—free agency—an eternal God-given principle. The Founding Fathers, inspired though they were, did not invent the priceless blessing of individual freedom and respect for the dignity of man. No, that priceless gift to mankind sprang from the God of Heaven and not from government. The Founding Fathers welded together the safeguards as best they could, but freedom must be continually won to be retained.

With the help of a kind providence let us get on—now—with the job of building a prosperous, expanding, and free agriculture in a prosperous, expanding, and free America—an America which is economically, socially, and spiritually sound.

Elkins Girl Wins Statewide Essay Contest of Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. STAGGERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the winning essay in the statewide contest sponsored by the Veterans of Foreign Wars and written by Miss Joan Lea Kramer, a senior in the Elkins, W. Va., High School. Miss Kramer, the statewide winner, was awarded a 4-year college scholarship, $150 in United States savings bonds, and a $50 cash prize. This young West Virginian has shown a remarkable grasp of America's crusade for free men's rights. Her essay effectively sets forth the principles of our democracy and makes us conscious of our great heritage and our obligation to preserve our institutions. I commend it to your attention:

WINNING ESSAY IN NATIONAL CONTEST—ELKINS GIRL WINS STATEWIDE ESSAY CONTEST OF VETERANS OF FOREIGN WARS

Miss Joan Lea Kramer, a member of the senior class at Elkins High School, has been revealed as the winner of a statewide essay contest, sponsored by the Veterans of Foreign Wars.

A daughter of Mr. and Mrs. Noble Kramer, of 12 First Street, Miss Kramer first won a seventh district contest conducted by the VFW and went on to win statewide honors. She represented Tygart Valley Post No. 3647 of the VFW.

Miss Kramer will receive a 4-year college scholarship, $150 in United States savings bonds, and a $50 cash prize for winning the district and State contests.

Her essay, titled "America's Crusade for Free Men's Rights," will be entered in a national contest which has as the first prize $1,000.

Miss Kramer's winning essay follows:

"The sun rose in pale golden rays and a new glorious day dawned. The sky turned from light gray to blue, and the fluffy white clouds floated over the little colony of Plymouth, Mass. Here a group of weary, God-fearing people had come to live, exchanging the security of their homes across the vast, wave-whipped Atlantic for a bleak, turbulent existence in a new land. They were pilgrims. Pilgrims whose main aim was worth giving their lives for—freedom. Freedom of worship, of speech, of press, and freedom to live in peace and understanding with their fellow man—this was the way of life they were seeking.

"From the crude beginning of those rugged and courageous pilgrims in 1620, to the opening of the 85th Congress in 1957, there have been many changes. This land has been turned from a dense, uninviting wilderness to a land of hazy, rugged mountain peaks, serene valleys, peaceful flowing rivers, and waving fields of golden grain. Within the great land of bustling, steel cities and small cozy, Cape Cod villages nestled by the ocean, there is a word that all hold dear—democracy. Our American way of life is founded upon the solid basis of freedom.

"Although other countries lay helpless under the unmerciful arm of a dictator, our country has been held in the hand of God. We are a free and independent democracy, one of which we can be proud.

"Our democracy was made possible through the struggles and genius of many great and valiant souls who loved their land dearer than life itself. Washington and his men fought at Valley Forge to keep their freedom. The brave men who fought and died in World War I; again against Hitler's oppression in World War II; and still again on the bloody, little, wartorn strip of land known as Korea, did not die in vain. They have defended and upheld their rights of 'life, liberty, and the pursuit of happiness' with everything they had.

"America has always been a peace-loving nation, and by the blood, sweat, and lives of her soldiers, she has and will remain free and independent.

"All America stands for freedom, strives for freedom, and yearns for freedom for all who have it not.

"The United Nations assembly building in New York City is a graceful symbol of countries working toward freedom for all mankind. It stands slender and gleaming; a mighty fortress in a land that is dedicated to the great principles of freedom of speech, religion, and government. We send money, that in turn sends the truth of freedom to those behind the Iron Curtain, giving them hope and courage. The people of these United States send money, food, and clothing in aid to the helpless people of the world, through organizations such as CARE, the Red Cross, and Radio Free Europe.

"Our Constitution has given us our rights but what is to give freedom to other countries?

"When we look at the red, white, and blue of Old Glory waving in the breeze, we know we have a government 'of the people, by the people, and for the people.' When we stand at attention listening to the gripping strains of our national anthem, we are proud we live in this land of plenty. We are the envy of all the war-torn, pain-wracked nations of the world. These countries look to us for help and we answer their mournful call. Our Statue of Liberty, standing majestically overlooking New York Harbor, has seen the look of many humble people as they stood before her and thanked God that they have these blessed shores to welcome them. Never has America turned these freedom-starved refugees from the peace and hope of her democracy.

"America hates oppressors. Today the dark door of communism is standing in front of every American citizen and it is our duty to break it down and wipe out communism and any other threat to the freedom of mankind. In Hungary we have an example of people fighting for the freedom they went so badly. People have been murdered and their homes wrecked because they want to live freely or not at all. Why do not all people see that the American way is best? This question is hard for people of a free nation to answer. We sometimes take our freedom for granted but we need to do all in our power to stay strong and free.

"An American baby cuddled in a loving mother's arms doesn't know that it was born with one of lifes' most precious gifts—that of being born in a free land. Before many years this child will see that this Nation is truly one of freedom. And by the time he reaches maturity, he finds he has the great privilege of living his life in a land where fredom is his heritage and prosperity the way of life for all people.

"America stands as a beacon of liberty to the oppressed people of the world, shedding her silvery beams across the white, foam-tipped waves of the Atlantic and the deep, blue-green swells of the Pacific, setting an example for all the world to see. From the north, south, east, and west people look on America as the land of hope and glory; a land where from the first silver rays of sun at dawning, till the last golden rays sink over the horizon and deepen to copper in the evening, we live in peace and understanding. From the twinkling stars at twilight and on to the rich, blue-black, velvet of night, we have the angel of happiness and peace hovering over us in our beloved land.

"Yes, our land is blessed with peaceful homes and people. We are proud of our heritage and in this way we will live because this is the only way of life we know. We are Americans."

Ideas Are God's Weapons for a New World

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. SHEPPARD. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following broadcast by Dr. Frank N. D. Buchman:

[From the Washington Post and Times Herald of June 4, 1957]

IDEAS ARE GOD'S WEAPONS FOR A NEW WORLD

(By Dr. Frank N. D. Buchman)

(A broadcast made at the opening of the Assembly of Nations, Mackinac Island, Mich. It is being rebroadcast throughout the world on June 4 in languages including Japanese, Chinese, Indonesian, Arabic, French, Italian,

Spanish, German, the Scandinavian languages and Russian.)

A glorious answer has come to the years of costly failure in the Pacific.

"Pacific Relations" was an idea that caught the imagination of the world. It brought no peace, nor did it improve relations. Like all false ideas it threw up a mountain of chaotic debris that dammed back unity and freedom for millions. Today that debris is being swept away by the force of a God-given idea.

Magsaysay of the Philippines experienced it. He said to us, "Most people weigh me down with problems. You bring the answers."

General Ho Ying-chin of China defeated the Japanese in battle. The mainland of his nation is enthralled by the wrong idea. He has been a friend of mine for many years. Recently in Magsaysay's country at the Moral Re-Armament Assembly of Asian Nations, he said, "What we have failed to achieve in 10 years of postwar diplomatic effort has been accomplished at this Assembly."

Mr. Hoshijima, Supreme Adviser to the Japanese Government, declared at this Assembly, "Here we have been able to find the road to unity between Korea and Japan." He was a signatory of the Japanese Peace Treaty in San Francisco. That was the time Robert Schuman said to me after the signing, "You made peace with Japan 2 years before we statesmen had the courage to sign it."

Korea I have known for many years. Take Mrs. Park, a former Cabinet Minister, who had been deeply humiliated, and whose husband has been bedridden for more than 18 years as a result of Japanese imprisonment. She said at the Assembly, "Through change in my own heart, I have lost my enmity. Only on the basis of moral rearmament can permanent peace be achieved in Asia and the world."

Also at this Assembly was the great-grandson of the founder of modern industrial Japan. Viscount Shibusawa was my host when I first went to Tokyo in 1915. His great-grandson is a typical postwar young Japanese businessman. He saw that the choice for Asia was moral rearmament or communism. He made his choice. He changed. He found a faith. He has given up his business. His father, a postwar Minister of Finance, had young Shibusawa speak to 50 of his intellectual friends, including economics professors and younger businessmen. At the end the father spoke. He said his son's great-grandfather had left his home and plunged into the Meiji revolution. He had felt history was being made and he must have a part in it. Now the great-grandfather's blood was surging in the great-grandson's veins. He believed moral rearmament is a new factor in history and that he must give everything for it.

The youth organization of Japan, the Seinendan, 4,300,000 strong, is asking, "Which way will youth go?" They are finding the idea for Japan's future at the moral rearmament assemblies in Europe and America. Now Moscow offers a hundred of them a free trip to Russia. They turn to us—can we answer this strategy? And so 100 from Japan are coming to an assembly at Mackinac Island and a proportionate number from the rest of Asia.

Not only Japan, but the youth of Taiwan, the Philippines, Vietnam, Indonesia, Burma, Malaya, India, Ceylon, are asking the same question, "Which way shall we take—Moscow or moral rearmament?"

U Nu of Burma while in America heard that in his university in Rangoon an idea had gripped the youth—taken them away from the wrong idea that obsessed them, and given them the right idea. His message to the Asian assembly was, "This ideology is above race and class because it answers the needs of the heart. It seeks to change men, their ideas, their motives, their aims."

The rector of the university's older brother, Foreign Minister U Tin Tut, said, "The one unfailing light in this dark world is the light of moral rearmament." As the younger brother, the rector told us he had always reserved the right to disagree with his older brother, but he, too, now says, "Moral rearmament is a magic word in Rangoon University. It marks the beginning of a new era."

The widow of President Magsaysay is caught by this same spirit that won her husband. She invited the Colwell brothers to her home to meet her son. They are the three Americans whom Magsaysay specially wanted to be at the Philippine assembly. He put their songs on the national radio. They have laid aside all worldly advantage. The Asian leaders at the assembly declared, "They have played a vital part in creating the spirit in which unity is being forged between our nations." The Colwells arrived at 4 o'clock. The Magsaysay family kept them until 11:30, such was the radiant response. Mrs. Magsaysay 20 times called for their songs.

Then the Colwells traveled 60 miles to a Philippine village 15 miles from the territory of the rebel Huks. The mayor, the chief of police, the deputy mayor, were among hundreds who gathered beneath a spreading acacia tree beside the main street for an hour and three-quarters to hear the Colwells and their friends. They were introduced by the medical director of the Far Eastern University, Dr. Gutierrez, who cares for 28,000 students. Traffic was repeatedly blocked in the street as people crowded to listen. They said there were Huk rebels in the crowd. At the end the people refused to disperse until there were two more songs from the Colwell brothers. Said Mrs. Gutierrez, also on the staff of the Far Eastern University, "You are doing what made Magsaysay so loved among his people. You have gone to meet them in the villages."

The chairman of the Philippine Senate committee for national defense is quick to realize the meaning of this for the nation. He said, "For reasons of national security, I want moral rearmament to take root here and be a force. It can be a very practical and realistic bulwark against the infiltration of communism."

In our frantic efforts to buy security, let us not sell ourselves short by overlooking the one real security—the idea which can remake men and unite them to remake the world.

Ideas are God's weapons for a new world. And man has the capacity to receive ideas from God. When men act on these ideas they find new direction for themselves and their nations. Now I believe that we should so live that God can speak to us at any hour of the day or night.

And it was in the night that I had the compelling thought, "Africa will speak to the world." I was at the World Assembly at Caux at the time and with me there were Africans from all parts of the Continent. The Africans responded. They wrote a play on the theme closest to their hearts—Freedom. The German Ambassador in London saw it. The same night he telephoned Bonn to tell his colleagues they must see it. That play went through the capitals of Europe. Now it has been made into a film—the first film made in Africa, written by Africans and played by Africans. Walt Disney's European cameraman sacrificed his contract to make the picture. Men of many nations gave money, time, and skill. The premier was in Hollywood. "A picture that may change my life," wrote one critic. "It made me feel the soul of Lincoln was still with us," wrote another. "If we act on it, we may save all we value in civilization." And a Nigerian political leader commented, "For our present generation of vipers Freedom is the bible which people will read today."

"Africa speaks to the world"—Washington queued up four deep for half a mile outside the National Theater twice in one day to see it. Leaders of nine Asian nations at the Asian Assembly cabled the Speaker of the United States House of Representatives and the chairman of the Senate Foreign Relations Committee, "This overwhelming film is providential for our nations at this critical time and must reach the millions of Asia now. Its ideology is the only true basis on which East and West can unite."

Men of science understand that weapons can only buy time. An ideal must win the world. And the youth of a scientific age respond to moral rearmament because it is the idea that answers the basic divisions of race, class, and ideology.

An American university student leader was won by this idea. He began by putting right what was wrong. He went to the home of the president of the 16,000 students of his university, a Negro. He apologized for his bitterness and his dishonest politics. It was at Christmas time. The president held out his hand. "This is really going to be a happy Christmas," he said. The 2 of them joined forces. They brought 700 of their fellow students to see the film Freedom, including members of the faculty, the staff of the university paper and the members of the student council.

Then they went together to the Asian Assembly. Declared the president through the Los Angeles Sentinel, "Moral rearmament is the only real solution to the race problem in the United States. This answer is needed in the Negro community. Only the ideology of moral rearmament can answer racial prejudice because it is the only force that can challenge both black and white to change and build a new world."

Senator ALEXANDER WILEY on the floor of the Senate introduced the story of the Asian Assembly to the CONGRESSIONAL RECORD. He spoke of the ideology which had produced these results. He said, "If we in America live that ideology we shall find a response in Asia that money cannot buy. It could be the turning point. The signs of a response to these deeper realities at this assembly are a source of hope for us all, and a challenge to us to examine our policy and our practice in the light of these truths."

A book has just been published. The idea for it came to me early one morning. It was a God-given thought—America needs an ideology. William Penn expressed the heart of this ideology, "Men must choose to be governed by God or they condemn themselves to be ruled by tyrants."

When man listens, God gives him ideas. And when man chooses to be governed by these ideas, he becomes a new type of man. It is an experiment which can be tested by anyone, anywhere, at any time. It works.

The challenge of our time is simply this. Will the scientists, the statesmen, the men of the factory, school, and farm, face these facts? Test them? Act on them and live accordingly?

Ideas quick and powerful to reconcile nations, to conquer all hearts and wills, to inspire a worldwide renaissance, are instantly available, immediately applicable.

For ideas are God's weapons for a new world.

And every man, if he will, can listen to God.

Our National Economy and the Budget

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. PRICE. Mr. Speaker, an unusually thoughtful and useful analysis of the so-called budget fight appeared recently in the East St. Louis, Ill., Journal. It was written by Edward Lindsay, and it states some facts that most people either do not know or overlook.

Mr. Lindsay points out the highly publicized controversy over President Eisenhower's $71.8 billion budget has little or no relationship to actual Government spending.

He points out that the billion-dollar figures bandied so glibly by pressure groups or by those responding to what they think is public demand have little or no relationship to reality.

Mr. Lindsay had the commonsense to begin his study of the budget controversy by checking actual Government receipts and expenditures for what he terms the "fabulous postwar years."

He next moved to the appropriations that were voted during these same years by the Congress and demonstrated that budget appropriations and actual spending are very different things.

Are Members aware that for the last full fiscal year of the Truman administration the Congress appropriated $127.7 billion for the Government, but that the Government actually spent only $65.4 billion?

Are they aware that for fiscal 1953 the Congress voted smaller appropriations—$94.9 billion, but the Government spent more than in 1952—a total of $74.2 billion?

Mr. Lindsay draws the conclusion that there is money "in pipelines," as he puts it, "that is not very well accounted for."

His greater service, however, is to document the explosive nature of our economy in the first 10 postwar years that enabled us to support the appropriations and the spending.

He cites the increase in compensation of employed persons from $117.6 billion in 1946 to $223.1 billion in 1955.

He mentions the increase of corporation profits and adjusted inventories from $17.2 billion to $40 billion.

And most important is the growth in total national income, from $179.5 billion in 1946 to $324 billion in 1955.

Mr. Lindsay draws the commonsense conclusion that with the rise in salaries and purchases, "it is not surprising that the cost of government would tend to rise with the increase in national income."

He draws another conclusion about which I hope he is partly in error—that when his readers read about the great budget battle, they should realize that neither they nor the Congressmen who are making what they think is a statesmanlike correction of the President's budget estimate, have the slightest idea of what they are talking about.

Under permission to revise and extend my remarks, I offer Mr. Lindsay's analysis for the RECORD:

WE KNOW NOT WHEREOF WE SPEAK

(By Edward Lindsay)

Much has been said about the United States budget for the fiscal year ending June 30, 1958, now before Congress.

President Eisenhower proposed a budget of $71.8 billion. The Democrats and disaffected Republicans in Congress, with some aid and comfort from members of the President's Cabinet, have been making a big thing of "cutting the budget."

In trying to get this controversy into focus, I have been looking at the 1957 World Almanac. The fabulous postwar years, which began in 1946, seem to me to be a reasonable base against which to consider figures that are now in the news.

I looked at the United States receipts and expenditures, which follow this pattern:

[In billions]

Year	Receipts	Expenditures
1946	$39.7	$60.4
1947	38.7	39.0
1948	41.4	33.0
1949	37.6	39.5
1950	36.4	39.6
1951	40.5	44.0
1952	61.3	65.4
1953	64.8	74.2
1954	64.6	67.7
1955	60.3	64.5
1956	68.1	66.3

Since Congress doesn't actually spend the money, but appropriates it to departments and bureaus, I turned to a table on appropriations by the Federal Government.

Appropriations—in billions of dollars—follow this pattern in postwar years: 1946, 76.5; 1947, 40.8; 1948, 41.1; 1949, 48.2; 1950, 52.8; 1951, 67.9; 1952, 127.7; 1953, 94.9; 1954, 74.7; 1955, 64.3.

Now that we see the appropriations figures, we have some questions about the relationship between the appropriations and the expenditures.

Look back at the year 1952, when $127.7 billion was appropriated. In 1952 the Government spent $65.5 billion, and the following year $74.2 billion. It seems likely that there is money in pipelines that is not very well accounted for.

When we see the rise in the cost of Federal Government, we ought to relate this in some way to what is happening to the United States economy as a whole.

It is unlikely that the cost of Federal Government would go down when the cost of everything else is going up. This is not to say that the Federal expenditures are right or wrong.

I picked out, in another table, a few of the items that go to make up the total of national income.

Under the columns below I have tried to show three figures, as the critical ones, which illustrate the explosive nature of United States economy since the war.

In the first column, by years, is compensation of employed persons. This is both private and military.

The second item I have chosen is corporate profits and an adjusted inventory valuation. The third figure is the total national income. All figures are in billions of dollars.

Year	Compensation	Corporate profit	National income
1946	117.6	17.2	179.5
1947	128.7	23.6	197.1
1948	140.9	30.6	221.6
1949	140.8	28.1	216.1
1950	154.3	35.1	239.9
1951	180.4	39.9	227.0
1952	195.0	36.9	290.1
1953	208.0	36.0	302.1
1954	206.9	32.8	298.3
1955	223.1	40.0	324.0

Since the cost of Federal Government includes salaries and purchases, it is not surprising that the cost of government would tend to rise with the increase in the total national income.

I realize that none of these figures tend to prove anything, and this is the point I hope to make.

The Federal Government keeps books on a cash basis, ignoring in its so-called budget any prior commitments to make expenditures and any prior appropriations not yet expended.

When you read the news of the great budget battle in Washington, I think you should bear in mind that neither you nor the Congressmen who are making what they think is a statesmanlike correction of the President's budget estimate have the slightest idea of what they are talking about.

Why I Choose To Locate in South Carolina or the Southeast

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an essay entitled "Why I Choose To Locate in South Carolina or the Southeast," which was prepared by a student at Clemson College, South Carolina.

I hope that every Member of Congress will take time from his or her busy schedule to read this essay.

The essay follows:

WHY I CHOOSE TO LOCATE IN SOUTH CAROLINA OR THE SOUTHEAST

(By William G. Johnson, Jr.)

The industrial heart of the Western Hemisphere is located between the Canadian and Mexican borders. The pulse beat of this heart, South Carolina, lies between the Gulf of Mexico and the Mason-Dixon line. This new frontier, this dynamic changing South and its people are providing this heart with new lifeblood. In recent years there has been an amazing transition in this pulse beat of our Nation. The era of cotton and vast plantations, mint juleps and magnolias in the moonlight, wealth for a privileged few and toil for many has died a long-deserved death. The Southeast is still a great agricultural region, but a new giant has become a partner of agriculture. This giant is the titanic industrial growth of the entire Southeast. Any red-blooded American who ever dreamed of being a pioneer will not

need to choose to make his career in the Southeast. This new frontier will decide his destiny for him.

What brought about this new frontier that provides such a tremendous challenge to the college graduate in the Southeast? The last rumbles of the chaos created by the Civil War and the old traditions and mores are heard only in the far distance. A new, much louder rumble created by an awakening Amazon, the new South, is vibrating throughout every corner of the Southeast. Where did their great and gracious lady obtain her strength to create this industrial earthquake? Industry has become aware that her favorable climate and tremendous natural resources are assets of remarkable worth. The last asset, the worker, is the most important of the three, although people in other parts of our country are reluctant to acknowledge this fact. A mild climate prevails throughout the Southeast. The temperature for the four seasons does not have the wide range found in other sections of the country. The climate is suitable for production every month of the year. Plants do not have to shut down because of 10-foot snowdrifts or 100-degree-plus temperatures. Most manufacturing firms need large amounts of electricity and water. The Southeast has the best distributed and largest amount of these resources in the country. There are people who contend that favorable tax laws and lower wages have caused industry to move to the South. This contention is untrue, but it does make the last and perhaps the greatest factor seem less important to people in other sections of the country. This factor is the homegrown worker. The South is enjoying a competitive advantage, not because of low wages, but because of the high productivity of the worker. Why are these workers more productive? Most of the workers were born in rural areas where self-reliance and resourcefulness were an inherent part of their education. Industry has discovered that a man with an independent mind who accepts guidance from a much higher authority than a union official will become the most productive worker in the world if he is treated with fairness and respect. These workers believe in an honest day's work for an honest day's pay, and they know that an honest day's work will reap its own reward. The new South has not changed the worker's way of life very much at the present time. He still eats his beans and collard greens cooked with a piece of salt pork, but now very often that side meat has a good wide streak of lean in it. Industrial growth has not caused the South to lose its charm, but a new economic status is quite evident.

I shall remain in the beloved land of my birth because I want to advance with it culturally, socially, and economically. Although its legend will live forever, the old way of life is gasping its dying breath. A new form of liberalism and political freedom is arising with the economic growth. An improvement in living standards, the trend toward a two-party system, and a better balance between agriculture and industry make it a healthy, wholesome place to live.

Why does this area provide the college graduate with such glowing opportunities for success? The leisurely pace of jasmine-scented days and the Dixie-colonel-type businessman are gone. They have been replaced with dynamic business enterprises managed by young executives whose college training in industrial development, research, and management prepared them for these positions. This new-type executive knows that his company must produce a quality product at a competitive price. He knows that large amounts of capital must be spent to provide research on new ideas for better methods, machinery, and product. He advocates a sound personnel policy because he knows the production of the firm is directly proportional to the satisfaction of its workers. This new-type executive has become the guiding light of this new industrial frontier. The future of this industrial boom rests on his ability and training. The southeastern colleges are giving the necessary training to many young men. Unless they are blind, they cannot fail to see that their future awaits them in this same region.

There is an acute shortage of the new-type executive throughout the southeast, and this shortage creates a challenge for me that I accept wholeheartedly. I have received the necessary background at Clemson to qualify as a candidate for one of these positions, and I know how well I meet this challenge from this point on will be determined by the contributions I make to this new way of life. I can apply the training I have received, contribute all my abilities and resourcefulness, and direct all my energy toward the predetermined goal, which is the establishment of the South as the greatest agricultural and industrial region in the world. I will not have to adjust to the southern way of life. I am a part of both the old and new. I shall remain here on this new frontier, this new melting pot, this new gold coast, and fulfill my boyhood dream of becoming a pioneer. Horace Greeley made a phrase famous, but the direction needs to be changed.

Address of His Eminence Francis Cardinal Spellman at the Commencement Exercises of Providence College, Providence, R. I., June 4, 1957

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. McCORMACK. Mr. Speaker, on June 4, 1957, Providence College, of Providence, R. I., held its 39th annual commencement. Presiding at the commencement exercises was the Very Reverend Robert J. Slavin, O. P., S. T. D., president of Providence College. Many distinguished persons in both religious and governmental life—Federal, State, and city—attended the commencement exercises.

The recipients of honorary degrees conferred upon them this year were His Eminence Francis Cardinal Spellman, Archbishop of New York; Dr. John Stephen Burke, chairman of the board, B. Altman Co.; and Dr. Frank Marion Folsom, chairman of the executive committee of the board, Radio Corporation of America.

The commencement address was given by His Eminence Francis Cardinal Spellman, Archbishop of New York; an eloquent and effective address appropriate for the occasion and for this period of the world's history. In his address to the members of the graduating class, Cardinal Spellman, in part, said:

It is my fervent prayer that all of you, graduates of Providence, may through God's grace, become apostles of truth and charity, for these are the virtues which must predominate in the souls of men if they aspire to be worthy of their treasured twin-heritage of Catholic faith and American citizenship.

These stirring words of Cardinal Spellman could be taken into the minds of all of our people, particularly in connection with becoming "apostles of truth and charity."

The message of Cardinal Spellman, stressing "faith of God and love of country" is not only the message of hope and confidence for all persons, if they would only heed it, but the road to success, particularly in the trying period of the world's history that we are undergoing. For as Cardinal Spellman again said in his great address:

This wondrous Nation of ours is a religious nation, her strongest armor against her atheistic foes is godliness; her strongest weapon faith.

It is with pleasure that I include the address made by Cardinal Spellman in my extension of remarks, an address that should be read by all persons possible:

Gratefully do I acknowledge the honor that is mine today as I become an alumnus of Providence College. As brother alumni we share not only pride in our living faith, but also pride in living our loyalty to the law of this great and blessed land. It is my fervent prayer that all of you, graduates of Providence, may through God's grace, become apostles of truth and charity, for these are the virtues which must predominate in the souls of men if they would aspire to be worthy of their treasured twin-heritage of Catholic faith and American citizenship.

This memorable day marks for you the fulfillment and the realization of your dreams, for the goal you envisioned 4 years ago has now been attained. This is the day, long awaited, when you become alumni of Providence College, loving sons of your alma mater, which, throughout her hallowed history, has nurtured many devout and devoted sons upon whom God has bestowed the graces of goodness and intelligence.

A tinge of regret shadows this joyful occasion, however, for you are about to bid farewell to Providence, and farewells are rarely joyous. You are about to leave your college home endeared to you with its pleasant, familiar surroundings. There will be times when you may wish that you could come back to Providence, back to your friends, your classmates and professors, with whom you shared heartaches and headaches, happiness and gaiety—friends whom you may never see again, or at best, only occasionally. Actually, in leaving this ordered and orderly way of life, you are exchanging your sheltered security for freedom, a freedom, however, which imposes upon you at once a responsibility and a challenge, as you face the future weighted with daily complex problems involving not only your own personal life, but your immediate family life, your community life and the life of your beloved America.

This wondrous Nation of ours is a religious Nation, her strongest armor against her atheistic foes is godliness; her strongest weapon faith. Therefore do I pray you friends and fellow-alumni, cherish and live your faith, seeking devoutly to spend yourselves for God, your country and your neighbor. Only thus will you prepare within your own souls a fertile field in which the seeds of faith can take firm root and grow, because, unlike many Soviet-dominated lands, America's freedoms guarantee each of her citizens the priceless right fearlessly to follow the faith of his choice. For in this land liberty was born; in this land freedom to exercise God-given rights was won; in this land enterprise and labor have prospered; in this land hunted minorities have found haven and homes.

But constantly we must be aware that the forces opposing these treasured liberties of our great and glorious Nation are strong and relentless. The evil spirit prevailing today expresses its power and purpose in two violent, godless ways, evil thinking and evil living. Against this evil spirit, logic avails

nothing, for it confounds falsehood with the truth. Against it virtue avails nothing, for the credo of the godless is that unbridled living alone makes life worthwhile. Like a cancerous growth this malignant spirit of evil thinking and evil living corrodes the body and corrupts the soul of a nation, obscuring its power to see truth, weakening its power to live truth. And when a nation becomes blinded in mind and hardened of heart, it becomes a target for tyranny and its ultimate end is enslavement.

Your training here at Providence College has prepared you to meet this challenge of good and godly living by nourishing and strengthening your Christian ideals, cultivating your powers of understanding and deepening your love of truth. As I gave thanks for the privilege of participating in this memorable occasion, I offer especial gratitude to God for this citadel of learning whose very motto is truth and which, over the years, has taught so many of our young Americans to know truth and to live truth as they pursue their varied occupations and professions.

During the past 40 years a deep and abiding love of God has been implanted and nurtured within this sanctuary of faith and learning. Who can estimate the graces that have been poured forth upon the faculty and students of this college and the blessings that they in turn pass on to others? Who can calculate the forces for good that have been stimulated in this land because of the presence of the Holy Ghost in the souls of the men of this college, souls wherein the gift of faith was tenderly fostered? This precious gift of faith is the cornerstone of Catholic education from the kindergarten to the graduate school; it orientates the personalities of our youth toward God, their Creator; it enables youth to recognize in their parents an authority delegated to them by God and acts as a leaven in society, producing harmony and order in the community.

Your years of education under Catholic auspices have been truly a privilege, and I am sure that you who have received it have both appreciated and enjoyed it. But I pray you to remember that this is not an exempt privilege; it is a privilege freighted with tremendous responsibilities, for yours is the sacred duty to be fearlessly steadfast in your love of God and the practice of your faith; courageously loyal to your beloved country; devoted to your families; honorable in your cherished friendships; charitable and respectful in all your relationships, and dedicated to your destined work.

Providence College has accomplished much good during its lifetime and I know that under God's divine protection her contribution and her reputation will increase with the years. Your alma mater will lead an ever greater number of students to a deeper reverence for God and God's design for mankind; it will direct the careers of young men along the paths of righteousness and justice and instill in the hearts of its students a patriotic devotion to our free and blessed Nation, teaching them that no sacrifice, not even life itself, is too great a price to pay for the security of our country's sacred liberties. In the challenging and crucial years that are ahead of us, Providence College will send forth from these halls of learning many more of America's sons dedicated to study and research, men proud to be Americans, men whose hearts are consecrated to their Creator and this glorious country which God has chosen to be the vessel of His justice, the instrument of His wisdom, the medium of His mercy.

On this commencement day I pray God's blessing upon you, sons of Providence College and implore you, stay close to Christ, making your hearts His shrine, your bodies His temple, your minds His mirror, your souls His abode, for only those whose hearts are pure and powerful with faith are endowed with the supernatural strength and the unchallengeable loyalty to protect the precious liberties of our own mighty land, and help achieve freedom and peace for all this troubled world.

Statement of New England Governors' Textile Committee on Two-Price Cotton

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement on two-price cotton, which has been submitted to the New England congressional delegation by Mr. Seymour E. Harris, chairman of the New England Governors' Textile Committee:

THE NEW ENGLAND GOVERNORS' TEXTILE COMMITTEE,
Cambridge, Mass., June 5, 1957.

To: The New England congressional delegation.
From: Seymour E. Harris, chairman, New England Governors' Textile Committee.
Subject: Two-price cotton.

THE PROBLEM

At our recent meeting with the New England congressional delegation, the Governors' committee suggested that something should be done about two-price cotton. Congressman MCINTIRE in turn proposed that we make some concrete proposals for the guidance of the congressional delegation.

The injustice done by two-price cotton is that the American Government sells cotton abroad at prices substantially below those sold at home. Hence competitors abroad are able to obtain an advantage in foreign markets and in our markets at the expense of the American taxpayer. In any event, world prices for non-American cotton will probably be lower than the supported American price.

The Government recently has allowed similar concessions to be made to American purchasers of cotton to be exported in the form of textiles. But no protection has been made for cotton exported at prices below the support level and then imported into this country as textiles or apparel.

The current practice amounts to a subsidy to foreign producers (the reverse of a tariff) who are thus encouraged to penetrate our markets. The price of cotton amounts to about one-half the finished price of textiles in the United States. But with foreign low-wage producers cotton amounts to an even larger percentage of price and consequently a greater advantage. The concession in cotton price to foreign purchasers is of the order of 25 percent–30 percent, or at least 15 percent in the price of the finished textile. In countries with very low wages, the differential might well be 25 percent of total costs. The wage differential is even greater, and in addition.

The continued high price of cotton for which the Government is largely responsible has also contributed to the substitution of man-made fibers, to the detriment of cotton producers and the New England economy.

POSSIBLE SOLUTIONS

What can be done to correct this situation?

(a) One price: An obvious solution would be to sell cotton to American producers at the same price as it is sold to foreigners, namely, the world cotton price. This would at least have the advantage of giving the consumer the advantage of the great rise of productivity in cotton growing. New legislation will be required, for the Government at present is not allowed to sell cotton on domestic markets at prices below support levels.

(b) Compensating tariff: Another suggested method is to impose an additional tariff on cotton goods and apparel imported into the United States which will compensate for the difference in price which American mills must pay for cotton and that which foreign mills pay. Exported American cotton is sold at the world price for cotton, and consequently it can be assumed that all cotton textiles and apparel coming into the United States will be made with cotton bought at cheaper prices.

The sale of 9 million bales in export markets in 15 months at world competitive prices and the low level of sales in preceding years, despite sales for domestic currency and grant-financed exports, reflects the disadvantage suffered by American producers in recent years. The large sales under a two-price system have merely clarified a price disadvantage suffered by American producers of textiles in the purchase of cotton which has prevailed for a long time.

A PROPOSED SOLUTION: ONE PRICE, THE MARKET PRICE

Of the two solutions we prefer the one-price approach.

The decline of the consumption of cotton in this country is partially, at least, the result of the high-price policies of the Government.

The cotton textile mills have been forced, as a result of the cotton farm programs, to include in the price of the cloth much of the cost of the farm program. This has seriously hurt their competitive position and the total market for their fabrics. It is generally believed that much of the growth of the synthetic textile industry, as well as the popularity of many paper substitutes, is due to the relatively high price of cotton caused by farm programs.

It is therefore in the interests of the cotton textile mills as well as the farmers to lower the price of cotton in order to increase consumption of cotton and cotton textiles and improve their relative competitive position. It has already been found necessary to lower the price of cotton in order to restore the export market which was lost, and to discourage the great expansion of cotton plantings in foreign countries which was stimulated by the high-price umbrella which the United States has held over cotton.

From a textile mill point of view, the price of cotton should be determined by free market forces so that the American mills can buy at world prices, and so that the farmer can profit from greater consumption and increased exports. With greater acreage, his total earnings would also be greater.

We are not taking a position against the price-support policies of the Government. We realize that a serious problem of adjustment exists, particularly for the small cotton farmer, and that a completely free market for cotton, suddenly created, would bring hardships which should be avoided by a more temperate long-range program.

Various suggestions have been made for handling this matter, which include either adjustment payments or a combination of adjustment payments (direct subsidy), and increased acreage allotments. From the textile point of view there may not be too much difference, although, generally speaking, the textile mills would prefer increased acreage.

It is essential to remember, however, that the adjustment payments or subsidy to the farmer must not be loaded on to the price of cotton or on to the textile manufacturers by way of a processing tax or other device. This would be self-defeating, and would cause great damage to our textile mills. The farm program should not be a tax or other cost added on to textiles.

IN SUMMARY

In short, the maintenance of the position of the cotton farmer requires lower, not higher prices; and if the cotton farmer has to be helped, it would be better to increase output and to allow the rising productivity to be reflected in declining prices, the farmer to be compensated in part by subsidies and in part by increased acreage and larger markets, which in turn would increase his income.

ADDITIONAL MATERIAL

Other proposals

In this connection, a proposal of the American Cotton Producers Associates is of some interest. They suggest a long-range program which would include acreage allotments, a single but competitive price for cotton at home and abroad, and a payment to the cotton producer of the difference between average spot market price or loan price, whichever is higher, and a support level at a stated percent of parity. The farmer would receive an adjustment payment only on the domestic allotment of his acreage. His export allotment would increase his income but no adjustment payments would be made. For a farmer planting his entire allotment, the payment would be the support price (say, 34 cents)—the spot market price (say, 28.5 cents) or 5.5 multiplied by domestic allotment divided by total allotment, that is, by (say, 0.643) or 3.54 cents. The cotton buyer would be reimbursed for the extra 3.54 cents paid.

This particular proposal has some merit, though it proposes a loan rate of 75 percent of parity and production payments to farmers of the difference between 75 percent of parity or market price and 90 percent of parity—corrected for a fraction given by domestic allotment divided by total allotment.

A variant of this proposal was embodied in H. R. 877. Payments would be made on both domestic and foreign sales. The Assistant Secretary of Agriculture (April 9, 1957) estimated the cost of this program at approximately $240 million, and additional payments might be required to assure an export market.

The Atlantic Cotton Association (House Agricultural Committee hearings, April 9, 1957) endorsed H. R. 877 but would support cotton at 65 percent of parity (not 75 as proposed under H. R. 877), thus assuring movement of cotton into consumption instead of Government inventories. On the assumption of a fair price for the farmer of 80 percent of parity (33 cents per pound), then the association estimates costs at $300 million for 1958–59. In contrast, the current program would cost $500 million plus costs of administering the loan and soil bank and later losses on cotton sold by the CCC.

Problems raised by current policies

1. Cotton loses ground vis-a-vis rayon:

Pounds per capita consumption

	Cotton	Rayon and acetate	Percent cotton
1946	34.0	6.2	84.6
1956 (preliminary)	26.0	7.1	78.5

2. Prices and productivity:

	Yield per acre (pounds)	Price received (1910–14=100)
1946	226.4	238
1956	377.4	268
Percent gain	65	

(In 1946, 18.1 million acres yielded 8.64 million bales; in 1956, 16.9 million acres yielded 13.254 million bales.) Output per unit of input, 1955 versus 1947–49, equals plus 27 percent; but prices received equal minus 1 percent.

The price of cotton does not reflect the gains of productivity, though in view of the general inflationary conditions the price is not greatly out of line. But a much lower price and a more competitive position for cotton would have been had if acreage had not been cut severely.

3. Markets: High-price cotton means losses of competitive power for cotton producers and also for American textile and apparel manufacturers.

Despite the large increase of world markets, United States exports of cotton were approximately 40 percent of the exports of the 1920's in the years 1953–55. In 1955, exports had fallen to 2.209 million bales or only 20 percent of United States production—and a large part of these meager exports was financed by the Government.

The carryover rose from 2.2 million bales in 1951 to 14.4 million (estimated) in 1956.

The Department of Agriculture estimates that, in 1960, cotton consumption would decline from 63 percent (1955) of cotton and man-made fiber consumption to 60 percent with cotton at 75 percent of parity and to 55 percent of the total with cotton at 90 percent of parity.

4. Current costs: For the 1956–57 season, exports amounted to 6.98 million bales through March 25, 1957.

The losses per bale were $45, or $315 million, on 7 million bales.

In addition, through March 1957, the Government had spent $153 million under the soil-bank program.

Finally, the Government made available $458 million for loans, gifts, and sales in foreign currency. (This may not all be used in 1956–57.)

The total of these items is $926 million. Obviously a support program for cotton costing close to $1 billion in a year cannot be continued.

Even assuming that part of the loans will be paid and all of the $458 million will not be used in 1956–57, the costs are staggering. What is more, even the 25 cents competitive price, which presumably would make possible sales of 7 or so million bales abroad, is premised on the assumption that rayon producers would not meet this competition. Actually, the large expansion of rayon facilities points to a determination to meet the new competition.

(Material based on Economic Report of the President, January 1955; U. S. Department of Agriculture: (1) 1957 Agricultural Outlook Charts, (2) Foreign Agricultural Trade of the United States for Fiscal Year 1955–56 (January 1957), and (3) Competitive Position of United States Farm Products Abroad, 1957; Long-Range Program for Cotton by American Cotton Producers Association, May 20, 1957; American Farm Bureau Federation, Alternative Programs for Cotton, April 1957; Hearings on H. R. 877 before House Agriculture Committee, April 1957; Senate Document No. 12, Report on Various Methods of Supporting the Price of Cotton, January 1957 (by Department of Agriculture).)

Hon. Robert Crosser

SPEECH

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. McCULLOCH. Mr. Speaker, I have just learned, with deep regret, of the death of my late, great friend, Robert Crosser, longtime Member of the United States House of Representatives.

Bob Crosser devoted most of his adult life to a public service, which was long and fruitful.

In addition to his long and effective service in the House of Representatives, he served with honor and distinction as a member of the Ohio Constitutional Convention which, in large part, rewrote and gave the State of Ohio a modern and model constitution.

He was a fighter for freedom with a Scotsman's courage, which never wavered. We, his friends, will miss him more than we now know.

Ike's Hour of Triumph

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial:

[From the London Express of May 26, 1957]

IKE'S HOUR OF TRIUMPH

(By Robert Edwards)

The Russians have just suffered by far their greatest and most dramatic defeat in the cold war. Their idle threats have been exposed. Their foolish boasts have been stripped bare.

To one man must go the credit for this remarkable achievement, President Eisenhower.

His wartime triumphs are dwarfed by comparison. He has had the most startling victory of his career. He has carried out an act of daring that will scatter his critics like chaff—once they realize what has happened.

For here is the extraordinary fact. No one outside the inner conclaves of power seems to have understood the full measure of recent events. The victory has gone unhailed.

ON THE EDGE

I refer to the unprecedented challenge thrown out to Moscow by the sailing of the American 6th Fleet across the Mediterranean when Jordan was imperiled.

Look back on this moment in history and all its implications.

Jordan was on the edge of falling into the hands of conspirators from within. Outside the Syrian allies of the Russians were ready to send in their troops and swallow up the desert kingdom.

A MENACE

The signs pointed in one direction only. The Kremlin's Middle East ambitions were about to be fulfilled. A new and deadly menace to the immense Western oil reserves seemed inevitable.

Then President Eisenhower walked off the 18th tee at the Georgia golf course and gave the command as unconcernedly as most people would order a round of drinks: Sixth Fleet sail—call the Russian bluff. Dare them to pick up the gauntlet.

No humiliation was spared the Communists. The departure of the fleet from its anchorage off the south of France was as boldly advertised as a Hollywood epic.

BIG SHOW

Sailors, marines, and airmen were summoned from their leave billets ashore and from the casinos. Anyone left behind had to catch up by airplane. The maximum ostentation was employed to show that America meant business.

And what happened? Did Mr. Khrushchev threaten New York with guided missiles, as he did London when Sir Anthony Eden intervened in Suez? Did he write a stern warning to the President as he did to our Prime Minister?

SILENCE

Not at all. There was no talk of missiles. And not a single missive was sent to Washington. The best that Moscow could summon up were a few mumbling sentences in Pravda which had as much impact in America as a feather colliding with a Centurion tank.

By the time the 6th Fleet had arrived off the coast of Lebanon, by the time the marine contingents were landed and the anchor chains of the great vessels had rattled and roared into the sea, it was clear that for Russia the game was up.

The Syrian troops had no choice but to return to their homes. King Hussein was able to defeat his enemies without further interference from across the borders of Jordan. And the Kremlin leaders knew that their Middle Eastern adventure had come to an abrupt end.

Now nation after nation is rallying to the American banner. For domestic political reasons some of the Middle Eastern countries have yet to affirm the alliance publicly, but in due course they will do so. Only Syria and Egypt remain outside in lonely isolation.

Even the Israelites are under the American umbrella. Their boundaries have been made safe for them. They can relax as long as they behave themselves. "Jehovah has triumphed. Her people are free."

It is an astonishing transformation since the sorry picture a few months ago when all the Middle East was about to crumble. A transformation that has come about simply because America was willing to risk taking the world to the brink of the abyss.

Many a man of common sense and judgment would disapprove of America taking such a gamble.

ONE PATH

Supposing, after all, it had failed? Supposing Russia had sent in her forces on the other side? Then the last world war would have been fought to the finish or every one of us.

But these objections are now of no consequence. Whatever those who oppose unilateral action may say, the gamble came off, to the immeasurable benefit of mankind.

Now, of course, harvest piles upon harvest. One path alone lies open to the Russians. The path of peace. They are seeking to reach an accommodation with the Americans, an accommodation that will remove for generations ahead the fear of war. And they have found a willing response from the man responsible for their change of heart—Mr. Eisenhower.

DRASTIC

Yesterday he called a meeting of his defense chiefs and other advisers to work out new disarmament proposals. He is preparing a drastice reappraisal of policy toward the Russians following their acceptance of defeat in the Middle East.

Only the vested interest of the merchants of death stands in the way.

The American economy is sustained by the manufacture of ammunitions. Be sure the arms manufacturers will strive hard to prescrve the atmosphere of the cold war rather than see their profits dwindle.

EDEN'S BID

Where lies the moral for Britain in this triumph of American strategy?

Sir Anthony Eden's government tried to carry out exactly the same operation against Egypt and failed.

Britain ignored the United Nations and took tremendous punishment. America ignored the United Nations and gathered great benefits.

The lesson is surely this. Successful diplomacy depends upon overwhelming strength.

Allies' Policy Toward Red China

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. NEAL. Mr. Speaker, within the past week the citizens of the United States were dumfounded, if I may make it even stronger, shocked, when some of our stanchest allies deserted us on our fundamental position that Red China should be commercially quarantined from the free world. I do not need to remind you that we adopted this policy in regard to the Peiping regime because of China's inhuman and barbaric treatment of Americans in China at the time the Communist masters assumed control.

It was a policy of some 10 years' duration and our desertion by the British, French, Norwegians, and others of the free world community serves to underline the changing picture of America's position today and what it amounted to a decade ago.

At the time we adopted our no-trade policy, America's position was secure as the financial and industrial giant on this planet. True, by loans, grants, and assorted forms of aid, we were able to maintain adherence to the China boycott policy. Now, it is of some concern to me when I consider the fact that perhaps we, unwittingly, have weakened ourselves to a point where our erstwhile stanch friends see fit to disregard and turn away from a basic American foreign policy.

During the 10 years in which we clung to commercial and diplomatic ostracism of the Communist masters of Russian and Chinese millions, we sacrificed a considerable portion of our own industrial capacity through liberalized tariff rates and trade agreements, in order to bolster and maintain the dollar balances of foreign countries. They, our allies, in turn used such dollar balances to come into our market for the purchase of machine tools and heavy durable equipment which enabled them thus to manufacture goods for the world market and with their cheap labor undersell American manufacturers.

It is my considered opinion that it will never be known just how much of American manufacturing costs of producing this export material for foreign aid have been absorbed by the United States Treasury. It seems to me, however, that throughout the years there has been a steady stream of America's wealth that has flowed outward in the form of gifts, grants-in-aid, and highly questionable loans. This growing stream is a highly important factor in high taxes which the American people are made to pay. Meanwhile, recipients of these gifts have attained the point of real, and, in some cases, crushing competition for the American businessman in world markets.

As a result of these strengthened economies, given sinew by successive administrations pledged and devoted to continue foreign aid, we are turning now to mass production of war materials for export purposes, hoping that such war materials will eventually give us firm recruits in our fierce determination to prevent extension outward of Russia's Iron Curtain. This is, of course, a highly debatable policy and only time can show its worth.

A second result that has come to pass from our prosperous friends is that they have assumed various postures of diplomatic independence which led to last week's instant case of their desertion of the United States on the China question.

I do not know what the will of this Congress will be on GAT and OTC but I do know that Members of this House will be under increasingly heavy pressure from producers of durable goods, international bankers and the prophets of "one world" in future weeks to lower tariff barriers and generally to launch this Nation upon something approaching free trade. When that day comes we will see a vast importation of foreign goods which will undersell products made at home. Thus our foreign friends will accumulate dollars to their credit in our own country with which to pay for the export materials which we supply them.

It might be timely to point out that while it was a great blow to have our friends repudiate our Chinese policy, there occurred another event almost parallel with it, which showed even better how anti-American blow the international winds. It was on Formosa that anti-American sentiment flared up into astonishing proportions, leaving even some of our most determined supports of Nationalist China here on the Hill considerably shaken and taken aback. This riot occurred in one place where it had been almost automatically assumed that one of our best friends resided. If such violent anti-American feeling could flame up on Formosa, what of the situation in other countries which have been shored up and sustained by American dollars and aid?

It seems to me that much of what we have sought to accomplish in the way of a stable and peaceful world at such a staggering cost during the past postwar period may have come to naught. It is true that we have saved many a country from being gobbled up by the Russian bear but it is even truer that gratitude among nations, as among men, is a fragile thing.

I do not believe that America can stand totally alone in a hostile world.

To exist as a Nation we must have alliances, but to have enduring and profitable alliances we, as a senior partner, must be strong internally. Even now while we enjoy unprecedented prosperity there are disquieting but abundant signs that the time of reaping of the economic whirlwind may not be too far in the future.

You may recall that during the week of May 12 the United States Treasury's offer of several million dollars' worth of bonds was a failure. While officially it was said that the low-interest yield was largely responsible for the lack of investors, it may be an ominous sign that private capital is increasingly afraid of Federal securities because of the staggering size of our $270-billion national debt. If that be true, then it means that public confidence in the fiscal policies of the United States Government has been severely shaken, and a shaken confidence in Government means a diminution of confidence in our economy and the political machinery of the Republic.

I think it is time for some stocktaking upon the part of those entrusted with making national policy. I, for one, believe that the entire question of foreign aid should be gravely and thoroughly reexamined and a new assessment of its true worth as an instrument of foreign policy be arrived at. I believe, further, that some consistency should be restored to the operation of the Federal establishment. By this I would strike a blow for the taxpayers by ruthlessly eliminating waste and extravagance to the double purpose that we might effect tax reductions and apply some of our savings to a reduction of our overwhelming national debt which hangs like the sword of Damocles over the heads of us all.

With a strengthened economy and our domestic economic household put in order, America need have no fears for the future; our labor and industry, possessing confidence in our way of life, can easily produce for the world market so efficiently and cheaply that we can hold our own in any competitive situation. However, labor and industry, debilitated by the knowledge their taxes are being used to subsidize their competitors to the point where American goods can be undersold and shut out, have lost half the battle before it starts.

There is still time for us to redeem much of our past folly. It is not too late to restore the United States to its dominant position of world leadership which it had enjoyed immediately following World War II. But to redeem our past errors we in this 85th Congress must show the way. We have been amply warned by international events since the first of this year that perhaps, after all, we have been living in a fool's paradise and continually deluding ourselves that all is right with the world. I hope the time has come when we can see the handwriting on the wall. The letters are large enough for all to see.

Message of President Chiang Kai-shek to the Chinese People on the Taiwan Riots

---

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. JUDD. Mr. Speaker, the press has carried brief excerpts from the broadcast delivered to the Chinese people, June 1, 1957, by President Chiang Kai-shek of the Republic of China, on the recent attack in Taiwan on the American Embassy and the American flag; an attack which President Chiang frankly states brought dishonor to the nation.

The full text should be available to our people and, therefore, under leave to extend my remarks, I include it as follows:

MESSAGE OF PRESIDENT CHIANG KAI-SHEK TO THE NATION ON THE RIOTS IN TAIPEI ON MAY 24, 1957

(English translation of a broadcast delivered on June 1, 1957)

My fellow countrymen, the unfortunate incident that occurred at the United States Embassy in Taipei on May 24 was one of the most shocking and most regrettable things to have happened to our country during the 50 years of my participation in China's National Revolution. For the moment I choose not to dwell on its effect on our struggle against communism and Russian imperialism, or its harm to our effort in restoring authority and delivering our people on the mainland from tyranny, or its damage to the century-old Chinese-American friendship. What grieves me most is that the incident has left on our national prestige and dignity a stigma not easily removed.

CAUSE FOR REMORSE

In the first place, I cannot but admit that my leadership has been at fault. With a heavy heart, I wish to point out to my countrymen that we should all realize the seriousness of the incident. We must take it both as a lesson and as a cause for remorse. Only thus can we hope to be able to repair the damage done to our national honor.

I can well understand why the masses felt indignant at the American court-martial's verdict in the Reynolds case, but they should never have resorted to violence. All those who have received basic citizenship education should have a proper respect for law and order. No citizen of a modern and civilized nation should have sacked the Embassy of a foreign power and torn the flag representing that power, because such acts of violence are serious offenses before the law of our land. What happened on May 24 brought dishonor to the nation in its relations with the outside world.

At his inauguration as the Provisional President of the Republic of China on New Year's Day, 1912, Dr. Sun Yat-sen declared in a statement: "Following the establishment of our government, we should fulfill the obligations as expected of any civilized nation before we can qualify for the rights and privileges of such a nation. We must do away with all misdeeds which have brought disgrace to our nation during the Manchu dynasty and correct all antiforeign feelings. We must uphold peace and promote friendship with other countries so that China can once again take her rightful place in the community of nations."

NATIONAL POLICY

This was the national policy which the founder of the Republic of China had proclaimed for our guidance. Ever since the northward expedition which brought about our national unification, our Government has consistently adhered to this policy.

Let us review the recent unfortunate incident on the basis of this policy. Dr. Sun's purpose in leading our people in the national revolution was to remove the shame which had befallen our country as a result of the ignorant policy and acts of violence of the Manchu dynasty. The humiliating protocol of 1901 was the aftermath of the Boxer Uprising, during which frenzied mobs attacked foreign legations and inflicted physical injuries on foreign diplomats and foreign nationals. The uprising not only greatly impaired our sovereignty, but also brought upon our nation such infamy that for many years China was looked upon as a barbarian country.

In plotting against their own country, the Chinese Communists have all along tried to conceal the brutality of international communism behind national sentiments. It has been their practice to stir up mob violence to destroy friendly relations between China and the various foreign powers. Their purpose is to isolate our nation and to pave the way for the enslavement of our people by the Russian imperialists. This Communist tactic has been applied not only to China, but also to other countries. This is the lesson taught us by modern history. Let us all take it to heart.

COMMUNIST MACHINATIONS

I will now cite for you three historical instances that I have personally experienced. The first of them happened in 1924. In his first speech at the Whampoa Military Academy, Michael Borodin, representative of Soviet Russia, told the cadets that Chinese mobs in storming foreign legations and killing foreign diplomats during the Boxer uprising became the forerunners of China's national revolution. He must have known that as a result of that uprising the Chinese people came to be branded as barbarians. China's international position sank to a new depth overnight and the Chinese people were subjected to prolonged derogation after the protocol of 1901. Yet Borodin openly lauded the Boxer uprising. It is no accident that today the Chinese Communists are publishing books on the uprising, unashamedly confessing that they are the successors to the Boxers.

The second instance occurred in 1926 when I was leading our armed forces in the Northward expedition. In public proclamations as well as in orders to the troops, I called on all those concerned to do their utmost to protect all foreign government organs as well as foreign lives and property. I was terribly shocked when Lin Tsu-han, a Communist, instigated some units of the Sixth Army to attack British and American consulates, to tear up foreign flags, to sack missionary schools, and to harm foreign nationals in Nanking. This happened shortly after our troops had entered the city and before they had had time to reestablish law and order in general. This was known as the Nanking incident. The Communists' intention was to provoke a clash between the

National Government and the foreign powers concerned. Fortunately, this plot on the part of the international Communists was discovered in time and an amicable settlement was found before the incident assumed more serious proportions.

The third instance known as the Anping Incident took place in 1946. After the American troops had helped us accept the surrender of Japanese forces in North China, Chinese Communists fired on American troops at Anping along the Peiping-Liaoning Railway. Their purpose was to force the American troops to leave and to sabotage Chinese-American cooperation. Soon afterward, the situation in North China began to worsen. The Chinese Communists finally succeeded in isolating not only China but also Asia, thereby precipitating a greater crisis in the Pacific. These are all unforgettable facts.

COMMUNIST DESIGNS ON TAIWAN

As a result of the concerted efforts of our Armed Forces and civilians during the past 7 years, our fight against communism and Russian imperialism, as carried on from our base on Taiwan, has become inseparably interwoven with the fate of Asia and the security of the Pacific region as a whole. Whether the Russian imperialists will be able to dominate the whole of Asia depends on how successfully we defend this strong anti-Communist bastion of ours. In other words, it will be decided by whether they can dispose of the so-called Taiwan problem on their own terms. Otherwise, the Communist Iron Curtain will sooner or later be destroyed by the crusading flames of China's National Revolution. In that event, not only our own people on the mainland will be delivered from Communist tyranny, but the people in other parts of Asia will also once again see the light of dawn. This is the last and only problem which still confronts the Russian imperialists in their scheme of aggression in Asia. Today they are directing their Chinese puppets to sow seeds of suspicion by treacherous propaganda, by threats as well as by cajolery with this very objective in view, namely, the disposal of this problem. If this scheme of the Russian imperialists should become successful, then not only our people on the mainland will remain indefinitely in the clutches of the Devil, but our very safety here will be seriously threatened.

Today the world is divided between the aggressors and the antiaggressors. In our struggle against communism, there can be no compromise between the patriots and the traitors. We must know what is right and what is wrong. We must distinguish friends from foes. Mao Tse-tung and his gang are approaching their collapse and our opportunity of restoring national authority on the mainland is not far off. The only hope of the Chinese Communists to save themselves is to open a new battlefield for psychological warfare right here in the center of our fortress by instigating mob violence and propagating anti-American movements. If our people should have lost sight of the enemy's scheme, felt incensed over a court case, forgotten the goal of our national endeavors, mistaken friends for foes, and even gone so far as to ignore our own national interests, I do not believe that this could possibly have been the real intention of our patriotic citizens. Today I must make it clear again to our people that in carrying out our national policy against communism and Russian imperialism, we must stand on the same side with the United States, which is the leader of the democratic nations, and that we cannot permit any opposition to this policy from within or without.

SINO-AMERICAN COOPERATION

Our people must also understand that the United States not only is on our side now, but has had a long history of friendship with us. She is the only one among the foreign powers who has never conceived any aggressive designs on our territory. In fact, both before and after the protocol of 1901, she forestalled all attempts at China's dismemberment. This is something we should never forget.

But even among friends, unpleasant things could happen. The proper attitude we should have is one of mutual understanding. We hope our friends will understand us, but it is for us first to understand them. Our conduct in human relations should be guided by the confusian principles of loyalty and reciprocity, which exhort us "to do the utmost within" and "to extend from ourselves to others." If we should let our emotions of the moment run away without restraint, then regardless of the motive, however patriotic it may be, and regardless of the justification, the result is the same in that it will harm our national cause and inadvertently condemn our people on the mainland to continued suffering.

In the recent unfortunate incident, those whose duty it was to maintain law and order T'ai-pei failed to adopt proper precautionary measures at the outset. In the course of the incident, they failed to take resolute steps to cope with the steadily worsening situation. They were still indecisive as to what to do even after a peaceful demonstration had turned into a mob violence. As a result, the disturbances got out of control. This was most deplorable indeed. The Government has ordered the dismissal of the security chiefs concerned as a disciplinary measure. Henceforth, Government organs will be held strictly accountable for carrying out our national policy, protecting the lives and property of both our own people and of foreign nationals and maintaining law and order in any circumstances. No failings shall be condoned. Those arrested on the scene of the riots shall be dealt with in accordance with law.

NEED OF ENLIGHTENED CITIZENRY

After this incident, both the Government and the people should take the painful lesson to heart. Especially in the field of education, attention should be paid to the matter of inculcating in the minds of the people at large knowledge of world affairs and concepts of modern citizenship. Relevant material should be added in textbooks on civics for use in all schools. We should understand that modern nations are made of people with modern knowledge and training and that an enlightened citizenry is the foundation of a nation.

My fellow countrymen: At this crucial moment when our national interests and honor are at stake, I earnestly hope that all teachers and parents will tell their students and children that they must learn to behave like citizens of a modern nation. Henceforth, there should be a spirit of respect and friendliness not only toward American nationals but toward all other foreign nationals who reside in our country. Only thus can the Republic of China fulfill its duties and at the same time enjoy the rights and privileges of a civilized nation. This is why we must maintain our national standing and promote international cooperation and mutual help. Only thus can our nation look forward to a brighter future and our 60 years of national revolution be expected to bear fruit. Only thus can we insure success in our fight against communism and Russian imperialism.

Reds Appear To Be Losing Italy's Unions

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. CRETELLA. Mr. Speaker, I have noted with great interest and profound pleasure the fact that the Communists appear to be losing ground in Italy, both in the labor movement and the registrations of the general public.

As I have pointed out earlier, I think the greatest error made by the Communists was in the belief that they could derive more than token support from a freedom-loving nation of a deceptive and false ideology, which, in fact, actually denies freedom of choice and independence.

I include in the Appendix of the RECORD an article from a recent issue of the New Haven Register on this subject:

REDS APPEAR TO BE LOSING ITALY'S UNIONS—COMMUNIST LABOR BOSSES MAKING LAST STAND AT MILAN SUBURB

MILAN.—Communist control of Italy's labor movement is being shattered in a series of crucial union elections in key plants of this northern industrial hub.

Red labor bosses are making a back-to-the-wall stand here in the Milan suburb of Sesto San Giovanni, known as Italy's "Little Stalingrad" for its Communist strength.

Two of their strongholds are the Marelli radio plant and the Falck steelworks. Elections are due in both plants late this month. The outlook, based on results at the key Fiat factories in Turin, is for a double-barreled Red setback.

The Fiat story capsules the rise and decline of Communist domination of Italy's highly organized labor movement. In the post-liberation summer of 1945, the Communists seized physical control of the Italian industrial titan, locking management out of the plants.

After law and order were restored, the Communists still managed to regain control of Fiat labor unions. As late as 1954 the Reds polled 33,000 votes against 13,000 for the free unions.

GRIP IS BROKEN

In 1955 the free unions, with a handsome assist from the United States, finally broke communism's grip at Fiat, but the Reds even so polled 40 percent of the ballot.

This year, in a record voting turnout, the 60,000 Fiat workers elected only 1 Communist of 6 on the committee the Reds had bossed entirely until 2 years ago.

The 1955 Fiat election was the turning point. The Communists slipped further at Fiat in 1956, and labor in other major Italian industries, with its eye on Fiat, began a similar breakaway from the Red-controlled CGIL union.

In 1955, it took a threat by the United States to cancel fat Fiat contracts for American-financed NATO aircraft to push the Reds out. After that the United States Embassy in Rome never had to enter the picture.

Communism's Fiat freezeout is a victory of incalculable magnitude for the western free-labor movement. It has eradicated Communist roots from possibly the world's most fabulous industrial concern, and, equally significant, it has demonstrated that,

with the worker in Italy as elsewhere, bread and butter, not ideology, still has priority.

LARGEST OUTSIDE UNITED STATES

Fiat is easily Italy's largest industrial concentration. It is the free world's largest single arsenal outside the United States. Not even Krupp at the peak of World War II armaments production was as fabulously vast as Fiat.

Fiat's industrial virtuosity is told in the firm's slogan: "Fiat on land, sea, and in the air." Fiat's 18 huge plants at Turin wander over 24 million square yards! They spew out automobiles, aircraft, washing machines, refrigerators, diesel trains, aircraft engines, marine engines, machine tools, tractors, trucks, and buses. The corporation also controls Italy's cinematographic film production, has a stake in the world-famous vermouth, and owns and operates the Sestrieres ski resort.

Fiat mines supply ore from the Piedmont Alps to Fiat iron and steel mills. Fiat boasts Italy's biggest steel mills, its biggest aircraft plant, and is Italy's biggest automobile producer. It also operates the world's biggest private social-welfare program of its type. In the mechanical trades, Fiat pays Italy's highest wages. But that is only a starter.

Every Fiat worker receives free medical treatment. Fiat has a convalescent hospital for its workers and a retirement home for its aged. It operates a social-insurance fund which is paying out to 170,000 beneficiaries.

The corporation operates a mammoth technical-training program. And it provides for the worker in his free time and for his family. There are Fiat holiday camps, social and recreational centers, and day nurseries.

When Fiat workers need housing, the firm will provide that, too. Fiat invested $13 million in worker housing after the war.

Taking stock of all this, it has apparently suddenly occurred to the workers that communism can give them nothing they aren't already getting—at Fiat.

Reserve for the Soil Bank

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am happy to include an editorial from today's Washington Post titled "Reserve for the Soil Bank."

When this bill was before the House a few weeks ago, I did feel it was largely misunderstood by many Members of the House—and especially what we were trying to accomplish by the continuation of the soil bank through the full 3-year period for which it was originally designed.

I am happy that the other body has included authorization for the soil bank next year.

This will undoubtedly come before the House in the next few weeks for another vote. At that time we will have a chance to explain the matter in more detail and I feel sure that many of those who voted against the continuation of the soil bank for next year will change their minds. The soil bank is a good plan and it produces the proper incentive for reduced production. Unless we have reduced production, it is impossible for the farmer to get an adequate price for his produce in the open market place—and that is the purpose of this legislation.

Mr. Speaker, I append in full the editorial of Friday, June 7, from the Washington Post:

RESERVE FOR THE SOIL BANK

The budget-cutting fever on Capitol Hill has subsided sufficiently to enable a Senate Appropriations Subcommittee to restore a spending authorization for the soil bank next year. The House had capriciously deleted this $500 million item for economy reasons, with apparently little thought of the impact it would have on the agricultural program. The Senators who voted 8 to 2 to reverse that action are probably no less economy-minded than the House, but they feel some responsibility for continuing the soil bank's incentives for reduced production until something better can be put in their place.

It is instructive to remember that only a little more than a year ago Congress passed an omnibus farm bill providing for restoration of rigid 90-percent-of-parity price supports for basic crops and a dual parity system as well as a soil bank. The President vetoed that extravagant measure. Likewise it is well to remember that only a few months ago the agricultural leaders of the House sponsored a feed-grains bill that might have added another billion dollars to farm benefits. After defeating this measure the House flew to the other extreme of trying to kill the soil bank.

It is good that more sober counsel has prevailed in the first test on the Senate side. Nothing is to be gained by offering the farmer the moon one month and snatching away benefits already authorized the next. The Senate will do well to insist on carrying the soil bank through 1958 or until the proposed new program can be worked out and enacted.

Innocent Incitement

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. BOSCH. Mr. Speaker, I have just read an article in the National Review of June 8, 1957, regarding the part that Radio Free Europe played in the recent Hungarian revolt. Under leave to extend my remarks, I include this article and commend it to the attention of my colleagues:

INNOCENT INCITEMENT

The New York Times of April 29 carried a dispatch from Munich reporting that Radio Free Europe officials there had declared that none of the changes (in the personnel of RFE's Hungarian desk in Munich) made, or in the making, implies a guilty plea to charges that the organization irresponsibly incited Hungarians to revolt.

Three months earlier, on January 26, the Herald Tribune's Bonn correspondent, Gaston Coblenz, had reported President Konrad Adenauer's criticism of RFE. President Adenauer had, according to Mr. Coblenz, "also disclosed that certain changes in personnel have taken place on RFE's staff as a result of the handling of broadcasts during the Hungarian uprising."

In 1950's RFE's founders declared that it was necessary to form RFE in order to have a hard-hitting instrument, not bound by restrictions under which the official Voice of America has to broadcast to the enslaved peoples behind the Iron Curtain.

That encouragement to fight communism and the creation of revolts has always been the purpose of RFE can easily be proved not only by the transcripts of its broadcasts but also by statements of its highest officials. To give just one example:

On November 25, 1951, the New York Times carried a story from Munich by Jack Raymond, in which he quoted a speech by Charles D. Jackson, then president of the National Committee for a Free Europe (which runs RFE), as follows: "What we wanted was to create conditions of inner turmoil in the countries our broadcasts reached." According to Mr. Raymond's report, Mr. Jackson said "The time to think about possible military aid is when people in satellite countries succeed in inaugurating a useful military movement on home grounds."

This speech was, of course, broadcast to Hungary. The Hungarians never forgot it, as many Hungarian refugees at Camp Kilmer have told me. It was rebroadcast by Hungarian freedom stations again and again in 1956, with assurances that the United States would certainly honor C. D. Jackson's promises of 1951—all the more since Jackson had in the meantime been appointed special adviser to the President on problems of psychological warfare.

In the light of these facts, can we still maintain that we are innocent?

JULIUS EPSTEIN.

NEW YORK CITY.

Mr. Brownell's Witness

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. COLMER. Mr. Speaker, much has been said in the last week about the right of trial by jury of those charged with violating an injunction under the pending civil-rights bill.

The Attorney General of the United States has called upon the late and respected President Taft to bolster his demand for the denial of the jury trial to those so accused.

The highly respected Washington Star has today exposed the fallacy of the Attorney General's position in the following editorial:

MR. BROWNELL'S WITNESS

For reasons which are obscure to us, the Attorney General has called the late William Howard Taft as a witness in his behalf in his opposition to the jury-trial amendment to the proposed civil-rights bill. And at his press conference last week the President joined Mr. Brownell.

Early this month the Attorney General wrote to several Members of Congress arguing against the jury-trial amendment. And he quoted the former President and Chief Justice to this effect:

"The administration of justice lies at the foundation of government. The maintenance of the authority of the courts is essen-

tial unless we are prepared to embrace anarchy. Never in the history of the country has there been such an insidious attack upon the judicial system as the proposal to interject a jury trial between all orders of the court made after full hearing and the enforcement of such orders."

On its face, this sounds impressive—and it certainly impressed Mr. Brownell. But let's look a little closer. Mr. Taft made the statement in a speech accepting the Republican nomination in 1908. It was a political speech—a speech attacking a Democratic proposal to provide for jury trials of persons accused of violating labor injunctions.

A year later, on September 16, 1909, Mr. Taft made another speech, and we commend it to Mr. Brownell's attention. For by that time Mr. Taft had been elected, and it is fair to say, we think, that his real attitude toward jury trials became clearer. The truth is that Mr. Taft, a former judge even at that date, did not think very highly of the American jury system. He thought that "a judgeship is a great office and the man who holds it should exercise great power and he ought to be allowed to exercise that in a trial by jury." He deplored the practice of letting juries "follow their own sweet will, influenced by all the arts of counsel." He spoke chidingly of the "weaknesses, the timidities and the ignorance of juries." In short, Mr. Taft preferred the English system, where, as he put it, a murder case would be disposed of in 2 or 3 days, and where "the judge controls the trial."

But let's go back to the 1908 speech. Why does Mr. Brownell cite it in support of his current opposition to jury trials in civil rights cases? For the plain fact is that Mr. Taft was mistaken. Despite his opposition, Congress did provide for jury trials in labor cases. And the country did not sink into anarchy, nor did the provision prove to be an insidious attack upon the judicial system. In short, Mr. Taft was just about as wrong as a man could be in 1908. Why does Mr. Brownell call him to the witness stand in 1957?

Congress and Defense Money

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney, S. C., Ledger of June 8, 1957:

CONGRESS AND DEFENSE MONEY

The prevailing atmosphere in the House of Representatives indicates the Defense Department's budget requests are going to be cut. We did not anticipate that the House would be ready to whack huge defense requests this year, although we have predicted that this was an inevitable development, military expenditures being what they are.

In recent days, the House Appropriations Committee chopped some $2,587,000,000 from the original Defense Department appropriation requests, which was $36,128,000,000. As soon as this cut was made, the President and Defense Secretary Charles E. Wilson asked that at least half the cut be restored.

However, a scene occurred on the floor of the House shortly after this appeal which indicates the sentiment prevailing in the lower legislative body. A Democrat, a member of the House Appropriations Committee, defended the committee's action and was applauded by both Republicans and Democrats. Moreover, Republican Members of the House arose to defend the position taken by the Democrat and that of the Appropriations Committee.

This would indicate that the House, at least, is in a mood to cut defense expenditures. It is difficult to say that a military budget of over $36 billion cannot be cut without impairing the Nation's security. It is also difficult for an editor, or a citizen far removed from the scene of budget study, to say where the cuts should be made.

And if Congress feels that the military requests for fiscal 1958 can be reduced after studying the proposed budget, and being aware of the international situation, then this judgment is not necessarily frivolous.

In our system of government, Congress often makes mistakes. So does the executive branch and the Pentagon. Therefore, Congress having granted huge defense budgets for many years in succession and having supported the foreign policies of both Democratic and Republican Presidents consistently, chances are that Congress is more right than wrong.

Iowa AMVETS Post Denounces Decision To Deliver Soldier for Trial in Japanese Court

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. GROSS. Mr. Speaker, vigorous protests have reached my office from veterans' organizations and individuals in response to the unthinkable decision of Secretary of State Dulles and Secretary of Defense Wilson to deliver for trial in a Japanese civil court Sp3c. William S. Girard for an alleged act committed while he was on duty.

One strong protest comes from Waterloo, Iowa, Post No. 19, American Veterans of World War II, in the form of a resolution adopted unanimously at a meeting of the post on June 6. The resolution follows:

Whereas Sp3c. William Girard of the United States Army has been, or will be, turned over to Japanese authorities for trial in the alleged killing of a Japanese woman; and

Whereas said William Girard was on duty at the time of the alleged incident and actually under the direct and immediate orders of a United States Army Officer; and

Whereas the case of William Girard who was on duty at the time of the alleged incident would not come under the provisions of the Status of Forces Agreement between the United States and Japan; and

Whereas the decision of the United States Government to allow Japanese jurisdiction in the case of William Girard is tantamount to a finding that Girard has not acted in line of duty in the alleged incident; and

Whereas such a finding is the proper concern of a military court-martial; and

Whereas William Girard has not been granted the right to a military court-martial to determine whether or not he acted in the line of duty in the alleged incident; and

Whereas the provisions of the Status of Forces Agreement have apparently been wrongfully applied in the case of William Girard as a result of the insistence of the Japanese Government and for the sake of diplomatic expediency; and

Whereas William Girard of the United States Army has been, or will be, deprived of the protection of the United States Constitution while serving his country in an onduty capacity in Japan; and

Whereas William Girard has been, or will be, placed in a position where he could be deprived of his freedom by a foreign power for an act allegedly committed while on active duty with the United States Army in Japan: Now, therefore, be it

Resolved by AMVET Post, No. 19, Waterloo, Iowa, That we protest in the strongest terms the decision of the Government to allow Japanese jurisdiction in the case of Sp3c. William Girard; be it further

Resolved, That AMVET Post, No. 19, Waterloo, Iowa, demands that our duly elected representatives in Congress make every effort to prevent the transfer of William Girard to Japanese authority, or in the event William Girard has already been transferred to the civil authority of Japan, every effort be made to restore him to United States custody and that his case be disposed of under the provisions of the Military Code of the United States Army.

AMVET POST, No. 19,
NICHOLAS GEORGE,
Commander.

The 85th Congress

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mrs. KEE. Mr. Speaker, about this time every year, a hue and cry goes up that Congress is two-thirds of the way through its session and has done nothing. This year and this Congress are no exceptions, as I have learned by reading my favorite political writers, commentators and news analysts. The criticism is never entirely justified and is frequently misleading. And so I am moved to say a good word for Congresses generally—since apparently so few people ever do.

Mr. Speaker, somehow, the impression has gotten about that unless the Nation's great legislative body is busily engaged in grinding out laws—like a giant buzz saw gnawing through wood and scattering the chips where it may—nothing is being accomplished. Of course, this simply is not so and I can think of nothing that could be worse for the country if it were. Laws passed in haste must inevitably be repented—and repealed—at leisure.

Each Congress develops a character and objective distinctly its own, but always in response to the public mood. When people are restless and reaching out toward new goals, you will find a Congress seething with action—scurrying about and eagerly seeking the means to achieve those goals. When the people are satisfied and wish, primarily, to be let alone, then you will have a Congress that is conservative and contemplative, reviewing, correcting and amending, but seldom pioneering in new fields.

From the vantage point of my seat in the House of Representatives, I would say that the character of the 85th Congress, as it has developed so far, is somewhere between the two extremes. It is neither especially progressive nor is it ultraconservative. It is deliberative.

Knotty problems and tremendous challenges face the 85th Congress; and I, for one, am content that it is not to be hurried into making any hasty, and possibly erroneous, decisions. Civil rights, foreign aid, amending the immigration laws, Federal aid for school construction, extending the minimum wage coverage, regulating election campaign contributions and tightening the lobbying law—these are some of the major questions to which this Congress must find the answers.

These answers, when they are found, are bound to affect the lives of all of us—and conceivably, a good many people could be hurt. That is why I am very glad that neither our leaders, the chairmen of our committees, nor the Members will allow themselves to be rushed or pressured into quick action.

At the moment I would say that the major objective of the 85th Congress is economy—the squeezing of the fat out of the budget. For years, Government spending has been the target of political barbs and public criticism—and again, I say, much of it justified, a good deal of it unfair and selfishly inspired. This year, both the House and Senate are determined to do something about it and are concentrating upon this single goal almost to the exclusion of the rest of the legislative program. At least, all other proposals are considered first in the light of whether or not they will add to Government spending.

To date, the House has cut more than $4 billion from the administration's budget estimates by painstaking examination, item by item, of its vast proposed expenditures. If you do not believe that this is something of a feat, try keeping track of every cent you spend in 1 month. Then go back and see how you can reduce that spending by 5 percent or better, without changing appreciably your mode of living. This is what the House has done on a tremendously greater scale and without detracting to any marked extent from the public good or the national well-being.

This accomplishment, alone, would constitute an outstanding record for the 85th Congress—to reestablish congressional control over spending in the executive branch of the Government. If is by no means all that has been accomplished so far.

Important to the Fifth District, and in fact to all of West Virginia, especially in those areas damaged severely by the January floods, is the legislation enacted which increased by $80 million the lending authority of the Small Business Administration.

The borrowing power of the Federal National Mortgage Association has been increased by $500 million to ease the mortgage-money market, and both House and Senate have passed housing bills which are now in conference and which, ultimately, will help homebuyers and the construction industry, allow lower downpayments on FHA-insured loans, and make it easier for elderly people and large families to obtain adequate housing.

In the House a number of veterans' benefit bills, long sought and urgently needed, have been passed. Among them are bills to increase the rates of compensation for service-connected disabilities and dependency allowances; to increase the maximum allowable for direct housing loans; to increase the monthly pension payments to widows of Spanish-American War veterans; and to make permanent the Missing Persons Act, authorizing continued pay to next of kin of personnel missing in the course of duty.

Nor does any of this take into account the vast scope of the work now going on in the committees of Congress—work which will shortly begin to bear fruit as each committee reports out the bills which are the results of its labors and both Chambers quickly pass these bills in rapid succession.

Mr. Speaker, this is the pattern which has been established in the Congress over the years. And although our good friends, the news reporters in the Press Galleries, are prone to describe this activity as "the rash of bills pushed through in Congress' last-minute rush to adjourn," it is, of course, nothing of the sort. It is final action coming after much hard effort, long deliberation, and careful weighing of the end results of each bill's passage.

In the estimation of this Representative, the best Congresses are those that pass the fewest laws—but take the time and thought to make them good ones.

American Job Spirit

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. O'BRIEN of New York. Mr. Speaker, I should like to insert in the RECORD a heart-warming letter from one of my constituents relative to the spirit and loyality of a wonderful group of workers at the Watervliet, N. Y. Arsenal. It offers further proof of the wisdom of the United States Government in continuing to provide the work needed to keep these splendid men and women employed in meeting the needs of our national defense. The letter follows:

ASSOCIATED INDUSTRIES OF
NEW YORK STATE, INC.,
Albany, N. Y., June 4, 1957.

Hon. LEO W. O'BRIEN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN O'BRIEN: Knowing of your interest in the people of Watervliet Arsenal I invite your attention to a spirit and job endeavor among the employees there which is always gratifying to find in industry and particularly in a Federal establishment. Moreover, involving a wholly voluntary, out of pocket, personal contribution to accident prevention and plant efficiency, it also represents a saving of Federal funds.

Here's the story: This year, for the first time, Watervliet Arsenal participated in the annual statewide accident prevention campaign of Associated Industries of New York State. The campaign, held during the first quarter of the year, is regarded by most participating firms as a means of strengthening their year round safety programs. Conducted as a public service, it is open to all types and sizes of industrial and business firms.

Twenty-one different departments of the arsenal enrolled in the campaign, each being classed with other entries of comparable size. Such all-out participation is a clear indication of earnest desire to derive the greatest benefit from the campaign in terms of real safety promotion.

There is an $8 and $12 fee for each entry to help defray costs of campaign materials and it is standard practice for a company, whether it has one or multiple fees, to write this cost off as an operating expense—as is also done with the tickets for employees to attend the award dinners held throughout the State to honor the winners.

In consideration of the strict controls over Federal funds, the people at the arsenal tried to find a precedent or regulation authorizing this type of expenditure. When the question still remained as to whether this was an acceptable charge, they undertook to assume the cost themselves.

Thus the employees of the arsenal paid the entry fees out of their own personal pockets. They also attended the regional awards dinner, held in Albany, and paid for the tickets out of their own pockets. They came through the campaign with flying colors, winning 19 awards. Their overall accident frequency rate was 4.2—substantially below the statewide average of 7.63.

The most commendable aspect of the Watervliet Arsenal's participation in the campaign is that the employees enrolled and assumed all the costs entirely on their own. As you well know, such instances of employee spirit and willingness to contribute materially to the advancement of organizational efficiency and prestige are not the general rule.

Moreover, in consideration of the fact that the average lost-time accident in the Ordnance Department costs the Government approximately $800, the fine safety enthusiasm and the splendid safety record of the 2,600 Watervliet employees is translatable into significant savings for the taxpayer. Against the current cries about Federal spending and extravagance this news is most timely and significant.

May I say that it was quite by chance that we learned of this fine move on the part of the Watervliet people. They have not been making anything of it nor has there been any publicity other than that normally given to all winners of the campaign. I am sure you will agree with me that this most commendable job spirit is clearly worthy of special recognition. Thus, my reason for bringing it to your attention.

Sincerely yours,
JOSEPH R. SHAW, *President.*

Cooperatives and the Future of Agriculture

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I would like to include an article from the May 31, 1957, issue of the Sco-op, published by Mrs. Doris Henderson, at Rolla, Kans., my hometown.

I believe this article shows thoughtful judgment and Mrs. Henderson's proposal that cooperatives may be the remedy to our farm problem ills certainly deserves further consideration.

The article follows:

No doubt you've all read the protests issued by farm legislators to Secretary Benson's suggested drastic overhaul of the farm program, and his statement that the present farm program is a failure.

Our own Representative J. FLOYD BREEDING has said that he does not believe that the farmer should accept anything less than 90-percent support on any basic crop—including grain sorghums—with acreage controls constituted and administered as they are today. He stated that he considered the existing program abundantly operable if realistically administered. But he said, "If the current administration of the farm program continues at its present ineffective rate, the farm leaders of the country had best begin devising fresh approaches to the Nation's agricultural problems."

Amen, brother. Government and politics have been used to keep prices up for some groups since time out of mind. One of the characteristics of modern economic life is that many more groups have demanded the same privilege, and it has been contested bitterly by those who have long enjoyed the privilege. But that is far from being the only feature. However that may be, a political solution for an economic problem is a lot like an aspirin for a pain in the head. It may relieve the misery, but it doesn't remove the cause. The cause itself may disappear while the aspirin is still giving relief from the pain, so that the aspirin may be credited with curing the headache, while it actually did no such thing. If the aspirin does not kill the pain, as happens with some headaches, or loses its effectiveness, it is time to look for the cause, and if possible, eliminate that.

Cooperatives are an economic approach to the economic headache of the individual, the family, the business, or the farm which must sell its goods or services in a market controlled by the buyer, and buy its supplies and equipment in a market controlled by the seller. Much economic distress boils down to this squeeze in which the other fellow always sets the price.

A farm, even a huge one, is a small business, by comparison with the industrial giants who produce most of the farmers' supplies and equipment, and who definitely operate in a seller's market. Like the aspirin, Government controls and supports are desirable to relieve the distress in this situation. Hurrah for the men up there in Washington who are doing their best with our problem. Whose methods are right and whose are wrong is not for me to say. Bless them for trying. But for curing the disease, cooperatives can provide their members true economic bargaining power, a sort of entering wedge in the cost-price squeeze.

Much has already been accomplished through cooperatives, though they are a child of the industrial revolution, and only a century old. But there is so much more that they can do, and in fact they have gone much farther in the direction of economic strength for agriculture, especially in the Scandinavian countries.

Let's work together to develop a sound solution to our own problems. Let's get them out of the lap of the Government as quickly as possible, and be the first segment of the economy to do this. It's part of the tradition of the land. Then we'll be in a position to challenge other groups for their Government subsidies.

As long as agriculture remains a political pressure bloc the whims of politics can destroy our economic position. Let's build it on an economic foundation.

Our cooperatives can be developed to do this. It will take time, but so do all strong, sound things. So do some precarious things. But there's one thing certain. A cooperative won't work unless its own members work it.

Juries in Contempt Cases

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include a letter published in the New York Times of Sunday, June 9, from Paul A. Freund, Royall professor of law at Harvard University, which makes a valuable contribution to the discussion of juries in contempt cases.

JURIES IN CONTEMPT CASES—BASIC ISSUE IN TRIALS IN AREA OF CIVIL RIGHTS DISCUSSED

To the EDITOR OF THE NEW YORK TIMES:

The debate over the pending civil-rights bills has come to turn increasingly on a proposed amendment for trial by jury in contempt proceedings, where the defendants are charged with having violated an injunction. The discussion has unfortunately converted what should be a straightforward practical issue of law-enforcement policy into a spurious struggle over constitutional rights.

The provision for jury in the Federal Bill of Rights did not uproot the historic practice of courts of equity whereby injunctions and contempt orders for their violation are issued in proceedings heard by the judge alone without a jury.

The real constitutional issue has not been over a supposed right of jury trial in this class of cases. It has been quite the reverse—namely, whether the judge may be deprived of his historic power to punish for contempt without a jury. Not until 1924, when the jury-trial provision in the Clayton Act was tested, did this issue become settled by a decision of the Supreme Court sustaining the legislative power thus to modify the historic practice of courts of equity.

STATE COURT RULINGS

It is noteworthy that when a similar issue had been presented by State statutes the jury-trial provision was held unconstitutional in a number of State courts, including those of Michigan, Mississippi, Missouri, North Carolina, Ohio, Oklahoma, and Virginia.

The Supreme Court decision in 1924, in the Michaelson case, sustained the innovation of the Clayton Act for criminal contempt while reserving the question whether a jury trial in civil contempt would be likewise constitutional—that is, where the contempt order is not punitive but is coercive toward compliance with the original order. In short, the constitutional issue is not what the proponents of jury trial contend; the constitutional shoe is decidedly on the other foot.

On the level of legislative precedent, the Clayton Act and the later Norris-LaGuardia Act are very remote analogies. The Clayton Act did not apply the jury-trial concept to suits brought by the United States. The Norris-LaGuardia Act was designed to take the Federal district courts out of the business of issuing injunctions in labor disputes in the general run of cases; the provision for jury trial was an appendage applicable to a negligible class of cases that might still remain in the Federal courts.

PRIVATE CONTROVERSIES

The central feature of that legislative episode was that the Federal courts were bringing their jurisdiction into disrepute by being drawn into private controversies which did not rest on any Federal statutory or constitutional mandate and which lent themselves to procedural abuses. Today the Federal courts in administering the National Labor Relations Act are not bound by the jury-trial provisions of the earlier statutes.

If there is apprehension that the Federal district courts may need constraint in carrying out their responsibilities under the civil-rights legislation, the debate could profitably center on what those constraints might be. Arguably the legislation should require that a defendant be named in an injunction order before being cited for contempt, and that the statute should specify the maximum punishment which a judge may impose for contempt.

When the legal dust raised by the jury-trial proposals has settled, the basic issue of judgment can be viewed more clearly. That issue is this, is it not: whether in carrying out the fundamental law of the land in the area of civil rights, miscarriages of justice are more to be feared at the hands of local Federal judges than of local juries?

PAUL A. FREUND.

CAMBRIDGE, MASS., *June 3, 1957.*

Time Should Be Given Koevago To Answer Khrushchev Broadcast on CBS

EXTENSION OF REMARKS
OF
HON. HARRY G. HASKELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. HASKELL. Mr. Speaker, on June 2, 1957, the boss of the Russian Communist Party, Nikita S. Khrushchev, appeared on the television program, "Face the Nation," on the Columbia Broadcasting System. His answers to the questions submitted to him were nothing but the usual Soviet distortions of the truth.

In my district, in a suburb of Wilmington, Del., the last freely elected mayor of the city of Budapest is now living. Yesterday, he wrote to the Columbia Broadcasting System and requested that he be given time to answer the statements made by Khrushchev, and especially the latter's assertion that the Kadar regime is the true representative of the people of Hungary.

The best way to disprove that statement would be for the Soviet Union to conduct free elections in Hungary and allow the Hungarian people to decide whom they desire to be governed by.

I know of no one who would be more qualified to give the American people the true picture of the tragic situation that now exists in Hungary than Mr. Joseph Koevago, the last free mayor of their capital city.

Mr. Koevago was very active in the resistance movement against the Nazis, and during World War II was a major factor in organizing the underground.

As a result of his attempts to strengthen ties with the western countries, he was, in 1946, thrown into prison by the Communists for 6½ years.

Mr. Koevago was the last freely elected secretary general of the Small Holders Party, the majority party in that heroic nation. Since escaping from Hungary, he has been to London, Paris, Brussels, and other parts of the free world to enlist assistance for his enslaved people. He is continuing these activities here in the United States. Mr. Koevago was one of the leaders of the October revolution in Hungary last year.

Today, I sent a telegram to Dr. Frank Stanton, president of the Columbia Broadcasting System, urging that Mr. Koevago's request for time to answer the outright lies by the Soviet Communist Party boss, Khrushchev, be granted.

There is no American spokesman who would be more capable of making such an answer and in presenting the true picture to the American people of Soviet brutality in Hungary.

I hope that the Members of Congress will support Mr. Koevago's efforts to obtain time on this nationwide television network, to give the American people the truth about Hungary.

Discrimination Against 90-Score Butter

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I should like to include in the CONGRESSIONAL RECORD Enrolled Senate Concurrent Memorial No. 1 which was adopted by the Oklahoma House of Representatives of the 26th Legislature on May 27 and by the Oklahoma Senate of the 26th Legislature on May 29:

The memorial follows:

Enrolled Senate Concurrent Memorial 1

A concurrent memorial relating to the proposed discrimination against 90-score butter in the application of the agriculture price-support program; directing that copies of this memorial be forwarded to specified officials

To the SECRETARY OF THE UNITED STATES DEPARTMENT OF AGRICULTURE:

Your memorialist respectfully represents:

1. That it is understood serious contemplation is being given by the United States Department of Agriculture to disqualify 90-score butter for eligibility under the agricultural price-support program.

2. Oklahoma produces and markets annually in excess of 25 million pounds of butter, 80 percent of which is 90 score.

3. It would result in a disastrous and unjustified discrimination against Oklahoma butter if the price support program were changed to eliminate 90-score butter.

Wherefore your memorialist, the Legislature of the State of Oklahoma, prays:

1. That the Secretary of the United States Department of Agriculture continue in effect the present rules and qualifications which afford the application of price supports to all butter scoring at least 90.

2. That copies of this memorial be furnished each member of the Oklahoma congressional delegation, with the urgent request that they personally present the same to the Honorable Ezra T. Benson, Secretary of the United States Department of Agriculture.

Adopted by the senate the 27th day of May 1957.

COWBOY PINK WILLIAMS,
President of the Senate.

Adopted by the house of representatives the 28th day of May 1957.

B. E. HARKEY,
Speaker of the House of Representatives.

Postmaster Quigley, of Brooklyn, N. Y., Appoints New Assistant Postmaster

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. DORN of New York. Mr. Speaker, following the announcement of the retirement of the assistant postmaster in Brooklyn, the postmaster has announced the promotion of loyal postal employees.

The announcement follows:

POSTMASTER QUIGLEY OF BROOKLYN, N. Y., APPOINTS NEW ASSISTANT POSTMASTER

Postmaster Edward J. Quigley, of Brooklyn, N. Y., has announced that personnel changes in the Brooklyn post office will go into effect, caused by the retirement of Charles J. Eginton, assistant postmaster.

The new assistant postmaster will be Martin Shapiro, 1270 East 18th Street, Brooklyn, N. Y., who formerly was the chief accountant. He is 54 years of age, with 37 years service, having entered the Brooklyn post office as a substitute clerk May 9, 1921. Mr. Shapiro has held many and varied positions during his long tenure, both in the mail operations and in the finance sections. In 1942, he was appointed a supervisor and has held many responsible assignments until his present promotion to the second highest position in the Brooklyn office. Mr. Shapiro is the father of two daughters, Mrs. Sally Walker, of New Brunswick, N. J., and Mrs. Lois Shaw, Brooklyn, N. Y. He was formerly national president of the Welfare Organization of the Jewish Civil Service Employees. His activities in labor management have seen him as past president of Local 251, National Federation of Post Office Clerks, and New York City Joint Conference of Postal Employees. He was a representative during his early postal career at many clerical organization conferences and conventions, and served in the same capacity at similar meetings during the last 15 years while a supervisor.

Replacing Mr. Shapiro as chief accountant, Postmaster Quigley has promoted Richard L. Calvely, who was appointed a subclerk in the Brooklyn post office in 1925 and has progressively been promoted through various clerical and supervisory assignments. Previous to his present assignment, he was on Postmaster Quigley's staff as survey officer making many recommendations for changes in the more expeditious handling of the mails.

On Monday, June 3, Postmaster Quigley, in a ceremony taking place in his office witnessed by many postal and community officials, will administer the oath of office to these new appointees. Postmaster Quigley pointed out that these men represent the trend in postal service career force, wherein qualified senior men are considered and appointed to positions commensurate with their ability.

Close Air Support

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. GAVIN. Mr Speaker, under leave to extend my remarks, I would like to insert the following article, Close Air Support, which appeared in the Officer, published each month by the Reserve Officers Association. It is the report as submitted to the House Armed Services Committee by the Department of the Air Force:

The Marine Corps is designed, equipped, manned, and trained to engage in "shock" type action which is limited in time, magnitude, and scope. Marine aviation, being integral to that corps, is called upon to provide direct air support operations, the specific purpose of which is to support ground elements of the Fleet Marine Forces. Normally, 1 Marine aircraft wing supports 1 Marine division. When one Marine division is operating independently, its supporting air wing is normally centrally controlled at division level. However, if two or more divisions are operating together, the commander would effect centralization of control of all air wings in order to employ the air effort effectively.

The Marine aircraft wing is a task organization of groups and squadrons tailored in strength and composition to conduct various type air operations. Its size, therefore, is not constant. It is, however, a much larger organization than an Air Force wing, although the two are not comparable as they have different missions and organizations. A typical Marine aircraft wing might consist of 3 to 4 Marine air groups, a total of 12 to 16 combat squadrons in these groups, additional specialized squadrons, and possibly as many as 10,000 personnel and over 300 combat aircraft. The personnel and aircraft strength of a typical Air Force wing in no manner approaches these figures.

One of the basic philosophical differences between the Marine and the Air Force systems for close air support is the degree of reliance placed by Army and Marine ground force commanders upon the supporting fires of their own artillery. Generally, Army commanders prefer to rely on their own artillery within the first thousand yards of the front. Conversely, Marine ground commanders can normally expect only flat trajectory fires of naval guns during the critical phases of ship-to-shore movement. Consequently, Marine commanders must place greater emphasis on close air support as a substitute for organic ground fires. The preliminary preparation of areas which are to be subjected to classic Marine air-ground action has usually been accomplished by either naval air or tactical air. A satisfactory degree of air superiority and isolation of the battlefield is accomplished prior to such close support operations as envisioned by the Marine system.

The Marine system has definite advantages when employed solely in support of an operation which requires classic Marine action. As the type of operation deviates from the classic, the Marine system becomes progressively more unsatisfactory and closely. As

an example in the later stages of the Korean conflict, Marine air effort was considered no different from Air Force tactical air support and was controlled with no partiality toward its parent service. It was placed under the operational control of the Fifth Air Force.

Thus, any definitive comparison of the Air Force and Marine systems is faulty in the very premise that the two systems are designed for completely different types of ground operations and necessarily have entirely different allocations of artillery and supporting air. This concept is accentuated by Secretary Wilson's recent Roles and Mission Directive. The Air Force, while retained responsibility for close air support to the Army, tends to move out of the ground battle zone. United States Army surface-to-surface missiles are directed to take over more of the close air support task with those new weapons.

Some Army personnel advocate close air support of the type and quantity that Marine air doctrine prescribes for Marine ground forces. This lavish use of close air support may be desirable in highly specialized operations such as amphibious landings, but not in large scale, extended-time ground operations. For the Air Force to attempt a similar close-air-support strategy for Army forces would be an inefficient and wasteful use of airpower, even though the economy of this Nation could support such a program, which is doubtful when the requirements for the support of ground forces of smaller allied nations are added to the support needs of the United States Army.

During calendar year 1955, the Tactical Air Command participated in conjunction with Army ground forces in 7 joint command post exercises and 8 joint exercises or maneuvers. During 1956 there were 6 joint command post exercises and 4 joint exercises. During 1957 Tactical Air Command has participated in 1 command post exercise and 1 joint exercise.

Tactical Air Command units have participated with the Army in 37 minor joint exercises during calendar year 1956. These joint exercises consisted of Air Force units participating in battalion training exercises, tracking missions and firepower demonstrations for division size and smaller units. In addition, two major firepower demonstrations are conducted each year at Eglin Air Force Base, Fla., for all the services and selected civilians.

Listed below is a breakdown of Tactical Air Command's troop carrier Air Force airlift capability allocated to support the Army each month:

Type aircraft:	*Army percentage*
C–124	35
C–119	55
C–123	65

DEVELOPMENT OF THE USAF'S CONCEPT FOR EMPLOYMENT OF TACTICAL AIR

World War II was the beginning of what might be termed the first scientific application of tactical air operations, and the basic doctrine for tactical air operations, as they are known today, had its inception in the lessons and hard-won experience of that conflict. For example, in the north African campaign we initially followed a practice of parceling out airpower to corps commanders to use as they saw fit. It was not until we realized that we were taking a beating from a numerically inferior Germany Air Force that we changed our practice. Once our Air Forces had been centrally organized under an air commander, their total effectiveness was fully exploited to turn the tide of battle. Thus, the tenet of having airpower controlled at the highest level than it can be effectively utilized was developed and is reflected today in the organization of each theater command.

Tactical airpower must be provided with centralized control and direction at both theater and tactical air force level. Its component parts are specifically designed to complement each other and to be mutually supporting. They cannot be fully effective if they are divided. Division seriously reduces tactical air potentials of mobility, and flexibility, as well as making these piecemeal air elements extremely vulnerable to destruction by a more wisely controlled and employed air force. Control and direction of available airpower must rest with a single air commander. Under such centralized control its full weight and power can be shifted quickly from one objective to another, or from one type mission to another, in order to meet unexpected threats; exploit success, and wield its tremendous influence in furtherance of the combined strategy.

Although it is perfectly natural that the infantry division commander feels that his job is of primary importance, he must realize that there are many other commanders who are concurrently thinking the same thing. If the available tactical air effort were to be split into the requisite number of small forces to satisfy all these individual desires for air support, tactical air power—the most powerful and strategic weapons system available to the theater commander—would be dissipated and denied him when he needed it most. In the obvious role that air force will have in future conflicts, and due to the tremendous destructive power that could be employed by an enemy air force, this point cannot be overemphasized.

Field Marshal Viscount Montgomery made the following statement: "The dominant factor in a future war will be airpower. * * * If we lose the war in the air, we lose the war, and lose it quickly. * * * We will not win the war in the air unless the air forces are allowed to retain their flexibility and unity, and unless the air command is organized accordingly."

General Eisenhower has recorded, also, some forthright and appropriate views on this subject. He wrote: "Battle experience proved that control of the air, the prerequisite to the conduct of ground operations in any given area, was gained most economically by the employment of air forces operating under a single command."

In order to permit a realistic interpretation of the problem, it is necessary to review basic Army and Air Force doctrine. First, Army doctrine, as stated in FM 100–5, is quoted: "Army combat forces do not support the operations of any other component." This concept envisions that theater operations will culminate in the ground compaign with the overall success of the theater mission being predicated on that action. The Army concept ignores the fact that both the United States Navy and United States Air Force are capable of decisive action in their media.

Air Force doctrine holds that theater forces are organized and employed in accordance with a tenet of mutual support. Each theater component is dependent upon the other for the accomplishment of certain functions and activities associated with a particular force. Compatible with the objective of mutual support, each component force is concentrated on the task it is best able to accomplish. No one theater component is self-contained or capable within itself of achieving the theater mission. The Army-Air Force positions are therefore in conflict.

For all intents and purposes, tactical Air Forces are synonymous with theater Air Forces. As such, they are the only Air Force forces which can respond immediately to the desires of the theater command and/or theater air commander. In this respect any changes which affect, or can affect, the overall theater mission can be exploited quickly as long as the tactical Air Forces are under the command and control of a single air commander. Piecemeal division of the Air Force forces would render ineffective the principles of centralized control and decentralized execution.

In the matter of quantitative requirements, wherein the Army desires one Air Force wing per division, the following information is submitted:

(a) The Army states that this wing would be under the direction of the division commander and employed like artillery. This arrangement would, the Army feels, "guarantee" the division commander close air support when he needed it. Let's observe what would actually happen to both the artillery and the aircraft. If the enemy concentrated a large effort through this division the wing would be insufficient. The aircraft from other divisions within the corps and all artillery which had the range and flexibility to strike the target would be utilized by the corps commander under his control to counter the threat. If the attack on the corps were of great magnitude, the Army commander would have to call on aircraft and artillery support from other corps, retained under the control of the Army commander, to counter the threat. Thus, one is forced into the basic principle of centralized control. These aircraft, as mentioned would be available to counter ground threats only. At a glance one can see that one wing per division would be a significant number of aircraft that would not be available for use in the accomplishment of the overall theater mission. Should this air effort be needed in the counter air battle, control would have to be exercised by the theater commander. This is presently accomplished by the theater air component commander who controls all air operating in the theater. Without centralized control, if the enemy were in an inactive ground status in front of any one particular division or corps front, the wing of aircraft available to this particular division or corps could not be properly utilized, and, thus, air weapons systems that have a tremendous capability would necessarily be wasted and misused. Centralized control is essential to exploit the full potential of airpower. The misuse of air as evidenced in North Africa was almost disastrous. This was an important lesson which we learned the hard way and at great cost. In a nuclear war against an aggressive, determined, and superbly equipped enemy we cannot afford the price we would have to pay to relearn this lesson.

(b) The foremost threat to any force is enemy air. The neutralization, and undeniably today, the destruction of such a threat is mandatory in order that all members of the land, sea, and air team can be utilized effectively. It would be attractive, indeed, if the Air Force had the specialized aircraft, personnel, equipment, and supplies in such tremendous amounts to meet any foreseeable threat. The counter air battle could be accomplished by specialized aircraft in sufficient numbers to accomplish efficiently this task. We could have specialized interdiction, close air support, reconnaissance, and airlift aircraft in sufficient numbers so that one task would not detract from another. From the standpoint of national economy alone this can never be the case. As the overall defense of the country is the foremost consideration, the military must place its greatest effort against the greatest threat. The greatest threat to our survival is enemy air power. This must be countered with a strong air defense, and an extremely effective retaliatory striking force. In the Zone of the Interior these functions are performed by the Air Defense Command and the Strategic Air Command. The theater commander has tactical air forces to perform both of these functions. In a theater these functions are more varied than in the Zone of the Interior. Thus, the theater air effort requires multipurpose aircraft employed under centralized control to accomplish the task which at a particular time, poses the greatest threat to the theater mission.

In addition to the responsibilities for providing air support to the United States Army, the United States Air Force is committed to providing similar support to allied nations in the NATO structure, and possibly in the SEATO structure. The United States Government has recognised certain deficiencies existing in the military strength of its allies. Several allied countries possess the necessary military strength in the ground forces, but they are lacking in an adequate air capability. Accordingly, the military forces of these nations are being assisted through military assistance groups. Since these nations do not possess an adequate air capability, United States Air Force responsibilities in the realm of tactical air support can no longer be limited solely to United States Army interests. To provide adequate, effective, and timely air support to the varied commands and allied nations requires centralized control of air power under a single air commander.

Whenever You See This Fake in Print, Nail It

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mrs. GREEN of Oregon. Mr. Speaker, an editorial in the June 8, 1957, issue of Labor points out that attempts are presently being made to arouse public prejudice against pension systems such as the railroad retirement system, social security, and civil-service retirement by picturing them as part of "Government spending." This propaganda is, of course, refuted by the fact that these pension funds are totally paid for by the workers themselves and their employers, and not 1 cent is contributed by other taxpayers. Therefore, the charge that these pension systems are a part of the Government's spending picture for the coming year is completely false and very unfair.

Under unanimous consent, I include for printing in the CONGRESSIONAL RECORD this editorial from Labor:

WHENEVER YOU SEE THIS FAKE IN PRINT, NAIL IT

A hoary old hoax—started years ago by the United States Chamber of Commerce—is being revived again. Its apparent purpose is to arouse public prejudice against the Railroad Retirement System and other pension systems by picturing them as part of Government spending.

Labor has received examples of this hoax. One is an article in a recent issue of Look, a national magazine. The headline says: "You think $72 billion is too much? The United States Treasury is really spending $96 billion. Where is the extra $24 billion hidden?"

The article answers that question by saying President Eisenhower's $72 billion budget is only part of the spending picture for the coming fiscal year and that, in addition, the Government will spend billions which are not counted in the budget, and which come from trust funds.

Among those funds, the article lists those which support the railroad retirement, social security, and civil-service retirement systems.

The article subtly suggests more than it says. What it suggests is indicated by such phrases as "the Eisenhower administration makes New Deal spenders look like pikers." "More than $14 billion are to be spent for welfare next year, a far greater amount than the New Dealers ever dared dream of spending." "Uncle Sam keeps digging deeper and deeper into the public's pocket."

In short, this is a thinly disguised revival of the old theme song, and its revived now to take advantage of the wave of public feeling stirred up by the present drive to cut the Federal budget.

Now let's size up the facts which refute this insidious propaganda. The pension funds were left out of the budget for a simple reason—they do not belong there. The spending proposed in the budget will be paid for by taxes on the general public. In contrast, the workers under the railroad retirement, social security and civil service systems, equally with their employers, pay for their own pensions. Not a cent of the cost is contributed by other taxpayers.

Not only that, but, by paying for their own support in their old age, the workers under the three great pension systems relieve other taxpayers of much of the relief costs they would otherwise have to pay. That's one reason why the railroad unions are asking Congress to end the unjust tax on a tax—the income tax on money which has already been paid out in retirement taxes under three pension systems.

These pension funds are not Government money. The Government merely administers them as trustee. The money belongs to the workers who shared in paying retirement taxes. When they get back this money in pensions, it is not Government spending.

That was well pointed out by retired railroader Earl R. Hodgin, of Spokane, Wash., in a letter to the editor of Look, a copy of which he sent to Labor. Among other things, the letter said:

"Why should railroad retirement be included in the (Government spending) list, when the employer and employee pay the entire cost and not a dollar comes from the public in the way of taxes. The statement in Look is in error and I, as a pensioner under the Railroad Retirement Act, resent it. The reading public gets a slanted, untrue picture of the railroad retirement setup, and Look should offer a correction."

Hodgin set a good example by his protest. If other railroaders would write similar protests when they see articles confusing their pensions with Government spending, editors would begin to think twice before publishing such misleading stuff.

Why Gamble?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill (S. C.) Evening Herald of June 6, 1957:

WHY GAMBLE?

Are nuclear weapons endangering the lives of people throughout the world? Some scientists say "yes." Some say "no." Others say "not yet."

The fact is, no one knows for sure. And so long as we don't know there's no sense in gambling with the future of the human race.

Suppose we continue atomic-weapons tests—the United States, Russia, and England. Suppose the smaller nations gradually begin tests. Each year the amount of radioactive ash in the upper atmosphere would grow. Each year the fallout of this radioactive material would increase.

Damage from such radioactivity doesn't appear until humans have undergone years of exposure. By the time we found out whether the increased radiation was dangerous to human life it might be too late.

The nuclear-weapons tests continue because the free world and the Soviets are locked in a struggle for power. Surely, on the basis that further nclear tests could kill off all humanity, the free world and the Soviets can come to some agreement to halt a race toward self-destruction.

The Russian leaders are coldly practical people. Even they should see the wisdom of self-preservation.

AEC Needs Murray

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid editorial in relation to Hon. Thomas E. Murray, member of the United States Atomic Energy Commission, entitled "AEC Needs Murray" and appearing in the Washington Daily News of June 10, 1957.

I thoroughly agree with all of the editorial, and particularly its conclusion, "The country, the Eisenhower atoms-for-peace program, and the AEC need men like Tom Murray."

I further thoroughly agree with the editorial when it said, in connection with Commissioner Murray, that "events have often shown him to be right." There is no act that President Eisenhower could make that would more effectively evidence real bipartisan leadership on his part and cement and strengthen bipartisan action by the two great political parties than the reappointment of Commissioner Murray.

The editorial follows:

AEC NEEDS MURRAY

Thomas E. Murray's first term as a member of the United States Atomic Energy Commission, now nearing its end, has proved him to be a fine public servant.

He is a practical man, dedicated to free enterprise, with a long and successful business career behind him. Commissioner Murray is also a philosopher, an articulate defender of what he believes is right. And events have often shown him to be right.

His views have at times clashed with those of Lewis L. Strauss, AEC's chairman. His occasional dissents have been vital in the final fixing of some of the policies of the great agency upon which the security of our country and that of the free world so largely depends.

Recent congressional hearings on radioactive fallout from atomic and hydrogen weapons have shown vividly the wide differences of opinion among trained scientists on the dangers involved.

These point up the necessity of insuring that the AEC, above all other Government agencies, shall never become a mere rubber stamp, blindly approving the views of one man or one group of men.

The whole atomic enterprise is so young, so complicated, so vastly important that only out of a clash of opinions can AEC select the proper course toward its twin objectives: First, the military security of our country; and, second, the application of this mysterious force to the advancement of mankind.

Mr. Murray, a devout man, is a strong supporter of the President's atoms-for-peace program which could lead to the establishment of God's peace.

Chairman Strauss doubtless will have great influence in President Eisenhower's decision on whether to reappoint Mr. Murray.

A big man in his own right, Mr. Strauss was himself an occasional "dissenter" in earlier days of this atomic agency. He will increase in stature when he shuns those who put unanimity above all else, and recommends the reappointment of Mr. Murray.

The country, the Eisenhower atoms-for-peace program, and the AEC need men like Tom Murray.

National Freedom Board Urged Anew

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article:

[From the Christian Science Monitor of April 22, 1957]

NATIONAL FREEDOM BOARD URGED ANEW

(By Kimmis Hendrick)

LOS ANGELES.—California's Senator WILLIAM F. KNOWLAND, Republican, has once more introduced a bill to establish a National Freedom Board. Representative DONALD L. JACKSON, Republican, of California's 16th District, has also reintroduced a companion measure in the House.

Their purpose is to provide for coordinating all of the Government's means and efforts for telling the American story of freedom for nations and individuals around the world, and for combating communism's lies about that story.

The freedom board proposal has strong American Legion support, and in large part originated with Aviators Post No. 350 here in Los Angeles. But the legislation originally introduced 2 years ago was stopped by strong State and Defense Department opposition.

Presumably the difficulty was the potential threat to establish procedures in both departments by a new agency designed to have executive level authority in a field important to each of them. Legionnaires believe that the freedom board is needed to provide a strong foundation for the people-to-people peace approach which President Eisenhower has called for.

COUNTERATTACK SPURRED

Lewis K. Gough, a national past commander of the Legion, says the time has come when this country's counterattack on Communist propaganda must be on "a big league basis." He says, "We are in big league competition and either we meet it effectively or it will wear us down."

When the Legion held its national convention here last year, it urged Congress to establish the Freedom Board as part of the executive branch of the Federal Government.

It said it was "vitally necessary to provide a top-level planning and coordinating board with adequate authority, responsibility, and funds to successfully wage the battle for peace to national victory."

ENTHUSIASTIC RESPONSE

Mr. Gough says the Communists are spending between two and three billion dollars on cold war propaganda while the United States is spending just $80 million.

Legionnaires, like the Veterans of Foreign Wars and other organizations have responded enthusiastically to President Eisenhower's call for Americans to forward the story of Americanism, as individuals, to other individuals and peoples throughout the world. But the Legion is not satisfied with the report on the Knowland-Jackson bills that came from the State and Defense Departments during the 84th Congress.

This was, in effect, that these Departments were doing "all that is necessary to be done."

Legionnaires like First Vice Commander Rollins MacFadyen, of Aviators Post, No. 350, here, hoped that Senator THEODORE F. GREEN, Democrat, of Rhode Island, chairman of the Senate Foreign Relations Committee, would coauthor this year's bill. But Senator KNOWLAND finally introduced it in the Senate alone.

The Knowland-Jackson bills provide for a Board consisting of the Vice President, Secretary of State, Secretary of Defense, Director of the United States Information Agency, and five persons from civil life appointed by the President with the advice and consent of the Senate. The first group would serve without extra pay; the non-Government members would receive salaries of $20,000 a year.

This Board's task would be threefold.

Under a plan it would formulate, which the President must approve, it would act for "the effective exposure of the falsity of propaganda used by Communist governments and agencies to mislead the people of the world with respect to the nature of the American way of life."

It would develop specific ways to make known the true purposes and methods of the United States.

It would be responsible for "promoting affirmatively by all available means (other than by military or diplomatic action) the cause of freedom throughout the world." It would do this by making known "the genuinely revolutionary concept of individual liberty within a free nation."

Fighting Bob

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McCORMACK. Mr. Speaker, I include herein in my extension of remarks a fitting tribute to our late friend and colleague, Hon. Robert Crosser, an editorial entitled "Fighting Bob," appearing in the June 10, 1957, issue of the Trainman News, official publication of the Brotherhood of Railroad Trainmen.

The editorial follows:

"FIGHTING BOB"

"Fighting Bob" Crosser has gone to his eternal reward, but the memory of "the fighting Scot" will live on among the people whom he served so faithfully and well during his 38 years in Congress.

Former Congressman Crosser, a Democrat representing Ohio's 21st district, was ever in the thick of the fight during his long tenure of service to bring advancement to all the people through progressive legislation.

Members of the Brotherhood of Railroad Trainmen and other railroad workers will never forget the part "Fighting Bob" played in drawing up the original Railroad Retirement Act and subsequent amendments that resulted in improved benefits under RRA. When other beneficial rail labor legislation was up for consideration in Congress, Bob Crosser could be counted upon to do his utmost for its enactment.

He also distinguished himself in his efforts for the Social Security Act, the Federal Deposit Insurance Act, the Federal Reserve Act and the Farm Credit Act.

Speaker of the House SAM RAYBURN had these laudatory words for Crosser when he left Congress in 1955:

"I never knew a man in or out of public life that I thought had a higher sense of justice, a greater devotion to public service and trying to serve his day and generation well and make this country better while we lived and leave it better for those who came after than Bob Crosser."

That was "Fighting Bob" Crosser.

Polish Aid Agreements

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. FLOOD. Mr. Speaker, as you know I have been very active in urging the satisfactory conclusion of the negotiations between this country and Poland concerning economic aid to Poland by our Government.

As you will recall, during the negotiations I introduced a resolution in the House, House Resolution 248, which states, in part, that "the United States should speedily furnish substantial economic and technical assistance to the people of Poland, subject to careful control through the use of inspection teams or otherwise to insure that commodities and equipment so furnished will not be diverted to Russia or her satellites but will remain in Poland for the purpose of strengthening her internal economy and bolstering her people in their quest for freedom."

I am certain, Mr. Speaker, that our Government agencies will follow through with shipments of American products to Poland, and also arrange for shipment of surplus agricultural products to Poland as well as permit the receipt by the people of Poland of gifts from their relatives here in this country.

I was gratified to learn that agreements have been arrived at on the allocation of funds to finance the sale of various food products and textile raw materials for Polish currency.

It is interesting to note that the bank loans will be repaid in dollars at 4½ percent interest beginning in 5 years and extending to 20 years.

Mr. Speaker, there is no doubt in my mind that the Polish people have never been, are not now, and never will be pro-Communist, despite indescribable sufferings and persecutions by the Communist.

There is also no intelligent doubt that the Polish people want a free and independent Poland and will always trust the United States as Poland's true friend.

Facts Showing Why the Congress Should Not Ignore Its Mandate To Save the Insurance of 95,000 Present, Retired, and Separated Federal Employees

---

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. CRETELLA. Mr. Speaker, I have received a great many letters from persons in my district urging that the Civil Service Commission be given funds to take over the administration of the remaining beneficial insurance associations within the Government which have not been absorbed into the Federal employees group life insurance program.

It is my feeling that Congress has a clear and definite responsibility to provide the necessary funds to the Civil Service Commission, and I am very regretful of the fact that the House has acted unfavorably on this proposal.

I hope that legislation which has recently passed the Senate and is pending before this body for the relief of thousands of persons holding beneficial association insurance will be passed prior to the adjournment of this session.

I am enclosing a fact sheet from the War, Navy, Treasury, and Interior Departments Beneficial Associations which I think will be of interest to all:

FACTS SHOWING WHY THE CONGRESS SHOULD NOT IGNORE ITS MANDATE TO SAVE THE INSURANCE OF 95,000 PRESENT, RETIRED, AND SEPARATED FEDERAL EMPLOYEES

Question: Prior to the passage of the Federal Employees Group Life Insurance Act of 1954, could Federal Government employees secure low-cost group life insurance?

Answer: Yes; but only through associations organized by them within their departments or agencies. Employees joined voluntarily to secure this much-needed protection at low rates because none was provided by the Federal Government.

Question: How long have these employee beneficial associations been operating within the various departments of the Federal Government?

Answer: Some since before the turn of the century, but the majority of more than 25 years.

Question: Have these associations served a real purpose in government?

Answer: Yes; $36.4 million in death, disability, and dismemberment claims have been paid to employees or to their beneficiaries.

Question: Did the Congress recognize the fact that the passage of the Federal Employees Group Life Insurance Act of 1954 would impair the growth of these associations and face them with posible extinction?

Answer: Yes. Section 10 of the act was later amended to provide for the assumption of the outstanding insurance of these associations by the Civil Service Commission. Without this, the associations faced ultimate insolvency and loss of the insurance by their members, both active and retired employees of the Government.

Question: At the time the Civil Service Commission and the associations asked the Congress to amend section 10, was the Congress advised as to the ultimate cost of taking over these associations?

Answer: Yes. The testimony before the Congress showed that over a period of more than a quarter of a century the ultimate cost would be approximately $33 million.

Question: Was this sum of $33 million to be paid from general tax receipts?

Answer: No. The Federal Employees Group Life Insurance Act of 1954 provides that the expenses incurred in the administration of the act shall be paid from the employees life insurance fund created by the act.

Question: What constitutes the employees life insurance fund?

Answer: The fund is made up of the employees contribution (two-thirds) and the Government's contribution (one-third) of the present life-insurance premium. It is increased by dividends or premium refunds from the insurance companies underwriting the coverage, and by the assets of the 16 employee beneficial associations which have now been taken over by the Civil Service Commission.

Question: What is the estimated total of the fund at this time?

Answer: Approximately $100 million.

Question: How many employee beneficial associations requested the Civil Service Commission to take them over under section 10 of the act, as amended?

Answer: Twenty-five associations having assets, collectively, approximating $22 million.

Question: How many of these associations have been taken over by the Civil Service Commission under section 10, as amended?

Answer: Sixteen, having assets of approximately $5.5 million.

Question: How many of these associations remain to be taken over?

Answer: Nine, having assets of approximately $16.5 million.

Question: Is it equitable for the Government to take over the life insurance agreements of 16 associations having 52,000 members, and fail to provide the same protection for the remaining 9 associations having 95,000 members?

Answer: No. Certainly, in amending section 10, the Congress did not intend to discriminate against these 95,000 present, retired, and former Government employees as being less deserving than the 52,000 whose insurance has been assumed by the Government.

Question: Did the Civil Service Commission schedule these 9 associations for takeover pursuant to section 10, as amended, and so notify each association?

Answer: Yes. The Civil Service Commission, acting in good faith and under the congressional mandate, scheduled these 9 associations for takeover during the months of June, July, and August, 1956, and so notified each association by letter during the early part of 1956.

Question: Did the Civil Service Commission later notify these 9 associations in writing that they could not be taken over as scheduled and as previously notified?

Answer: Yes, after the Congress failed to authorize the use of sufficient funds for this purpose.

Question: Did the Civil Service Commission give these 9 associations any assurance that they would ask the Congress for authority to use the necessary funds?

Answer: Yes, and expressing confidence that funds would be available to carry out the provisions of the law, the Civil Service Commission directed the associations during the interim to retain all holdings of United States Government obligations and to convert other holdings to cash, including stocks, bonds, mortgages, and savings and loan accounts.

Question: Have these 9 associations suffered monetary loss by complying with this directive?

Answer: Yes. Collectively, they have lost more than $200,000 to date by converting their holdings to cash and by reinvesting in Government bonds at the request of the Civil Service Commission, and this loss is increasing daily.

Question: If the Congress does not permit the Civil Service Commission to take over and administer these 9 associations before August 17, 1957—the deadline fixed by section 10, as amended—what will happen to these associations and to the insurance benefits of their members?

Answer: The ultimate result will be the insolvency of the associations and the loss of insurance benefits by many members and their dependents. These include present employees of the Government, as well as retired and former employees who are not eligible for insurance protection under the Federal Employees Group Life Insurance Act of 1954.

Question: How much insurance is now in force on the 95,000 members of these 9 associations?

Answer: Approximately $140 million.

Question: In the House Appropriations Committee report accompanying the third supplemental bill (H. R. 7221) for fiscal 1957, the committee indicated it would consider a fair and reasonable proposal to assume the insurance policies of retired Federal employees who are members of these 9 associations. Would such legislation be effective?

Answer: No. Section 10 of the act originally made such a provision, but it was found to be unworkable and of doubtful legality because of legal decisions which prevented a division of the assets of these associations among the active, retired and separated employees without a dissolution of the associations. Therefore, Section 10 was amended in 1955 to provide for the taking over of all of the insurance and all of the assets.

Question: Will the taking over of these 25 associations by the Government constitute a double favoritism for a handful of people?

Answer: No. The records indicate that approximately 50 percent of the members of the associations are active Federal employees who pay a higher premium for this insurance and will continue to pay this higher premium under Government administration. Also, this insurance does not reduce at age 65, but remains constant in the majority of cases.

Question: How many members of these 25 associations are now employed by the Federal Government?

Answer: Approximately 50 percent. It is estimated that 20 percent of the total are retired Federal employees and that the remaining 30 percent are now separated from the Federal service after employment by the Government during World War II. These retired and separated employees reside in practically every State in the Union and are not eligible for insurance under the Federal Employees Group Life Insurance Act of 1954.

Question: If the associations should become insolvent, can the members convert their group life insurance to individual policies?

Answer: Yes, but without disability benefits, and few would have the means to pay the premium rate at their attained age.

Question: Why could not these associations continue to operate on a group basis until the last member dies?

Answer: Because in a closed group without younger members being added, the average age becomes higher annually with resulting increase in the average premium for the group. Many members would be forced out and lose their insurance because of their inability to pay this higher premium.

Question: Could these associations bring in new members and maintain a low average age?

Answer: No, because the basic life insurance needs of the employees of the Federal Government are now met by the insurance provided by the Federal Employees Group Life Insurance Act of 1954, at a premium rate which cannot be matched by ordinary insurance.

Question. Are there any nonprofit associations of Federal employees which are not interested in being taken over by the Civil Service Commission?

Answer. Yes; the War Agencies Employees Protective Association and the American Foreign Service Protective Association. These two associations offer large amounts of insurance to members assigned to foreign service or subject to call to foreign service, with the group insurance terminating at age 65. Their plans of insurance include accidental death benefits and dependents' hospitalization insurance coverage that would terminate should the association dissolve.

Question. What will be the ultimate cost to the Employees Life Insurance Fund if the Government takes over and administers the insurance of these nine associations?

Answer. Actuarial projections indicate that over a period of 25 years or more the ultimate cost will be $22 million.

Question. Would this $22 million be paid from general tax receipts?

Answer. No; it would be paid from the Employees Life Insurance Fund.

Question. Have any Federal employee organizations endorsed the taking over of these nine associations under section 10, as amended?

Answer. Yes; a number of employee organizations within the Government have endorsed the taking over of these nine associations, including: AFL–CIO, National Federation of Federal Employees, National Federation of Post Office Clerks.

Respectfully submitted:

WAR DEPARTMENT BENEFICIAL ASSOCIATION.
NAVY DEPARTMENT BENEFICIAL ASSOCIATION.
TREASURY DEPARTMENT BENEFICIAL ASSOCIATION.
DEPARTMENT OF INTERIOR BENEFICIAL ASSOCIATION.

The Hour of Crisis for a Free Asia—and for a Free World—Is at Hand

---

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. JUDD. Mr. Speaker, during the thirties many western countries, including our own, made the tragic mistake of trading with enemies, like Hitler and Japan. For every dollar of profit they made, they lost a thousand dollars, and thousands of their finest youths besides. Britain and France lost their empires. Yet many of the same countries seem determined to make the same mistake again—by expanding trade with Communist China—even though the stake now is not relatively puny profits, but sheer survival.

Some are urging the United States to follow these other countries down the primrose path. They talk about commercial benefits that might conceivably be gained; they ignore the political losses that certainly would be sustained. The greatest would be that, as has been warned so many times, no country in Asia would trust us again—and the free countries of Asia would have no choice but to give up their struggle and accept Communist domination.

But if the United States stands firm, such a debacle need not follow. The countries of Asia understand better than we that it is the United States, not England or France, that has power in their part of the world.

Furthermore, they have learned to expect expediency from the European powers; they trust the United States to stand on principle.

So it is we who are on trial. They wait breathlessly to see what the United States Government and our people will do. We must make clear there is no weakening of our resolve to stand resolutely with them in their determined effort to remain free, as long as the Red threat exists.

We have won the first three quarters of the game. The Communists in both Russia and China are unable to conceal their growing internal troubles. I cannot believe we will wobble and weaken in the last quarter—and lose the game.

But the time to make clear our steadfastness is right now. Our Government is under strong pressures from small but powerful groups. The people as a whole must rise and make their wishes known. They know that Communist China is an enemy of everything Americans believe in. They know that we cannot weaken an enemy by making him stronger. They know that no good has yet come from helping Communists.

Just how grave and how urgent are the dangers is brilliantly portrayed in the following sobering article from the Washington Daily News by Fred Sparks of the Scripp-Howard press:

A SILENT CRISIS IN THE FAR EAST

(By Fred Sparks)

Free Asia is in serious danger; the silent crisis is now.

Not from a Red Chinese blow. But from contagious defeatism that might accept the Peiping regime as the undisputed, direct, or indirect master of hundreds of millions of brown and yellow people who ask little, but freedom.

The new crisis has been created not by bullets, but by talk and hesitation. Talk of trade with Red China, talk of neutralizing Formosa. Hesitation to strengthen South Korea, while acknowledging North Korea's build-up.

What is at stake for America is the loss of a vast buffer of proved friendship and, yes, the military service of your son, brother, or friend, his very life.

CONVINCED

As one who has spent more time in the Orient since the end of World War II than in the United States, and is still in touch with developments there, I am convinced our friends in free Asia are demoralized today. Demoralization is the prolog to disintegration.

While we were occupied with spectacular doings in the Middle East—the endless frictions between Arab and Israeli, the Soviet grab for power in the oil deserts—the prestige of Red China, which spoonfeeds its young a "Hate America" diet, has been elevated to new arrogant heights.

What are the fresh fever points? Why does the patient weaken?

TRADE

England, followed by others, eased restrictions set up during the Korean conflict. Merchants from Birmingham and Lille now hasten to the court of the great Red Khan in a manner of bootlickery, order books in hand.

This itself would hardly discourage free Asians. For they have seen England and France compromise in the Orient before.

But the foreigner they depend on is the United States. And—as in the Middle East—we have of necessity moved independently.

Then just the other day President Eisenhower (under terrible pressures) opened wide the possibility of American trade with Communist China.

Consider the free Vietnam soldier, his youth spent fighting communism. Abandoned by France, today he packs an American carbine. Daily he sees an American officer, his regimental adviser. He is told: To the north is your mortal foe; there can be no compromise.

What now if he hears of Detroit peddlers offering wares to this same Communist enemy? Who can distinguish between military and nonmilitary cargo? Cannot a civilian truck transport troops? Cannot a shovel spade a foxhole as well as a garden?

Do you blame this boy if he is puzzled tonight? (I pity the many American military friends I have who today are training Formosans, Koreans, Thailanders, Vietnamese. I can imagine the questions they are being asked.)

In Saigon, in Bangkok the Red underground can make good use of this new trend. They can quietly advise community leaders: "Well, see how it's going? America is shifting. Make the best deal you can—while you can."

KOREA

As every general, admiral and UN observer has stated, Communist North Korea laughs at the agreement forbidding retooling and reinforcing armies present when the truce document ended the killing.

Still, we refuse to send in modern tools. Our infantrymen watching the bleak armistice line are threatened with brutal beating when it should please Peiping again to push south.

You can assume, then, South Korea's declining morale. Seoul is two jeep hours from Communist bunkers. Twice half that country was subjected to the tyranny; thousands of innocents died in bloodletting.

FORMOSA

The unfortunate flash mob madness that sacked our T'ai-pei Embassy has again stirred those who used to label Red China's leaders "agrarian reformers" without territorial hunger.

Important politicians and columnists—whose Asian journeys are limited to occasional plates of won ton soup in Washington's chop suey parlors—now cry for a neutralized, demilitarized Formosa.

A militarized, partisan Formosa is a club of peace. That late giant, Philippine President Ramon Magsaysay, predicted that without the shield of Formosa, communism would chain his own country in 3 years.

By threatening the mainland coast, Formosa borrows time for Hong Kong, a spoil Red China means eventually to have. In the crown colony's tea rooms, Peiping's agents' boast: "Hong Kong can be taken by telephone."

INSIDE RED CHINA

Millions gagged by the absolute state still dream of liberation. Priests hold clandestine prayer meetings like ancient Christians in Roman caves. Well remembered are missionary schools, American friends, western democracy.

Today's "two Chinas" campaign means their slavery will never end. And such talk is precious for the Communist brainwashers.

OVERSEAS CHINESE

There are 13 million in southeast Asia. Energetic, wise, they nearly dominate the finances of a half dozen countries.

So far, we have managed to keep them, at worst, neutral. We have argued against remittances to relatives inside Red China, insisting that every dollar dispatched muscles the Communist war machine.

If Formosa collapses, or if American merchant ships anchor in Shanghai, their resistance would be snipped like a ribbon before a new bridge; they'd be a prefabricated fifth column.

As appeasement mounts, I can recall just a few Asian lives we have influenced:

The brown Cambodian girl who learned the true nature of communism sitting barefoot in an American library, a sturdy structure ringed by paddy-mud huts.

The young Chinese, captured fighting for communism in Korea who, under our influence, refused to go home (sentencing his parents to what penalties). He chose Formosa, tattooed his chest with bitter anti-Mao slogans.

The North Korean professor, a straggle of white beard on his chin, who fled his work, his books, after hearing brave words defying communism, offering hope, on the American Government's radio.

These people are depressed today. The mood is spreading. Can you blame me for being convinced that the silent crisis is now?

Smalltown Editor Has Powerful Voice

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. DENNISON. Mr. Speaker, one of the most honored and important institutions in this Nation is the smalltown newspaper. From the earliest days of the history of this Republic the smalltown newspaper and the country editor have contributed much to the winning and the development of our liberties. In thousands of small communities throughout the land are dedicated men and women, noting the daily history of their town or village, speaking out freely against injustice, intolerance, and any threat to our way of life. Extolling those sound, old-fashioned virtues upon which this great country was founded and by which we have continued to grow morally and spiritually.

The smalltown editor chooses his profession because it offers him a wide field of service, not because of any hope of obtaining for himself great wealth, for the very operation of these small papers precludes the piling up of material riches. But in his service to his fellow man, in the respect for him in the community, in the day-to-day and week-to-week accomplishment of making this land of ours a better place, in his devotion to freedom and the protection of our liberties, he amasses treasures of great worth.

In the 11th District of Ohio, which I have the privilege and honor to represent, we have an outstanding example of the courageous editor, the crusading writer, the angry man who rails against injustice. He is Chet Lampson, for 61 years editor of the Jefferson Gazette at Jefferson, Ohio. In April, Editor Lampson received a notice from the Internal Revenue Department notifying him that he owed the Government $9 on his income tax. Incensed at both the charge, which he claimed he did not owe, but also at the language used in the notice, Mr. Lampson took up his pen and spoke out against what he considered to be a rank injustice. Probably there were those who smiled at the audacity of this smalltown editor who dared to challenge the strength and majesty of the Federal Government and its entrenched bureaucrats, but Editor Lampson did not hesitate. He wrote editorials for the Gazette, he wrote letters to his Congressman, to the President. The strength of his argument prevailed and not only has his own account been corrected but the Internal Revenue Department has agreed to drop from future notices language which must necessarily be offensive to honest, hard-working citizens.

Under leave to extend my remarks, I would like to include Mr. Lampson's open letter to the Members of Congress, giving the facts of the case, the story in the Jefferson Gazette of the victory won by Mr. Lampson, an editorial from the Ashtabula Star-Beacon applauding Mr. Lampson's stand and its importance to all of us, and an additional editorial by Mr. Lampson stressing the necessity of Government bureaus to obey State laws:

CONTEMPT FOR THE GOVERNMENT IS THE NATURAL RESULT OF CONTEMPT SHOWN THE TAXPAYERS—REVENUE OFFICERS VIOLATE STATE AND FEDERAL LAWS—STATEMENT OF INCOME TAX DUE MAY CONSTITUTE BLACKMAIL, IT VIOLATES THE BILL OF RIGHTS

A LETTER TO EACH MEMBER OF THE CONGRESS

DEAR SIR: If you will secure from an income tax agency copies of Statement of Income Tax Due which constitutes the first notice to an alleged delinquent income taxpayer, you will be amazed at its effrontery.

It is beneath the dignity of the United States Government to permit any of its agents to humiliate or frighten taxpayers, delinquent or not, in the agency's initial notice of an alleged delinquency.

The first notice should be as courteous as those used in general business.

The said Statement of Income Tax Due gives absolutely no explanation of why, how, nor what. The statement assumes infallibility by the accounting department, notorious for its delays and errors. The first notice is a preemptory demand for payment within 10 days of the date on the notice. If the alleged delinquent does not send funds which are "received within 10 days of the date of the notice," the alleged delinquent is threatened in the first notice: "Your account will be placed in the hands of an internal revenue collection officer without further notice. Under the law, he may levy on your wages, salary or other income, or seize or sell your property or rights to property to collect this account."

"Your computation of tax has been mathematically verified."

The person who wrote this first notice did not mean "your computation of tax has been mathematically verified." He meant your computation of the tax is incorrect. The agency should in this first statement make a proper claim and allow a reasonable time for the alleged delinquent to accept and pay or question the accuracy of the agency.

INCORRECT BILLINGS MADE

Besides my own case, I know of two local cases in which the taxpayer was threatened with dire punishment if the alleged tax delinquencies were not paid within 10 days of date of the notice. Within 10 days of May 10 is any of the 9 days just prior or any of the 9 days immediately after May 10.

A competent author would have written "prior to the date on this notice."

A Jefferson woman, whose legal exemptions are more than her total income, received one of these insulting demands that she pay a small tax "or else." This citizen cannot be frightened by any illegal claims. The illegal charge distressed her. She denied the claim and refused to make the illegal payment. In the end, the clerk at Cleveland admitted a mistake. The following year (1955) this woman received a demand for about 4 times the tax claimed in 1954. She owed nothing and refused to make the illegal payment. As the agent who made the claim in the first place had no evidence to prove the claim, this second false charge was deleted. I use the word deleted. If there were no proper evidence that the claim was just and the Jefferson woman had been frightened into paying it, where would her blackmail money have gone?

I know of many unjust actions, but find people fear to allow their names to be used.

If you can get the Treasury to order the present illegal "Statement of Income Tax Due" to be dropped and a businesslike system of first notification with reasonable time for the taxpayer to prove his claim, millions of people will have their respect for their own Government restored.

The wording of this Statement of Income Tax Due shows it was written by someone too ignorant to comprehend business courtesy or the rights of citizens to due process of law under the Bill of Rights.

I claim that no Federal officer is privileged to violate a State or Federal law or the Constitution in the course of making a Federal collection.

This Statement of Income Tax Due if mailed violates Federal postal laws. It contains the inference that the delinquent is a criminal. It contains threats of summary punishment unless the account is paid within a limited time. That card may be a libel and actionable.

If the alleged taxpayer be frightened into paying more than he owes by fear of publicity or fear of duress then this notice is blackmail. Out of the 60 million income-tax payers how many have paid sums they did not owe? What becomes of an illegal collection?

The agency claims legal right and power to seize private records, books, and papers, to levy on wages, salary, or other income and to seize or sell property all without a constitutional court order.

Thus, the alleged delinquent is denied the protection of the Bill of Rights and his day in court. He may be the victim of great injustice by his own Government.

No agency of Government should be allowed to insult any citizen, or deny him his constitutional rights or inflict cruel and unusual punishments on a mere assumption that the taxpayer is a willful violator of the income tax law.

CHET LAMPSON,
Editor for 61 years of the Jefferson Gazette, Jefferson, Ohio.

[From the Jefferson (Ohio) Gazette of May 28, 1957]

NEWSPAPER WINS FIGHT WITH REVENUE BUREAU—GOVERNMENT TO DROP OFFENSIVE LANGUAGE ON FEDERAL TAX NOTICES

Late in April, about 90 days after I had paid my income tax for 1956, I received a notice that unless I paid an alleged $9 balance within 10 days of May 6 "your account will be placed in the hands of a revenue collection officer without further notice. Under the law, he may levy on your wages, salary, or other income, or seize, or sell your property or rights to property to collect this account."

There was no explanation of how the amount alleged due had been determined by the Internal Revenue Service. In our 61 years as editor of the Jefferson Gazette, we have never defaulted on any obligation, public or private. To have the Government of the United States insult me, and doubtless thousands of other well-meaning citizens by such a threat, raised my blood pressure. I decided to fight.

Fortunately I knew how to get attention from the top men in the Government. I told some of them the notice I received was beneath the dignity of the United States of America, and that no taxpayer should be sent an insulting notice. There could be a mistake on both sides.

On April 30 the Gazette published an open letter to the President of the United States. We wrote to the Vice President, to Hon. MICHAEL J. KIRWAN, to Senator FRANK J. LAUSCHE and Hon. DAVID DENNSION (our Congressman), and to Hon. CLARENCE BROWN, whom I have known for many years.

President Eisenhower, or an aid, sent my personal letter to him and the editorial of April 30 to the Internal Revenue Collection Division. I have a letter from Robert L. Jack, Director, so stating.

Three days after the editorial was published here, Hon. MICHAEL J. KIRWAN inserted the same in the CONGRESSIONAL RECORD at Washington.

Six days after the editorial was printed here, Senator FRANK LAUSCHE wrote stating he would take the editorial and our letter directly to the Secretary of the Treasury.

The secretary for the Vice President wrote a personal letter stating he would present our editorial and letter to Vice President NIXON.

On May 17 we received a very good letter from the First Assistant Secretary of the Treasury, Hon. Fred C. Scribner, Jr. That letter proved immediately that the right man had been reached. We knew then that we had bypassed the bureaucratic minds and were dealing with a capable official.

On Saturday morning, May 25, the Gazette received the following explanatory letter from Hon. Fred C. Scribner, Jr., stating that the offensive card will be banned as fast as possible, and that the statement of income tax due will not contain any offensive language. It will take time to make a complete change.

The Gazette is deeply appreciative of the efforts of each official to whom we appealed.

In my first letter to Mr. Scribner I made the remark that if the language on that card were changed, then my 81 years would not have been lived in vain.

CHET LAMPSON.

DEAR MR. LAMPSON: I have your letter of May 20. Since writing to you on May 17, I have discussed with the Commissioner of the Internal Revenue Service the printed notice which was sent to you. We are agreed that the language should be revised, and the technical staff is now at work on the revision.

We do wish to point out to you that the statements which appeared on the card which you received were an accurate statement of the rights of the Service. In instances in which the failure to pay the full tax was deliberate, the language was justified. However, in order to keep the number of forms in use at an absolute minimum, the card which was sent to you has been used in all instances in which an initial verification indicated some balance due. I personally agree with you that in most cases the language was too strong for a first notice.

As you can well understand, the revision of the language, the printing of new cards and the distribution of the same throughout the country will take a little time. In the meantime, some taxpayers will continue to receive the cards which are now in use.

You can be assured, however, that, as a result of your action in calling this matter to our attention and of the very thoughtful consideration which has been given to the matter by the Commissioner of Internal Revenue, a change will be made in the card at the earliest possible moment. You can rest assured also that you will not have lived in vain, as the card which you called to our attention is to be changed.

Thank you very much for giving us the opportunity to consider this matter.

Very truly yours,

FRED C. SCRIBNER, JR.,
Assistant Secretary of the Treasury.

[From the Ashtabula Star-Beacon]

GOVERNMENT HEEDS EDITOR'S PROTESTS

The enraged outcry of a smalltown northeastern Ohio editor has been enough to make even the Federal Government take notice.

Chet Lampson, of Jefferson, didn't like to be dunned for a $9 payment due on income taxes. What's more, he was annoyed even more by the harsh language of the dun.

So the bristling Mr. Lampson turned loose both barrels. He went beyond his own Gazette editorial columns. He wrote letters—to officials and to the metropolitan press.

The result has been complete. He has received recognition of his efforts from the top Federal echelon. And, even more important, he has won for all taxpayers a less-demanding tone from the Bureau of Internal Revenue.

It appears to be symptomatic of Government service to assume persons guilty of innocent mistakes are hardened criminals and intentional lawbreakers. Obviously the original letter Mr. Lampson received was based on that erroneous assumption.

By striking back, Editor Lampson has impressed these bureaucrats that taxpayers need not be treated like dogs. They do, after all, provide those bureaucrats with their salaries.

[From the Jefferson (Ohio) Gazette of June 7, 1957]

REVENUE MEN MUST OBEY STATE LAWS—AN OPEN LETTER TO THE ATTORNEY GENERAL OF THE UNITED STATES, PROTESTING FELONIES AND MISDEMEANORS PERPETRATED BY SOME INTERNAL REVENUE OFFICIALS AND AGENTS

Attorney General HERBERT BROWNELL.

GREETINGS: Your correspondent recently protested the discourtesy of the Internal Revenue Division of the United States Treasury in its first Statement of Income Tax Due. I doubt if you ever have seen such a card and realize how crudely it is worded.

It is beneath the dignity of the United States Government to permit any of its agents to humiliate or frighten taxpayers, delinquent or not, in the agency's initial notice of an alleged delinquency.

The first notice should be as courteous as those used in general business.

The said Statement of Income Tax Due gives absolutely no explanation of "why, how, nor what." The statement assumes infallibility by the accounting department, notorious for its delays and errors. The first notice is a peremptory demand for payment within 10 days of the date on the notice. If the alleged delinquent does not send funds which are "received within 10 days of the date of the notice," the alleged delinquent is threatened in the first notice: "Your account will be placed in the hands of an Internal Revenue Collection officer without further notice. Under the law, he may levy on your wages, salary, or other income, or seize or sell your property or rights to property to collect this account."

UNITED STATES TREASURY PROMISES TO CHANGE FIRST STATEMENT

On April 30, 1957, I published in the Jefferson Gazette, which I have edited for nearly 61 years, an open letter of protest to the President of the United States. On May 2, this letter was reprinted in the CONGRESSIONAL RECORD (A3287, courtesy of Hon. MICHAEL KIRWAN).

On May 6, 1957, United States Senator FRANK J. LAUSCHE wrote me that he would take the matter up with the Treasurer of the United States.

On May 23, 1957, I received a courteous letter from the First Assistant Treasurer of the United States, Fred C. Scribner, Jr., reading in part as follows:

"I personally agree with you that in most cases the language was too strong for a first notice.

"As you can well understand, the revision of the language, the printing of new cards and the distribution of the same throughout the country will take a little time. In the meantime, some taxpayers will continue to receive the cards which are now in use.

"You can be assured, however, that, as a result of your action in calling this matter to our attention and of the very thoughtful consideration which has been given to the matter by the Commissioner of Internal Revenue, a change will be made in the card at the earliest possible moment. You can rest assured also that you will not have lived in vain, as the card which you called to our attention is to be changed."

On June 3, 1957, Mr. Scribner wrote to me stating: "If at any time you have any other matters which you think should be called to our attention, I hope you will write to me about them."

It required only 23 days to get this change beneficial both to the Government and to 60 million income taxpayers.

INFORMAL PETITION TO THE GOVERNMENT IN REDRESS OF GRIEVANCES

Under authority of article I in the Bill of Rights, I am petitioning the Government of the United States for a redress of a serious grievance. In doing so, I voice the appeal of thousands of loyal citizens who have been illegally attacked by alleged Internal Revenue officials or agents.

Since there may be no provision in the United States Constitution itself, naming the person or persons who shall represent the Government to receive and consider my petition, I address it to you, Mr. Attorney General. By direct action, we may save a long and expensive gantlet of the various State and Federal courts.

In my letter from the Assistant Treasurer dated May 23, 1957, were the following words, which I deem an effort to defend an untenable position, if we are a nation of free men and women. Mr. Scribner wrote:

"We do wish to point out to you that the statements which appeared on the card which you received were an accurate statement of the rights of the service.

"Proposition No. 1: A Federal officer or agent is amenable to and not immune from prosecution and punishment for any violation within the State itself of a State law.

"Proof: The fourth amendment to the Federal Constitution and the 14th article of the Ohio State Constitution are identical, namely: The right of the people to be secure in their persons, houses, papers, and posses-

sions, against unreasonable searches and seizures shall not be violated and no warrant shall be issued, but upon probable cause, supported by oath or affirmation, particularly describing the place to be searched, and the persons and things to be seized."

Application: This prohibition in the State of Ohio and the Federal Constitution is violated frequently by Revenue officers and agents.

OHIO COURT DECISIONS

In this informal brief and letter I need not cite in detail the numerous cases in Ohio and elsewhere in support of proposition No. 1. Our Ohio courts have held "that an officer of the law who makes search and seizure in a dwelling or other premises, without a warrant, or with an illegal warrant—is a trespasser, and amenable to an action for such trespass."

Also, "Strong probability that defendants were guilty of offenses charged was insufficient where convictions could not be sustained without giving sanction to procedure violative of rights under constitutional provisions regarding search and seizure."

Also, "No exploratory search or seizure of either persons, houses, or effects can ever be justified without warrant."

Also, "Under a subpena duces tecum the person subpenaed is required to bring with him only such books and files as are particularly described—and a subpena duces tecum purporting to require the person subpenaed to bring with him books and files under his control without particularly describing such books and files, is wholely void."

Also, "Searching of a garage without search warrant and without consent of the owner, is clear infringement upon his constitutional rights, for this section protects not only houses but whatever is regarded as 'place'."

Article I of the Ohio State Constitution grants to its citizens the right "of defending life and liberty, acquiring, possessing, and protecting property and seeking and obtaining happiness and safety." Can the Federal Government evade and render void that Ohio constitutional provision? It cannot do so constitutionally.

Mr. Attorney General, each of the 48 States, when admitted to the Union, had to have a republican form of government. Each is sovereign in intrastate affairs. Every citizen is first a citizen of the State in which he holds residence. He is a citizen of the United States, not in the first capacity of citizenship, but in a secondary capacity, save in those things and powers delegated by the Constitution to the United States of America. The doctrine of "implied powers" is specifically denied in the Federal Bill of Rights, article X. The powers not delegated to the United States by the Constitution, or prohibited by it to the States, are reserved to the States respectively or to the people."

CONCLUSION

If an officer or agent of the United States Government, acting within the State of Ohio, without prior notice and due process of law levies on the wage, salary, or income, or seizes or sells the property of a citizen of the State and of the United States on the mere assumption that the taxpayer is guilty of willful or neglectful failure to pay an income tax, then such officer or agent of the Federal Government is guilty of a crime. His crime may be a misdemeanor, a felony or both. No Federal officer can legally make any search and seizure in Ohio without a proper search warrant particularly describing the persons or the place, and the property which he expects to search and seize.

A clerk, agent, or collector in the Internal Revenue Division has no constitutional judicial powers. The revenue agent often punishes an alleged delinquent as guilty of evasion of income taxes with no more evidence than what may be a bookkeeping error made by a careless or incompetent clerk in a district Internal Revenue office. Against such error the alleged delinquent is refused his constitutional right to due process of law.

The outraged citizen has no defense whatever under bureaucracy. A bureaucrat doesn't give a whoop about the Federal or the State constitution, nor the laws regulating search and seizure. Such agents acting without due process of law are criminals. They can be and should be prosecuted under State laws as trespassers, thieves or burglars.

Mr. Attorney General, there is a rising and ominous protest all over the United States against the injustice of the Federal income tax and the collectors of the tax. I warn you to listen and act promptly. You have the legal right for you are, first, the representative of the citizens, second, the representative of an administration in the Government of the people.

There is no immunity under the laws of Ohio even to a Federal officer who violates our constitution and laws. Our people will not be pushed around forever.

Will you see to it that Internal Revenue agents, in Ohio, obey the laws of Ohio?

CHET LAMPSON.

Scientists Unable To Clarify Confusion on What To Do About Atomic Testing Because Disagree as to Facts and Because Fundamental Decision Is Political Rather Than Scientific

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following article by Edgar Ansel Mowrer:

SCIENTISTS CANNOT CLARIFY SITUATION

(By Edgar Ansel Mowrer)

American scientists—some of them—are scornful of American politicians. Especially since the creation of the A-bomb these lofty intellects have been complaining of the politicos' failure to produce a coherent foreign policy, one adjusted to the tremendous facts of the world situation.

Instead of obtaining a settlement with the Kremlin, abolishing the use of thermonuclear weapons, raising world living standards and other odd jobs, these poor elected Americans have, it seems, dallied, and talked. They cannot even agree among themselves. Therefore what is needed is scientific politics.

Now, however, Washington politicians are reversing the charges. It appears the greatest scientific minds cannot agree about the possible dangers to mankind of continual tests of thermonuclear weapons—A and H.

How come? Don't all scientists have access to the same basic facts? Are not scientific conclusions open to all honest minds of sufficient capacity?

These certainly are things scientists have long claimed. Yet the fact remains that on what should be a simple matter of fact, the greatest experts disagree.

Over the last few years many scientists, particularly biologists, have been pressing for an end to tests of atomic weapons. Nobel prize biochemist Linus Pauling mobilized no less than 2,000 American scientists to urge our Government to stop testing thermonuclear weapons.

"SPONTANEOUS" MUTATIONS

The argument is simple: Atomic tests loose particles which multiply spontaneous (meaning unaccounted for) biological mutations. Most mutations are harmful—by definition if not by experimental demonstration. Therefore, atomic explosions are harmful and ought to be stopped.

Moreover, all exploding bombs release some strontium 90 which, entering human bones, causes cancers.

It sounds impressive—until one notes that equally famous scientists, possessing the same knowledge, claim the amount of noxious substances so far released, or likely to be released in the near future, is so small as to be insignificant. There is as yet no real danger, these people believe.

Where does this leave a really scientific national policy?

Some have tried to explain the scientists' argument away on the following basis: Biological mutations likely to be caused in the near future will harm only a few thousand individuals.

To the tough group this is fairly unimportant since the number of deformed individuals in any war will number millions. The tender fellows, on the other hand, insist that knowingly adding any more to the inevitable number of the biologically handicapped is a crime.

To which the tough rejoin, in that case the tender should also advocate the abolition of motorcars (at least those with speeds over 35 miles an hour), the abolition of fast military airplanes which are continually cracking up, and all other causes of danger.

To which the tender minded reply no—those things are necessary, but further atomic weapons tests are not.

EXPLANATION OF DISCREPANCY

Here, I submit, lies a plausible explanation of a discrepancy which is putting science and scientists in a very poor light. Apparently leading scientists do agree on approximately what more tests may do.

Where they differ is in their appreciation of the need for trying to maintain thermonuclear supremacy over an enemy.

They differ in their views as to that enemy's readiness to reach a political solution and call the cold war off.

They differ as to the chances of any disarmament agreement which the Kremlin would then observe.

They differ as to the virtues of nonprovocation and pacifism.

Just like the unscientific politicians.

All of which suggests two things: First, our scientists have little or nothing new or constructive to contribute to the formulation of national policy; and second, the contradictory evidence now being presented by learned men to the special congressional Atomic Energy Committee will add little or nothing to the common understanding of the desirability of further thermonuclear tests.

Early Congressional Directories

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McMILLAN. Mr. Speaker, on the eighth ultimo, following the unanimously favorable report of the House Committee on the District of Columbia,

there was passed by the House and sent to the Senate for action, H. R. 4874. The reasons in support of such passage are fully set forth in the committee report, House Report No. 303.

Touching the splendid services which have been and are being rendered by the Columbia Historical Society in compiling and preserving for the benefit of the entire country the annals and important historical incidents of the District of Columbia, I have noted with interest an article recently prepared by Mr. Meredith B. Colket, Jr., vice president of the Columbia Historical Society, setting forth in interesting detail the story of the early Directories of Congress. Believing that publication in the CONGRESSIONAL RECORD of this highly informative sketch may prove of interest and value to Members of Congress, under leave accorded, I herewith include the same as a part of my remarks:

THE EARLY CONGRESSIONAL DIRECTORIES

Very little is known about the embryonic predecessor of the large and regularly published Congressional Directory that is so valuable to every Member of Congress. In 1911 the Superintendent of Documents issued a checklist of Government documents and listed the Congressional Directories then known. He described the early ones as "queer little pamphlets" and identified 5 that were dated 1820 or before. The earliest found was printed in 1809. In 1950 a committee of Congress published a revised Biographical Directory of the American Congress and identified an even earlier pamphlet, printed in 1803. The Library of Congress issued a catalogue card for the latter rarity as follows:

"United States Eighth Congress, first session, 1803–04: Alphabetical list of the Members of the two Houses of Congress. According to States. First session, Eighth Congress. Commencing the 17th of October 1803." ([Washington, 1803] 12 p. 21cm.)

Recently, a dealer in secondhand books offered for sale a leaflet identified as "List of Members of the Senate and the House of Representatives with their Places of Abode. n. d." This undated leaflet proved to be of even earlier vintage; for it includes the name of Senator Thomas Sumter, of South Carolina, who took his seat on December 19, 1801, and does not include the name of Representative Seth Hastings, of Massachusetts, who took his seat January 11, 1802. It was evidently printed for the Seventh Congress between these dates, and not long after the Capital of the United States had moved to the District of Columbia. Further investigation reveals that the first directory with the formal title "Congressional Directory" was published in 1811; and that the only known copy of it is in the Columbia Historical Society. At least 26 rather than 5 Congressional Directories were printed by 1820, if we include broadsides printed when Congress met in New York and Philadelphia.

These directories served a practical purpose. It was obviously necessary for every Member of Congress to be able to ascertain the name of each colleague and the place of his residence. The difficulty in locating the places of residence of public figures in the Nation's Capital in the early days is probably best illustrated by a problem that beset young Elbridge Gerry, Jr. One June afternoon in 1813 he arrived in Washington to visit his father, then the Vice President of the United States. The boy wrote in his diary:

"* * * As I was ignorant of the lodgings of my father, who is now at Washington, I alighted at the hotel, having made some vain efforts to find him. I arrived at 6 in the evening, and after tea was informed that he lived in 10 buildings at one end of the town. I commenced my walk in the dark, and having measured more than a mile, I came to the place. Here no father was to be found, and I was directed to his barber to obtain the necessary information. Him I found and was informed that he lived at the other extremity of the city, 2 or 3 miles distant, in 7 instead of 10 buildings. I endeavored to find a hack but none could be had. By this time it was 9 o'clock. I was so provoked at my lost labor, that I was resolved to walk until morning, but what I would find the house. Off I set and at 10, reached the place.

However practical the directories may have been, they apparently were printed in very small numbers, chiefly for congressional use. They appear to have been regarded as ephemera to be thrown out as soon as a particular Congress was over or a new issue was printed.

The early Congressional Directories are virtually the only source of information as to the residences of the Members of Congress because Washington directories were not published until 1822. The Congressional Directories show that most Members in those early days lived in boarding houses. They show where these boarding houses were and who operated them. They enable us to reconstruct a segment of the life of an individual Member of Congress, for we can see what other Members sat at his table. They may even help to explain the "ayes" and "nays" in Congress. From about the time of the War of 1812 on they contain such information as the home post offices of the Members and the names and locations of the Federal buildings and foreign legations in the city. They show that Senator Eaton wasn't the only Member of Congress to lodge at the O'Neill tavern where the famed Peggy O'Neill, the proprietor's daughter, resided. Just after some of the public buildings were burned by the British during the war, the President was described in the appropriate Congressional Directory, as a resident of "The house lately occupied by Colonel Tayloe." This is the Octagon House, now occupied by the American Institute of Architects.

Dr. Samuel Clagett Busey, one of the foremost historians of the District of Columbia, years ago recognized the historical significance of these directories. Although only a few of the early ones were available to him, he was able to piece together a delightful and informative monograph Boarding-House and Hotel Life of Public Men in the City During the First Half of the 19th Century. This was published as a chapter in Pictures of the City of Washington in the Past (Washington, D. C., 1898).

More recently, Dr. Frederick Barnes Tolles, librarian of the Friends Historical Library, Swarthmore, Pa., utilized information from the 1801 list in his biography, George Logan of Philadelphia (New York, 1953). Dr. Tolles identified Senator Logan's boarding house, and reconstructed a brief but interesting account naming Members who sat at the Senator's table.

Little is known about the printers of the earliest Congressional Directories, which bear no imprint. It is quite probable that in the days before there was a Public Printer, a local printer was induced to undertake the printing as a private venture. Certainly it was not until 1848 that official authorization is indicated on the directories. Charles Evans in his American Bibliography attributes two printed in Philadelphia in the late 18th century to John Fenno, perhaps through a comparison of type face. R. C. Weightman is credited by James L. Harrison, editor of the 1950 Biographical Directory of the American Congress, with printing the 1809 directory. The 1814 directory, printed by Rapine and Elliott, is the first directory to bear an imprint. Daniel Rapine alone was the printer in 1816. Peter Force, whose very full directory was actually a directory of the Government in Washington, was a printer in 1820.

Force, who later became Mayor of Washington, is perhaps the best known of these early printers; and the details of his life have been well told by the former curator of the Columbia Historical Society, Newman F. McGirr. We want only to add the following intimate picture of Force's printing shop as described by Representative John Heritage Bryan, of North Carolina. He wrote his wife from Washington on February 28, 1828:

"MY DEAR WIFE: * * * It is such a wearisome drudgery to prepare a speech, to wait with fervish anxiety for an opportunity to deliver it, and then to prepare it for the press, and superintend its publication, that I am almost deterred from undertaking it again shortly; however ambition requires the slaving of its votaries. I was kept up last night til near midnight waiting for the proof sheets. I waited for them with great impatience and then went to the office through the rain to correct them. After all there are several errors.

"I really pity the poor journeymen whom I saw at work at Force's office. (Nat.[ional] J.[ournal].) They were employed in a heated atmosphere setting types. They sit up night after night nearly all night long and sleep in the day—the poor creatures strain their eyes in arranging the small type by a bad light and altogether they look very wan and meager. I almost felt as if I have got among some unearthly beings."

The search made to locate every Congressional Directory that was printed down through the year 1820 took us to many depositories of Americana in the United States. It revealed a number of interesting things. The first directory proved to be published not for the 7th Congress, but for the 1st Congress. The formal title "Congressional Directory" was not used until 1811, during the 12th Congress. There was at least one directory for each Congress; and, from the 12th Congress, one for each session of each Congress.

The frequency of the printings is probably the best direct evidence to suggest that the directories served a practical purpose, since 26 separate imprints were found for the period 1789–1820. The scarcity of these printings is the best evidence that they were treated as ephemera. No library has been found to possess as many as half; and no library of the Federal Government, except for the Library of Congress, has been found to possess one. The Library of Congress, however, has 12 of the 26, the largest holdings for any library; and, the chief of its Rare Book Room, Dr. Frederick Goff, has recently had photostated the ones missing from its collection.

Two Massachusetts libraries, the American Antiquarian Society and the Boston Athenaeum, almost equal the Library of Congress in the number of the early directories owned, a situation that speaks well for the collecting instincts of the New Englanders. No other libraries can boast of possessing as many as a quarter of the directories printed during this period. The Columbia Historical Society is the only library that has a copy of the 1811 directory, the first directory entitled "Congressional Directory."

The following table shows the holdings of each of the depositories found to have one or more of these early directories (1789–1820):

sions, against unreasonable searches and seizures shall not be violated and no warrant shall be issued, but upon probable cause, supported by oath or affirmation, particularly describing the place to be searched, and the persons and things to be seized."

Application: This prohibition in the State of Ohio and the Federal Constitution is violated frequently by Revenue officers and agents.

OHIO COURT DECISIONS

In this informal brief and letter I need not cite in detail the numerous cases in Ohio and elsewhere in support of proposition No. 1. Our Ohio courts have held "that an officer of the law who makes search and seizure in a dwelling or other premises, without a warrant, or with an illegal warrant—is a trespasser, and amenable to an action for such trespass."

Also, "Strong probability that defendants were guilty of offenses charged was insufficient where convictions could not be sustained without giving sanction to procedure violative of rights under constitutional provisions regarding search and seizure."

Also, "No exploratory search or seizure of either persons, houses, or effects can ever be justified without warrant."

Also, "Under a subpena duces tecum the person subpenaed is required to bring with him only such books and files as are particularly described—and a subpena duces tecum purporting to require the person subpenaed to bring with him books and files under his control without particularly describing such books and files, is wholely void."

Also, "Searching of a garage without search warrant and without consent of the owner, is clear infringement upon his constitutional rights, for this section protects not only houses but whatever is regarded as 'place'."

Article I of the Ohio State Constitution grants to its citizens the right "of defending life and liberty, acquiring, possessing, and protecting property and seeking and obtaining happiness and safety." Can the Federal Government evade and render void that Ohio constitutional provision? It cannot do so constitutionally.

Mr. Attorney General, each of the 48 States, when admitted to the Union, had to have a republican form of government. Each is sovereign in intrastate affairs. Every citizen is first a citizen of the State in which he holds residence. He is a citizen of the United States, not in the first capacity of citizenship, but in a secondary capacity, save in those things and powers delegated by the Constitution to the United States of America. The doctrine of "implied powers" is specifically denied in the Federal Bill of Rights, article X. The powers not delegated to the United States by the Constitution, or prohibited by it to the States, are reserved to the States respectively or to the people."

CONCLUSION

If an officer or agent of the United States Government, acting within the State of Ohio, without prior notice and due process of law levies on the wage, salary, or income, or seizes or sells the property of a citizen of the State and of the United States on the mere assumption that the taxpayer is guilty of willful or neglectful failure to pay an income tax, then such officer or agent of the Federal Government is guilty of a crime. His crime may be a misdemeanor, a felony or both. No Federal officer can legally make any search and seizure in Ohio without a proper search warrant particularly describing the persons or the place, and the property which he expects to search and seize.

A clerk, agent, or collector in the Internal Revenue Division has no constitutional judicial powers. The revenue agent often punishes an alleged delinquent as guilty of evasion of income taxes with no more evidence than what may be a bookkeeping error made by a careless or incompetent clerk in a district Internal Revenue office. Against such error the alleged delinquent is refused his constitutional right to due process of law.

The outraged citizen has no defense whatever under bureaucracy. A bureaucrat doesn't give a whoop about the Federal or the State constitution, nor the laws regulating search and seizure. Such agents acting without due process of law are criminals. They can be and should be prosecuted under State laws as trespassers, thieves or burglars.

Mr. Attorney General, there is a rising and ominous protest all over the United States against the injustice of the Federal income tax and the collectors of the tax. I warn you to listen and act promptly. You have the legal right for you are, first, the representative of the citizens, second, the representative of an administration in the Government of the people.

There is no immunity under the laws of Ohio even to a Federal officer who violates our constitution and laws. Our people will not be pushed around forever.

Will you see to it that Internal Revenue agents, in Ohio, obey the laws of Ohio?

CHET LAMPSON.

Scientists Unable To Clarify Confusion on What To Do About Atomic Testing Because Disagree as to Facts and Because Fundamental Decision Is Political Rather Than Scientific

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following article by Edgar Ansel Mowrer:

SCIENTISTS CANNOT CLARIFY SITUATION

(By Edgar Ansel Mowrer)

American scientists—some of them—are scornful of American politicians. Especially since the creation of the A-bomb these lofty intellects have been complaining of the politicos' failure to produce a coherent foreign policy, one adjusted to the tremendous facts of the world situation.

Instead of obtaining a settlement with the Kremlin, abolishing the use of thermonuclear weapons, raising world living standards and other odd jobs, these poor elected Americans have, it seems, dallied, and talked. They cannot even agree among themselves. Therefore what is needed is scientific politics.

Now, however, Washington politicians are reversing the charges. It appears the greatest scientific minds cannot agree about the possible dangers to mankind of continual tests of thermonuclear weapons—A and H.

How come? Don't all scientists have access to the same basic facts? Are not scientific conclusions open to all honest minds of sufficient capacity?

These certainly are things scientists have long claimed. Yet the fact remains that on what should be a simple matter of fact, the greatest experts disagree.

Over the last few years many scientists, particularly biologists, have been pressing for an end to tests of atomic weapons. Nobel prize biochemist Linus Pauling mobilized no less than 2,000 American scientists to urge our Government to stop testing thermonuclear weapons.

"SPONTANEOUS" MUTATIONS

The argument is simple: Atomic tests loose particles which multiply spontaneous (meaning unaccounted for) biological mutations. Most mutations are harmful—by definition if not by experimental demonstration. Therefore, atomic explosions are harmful and ought to be stopped.

Moreover, all exploding bombs release some strontium 90 which, entering human bones, causes cancers.

It sounds impressive—until one notes that equally famous scientists, possessing the same knowledge, claim the amount of noxious substances so far released, or likely to be released in the near future, is so small as to be insignificant. There is as yet no real danger, these people believe.

Where does this leave a really scientific national policy?

Some have tried to explain the scientists' argument away on the following basis: Biological mutations likely to be caused in the near future will harm only a few thousand individuals.

To the tough group this is fairly unimportant since the number of deformed individuals in any war will number millions. The tender fellows, on the other hand, insist that knowingly adding any more to the inevitable number of the biologically handicapped is a crime.

To which the tough rejoin, in that case the tender should also advocate the abolition of motorcars (at least those with speeds over 35 miles an hour), the abolition of fast military airplanes which are continually cracking up, and all other causes of danger.

To which the tender minded reply no—those things are necessary, but further atomic weapons tests are not.

EXPLANATION OF DISCREPANCY

Here, I submit, lies a plausible explanation of a discrepancy which is putting science and scientists in a very poor light. Apparently leading scientists do agree on approximately what more tests may do.

Where they differ is in their appreciation of the need for trying to maintain thermonuclear supremacy over an enemy.

They differ in their views as to that enemy's readiness to reach a political solution and call the cold war off.

They differ as to the chances of any disarmament agreement which the Kremlin would then observe.

They differ as to the virtues of nonprovocation and pacifism.

Just like the unscientific politicians.

All of which suggests two things: First, our scientists have little or nothing new or constructive to contribute to the formulation of national policy; and second, the contradictory evidence now being presented by learned men to the special congressional Atomic Energy Committee will add little or nothing to the common understanding of the desirability of further thermonuclear tests.

Early Congressional Directories

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. McMILLAN. Mr. Speaker, on the eighth ultimo, following the unanimously favorable report of the House Committee on the District of Columbia,

there was passed by the House and sent to the Senate for action, H. R. 4874. The reasons in support of such passage are fully set forth in the committee report, House Report No. 303.

Touching the splendid services which have been and are being rendered by the Columbia Historical Society in compiling and preserving for the benefit of the entire country the annals and important historical incidents of the District of Columbia, I have noted with interest an article recently prepared by Mr. Meredith B. Colket, Jr., vice president of the Columbia Historical Society, setting forth in interesting detail the story of the early Directories of Congress. Believing that publication in the CONGRESSIONAL RECORD of this highly informative sketch may prove of interest and value to Members of Congress, under leave accorded, I herewith include the same as a part of my remarks:

THE EARLY CONGRESSIONAL DIRECTORIES

Very little is known about the embryonic predecessor of the large and regularly published Congressional Directory that is so valuable to every Member of Congress. In 1911 the Superintendent of Documents issued a checklist of Government documents and listed the Congressional Directories then known. He described the early ones as "queer little pamphlets" and identified 5 that were dated 1820 or before. The earliest found was printed in 1809. In 1950 a committee of Congress published a revised Biographical Directory of the American Congress and identified an even earlier pamphlet, printed in 1803. The Library of Congress issued a catalogue card for the latter rarity as follows:

"United States Eighth Congress, first session, 1803–04: Alphabetical list of the Members of the two Houses of Congress. According to States. First session, Eighth Congress. Commencing the 17th of October 1803." ([Washington, 1803] 12 p. 21cm.)

Recently, a dealer in secondhand books offered for sale a leaflet identified as "List of Members of the Senate and the House of Representatives with their Places of Abode. n. d." This undated leaflet proved to be of even earlier vintage; for it includes the name of Senator Thomas Sumter, of South Carolina, who took his seat on December 19, 1801, and does not include the name of Representative Seth Hastings, of Massachusetts, who took his seat January 11, 1802. It was evidently printed for the Seventh Congress between these dates, and not long after the Capital of the United States had moved to the District of Columbia. Further investigation reveals that the first directory with the formal title "Congressional Directory" was published in 1811; and that the only known copy of it is in the Columbia Historical Society. At least 26 rather than 5 Congressional Directories were printed by 1820, if we include broadsides printed when Congress met in New York and Philadelphia.

These directories served a practical purpose. It was obviously necessary for every Member of Congress to be able to ascertain the name of each colleague and the place of his residence. The difficulty in locating the places of residence of public figures in the Nation's Capital in the early days is probably best illustrated by a problem that beset young Elbridge Gerry, Jr. One June afternoon in 1813 he arrived in Washington to visit his father, then the Vice President of the United States. The boy wrote in his diary:

"* * * As I was ignorant of the lodgings of my father, who is now at Washington, I alighted at the hotel, having made some vain efforts to find him. I arrived at 6 in the evening, and after tea was informed that he lived in 10 buildings at one end of the town. I commenced my walk in the dark, and having measured more than a mile, I came to the place. Here no father was to be found, and I was directed to his barber to obtain the necessary information. Him I found and was informed that he lived at the other extremity of the city, 2 or 3 miles distant, in 7 instead of 10 buildings. I endeavored to find a hack but none could be had. By this time it was 9 o'clock. I was so provoked at my lost labor, that I was resolved to walk until morning, but what I would find the house. Off I set and at 10, reached the place.

However practical the directories may have been, they apparently were printed in very small numbers, chiefly for congressional use. They appear to have been regarded as ephemera to be thrown out as soon as a particular Congress was over or a new issue was printed.

The early Congressional Directories are virtually the only source of information as to the residences of the Members of Congress because Washington directories were not published until 1822. The Congressional Directories show that most Members in those early days lived in boarding houses. They show where these boarding houses were and who operated them. They enable us to reconstruct a segment of the life of an individual Member of Congress, for we can see what other Members sat at his table. They may even help to explain the "ayes" and "nays" in Congress. From about the time of the War of 1812 on they contain such information as the home post offices of the Members and the names and locations of the Federal buildings and foreign legations in the city. They show that Senator Eaton wasn't the only Member of Congress to lodge at the O'Neill tavern where the famed Peggy O'Neill, the proprietor's daughter, resided. Just after some of the public buildings were burned by the British during the war, the President was described in the appropriate Congressional Directory, as a resident of "The house lately occupied by Colonel Tayloe." This is the Octagon House, now occupied by the American Institute of Architects.

Dr. Samuel Clagett Busey, one of the foremost historians of the District of Columbia, years ago recognized the historical significance of these directories. Although only a few of the early ones were available to him, he was able to piece together a delightful and informative monograph Boarding-House and Hotel Life of Public Men in the City During the First Half of the 19th Century. This was published as a chapter in Pictures of the City of Washington in the Past (Washington, D. C., 1898).

More recently, Dr. Frederick Barnes Tolles, librarian of the Friends Historical Library, Swarthmore, Pa., utilized information from the 1801 list in his biography, George Logan of Philadelphia (New York, 1953). Dr. Tolles identified Senator Logan's boarding house, and reconstructed a brief but interesting account naming Members who sat at the Senator's table.

Little is known about the printers of the earliest Congressional Directories, which bear no imprint. It is quite probable that in the days before there was a Public Printer, a local printer was induced to undertake the printing as a private venture. Certainly it was not until 1848 that official authorization is indicated on the directories. Charles Evans in his American Bibliography attributes two printed in Philadelphia in the late 18th century to John Fenno, perhaps through a comparison of type face. R. C. Weightman is credited by James L. Harrison, editor of the 1950 Biographical Directory of the American Congress, with printing the 1809 directory. The 1814 directory, printed by Rapine and Elliott, is the first directory to bear an imprint. Daniel Rapine alone was the printer in 1816. Peter Force, whose very full directory was actually a directory of the Government in Washington, was a printer in 1820.

Force, who later became Mayor of Washington, is perhaps the best known of these early printers; and the details of his life have been well told by the former curator of the Columbia Historical Society, Newman F. McGirr. We want only to add the following intimate picture of Force's printing shop as described by Representative John Heritage Bryan, of North Carolina. He wrote his wife from Washington on February 28, 1828:

"MY DEAR WIFE: * * * It is such a wearisome drudgery to prepare a speech, to wait with fervish anxiety for an opportunity to deliver it, and then to prepare it for the press, and superintend its publication, that I am almost deterred from undertaking it again shortly; however ambition requires the slaving of its votaries. I was kept up last night til near midnight waiting for the proof sheets. I waited for them with great impatience and then went to the office through the rain to correct them. After all there are several errors.

"I really pity the poor journeymen whom I saw at work at Force's office. (Nat.[ional] J.[ournal].) They were employed in a heated atmosphere setting types. They sit up night after night nearly all night long and sleep in the day—the poor creatures strain their eyes in arranging the small type by a bad light and altogether they look very wan and meager. I almost felt as if I have got among some unearthly beings."

The search made to locate every Congressional Directory that was printed down through the year 1820 took us to many depositories of Americana in the United States. It revealed a number of interesting things. The first directory proved to be published not for the 7th Congress, but for the 1st Congress. The formal title "Congressional Directory" was not used until 1811, during the 12th Congress. There was at least one directory for each Congress; and, from the 12th Congress, one for each session of each Congress.

The frequency of the printings is probably the best direct evidence to suggest that the directories served a practical purpose, since 26 separate imprints were found for the period 1789–1820. The scarcity of these printings is the best evidence that they were treated as ephemera. No library has been found to possess as many as half; and no library of the Federal Government, except for the Library of Congress, has been found to possess one. The Library of Congress, however, has 12 of the 26, the largest holdings for any library; and, the chief of its Rare Book Room, Dr. Frederick Goff, has recently had photostated the ones missing from its collection.

Two Massachusetts libraries, the American Antiquarian Society and the Boston Athenaeum, almost equal the Library of Congress in the number of the early directories owned, a situation that speaks well for the collecting instincts of the New Englanders. No other libraries can boast of possessing as many as a quarter of the directories printed during this period. The Columbia Historical Society is the only library that has a copy of the 1811 directory, the first directory entitled "Congressional Directory."

The following table shows the holdings of each of the depositories found to have one or more of these early directories (1789–1820):

Symbol of depository	Name of depository	Number of copies
AAS	American Antiquarian Society	11
BA	Boston Athenaeum	10
CHS	Columbia Historical Society	5
CL	William L. Clements Library	2
HSP	Historical Society of Pennsylvania	1
JCB	John Carter Brown Library	4
NYHS	New York Historical Society	1
NYPL	New York Public Library	5
LC	Library of Congress	12
PPL	Philadelphia Public Library	1
V	University of Virginia, Alderman Library	1
W	Western Reserve Historical Society	1
Y	Yale University Library	4

The early directories printed after Congress moved to the District of Columbia (1801–20) are listed below:

SEVENTH CONGRESS

(Double rule.) List of Members of the Senate and House of Representatives, with their places of abode. (Short thick-thin rule.) Washington? 1801?

Seven pages, 23 x 14.5 cm. Caption title. Apparently printed between December 19, 1801, when Thomas Sumter (Senator, South Carolina) who is listed, took his seat, and January 11, 1802, when Seth Hastings (Representative, Massachusetts), who is not listed, took his seat. Gives, usually, the name of the proprietor of each boarding house or other residence, a brief identification of the residence, and the surnames of Members residing there. Listed by A. W. Greely, Papers Relating to Early Congressional Documents (56th Cong., 1st sess., S. Doc. 428, serial 3879), page 202, under December 1801. Copies in LC, CHS, CL, and W.

(Long thick-thin rule.) List of Members of the Senate and House of Representatives, with their places of abode. (Type ornament.) Washington? 1802?

Eight pages, 17 x 11 cm. Caption title. Apparently printed in 1802 after May, when John Milledge (Representative, Georgia), who is not listed, resigned. Benjamin Tallaferro (Representative, Georgia), who also resigned in 1802, evidently after May, is listed. Copies in AAS, BA, and CL.

EIGHTH CONGRESS

Alphabetical list of the Members of the two Houses of Congress, according to States. (Double rule.) First session, 8th Congress. Commencing the 17th of October 1803. (Double rule.) Washington? 1803?

Twelve pages, 21 x 13 cm. Copies in BA, CHS, LC, and Y. LC card JK 1012.Z5 1803a Rare book collection.

NINTH CONGRESS

A list of the names of the Members of the Senate and House of Representatives of the United States, according to States. (Short thick-thin rule.) Washington? 1805?

Broadside: 40 x 23.5 cm. (printing 36.5 v 18.5 cm.). Includes the name of Thomas Spaulding, Representative, of Georgia, who took his seat December 24, 1805, but does not include the name of Evan S. Alexander, Representative, of North Carolina, who took his seat February 24, 1806. Copy in LC.

TENTH CONGRESS

(Thick-thin rule.) Places of abode of the Members of both Houses of Congress. (Short thick-thin rule.) Washington? 1807?

Twelve pages, 21.5 x 12.5 cm. Caption title. Apparently printed in November 1807 for (Ezekiel) Bacon, Representative, of Massachusetts, who took his seat Novemeber 2, is listed and Elisha Mathewson, Senator, of Rhode Island, who took his seat November 20 is not listed. Copies in LC and Y.

ELEVENTH CONGRESS

(Long thick-thin rule.) Places of abode of the Members of both Houses of Congress. (Short thick-thin rule.) First session of the 11th Congress. (Thick-thin rule.) Washington? 1809?

Fifteen pages, 16.5 x 9.5 cm. Caption title. Gives, usually, the surname of the proprietor of each residence, the street name or other brief identification of the residence; and the names of the Members residing there. Attributed to R. C. Weightman. Copy in CHS, LC.

TWELFTH CONGRESS

Congressional Directory, for 1811–12. Washington? 1811?

Nineteen pages, 15.5 x 8.5 cm. Caption half-title: "Places of abode of the Members of both Houses of Congress." Copy in CHS.

Congressional Directory, for 1812–13. Washington? 1812?

Twenty-six pages, 15.5 x 9.5 cm. Caption half-title: "Places of abode of the Members of both Houses of Congress." Copy in AAS.

THIRTEENTH CONGRESS

Congressional Directory, for 1813. Washington? 1813?

Forty pages, 15 x 9.5 cm. Caption half-title: "Places of abode of the Members of both Houses of Congress." Copies in AAS and PPL.

Congressional Directory for the 2d session of the 13th Congress of the United States. Washington City, printed by Rapine and Elliot, near the Capitol. 1814.

Sixty-three pages, 15.5 x 9.5 cm. Half-title: "Places of abode of the Members of both Houses of Congress, together with their State, county, and post office." Copy in AAS.

Congressional Directory for the 3d session of the 13th Congress of the United States. Washington City, printed by Rapine and Elliott. 1814.

Thirty-six pages, 15.5 x 9.5 cm. Halftitle: "Places of abode in the District of Columbia, of the Members of both Houses of Congress, together with their post office and county." Copies in AAS, CHS, and LC. LC card JK 1012.Z5 1814 Rare bk. coll.

List of Members of the Senate and House of Representatives of the United States, in the 3d session of the 13th Congress, according to States. Washington? 1814?

Broadside: 49.5 x 30.5 cm. Letter press 43 x 25.5 cm. Copy in BA.

FOURTEENTH CONGRESS

Congressional Directory, for the 1st session of the 14th Congress of the United States. (Double rule.) Washington City: Printed by Daniel Rapine. Two short rows of dots.) 1816.

Thirty-one pages, 15.5 x 9.5 cm. Halftitle: (rule) "Places of abode, in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." (Rule.) Copies in AAS and BA.

Congressional Directory, for the 2d session of the 14th Congress of the United States. (Thick-thin rule.) Washington City: printed by Daniel Rapine. (Two short rows of dots.) 1816.

Thirty-nine pages, 15.5 x 9.5 cm. Halftitle: (wavy rule) "Places of abode, in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." (Wavy rule.) Includes a folding table containing an alphabetical list of the boarding houses, with members in each. Gives also the names of members of standing and select committees, of American ministers in foreign countries, and of foreign ministers in the United States with their places of residence. Copies in BA, NYPL, and LC.

FIFTEENTH CONGRESS

Congressional directory, for the 1st session of the 15th Congress of the United States. (Double rule.) Washington City: printed by Daniel Rapine. (Two short rows of dots.) 1817.

Thirty-eight pages, and folding table, 15 x 9 cm. Halftitle: "Places of abode, in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." Similar in contents to that of the directory for the 2d session of the 14th Congress. Copies in BA and LC.

Congressional directory for the 2d session of [t]he 15th Congress of the United States. (Double rule.) Washington City. Printed by Daniel Rapine. (Two short rows of dots.) 1818.

Thirty-nine pages and folding table, 14 x 8.5 cm. Half-title: (rule) "Places of abode in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." (Rule.) Similar in contents to that of the directory for the 2d session of the 14th Congress. Copies in BA, NYPL, and Y.

SIXTEENTH CONGRESS

Congressional Directory, for the 1st session of the 16th Congress of the United States. (Thick-thin rule.) Washington City, printed by Daniel Rapine. (Two short rows of dots.) 1819.

Forty pages and folding table, 15 x 9.5 cm. Half-title: (ornamental rule) "Places of abode, in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." (Ornamental rule.) Similar in contents to that of the directory for the 2d session of the 14th Congress. Copies in BA, LC, NYPL, V.

Congressional Directory for the 2d session of the 16th Congress of the United States. (Vignette.) Washington City, printed by Daniel Rapine (agent). (Two short rows of dots.) 1820.

Forty-seven pages, 15 x 9.5 cm. Half-title: (wavy rule) "Places of abode in the District of Columbia, of the Members of the Senate and House of Representatives, together with their post office and county." (Wavy rule.) Similar in contents to that of the directory for the 2d session of the 14th Congress. Copies in AAS, BA, LC, NYPL.

A directory for the public offices, the library, offices, and committee rooms, in the Capitol; explained by engravings and floor plans of the several buildings. With the residence of the foreign ministers, &c. to which is added, an alphabetical directory for the Members of Congress (row of dots.) to be published annually. (Double rule.) By Peter Force. (Double rule.) Washington City, printed and published by Davis & Force, printers, book-sellers and stationers, Pennsylvania Avenue 1820.

Twenty pages, 6 1; 17.5 x 10 cm. Includes views and floor plans of public buildings, lists Masonic lodges in the District of Columbia, etc. Copy in LC. LC card JK 1012.F6.

A Painless Plan of Foreign Aid

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mrs. ST. GEORGE. Mr. Speaker, it becomes daily more evident that our country has more money lying around the world than we have any idea of. Among other moneys are the counterpart funds that could be put to good use.

In the following article by Mr. David Lawrence, appearing in the Washington Star of June 6, an excellent and painless way is shown by which some of our

funds could be used for our foreign-aid program.

The taxpayers are becoming increasingly restive under the continual calls for new money for the program, and Mr. Lawrence's suggestion is both practical and timely.

The article follows:

A PAINLESS PLAN FOR FOREIGN AID—PROCEEDS FROM SALE OF FARM SURPLUS ABROAD PROPOSED AS SOURCE OF FUNDS

(By David Lawrence)

Four billion dollars is not easy to find these days, but this correspondent believes he has located inside the Government itself approximately that sum, and perhaps more, to pay for the mutual-security and foreign-aid program proposed recently by President Eisenhower. It could cut the budget by $4 billion and perhaps more. And nowadays anybody who can come up with a budget cut is supposed to be in tune with the times.

The $4 billion emerge in the form of foreign currencies that today are being used by nations abroad to buy American farm surpluses.

These surpluses consist of wheat and other grains, dairy products, fruits, and almost everything else that the farmer has been able hitherto to dump on the Government of the United States for purchase.

What happens is that, with the authority of the Congress, the farm products are sold overseas and payments by foreign governments are made in foreign currencies. Thus, anything sold to some countries would be in the local equivalent of pounds or francs or lire.

These sums have been given the name "counterpart funds." They usually are spent in the same countries which buy the surpluses. But the United States has troops in some and military installations in other countries, and makes all sorts of purchases locally.

Up to now only 21 percent of the counterpart funds are brought into the Federal budget and show up in the form of appropriations or as receipts when sales are made. The other 79 percent doesn't get into the budget at all, and only small amounts have been spent thus far.

The House of Representatives was told during debate this week that, as a result of farm sales overseas, more than $1 billion now is available in foreign currencies for spending by the United States Government. If the pending legislation is passed, approximately $4 billion worth of surpluses in the United States will be ready for disposal abroad.

Since the legislation was first passed, agreements have been made with 30 countries, covering 87 different disposal programs. Commodities involved in these agreements have cost the Commodity Credit Corporation nearly $3 billion and only $1 billion worth has thus far been exported.

Now there's no reason why the Government shouldn't buy more and more of the agricultural surpluses as they arise and sell them overseas except that the project has to be carefully handled so as to avoid ill feeling in other producing countries which may be deprived of their markets. But the best answer to this is that the world, with its increasing population, is in need of more and not less food. Backward areas are, of course, undernourished and need help.

In a report filed on May 9 by Chairman Cooley of the House Agriculture Committee, it is noted virtually all the foreign-currency funds used thus far have been employed for purchases of strategic materials, military procurement, and economic development, and for the payment of certain obligations of the United States Government abroad.

There is no reason why the same method and formula of payment cannot be applied to other projects and expenses of the United States in foreign countries, thus saving all or much of the money originally put in the budget for mutual security and foreign aid.

There are, of course, certain items that have to be paid for inside the United States, such as military "hardware" used in American bases abroad. But more and more of the foreign-currency fund can be converted into dollars, if necessary, by using barter methods.

The fact remains that Government dollars are being spent today to help American farmers get rid of their surpluses and to keep farm prices up. The farm bloc in Congress, composed of Members of both parties, has put this program through in the past and stands back of it today.

The more surpluses sold, the more money for the foreign aid program. This can easily cover the $4 billion already stipulated in the Federal budget for these items and, if sales of more surpluses of farm products should become necessary, there's plenty in the West and South where the present supply has been produced.

Some will say it's a matter of "bookkeeping." But so are many other items of the budget, and the important thing is to let the public know that foreign aid and mutual security can actually, if Congress wills it so, be obtained merely by selling more farm products overseas and finding ways of utilizing the foreign currencies even if those currencies have to be sold at a discount to get dollars. The accumulation of foreign-currency funds to date is a sizable sum, and more readily can be added. That's one way to save budget money and continue foreign aid at the same time—one of those necessary miracles in times like the present.

The Alger Hiss Book

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 10, 1957

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

THE ALGER HISS BOOK

(By Ralph de Toledano, North American Newspaper Alliance)

For years, Alger Hiss's friends have predicted hopefully that some day, some way, the whole truth would be told. Then there would be vindication for Hiss and annihilation for his enemies. Until then, there could only be mutterings of secret disclosures to come which would prove that the former State Department official had never been a Soviet spy.

The announcement by a respectable publisher that he was issuing Hiss's account of the case which shook America and figured in two Presidential campaigns seemed to promise the great revelation.

Those with long memories recalled that in two trials Hiss had come up with no more than a denial of guilt. After the appeals had traveled to the Supreme Court, his lawyers moved for a new trial but confessed in open court that they had not "a shred of evidence" to contravert the earlier decision of judge and jury.

To gild the finality, the FBI quietly turned up a half-dozen witnesses as reserves should the courts seek further corroboration of important aspects of the case.

What wonderful rabbit could Hiss pull out of a hat, they asked, which would refute and rebut the mountains of evidence heard by the courts and believed by the jury?

The new Hiss book, In the Court of Public Opinion (Alfred A. Knopf, New York City), offers that answer. What he pulls out of the hat is even less substantial than Harvey. In the book's 424 pages there is not one new fact or one new theory to explain away the Hiss perjuries concerning Soviet espionage in the 1930's. It is a dreary rehash of fact and conjecture, whose dominant note is "might have been" and "could be," but never was.

No single theory of his innocence covers all the facts of the case. So Hiss jumps from one to the other. A logical reader, totally ignorant of the case, can arrive at only one verdict from the Hiss book: Guilty.

Yet from this mixed stew there emerges one central thesis: The case against him, Hiss argues, was a monstrous frameup engineered by the FBI, Richard M. Nixon, Whittaker Chambers, the Republican Party, and other vicious forces. This vast plot was successful, he asserts, because the American public was "obsessed" by an "unreasoning fear" of communism. (The book has only unkind words for those who oppose communism.)

In the weird and wonderful world he conjures up, everyone except Hiss is a liar and any one except Hiss could have stolen the State Department documents which convicted him: "persons whose identity [Chambers] has never made public * * * officials * * * charwomen * * *messengers * * * someone else * * * Chambers himself."

Not only Chambers, says Hiss, but Hede Massing, Edith Murray, the entire phalanx of Government witnesses, Nathaniel Weyl, all committed perjury. Even the inanimate objects of the case—the documents typed on Hiss's Woodstock machine, the typewriter itself—were forgeries. (Even his own experts never went that far.)

And the late Judge Henry Goddard, criticized during the trial for allowing the Hiss defense to offer psychiatric testimony against Chambers, is pilloried as a prejudiced ogre.

To convince the world that this nightmare of villainy is real, Hiss resorts to a double-edged technique. On the one hand, he ignores as much of the truly compelling evidence as he dares—such as the testimony of Dr. Margaret Nicholson, the Hiss pediatrician in the 1930's, whose office records helped prove that the Hisses and the Chambers were in association long after Alger had sworn that they had forever parted company.

On the other hand, in trying to explain away evidence which is familiar to his court of public opinion, Hiss flatly contradicts his own sworn testimony at least six times—without, of course, letting the reader know what that testimony was. And in addition, he misrepresents the record of the two trials and the congressional hearing on more than 70 occasions.

Some of these misrepresentations are gross, some petty, some childish. For example, he tries to prove that Chambers was wrong when he said that Mrs. Hiss blushes "a fiery red" when she is annoyed or embarrassed. Mrs. Hiss, he states, is never annoyed or embarrassed. The reporters, like myself, who watched her in court saw her in the grip of both emotions—and saw her face turn to a reasonable approximation of "fiery red." He also tries to give the impression that Chambers was again wrong in testifying that Mrs. Hiss is a Quaker, perhaps forgetting that he himself so testified.

But Hiss' distortions and denials, both major and minor, are in a sense unimportant. What assumes significance is the picture which emerges of the man. Once, during the first trial, Hiss arrogantly corrected the grammar of Thomas F. Murphy, the prosecutor. For a second, another face peeked through the diplomatic aplomb. The effect on the jury was instantaneous—and Hiss never tried that gambit again. But in

the book, he could not resist the temptation to show his superiority, and he ostentatiously corrects typographical errors ("didn'tt" for "didn't", etc.) and the punctuation in the hearing record.

The Hiss of this book is pompous and sly in his conviction that what he considers the "boobus Americanus" will never remember the mass of detail which convinced jury and public 7 years ago. He exposes a man of no emotion, no anger, no humanity, nothing beyond a narrow mind which conceives of the law as a dialectical instrument for splitting hairs.

The wealth of feeling, of love and laughter, the sense of pity and terror, the intellectual grasp of our time's plague which made Whittaker Chambers' witness memorable—and convincing—is lacking. The dehydrated style recalls that Hiss has no interest in music, literature, or people—that the only excitement he showed in months of hearing and trial was at the mention of a prothonotory warbler. Even at the moment when the jury brought in its verdict, his only sign of passion was the movement of one thumb against the other.

What comes to mind is the description by atomic spy Klaus Fuchs of the controlled schizophrenia which enabled him to operate as a scientist and a Communist. It explains why Hiss persists in writing as if no one remembered the history of the case (and as if everyone were practicing his willed amnesia), why from the very first pages of the book he pleases to insist that he [never] really denied knowing Whittaker Chambers, why he forgets that as early as 1946 he identified Chambers to the publisher of a great Washington newspaper as that Time magazine editor who called him a Communist.

And it explains why he can argue simultaneously that Chambers' encyclopedic knowledge of the Hiss family was the result of clandestine study—and that Chambers really had no such knowledge at all.

In this context, there is something closely akin to the pathetic about all the subjects and objects which conspired to his downfall—Ford cars, registrations, typewriters, bankbooks, leases, rugs, office records, documents—stubborn artifacts of the case which did not respond to casuistry and lay in wait to make every alibi a trap.

Minutes after his lawyers had informed him that the incriminating typewriter, then the subject of an intensive search, was a Woodstock, Hiss told the FBI helpfully that he thought it was an Underwood. He ignores that little episode, perhaps because it is not known to the general public—but it is an insight into his character.

Even a mustache trapped him. For Hiss has testified and insisted that he had known Chambers for only a period of months in 1935. He had further insisted that the distinguishing characteristic was bad teeth. And then an old passport photo, showing that Chambers had worn a bushy mustache during that period—and that period alone—turned up.

Hiss accepts the passport as valid, accepts the fact that the photo was taken during the period of his admitted friendship with Chambers—and then blandly asserts that Chambers had no mustache. The prosecution contention, logically acceptable to the jury, that Hiss forgot the offending mustache because he continued to see Chambers for almost 3 years after it was shaved off—this Hiss ignores. That Chambers wore a mustache in 1935, Hiss says (and the reasoning escapes the average mind), is proof that Chambers is a liar.

Having divided his mind and defied logic, Hiss believes that he can do the same for the public in whose court he pleads. But his methods—the accumulation of irrelevant or inaccurate detail, the plodding obfuscations, the tactic of proving innocence by boredom—backfire. It is a mechanical performance by a mechanical man. And in the long run it will convince those who still believe in Hiss that their faith is misplaced. As Judge Jerome Frank said when he was asked to appear as a character witness in the first trial: "Mr. Hiss has no character." To Hiss' friends, this may be the great revelation of the book.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Problems in Foreign Relations

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. KNOWLAND. Mr. President, on June 9 I had the privilege of participating in a broadcast of the program entitled "Face the Nation," and I ask unanimous consent that a transcript of the broadcast be printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

FACE THE NATION

(As broadcast over the CBS Television Network, June 9, 1957, 4 to 4:30 p. m., CBS Radio Network, June 9, 1957, 9:30 to 10 p. m.; guest, the Honorable WILLIAM F. KNOWLAND, United States Senate, Republican of California; moderator, Griffing Bancroft; panel, William H. Lawrence, New York Times; Walter Cronkite, CBS News; James Shepley, Time-Life; producer, Ted Ayers; associate producer, Beryl Denzer)

ANNOUNCER. Senator KNOWLAND, face the Nation. You are about to see the Republican leader of the United States Senate, WILLIAM F. KNOWLAND, face the Nation, with questions from veteran correspondents representing the Nation's press: William H. Lawrence, Washington correspondent for the New York Times; Walter Cronkite, of CBS News; and James R. Shepley, chief of the Washington Bureau of Time and Life. And now, substituting for Stuart Novins, the moderator of Face the Nation, from CBS News and Public Affairs, Griffing Bancroft.

Mr. BANCROFT. Senator KNOWLAND is a man of many responsibilities. A California newspaper publisher and Member of the United States Senate for 12 years now. He is not only the Republican floor leader, but a member of perhaps the three most important Committees on Capitol Hill—on Appropriations—on Atomic Energy—and on Foreign Relations. So, Senator KNOWLAND, you have to cope not only with budgetary and political wars here at home, but with the cold war overseas as well. So, let's get started with our first question from Mr. Shepley.

Mr. SHEPLEY. Senator KNOWLAND, your colleague, LYNDON JOHNSON, of Texas, the Democratic leader of the Senate, proposed in a speech last night that following the appearance of Chairman Khrushchev on this program last week, that United States and Russian leaders should have equal time on the opposite radio and TV networks, each and every week of the year. You, as Republican leader of the Senate, endorse this proposal?

Senator KNOWLAND. Well, I thought Senator JOHNSON had made a constructive and interesting proposal. I certainly would think we would want to be sure that the American representative got equal time and was not just limited to being looked at and heard by the Communist hierarchy in the Soviet Union. If he could assure real equal time, that the people of Russia were getting the information, I think it might be helpful.

Mr. CRONKITE. Do you think, Senator KNOWLAND, that in the case of the Khrushchev interview last week on this program, Face the Nation, we should ask for equal time to answer that particular broadcast?

Senator KNOWLAND. Whether we should ask for equal time to answer that particular broadcast, I think it may be a little late to do that now, The time to have done it was perhaps before the broadcast was made, but over a year ago I suggested that at the United Nations, where they get a wide distribution by television and radio of the proceedings, that before the Soviet Union was able to take advantage of the American audience that he and his government should agree that equal time would be given to Ambassador Lodge and the spokesmen of the Western World, along the same general line.

Mr. LAWRENCE. Senator, do you get the impression that there has been any net change in the climate or in the relations between the United States and the Soviet Union as a result of events in the last week or 2 weeks?

Senator KNOWLAND. I personally, Mr. Lawrence, do not believe the Soviet Union has changed its long-term objectives. I am concerned that they may be interested for propaganda purposes of talking about a new agreement, but I have no confidence that they will live up to this new agreement if they enter into it, any more than they have the whole string of agreements that they have violated, and it seems to me that what the free governments of the world should do is to insist that they at least live up to some of the agreements they have already made. For instance, the 10 resolutions passed on the Hungary situation have not been abided by, by either the Soviet Union or by the captive government of Kadar in Hungary and apparently, now the Soviet Union are using the smokescreen of some interest in disarmament in order to make the world forget about the atrocities in Hungary.

Mr. LAWRENCE. You brought up this Hungarian revolution and I was interested in Khrushchev's assertion—that is all it was, it was hardly a statement of the fact, but his assertion—that the Russians would be willing to withdraw their troops from the captive—from the countries of Eastern Europe, the satellites—captive countries, if we would withdraw our troops from Europe and he expressed the belief that even if Soviet troops left, that these countries would still remain under the Soviet type of government. You agree with this?

Senator KNOWLAND. I do not agee with Mr. Khrushchev's statement. I do not believe that the Kadar government of Hungary would last a day or week if the Soviet troops were withdrawn.

I do not believe that we should try to get a settlement of the withdrawal from all of Europe or perhaps from all of Eastern Europe at one time. I think a good test of the good faith of Mr. Khrushchev and if he was speaking for the Soviet Government, would be to say, "All right, let's take a test. Hungary is the place. This is the time. The United Nations has passed 10 resolutions. Now comply with those 10 resolutions. Withdraw your forces, let there be free elections. You said that communism is a great success. You had an opportunity to impose communism in Hungary for over 10 years. Now let the world see whether the people in free elections would vote for communism or would not."

It seems to me that we ought to put Mr. Khrushchev on the spot; focus world attention on that issue. He has opened it up for us, and I don't think we ought to let him build a smokescreen now by talking about other agreements when here is a specific case where they can demonstrate whether the people of Hungary really want communism.

Mr. LAWRENCE. In your view, would there be a quid pro quo for this? I mean would we, in return for their withdrawing from Hungary, is there anything that we would do or should do?

Senator KNOWLAND. Personally, I would be willing to agree, provided it met the approval of our allies, to say you have talked about a Baltic neutrality situation. If Norway is willing to work with us on this situation, that Norway would join the neutral bloc of the Baltic states in exchange for your pulling out of Hungary and giving the people of Hungary a chance to determine by free elections whether they want communism. Now here would be a test. It would be a limited test. It would be a quid pro quo and would give a chance to see whether Mr. Khrushchev's appearance was only propaganda which I think it was, or whether he was speaking in good faith for his Government and the world would understand.

Mr. CRONKITE. Senator KNOWLAND, is anything being done to put that suggestion of yours into effect?

Senator KNOWLAND. I have written a letter to the Secretary of State suggesting that that be done.

Mr. SHEPLEY. Senator, would you add that, for the purposes of the test, any other countries, say Poland, for example?

Senator KNOWLAND. I don't think that you can solve all these problems at once. Personally, I think we should always seek to get a withdrawal ultimately of the Soviet forces from Poland, Rumania and Bulgaria, and the other captive nations, but we are not going to do that all at one time, and here is a chance to test out Mr. Khrushchev's alleged offer, and his statement that communism could exist if Soviet troops were withdrawn. I think we could, if he doesn't want to take Hungary as an example, we could offer him the alternative—let him withdraw from Latvia, Lithuania, and Estonia, to live up to the agreements that the Soviet Union signed in 1939. Let them become a part of this so-called Baltic neutral bloc in exchange for Norway becoming a member of the so-called Baltic neutral bloc.

Mr. SHEPLEY. Your proposal of Norway as a quid pro quo for Hungary is very interesting, and I was wondering if you had thought of a quid pro quo later for Poland?

Senator KNOWLAND. No; but if you were taking country by country, if he was willing to test whether the people of these captive nations really liked communism and felt it was a paradise as he visions it, why, then, maybe we could try and say that we would be willing to withdraw our forces from, let us say, Greece, so that we would try country by country and let's see how it works out.

Mr. BANCROFT. Senator KNOWLAND, have you had any reply from this letter?

Senator KNOWLAND. No; I have not because the letter was just written on Saturday.

Mr. BANCROFT. When did you write the letter?

Senator KNOWLAND. When did you write the letter?

Senator KNOWLAND. Just yesterday.

Mr. CRONKITE. Senator, a moment ago, in discussing disarmament you seemed a little

less optimistic about the sincerity of the Russians in this particular case than do Secretary of State Dulles and Harold Stassen. Do you feel that they are too optimistic?

Senator KNOWLAND. They are more optimistic than I am. I certainly wish them every luck. There is no man in the world today and the people of Russia must understand this, there is no man in the world today more devoted to peace than is President Eisenhower. He will take any honorable steps to try and gain a real peace in the world and try and gain a limitation of armaments, but I think the Government and the people of the United States have a right, in view of the unbroken record of violations of their prior agreements, to insist, as Senator JOHNSON said on yesterday, that there be some ironclad guaranties, some brassbound guaranties, that this is not just going to be some words without any deeds following it up, and I just don't believe that the Soviet Union has any intention of agreeing to an effective system of inspection, and without it, I think we would jeopardize the security of this Nation and perhaps the freedom of the entire free world if we merely took their word without insisting on effective guaranties.

Mr. SHEPLEY. On that point, Senator, what is your understanding of the status of the disarmament talks between Mr. Stassen and the Russian delegate in London?

Senator KNOWLAND. So far as I know there have been preliminary conversations with our allies first, so that they would understand some of the proposals that the Government of the United States has in mind. I have no doubt there have been preliminary discussions with Soviet representatives. I am not in a position to go into any details of it nor do I have any up-to-the-minute latest information.

Mr. SHEPLEY. Is it your understanding that these safeguards and controls of which you have just spoken are, indeed, part and parcel of the new American proposals?

Senator KNOWLAND. I believe that to be the case. I believe that that has been the position of our Government in the past. I have no reason to believe they would change it. I think it would be a very serious mistake to merely take the Soviet word without effective guaranties, and I don't believe that either Democrats or Republicans in or out of the Congress would support a proposal that merely gave us another scrap of paper with the signature of the Soviet Union without some effective guaranties on it.

Mr. SHEPLEY. Well, sir, both the President and Mr. Khrushchev have mentioned a general agreement with the proposition of going on with some initial step, some first thing first without awaiting an entire disarmament package. Do you have any idea what that first initial step might be?

Senator KNOWLAND. No; and I have no particular objection to trying it piecemeal, because we are not going to solve all the problems of the world at one sitting, so to speak, but I do believe that we have a right to expect a fair quid pro quo. Secondly, I think we have a right, based on the undisputed record of Soviet violations of their treaty obligations in the past, to make sure that whatever is agreed to, can be effectively inspected.

Mr. CRONKITE. Senator, if I may change the subject at the moment with the agreement of you gentlemen, most of our competitors for world markets are about to resume trade with Red China. You have been an outstanding spokesman for Nationalist China and for Formosa, for the policies of alliance with them in the past. Do you think that the time might be ripe now for us to review our policies toward Red China trade?

Senator KNOWLAND. I think on all foreign policy, no one can freeze their thinking and you have to, obviously, deal with the facts as they exist and as they change from time to time. Personally, I think it is a mistake under existing world conditions to open up the trade of strategic materials with Communist China.

Now, there is argument sometime as to what strategic materials are, but in the recent British announcement it indicated that locomotives, trucks, perhaps entire rubber industrial plants would be shipped. To me they are strategic and to the British Board of Trade they may not be. I, sometime ago, during the Korean war, I told a British friend of mine that I would be perfectly willing to accept the proscribed list of the British orders-in-council of World Wars I and II if there was any dispute as to what would help an unfriendly country.

Now, we have to keep in mind that Communist China only has a truce in Korea. There is not a peace treaty yet in regard to that country. They have violated the armistice terms in Korea; they have violated the armistice terms in southeast Asia; they are still holding American civilians in Communist prisons in violation of their pledged word at Geneva just a year and a half or 2 years ago; they are still making threats to take over Formosa by force of arms. In these conditions, to build up a potential aggressor in that area of the world, it seems to me to be as imprudent as the businessmen who were willing, for dollars, to ship scrap metal and oil to the war lords of Japan in 1939, in 1940, and early 1941, that came back at us, at our battle fleet at Pearl Harbor on the morning of December 7.

I hope those that are pursuing this course don't find that the end result is the same.

Mr. CRONKITE. According to Mr. Lawrence's esteemed publication, in a report today some of your own constituents are urging that course, importers and exporters in the San Francisco area.

Senator KNOWLAND. Yes; some of them dealt in sending scrap iron and oil to the Japanese war lords, too, but I think they have lived to regret it and I think the country learned and lived to understand that that was a shortsighted policy. For temporary profit, this Nation was endangered and a potential enemy was built up so he could make war, drive us out of most of the Pacific, overrun all of China and get down and knock on the doors of Australia.

Mr. LAWRENCE. Senator, I wonder if I could ask you a few questions of a domestic character. You announced some time ago that you would not be a candidate for reelection in 1958.

Senator KNOWLAND. Yes; that announcement still stands and I have no intention of changing it.

Mr. LAWRENCE. Well, I was about to say that some of my friends in California tell me that your friends, quite a few of them, are urging you to change it.

Senator KNOWLAND. There has been some suggestion, but I have written to them and told them that my decision is going to remain what it was.

Mr. LAWRENCE. Well, what will be your future political role, if any? Do you have any plan to run for Governor?

Senator KNOWLAND. I have no plans at the present time. As I announced before, when this session is over I intend to return to California, to get over the State from the Oregon line to the Mexican border, a distance of about 1,000 miles to consult with the people of California and following that, I will make a decision.

Mr. LAWRENCE. But you would be—what is the purpose of this survey trip? Get reacquainted with your State?

Senator KNOWLAND. No, I generally get out there after every session to acquaint them with some of the problems here in Washington. It will be partiallly that and partially to have a chance to talk with the people of California regarding 1958.

Mr. LAWRENCE. You are aware, of course, that a great many people are talking about you running for governor?

Senator KNOWLAND. I am aware that California will elect a governor and a United States Senator in 1958, and I think they will elect a Republican governor and a Republican Senator.

Mr. SHEPLEY. Senator, may I pursue that question just a little bit? People also say that the reason you are interested in the governorship is because it would considerably enhance your chances for the Republican nomination for the Presidency. Can you tell us now whether you are interested in the Republican nomination for the Presidency?

Senator KNOWLAND. 1960 is a long ways off and the bridge of 1958 in any event would have to be crossed first. I believe the record of this administration is such that the American people will elect a Republican administration in 1960.

Mr. SHEPLEY. You are not saying that you are not a candidate for the Presidency?

Senator KNOWLAND. No, I am not at this point making any statement in regard to 1960. I have no crystal ball that looks that far in advance.

Mr. CRONKITE. Senator, I don't think you need a crystal ball for this one. In March 1956, you said—that was, of course, during the primary periods before the last election—you said that the party must be unified and greater representation must be given in the campaign, if possible, and afterward certainly, to the Taft wing of the Republican Party. You feel that those conditions have been met?

Senator KNOWLAND. Well, I had reference particularly to the campaign of 1956 at the time. I think that throughout the country, members of all groups in the Republican Party were taken into the campaign organization. I think in the various State organizations they did not discriminate between one Republican and another. Personally, I don't believe in hyphenated Republicanism. I have said before I am a Republican—period. I think the label "Republican" is sufficiently broad that men may have honest differences of opinion and still consider themselves as Republicans without having to hyphenate the term.

Mr. CRONKITE. You mean modern Republicanism?

Senator KNOWLAND. Well, any kind of prefix to a Republican, I don't think is necessary. I think in and of itself it tends to be divisive and anything which divides our party I think is a mistake.

Mr. CRONKITE. You think that the present leadership of the party, under Chairman Meade Alcorn, is giving adequate representation to the so-called Taft wing of the party?

Senator KNOWLAND. I believe so. I have great confidence in Mr. Alcorn. I think he did an outstanding job as chairman of the arrangements committee. Having served on the national committee and on the arrangements committee when I was on the national committee, I think I know something about the problems. His going out to the grassroots has been highly helpful. It has given people a chance to express themselves, and I think Mr. Alcorn is to be commended in the job he is trying to do.

Mr. LAWRENCE. Senator, let's go back if we may to this business of differences of opinion which you mentioned just a moment ago. Now the President made a speech on Friday, this National Republican Conference, in which he said, among other things, that it was the duty of Republican leaders in the Congress and in the party to see to it that the platform pledges of 1956 were enacted into law and that men should not let preference for detail or differences about detail between them and the administration keep them from carrying out these platform

pledges. Now you have often disagreed with the President on vital and important matters.

Senator KNOWLAND. I know of no basic platform pledges upon which I differ materially from the President. As a matter of fact, according to Congressional Quarterly, I stand among the six highest Republicans, percentagewise, in support of the President's program, both domestic and foreign, with the percentage, I think, of 89 percent. There are three others who have that percentage. There are 2 that have 100 percent. But out of that 6, we are the top 6 out of 47. I think that is a pretty good batting average.

Mr. LAWRENCE. Well, I did not really mean to put that into the personal sense of a quarrel between you and the President, but I was getting at this business of getting the platform enacted into law, and the duty of the leadership to see that it is done. What are the chances of the school-aid program going through this session, the way the President wants it?

Senator KNOWLAND. There are lots of problems connected with the school-aid legislation. In the first place, Democratic leadership has indicated that that will not be taken up until after the civil-rights legislation is disposed of; depending on what happens on the civil-rights legislation, may depend on whether the so-called Powell amendment is offered to the aid-to-education bill. Some people believe that if that was added in the House or in the Senate, that might kill the legislation. There are various alternatives that have been suggested. Some favor, as you know, grants just to the needy States; some want to expand it to grants to States whether they are needy or not, which is far beyond the purview of the President's original recommendation; some believe that the needy States could be amply taken care of without grants, but with a kind of educational RFC funds where needy school districts had difficulty in floating their bonds or floating them at a reasonable interest rate might borrow from the Federal Government to repay the entire amount and have no obligations otherwise to them, at the same interest rate that the Federal Government is able to borrow funds, and this would not get into the difficulties that might follow grants-in-aid where the Federal Government ultimately would want controls.

Mr. CRONKITE. Senator, getting back to more specific political-type questions, if we may. How widespread do you believe the disenchantment is among the conservative Republicans over the Eisenhower budget?

Senator KNOWLAND. I think there has been concern throughout the country. I think the grassroots conferences to which we referred that Mr. Alcorn has had, has indicated that there is a feeling that every effort should be made by the Congress without hurt to our national defense, to reduce the $71.8 billion budget, and personally, I believe the budget should be reduced. I believe the Congress will reduce it by at least $3 billion. I favor them doing that and I think that will be done at this session of Congress, and can be done without harm to our national defense.

Mr. BANCROFT. Senator KNOWLAND, on that $3 billion, do you count in that, then $2½ billion out of defense?

Senator KNOWLAND. No; I don't believe the ultimate defense budget will have as deep a cut as the House proposed.

Mr. BANCROFT. But you are now supporting virtually all of the foreign aid program, are you not?

Senator KNOWLAND. Yes; I voted to report the foreign aid authorization bill from the Foreign Relations Committee on Friday, and I believe that the bill that has come out has been substantially a good bill. It did cut about $225 million off the original request which I think is modest and I think is supportable. The matter, of course, still goes to the House and then to conference and then the appropriation bills will have to follow.

Mr. SHEPLEY. Senator KNOWLAND, before we finish I would like to return to some of the questions raised by Communist boss Khrushchev last week. One of his major points was that the Soviet Union, the first Communist experiment on the earth, in the period of some 40 years, has been catching up with the world's greatest productive nation, the United States. He made the point that they have been catching up in production of milk and butter which he said they would reach our level, per capita, next year; meat in 1960. Soviet statistics are dubious at best, but we do know that they have created atomic weapons and hydrogen weapons and that they have jet airplanes that can fly across the ocean and reach our own country. I would like to know whether you have given any thought to the general proposition of how we stand in the competition with the Soviet Union and whether we are doing enough to keep our own country ahead of them in the important regards.

Senator KNOWLAND. I think we are ahead of them. I think the free enterprise system and free governments will keep ahead of them and that is one reason why I have opposed giving American financial aid to the nations behind the Iron Curtain. Khrushchev says we are in a great struggle between Marxian socialism and the free world. Now I think we can win that struggle, but I don't think we can win it if we tax the American people to support Communist economic and political systems and that is why I am opposed to taking the taxpayers' money to bolster up Communist systems in nations which are allied under the Warsaw pact where they are under occupation of Soviet forces. We know under the Marshall plan and under the subsequent mutual aid, why have we put these funds in? In our mutual interest. It has been to strengthen the economic systems of free nations of the world. Why? Because that strengthens their political systems. That strengthens their defensive capabilities and I have been for it.

Now, if you take the opposite side of that coin, if we make the people living under communism happy, if we make communism a success, we in turn, strengthen the war-making potential of Communist nations and I am opposed to doing that with the funds of the American people.

Mr. SHEPLEY. Are you satisfied that we are doing enough on our own in the way of educating scientists and in the way of producing for the common enjoyment of our own people, and for the rest of the free world?

Senator KNOWLAND. I think we are doing a great deal. I thing we can do more because I never want to see us get into a secondary position vis-a-vis the Soviet Union or any of the Communist states.

Mr. LAWRENCE. Senator, one quick question. As a Member of Congress, will you try to do anything to stop this loan to Poland which the administration is now negotiating?

Senator KNOWLAND. We can't stop the one that has already been given, but on the Appropriations Committee I think a limitation in the appropriation bill would be effective, and I don't believe as long as they are under Soviet occupation, that American taxpayers should be asked to support Communist political and economic systems.

Mr. BANCROFT. I am afraid that is all the time we have, and Senator KNOWLAND, many thanks for coming here today to Face the Nation, and our thanks also to today's panel of newsmen: William H. Lawrence of the New York Times, Walter Cronkite of CBS News, and James Shepley of Time and Life. This is Griffing Bancroft substituting for Stuart Novins. We invite you to join us again next week for another edition of Face the Nation. Our program today originated in Washington.

Tribute to the Late Senator McCarthy

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio broadcast by me on May 19, 1957, in honor of the late Senator McCarthy.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JENNER

My friends, I should like to talk to you about the Senate of the United States.

On the morning of May 6, the rostrum in the Senate Chamber was banked with flowers, white and a glowing red. The casket in front of the rostrum was covered with the American flag, and a Marine guard stood at attention. The chaplain of the Senate, the Reverend Frederick Brown Harris, of the Methodist faith, spoke of Senator Joe McCarthy's great courage in exposing "cunning foes who plot the betrayal of our freedom." The Reverend William J. Ewalt, who married Senator McCarthy just 4 years ago, read the Catholic service of sorrow for the dead, and hope for their triumphant entry into their heavenly home.

I am not going to speak to you about Senator Joe McCarthy's great fight to uncover the secret enemies of our country, nor of the way his life was destroyed by the venomous, vengeful, unremitting attacks of his foes. You know the story.

I wish to speak today about the Senate.

There were 40 Republicans and 37 Democrats present. These men were not present, most of them, for any official act of mourning. They were present as human beings, sorrowing for the tragedy they had witnessed, and in which they had had a part.

All of the Democrats (except the newly elected Members) had voted for the censure resolution. The Democratic Speaker of the House, from Texas, and the Democratic majority leader, from Massachusetts, were also present to pay their respects.

Nearly half of the Republicans who attended had voted for the censure, but they too came as human beings, only too well aware how deep was the suffering now ended.

One Cabinet member, Secretary Summerfield, was also present.

I wish to say to you, my friends, that a terrible breach in the American civil order began to heal on that day. We had come nearer than any of us guessed, to a breakdown in the American genius for political self-control.

Only one who lived through it can imagine the fierce pressure that was brought to bear upon the Members of the Senate 3 years ago, to accept the Communist myth about Joe McCarthy. According to their character assassins, he was violating the traditions of American fair play by asking witnesses questions. He was "helping the Communists" because he did not falter in his efforts. He was accused of all kinds of personal indiscretions, some charges too odious to mention among gentlemen. All of these Communist charges were of course put forward by innocents and secret collaborators who did not bear the brand of their master.

Joe McCarthy has been completely vindicated of all the personal charges hurled against him, especially of the baseless slander that he had not paid the income taxes he owed. But my story today is of how the Senate is freeing itself of the poisonous in-

fluences that beclouded its judgment wherever disguised Communist influence was at work.

The attack on Joe McCarthy was managed at every step like a military campaign, except that the Communists use words, instead of bullets, because words are more deadly.

Fulton Lewis in his broadcast stated what I believe to be true, that most of the Republicans who voted against Senator McCarthy were sorry they had done it, but had been unable to resist the overwhelming pressure. It is important, to the American people, to find out who put that irresistible pressure on the Senate, and why.

The Communist attack on the Senator from Wisconsin was in part an attack on the Senator as an individual, because, like General Patton, he had dared go forward after each contest. He had come so close to the citadels of their power that he must be destroyed.

But the attack on Senator McCarthy was also an attack on the Senate. The Communists knew the friends of Senator McCarthy were loyal. The anti-Communists knew how great was the triumph won by the enemy in the censure vote. The Communists believed they could stir up, in the American Senate, a bitter factional battle, like that which has turned many a parliament in Europe into a milling crowd impotent to serve their country.

During the debate on the censure resolution, I pointed out again and again that the real attack was against the Senate of the United States. I pointed out that the Bolsheviks had a well-established policy of reducing parliamentary processes to impotence. I said the attack was managed by a conspiratorial general staff, and no one man could fight a conspiracy. I pleaded with the other Senators to see the danger, and to join ranks in protecting our Nation.

It was too early, the pressure was too great, for most Members to see.

The censure vote split the Republicans in Congress down the middle. It placed the Democrats as a body in opposition to the Republicans. What a setting for the favorite Communist device of pouring gasoline on the little fires of controversy.

Americans can hardly imagine how fortunate a thing it was for our country that that factional split was avoided. We have to look at the parliaments of Europe from pre-Fascist Italy to present-day France, to know how great was our danger.

Joe McCarthy made no effort to rouse the passions of his followers and make his humiliation into a bitter national battle. No man in American political life ever had so great an opportunity for demagoguery, or refused so gallantly to take advantage of it.

But the split in the Senate was avoided also because of some deep instinct within the membership, to keep our political stability at all costs. The American people are the heirs of 700 years of self-government, that is, of political responsibility. That deep-ingrained sense of political responsibility held us firm while the Communists used their most brilliant leaders, their cleverest strategems, and their most helpful stooges to make the Senate keel over.

Joe McCarthy was a victim of that silent struggle from 1954 to 1957, because he did not realize how many people were coming to see his charges were true. The struggle was with forces too vast and too hidden to be managed normally.

This struggle, within the ranks of the Senate, between the cleverest attempts at subversion of its Members and the deepest national instincts of political stability, was too new in America, too close to political life or death, to be expressed in words. Every nation of Europe, subjected to such pressure, has caved in. Our inner struggle had the dimensions of a fight for preservations of the last stronghold of representative government in the world.

I hope we have won through. Only a few weeks ago, the same forces which like a mighty bellows, turned the disagreements over Joe McCarthy into a consuming flame of hate throughout the country, tried to repeat every one of their murderous strategems to make the Norman case into a similar attack, to split the Senate into factions, and make it impotent to protect our Nation.

This time the Senate was ready. All the blasts the Communists could turn against us, all the lies and smears, were ready to be hurled, if the Senate leaders had shown the slightest indecision. The Senate stood firm.

Our country is still in danger. The American people look to the Members of their Congress to be the watchmen on the city wall, to warn them of attack. I believe the Members of the Senate can now recognize the enemy with a clarity they did not have 3 years ago. I believe that never again will disguised Communists be able to rout the Congress when it must stand fast.

I do not know anything which would bring more happiness to Joe McCarthy than to know his sacrifice has not been in vain, that the watchmen on the wall will stand guard, however dark the night, or however insidious the enemy.

The day when the Senate met to pay the last honors to Senator McCarthy may be the day when our country began its slow and painful upward climb out of the poisonous morass of Communist seduction, to the light of American honor, and dignity, and loyalty of true Americans for one another.

More Dams Needed for Flood Control

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. JOHNSON of Texas. Mr. President, the great need for more dams for flood control and water conservation is widely understood in my State of Texas, where 7 years of drought have been followed by devastating floods.

Two Texas newspapers, one a great daily and the other an outstanding weekly, have recently offered thoughtful comment regarding this need for more dams.

I ask unanimous consent that the two editorials, published in the Dallas News and the Fredericksburg Standard, respectively, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fredericksburg Standard of May 29, 1957]

PEDERNALES FLOOD CONTROL STUDY

Senator LYNDON B. JOHNSON and Representative HOMER THORNBERRY have announced they will push for a $35,000 appropriation for flood-control study of the Pedernales River.

Under terms of the 1937 Flood Control Act to make studies of the Colorado and its tributaries, the Army Corps of Engineers has authority to make such a study of the Pedernales, agreeing it could be made for $35,000.

The study is one that is definitely needed on the part the Pedernales played in the recent filling to the brim of the lakes on the Colorado, and the damages wrought in the lower reaches of the stream by the high water this year, as well as in 1952.

The dams on the Colorado River have proven their worth as a flood-control measure, but to increase their effectiveness it would seem that a similar project should be undertaken on the tributaries of this great river.

Texas bumper rains, coming on the heels of the worst drought in the memory of many, has illustrated the great value of flood-control projects.

We of Gillespie need look no further than McCullough County where a series of dams have harnessed dry creeks that become turbulent and destructive without the benefit of retention structures in years gone by.

Many other sections of the State where work of this nature has been underway report similar results.

Gillespie County, wisely, has a functioning Water Control and Improvement District, a local political subdivision that could follow-up and cooperate with any agencies planning flood-control work on the Pedernales.

There can be no question but that the greatest challenge facing the people of our county and much of Texas today is water control and improvement, not only to control the floodwaters that are rolling off of our hills today, but to provide the water when there is no such rainfall.

[From the Dallas Morning News of June 6, 1957]

MORE DAMS NEEDED FOR FLOOD CONTROL

Recent floods in Texas, Oklahoma, and Louisiana would have been much worse except for the dams built in recent decades to hold back the water. If the Government had built the additional dams authorized by Congress but not yet financed, the damage would have been considerably less.

Senator LYNDON JOHNSON and others are right in deploring the tendency in some quarters of tagging the Federal program of water control as political pork. The control of navigable streams is vested in the Federal Government, and dams are built only on recommendation of the Army's Corps of Engineers. In most of them, flood control is combined with water conservation.

Recent damage from inundations has shown that even a 7-year drought doesn't end the need for protection against floods. In an area of extremes in weather, such as the Gulf Southwest, there is a continuing need to prepare for what seems most unexpected.

Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I wrote on June 6, 1957, to the Committee on Foreign Trade Education, Inc. This organization has recently published a research study entitled "The Returns Are In," which provides new evidence of the great importance of our national foreign-trade policy to the success of United States foreign policy. In my letter I have stressed the importance of congressional approval of the Organ-

ization for Trade Cooperation this year. Failure to authorize membership in the OTC would seriously jeopardize the position of the United States as world leader.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I am very impressed with the committee's research study, "The Returns Are In" which I have just finished reading. You provide new evidence of the vital importance of our national foreign trade policy to the success of United States foreign policy.

And, as you point out, whether the United States will assume membership in the proposed Organization for Trade Cooperation is, right now, solid proof that our country seeks to maintain the economic leadership of the free world. I note that your research study brings this out clearly, as you report that more than 68 percent of the leading foreign newspapers surveyed agree that congressional failure to authorize membership in OTC would seriously compromise United States world leadership.

The overriding importance of positive action on OTC is also spelled out by the fact that 89 percent of the Asian editors in your sample indicate that the Communists have already used our inaction on OTC for a "special line of propaganda" against the United States. I can corroborate this from my own experience. In my trip through the Asian countries early last winter, I again and again found evidence that where our foreign economic policy has an isolationist tinge, the Communists have picked it up as "proof of America's duplicity and inability to do the job."

I know, therefore, by firsthand experience, that trade policy is an all-important factor in the success of our foreign policy. And I am sure that congressional approval of OTC this year is the next indispensable step in making clear to the world that we are determined to maintain our leadership for freedom.

OTC has great importance to the prosperity of our economy as well. By giving the General Agreement on Tariffs and Trade a continuing, day-by-day administrative arm, the agreement will become more effective and do more to promote the interests of our American exports. OTC is, therefore, as Secretary of Commerce Weeks has told the Congress, "absolutely essential if United States agriculture, labor and industry are to receive maximum benefits from GATT."

It is important to remember that exports are vitally important to the growth of our prosperity. In 1957 exports should reach the neighborhood of $20 billion. These exports mean prosperity and jobs to the people in my own State. And similarly exports promote the livelihood of people throughout our Nation—roughly 4,500,000 families now being directly dependent on export trade for their incomes.

By backing down on OTC, GATT could suffer seriously, opening the door to the European neutralists and perverting the new common market and discriminating against United States exports.

Down to essentials, then, the question is whether we will have OTC or whether we will revert to obsolescent protection theories of the 1920's.

You can, of course, be sure that I will be in the forefront of those fighting in behalf of the President's recommendation of OTC.

But, to be realistic, I must say that winning the battle on OTC during this session—during the next 8 weeks—is only possible if the Congress feels that the people wish us to keep our world trade initiative.

You have endeavored to demonstrate that everyday people, having no self-serving interest in trade, can be mobilized to build a stronger trade policy—to make our foreign policy more effective and our prosperity more solidly based. Your Committee on Foreign Trade Education, Inc., has grown in 3 years from a handful in New York to an organization that maintains chapters and affiliates in many of our cities and that has a bipartisan volunteer membership in 36 of our States. You are called now to the field of national responsibility in the grassroots fight for winning United States adherence to OTC.

I am, with all best wishes for your success and assuring you of my cooperation in your objective.

Sincerely,

JACOB K. JAVITS,
United States Senate.

Baccalaureate Address Delivered by President A. Whitney Griswold, of Yale

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very remarkable baccalaureate address delivered by President A. Whitney Griswold on Sunday, June 9, at the Yale University commencement exercises.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled * * * with the yoke of bondage." (Galatians 5: 1.)

Every year, as we keep this commencement tradition, we find ourselves in a mood of questioning and stocktaking. This is as true of us who have been responsible for your formal education during your 4 years at Yale as it is of you yourselves. Have those years been worth while? Will they bring us both, students and teachers, mutual satisfaction? Our guiding principle has been the preparation of freemen for life in a free society. Few of us, I venture, would be disposed to doubt the theoretical validity of this principle. Yet the times give us all reason for concern over its practical application.

The principle assumes the existence not only of a particular type of student but also of a particular set of conditions in which he will live and work. We were born free men. But when we speak of a free society, do we not beg the question? By what evidence do we judge the society into which you now graduate to be free? I speak of freedom here not in the terms of Caliban or the noble savage, nor yet the rugged individualist of American fame, but as a modus vivendi that permits us to follow the devices and desires of our own hearts within Christian limits, that gives scope for the decent impulses of individuals and makes it possible for free men to function as such. If these conditions do not exist, or if their existence is doomed, of what avail our principle of education?

The outlook is not encouraging. Quite apart from the clinical study of radioactive fallout now in progress, which reduces us all to motes in the scientists' beam, and the cold war that generates such lethal heat, this is the age of organization. The cold war, with its emphasis upon national security; national security with its emphasis upon nuclear weapons; nuclear weapons with their emphasis upon methods of production that isolate and regiment the producers like the votaries of some secret religious cult—all this, and the fear of Armageddon that inspires it, impels us to organize to a degree heretofore undreamed of in this land of the free. But these lurid, latter-day phenomena are only the latest—one dare not say the last—projection of a trend that began more than a hundred years ago. This was the reorganization of our economic life caused by the industrial revolution. The strategic organization now enjoined upon the country by the cold war merely caps the climax in the history of the great corporations, labor unions, agricultural producers' and marketers' associations, and the myriad groups of similar nature, most of them with governmental shadows or counterparts, that characterize our economic society. By economic society I mean our human society in its working hours. Nor has our passion for organization spent itself in the economic sphere. Every thought and action, indeed every feeling of which we are capable as human beings has found an organization of some sort purporting to strengthen and improve it by the process of division.

The prospect is enough to give pause to any man educated in the tradition of individual freedom. The whole purpose of such education is to awaken and develop the individual to the full limit of his intellectual and moral powers so that he may exercise these to his own greater happiness and the greater benefit of his fellow men. The major premise of this educational philosophy, as of the Christian religion and the democratic political philosophy of which it is a part, is that wisdom and virtue must be cultivated in individuals before they can be communicated to society; that man's progress as a race is governed by his progress as an individual. Centuries of experience confirm the rightness of this premise. The very origins of the industrial revolution, in individual scientific discoveries, attest to it, as do all the great works of art, music, literature, philosophy, and religion, the hallmarks of what we please to call western civilization. Could Hamlet have been written by a committee, or the Mona Lisa painted by a club? Could the New Testament have been composed as a conference report? Creative ideas do not spring from groups. They spring from individuals. The divine spark leaps from the finger of God to the finger of Adam, whether it takes ultimate shape in a law of physics or a law of the land, a poem or a policy, a sonata or a mechanical computer. Groups may exploit, change, in some cases even improve upon this creative essence; without it they would have nothing to do.

But if the individual's exercise of his creative powers is to be systematically curtailed we may ask ourselves, Why bother to cultivate them in the first place? If his success and happiness is to depend upon organizational procedures and techniques, why not substitute these for the contemplation of the good, the beautiful, and the true? This is a conclusion to which numbers of educational institutions appear to have come and toward which the tide sets strongly throughout our schools and colleges. Shall we float with it or resist it? I hope we shall resist it. I hope you will resist it. And I shall endeavor to give you a few solid reasons for doing so in addition to my hopes.

First, let me assure you that it can be resisted. Yale proves that it can by its educational philosophy as do other institutions that share that philosophy. The graduates of Yale prove it by their extraordinary competence and versatility in the very circumstances that incline others in the opposite educational direction. Not least conspicuous in this respect is the record of those graduates in the Armed Forces and their prominence in the arts and in public affairs.

This is not the first time in our history that forms of organization have given pause

to the champions of individual freedom, nor is it likely to be the last. Surely the creation of a National Government presented our ancestors with no less formidable a problem of organization than the one with which we have to contend today. They were passionately dedicated to individual liberty. At the same time they realized that so vast and diversified a country could not hope to govern itself by a congeries of Greek city-states or New England town meetings, to say nothing of the romantic notions of Rousseau. Their major premise was the freedom of the individual. Their minor premise was the need for organization. Their conclusion was the Constitution and the Bill of Rights. They accepted the need of organization and devised a form appropriate to the need. They then infused that form with respect and protection for individual freedom and initiative.

This is exactly what we must do in our time and circumstances, and the fact that it could have been done so effectively nearly two centuries ago should give us courage to believe we can do it. We can do it, as we can do most things, once we clearly define the problem and address ourselves to its solution with whole minds and hearts. We have heard much talk of political subversion of our form of government of recent date. I cannot help but feel that it stands in greater danger of cultural submersion—that the tide of organization in our private life may engulf the last surviving instinct to preserve the safeguards of individual freedom in our public life. How can we make all this organization serve us instead of our serving it? That is our problem.

We might as well accept it as a fact that our present mode of living, with its intricate technical aspects, requires a correspondingly intricate nexus of organization. It would be foolish to talk of turning this clock back or of slowing its pendulum to the tempo of Walden Pond. It is equally foolish to consider this organization exempt from the same fundamental principles of individual freedom as are written into the Constitution. Corporations and labor unions have conferred great benefits upon their employees and members as well as upon the general public. But if power becomes too concentrated in a corporation or a union and its members are coerced into submission; or if either assumes and selfishly exploits a monopolistic position regardless of the public interest, the public safeguards of individual freedom are weakened by analogy, often by direct influence. Tyranny is tyranny, no matter who practices it; corruption is corruption. If citizens get used to these things and condone them in their private affairs they school themselves to accept and condone them in their public affairs.

But it is not so much these more flagrant (and less frequent) transgressions as it is the everyday organizational way of life that threatens individual freedom. For the obvious transgressions there are obvious remedies at law. But what shall we say about the endless, sterile, stultifying conferences held in substitution, or in the desperate hope of substitution, for individual inventiveness; the public opinion polls whose vogue threatens even our moral and esthetic values with the pernicious doctrine that the customer is always right; the unctuous public relations counsels that rob us of both our courage and our convictions? This continuous, daily deferral of opinion and judgment to someone else becomes a habit. The undeveloped negative remains a negative. It conjures a nightmare picture of a whole nation of yes-men, of hitchhikers, eavesdroppers, and Peeping Toms, tiptoeing backward offstage with their fingers to their lips—this, the nation whose prophets once cried "Trust thyself."

We profess dismay at the number of our acquaintances swallowing tranquilizers and rushing off to psychiatrists to make up their minds for them. These are symptoms of a loss of self-respect by people who cannot respect what they do not know. They do not know themselves because they spend so much of their time listening to somebody else. "I desire so to conduct the affairs of this administration," said Lincoln, "that if at the end, when I come to lay down the reins of power, I have lost every other friend on earth, I shall at least have one friend left, and that friend shall be deep down inside of me." It is because so many of us have not discovered this friend that we go looking for others and turn to sedatives or psychiatry for consolation when we fail to find them. This is part of the price excessive organization has exacted from us.

We can ill afford to pay it. A people that loses its self-respect is easily demoralized. Amongst such a people, everything is for sale including themselves. Art, science, politics all suffer from the basic lack of individual integrity. Here is reason enough for you gentlemen to keep the faith with your university and its philosophy of education. The welfare of your country depends upon it. Its cultural progress depends upon it. Its military security depends upon it, as tomorrow's technology is the fruit of today's scientific discovery. The creative power of the individual is more sorely needed today than ever before. This alone can save us from collective sterility. This alone can supply the great factory of America with designs worth producing.

Nor shall we recover our self-respect by chasing after it in crowds. Self-respect cannot be hunted. It cannot be purchased. It is never for sale. It cannot be fabricated out of public relations. It comes to us when we are alone, in quiet moments, in quiet places, when we suddenly realize that, knowing the good, we have done it; knowing the beautiful, we have served it; knowing the truth, we have spoken it.

Gentlemen of the graduating class, the society into which you now graduate is not as free as the one which produced the principles by which you have been educated. Bit by bit we have exchanged our freedom—voluntarily, for the most part, involuntarily to some extent—for security, for productive efficiency, for creature comforts. But far from discounting the value of those educational principles, this puts them at a premium. Again and again in all kinds of occupations individuals educated in accordance with those principles continue to prove their effectiveness in our society, even in the innermost sanctums and strongholds of organization. Civilization can lose just so much of its freedom without losing all of it. The presence of individuals educated in these principles, who cleave to them and live according to them, is sorely needed to prevent such a catastrophe, to hold the balance between freedom and organization, to insure the continuity of the creative process without which organization is futile.

My moral, then, is plain and my charge to you is simple: To do good you must first know good; to serve beauty you must first know beauty; to speak the truth you must first know the truth. You must know these things yourselves, be able to recognize them by yourselves, be able to describe, explain, and communicate them by yourselves, and wish to do so, when no one else is present to prompt you or bargain with you. This knowledge has been the purpose of your education. Hold true to that purpose. No price, no mess of pottage, can equal its value to your country and yourselves.

Status of Forces Treaties

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the status-of-forces treaties.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATUS-OF-FORCES TREATIES

(Statement by Senator WILLIAM E. JENNER)

The explosive issue of what legal jurisdiction our servicemen will be subjected to, if charged with crime in foreign countries, has now erupted into dangerous international crises, in Japan, Free China, and Korea.

This problem has been seething, below the surface, for several years. Just a year ago I appeared before the Senate Foreign Relations Committee to ask them to hold hearings on a resolution of mine, and a similar resolution by Senator McCarthy, on this issue.

My resolution called on the executive to invoke the clauses in the Status of Forces Treaty, which permitted our Government to revise article 7 of the treaty or to abrogate it in proper diplomatic form.

The case of Army Sp3c. William S. Girard is the most important indication of where we are going.

This American serviceman was engaged in practice firing, on the firing range. Japanese citizens had been warned to stay off the firing range because it was dangerous.

There was no personal quarrel between the American soldier and the Japanese citizen. He was involved in no rowdyism, criminal act, or personal hostility. He was engaged in duties connected with a clearly military action.

Under the treaty the American Government and the host government have concurrent jurisdiction over offenses arising in connection with military duties or military property, with primary jurisdiction resting with us. The recent argument that in the pauses to rest between firing rounds, Private Girard lost his role in a military operation, and was engaged in leisure-time activities is pure nonsense. To surrender jurisdiction over him is a pure political surrender. Someone was able to overrule the Secretary of Defense, who quite properly wished to give our fighting men full confidence that our Government stood with them.

Someone was willing to make an American soldier a pawn in moves on the international chessboard, however disastrously it would affect the morale of our fighting men.

The absurdity of this decision is highlighted by the State Department's equally absurd position, in reverse, in Free China. Here the soldier was clearly not engaged in military activities. We knew the Chinese Government had fought for a hundred years against arbitrary and unjust imposition of extraterritorial rights by foreign governments engaged only in trade. But we ignored the obligation to treat the Chinese as fairly as our other allies.

In a brief presented a year ago to the Senate Foreign Relations Committee, I summarized the judicial decisions dealing with this issue.

There is a long record of decisions going back to Chief Justice Marshall emphasizing the main point at issue—the troops of a friendly power visiting foreign countries, partake of the nature of the sovereignty, and are treated in law like a visiting sovereign. The same principle explains the legal immunity granted to diplomats by every law-abiding nation.

The enormity of the status-of-forces treaties is this. The State Department gave up the sovereign rights of this country, and the dignity of our soldiers as part of our national sovereignty, but they did not see any reason for giving up the immunity granted our diplomats.

Let me point out another aspect of this treaty which will rise to plague us someday. The Status of Forces treaties surrender American jurisdiction not only over our fighting men, but over their wives and children. They also surrender jurisdiction over what is lightly called civilian components of our Armed Forces. How many civilians are today subject to trial and imprisonment in a foreign country, perhaps for nothing more serious than reacting to Communist attempts to start street fighting? How many Americans might suddenly find themselves abroad and subject to a foreign court in the event of an emergency?

All Americans regret the deaths of any citizens of other countries as a result of any act of our fighting men. We know that large numbers of visiting troops always create problems. That is normal among all nationalities. We understand the desire of other nations to retain all the marks of full sovereignty. I am sure they will try to do their best to give our men a fair trial. But we cannot ask our young men to serve their country in foreign lands, and then take from them the protection of our Constitution.

It involves no diplomatic problem whatever for the State Department to open negotiations for a change in these treaties, to give American fighting men and their wives and children the protection of American laws. The procedure for reopening this question was put into the treaty as a safeguard for all nations. As I said a year ago, if Americans are willing to surrender their Constitution they certainly should not begin with our fighting men.

The United States Information Agency

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. SPARKMAN. Mr. President, recently I received from Buford Boone, publisher of the Tuscaloosa, Ala., News, a letter regarding foreign aid. He enclosed an editorial which had appeared on April 23 in the Tuscaloosa News.

What Mr. Boone has said to me in this letter and what he has said to his readers in the editorial is based upon what he has seen in the extensive travels he has made throughout some 35 countries of the world.

Both this letter and his editorial impressed me as being quite realistic. I commend them for the most careful reading.

Mr. President, I ask unanimous consent that the letter and editorial may be printed in the Appendix of the RECORD.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

THE TUSCALOOSA NEWS,
Tuscaloosa, Ala., April 27, 1957.

Senator JOHN SPARKMAN,
Senate Office Building,
Washington, D. C.

DEAR JOHN: I am concerned over the current inclination in Congress to make drastic cuts in all appropriations dealing with our assistance activities in other countries.

I think the money we spend overseas should be used well, but generally I believe it has been. I am perfectly aware of the fact that pressures on this issue come from those of us at home who pay the bills and that no such counterpressures can be or will be coming from overseas nations we are helping.

In such a situation, an unusual degree of perception and courage is required by our Senators and Representatives in Congress. I hope you and your colleagues will be most cautious in considering this important matter.

I have traveled a good bit in the last few years. I have visited United States representatives in approximately 35 foreign nations, and have listened to some extremely fine briefings in every one of these places, nearly always from personnel interested in their jobs and probably doing generally good ones.

I was in Iran in 1952. I left knowing that something drastic was going to happen there. It did, as we all know, but the Communists did not get control of this strategic country. I was back there last month and I was profoundly impressed by the improvements that have taken place in the last 5 years. I believe much of this progress is attributable to technical assistance and other help we have been able to give. No one knows whether the Communists would now be in control of Iran if we had not spent any money there, but I, for one, believe they would be.

As you know, the existence of the free world as we know it may actually be determined by what happens in some country like South Vietnam, Burma, or Pakistan, which I have also visited along with other press people who were really working to dig in and get as much information as possible. If we shortchange our servants who are working there, by failing to give them adequate financial support and ample help, we are only hurting ourselves.

Some of the illustrations that have been used as horrible examples of waste disgust me. These tales are laid before people who apply American standards and American conditions with the mistaken idea that such standards and conditions exist overseas. I have in mind particularly some of the recent criticism of USIA which in my judgment is doing generally a good job.

I am enclosing an editorial carried in this newspaper a day or two ago. The purpose of this letter is to ask you to do some real thinking on this matter and not be stampeded into taking action in a most important field of foreign service activity which could in the long run seriously jeopardize our national security.

I do have the impression from my travels that the USIA needs more authority, less supervision from Washington in terms of approving releases and other routine matters, and that greater weight should be given by nonprofessional supervisory personnel to the recommendations and viewpoints of professional personnel. In the use of these terms, I am referring to persons with extensive specific experience in newspapers and/or public relations work as contrasted with those who have no such background.

As you know, I do not write a lot of letters on such matters and this one comes to you with the hope that it will be helpful.

Sincerely,

BUFORD BOONE.

[From the Tuscaloosa News of April 23, 1957]

THE WORST KIND OF ECONOMY

President Eisenhower, we believe, has correctly summarized the unfortunate action of the House of Representatives in making a cut of 26 percent in appropriations for the United States Information Agency. He called it the worst kind of economy.

The Chief Executive's comment came after the House had approved a new budget for the USIA that was $37,900,000 less than the President had requested and $6,900,000 below appropriations for the current fiscal year. The reduced amount is to be used during the year beginning next July 1.

The issue, already carried to congressional leaders by Eisenhower, still is to come before the Senate, where we hope consideration will be given to the importance of the work involved and the amount required for an adequate job will be insisted upon.

In our judgment, it is penny wise and pound foolish for Members of Congress to run wild in slashing funds for overseas work of the United States just at a time when this Nation finds itself with its greatest responsibilities in history.

We have helped ease Britain and France out of the Near East, making for ourselves a complicated situation requiring constant attention and all the effort we can possibly make to sell the idea that the United States has no aggressive designs toward any people or toward anyone else's land.

In Asia, several young nations, pitifully weak, are struggling to keep the ship of state underway. We are properly committed to a policy of trying to help these new countries get on their feet and to establish stable governments operated by a free people. The Communists are waiting, meanwhile doing what they can to create confusion and to subvert. It is absolutely necessary for the information service of our government to have full backing and financing to disseminate correct information and interpretation of our aims and efforts.

If we relax our efforts—and we say the work of USIA is a most important part of what we are doing—we run the risk of contributing to a complete breakdown in the Near East which could result in a bitter outbreak of armed conflict and possibly the start of a world war. For our commitments are heavy. And it's even hard to say which side we'd support—since both Arabs and Israelis hold our promises—if shooting should start seriously.

In southeast Asia we have been making significant contributions to the struggles of nations like South Vietnam and Burma. In south Vietnam, with the local government enthusiastically doing all it can to fight communism, our information service has done such a fine job that the Communists to the north are mostly on the defensive with their propaganda.

Yet money spent for one information officer to serve in Saigon, the capital of south Vietman, has been highlighted as an example of waste in the hearings before Congress. The amount involved was big, by stateside standards. But what the Members of Congress and the people who cheer the criticism of such expenditures do not realize is that everything done in a difficult hardship post like that in Saigon is expensive.

But the least understood is the hardship feature. Men who go there to serve this Government put their health, and their families' health on the line. Did the congressional investigators learn, for example, that the last two Ambassadors to Saigon were taken out as stretcher cases after their health had failed due to the difficult conditions under which they had to live and work? And did they know that one of these men died not so long after returning to the United States?

In this part of the world malaria is an ever-present danger. Fevers of unknown origin cause debility. Intestinal upsets and disorders are chronic problems, with some

getting accustomed to bacteria, for which tolerances are not strong in the United States, quicker than others.

Yet, in Saigon a USIA officer, having done an outstanding job and being transferred to Washington as an advancement and a promotion, asked that his transfer be canceled. His only reason was that he believed so strongly in what he was doing, and he could see so clearly the success being made in blocking Communist encroachments, that he wanted to stick with the job under hazardous conditions.

Another USIA officer went to a post in the Orient in January. His wife became ill from a tropical virus shortly after they arrived. For 3 or 4 days it was feared that she would die. As of now, the infection has been arrested (still not stopped) and she is taking medication for intense pain. The illness has just about wiped out the family's savings.

Such stories are manifold. There was the recent case in Iran of two Americans (not in the information service, but in another branch of our own foreign assistance program) who were murdered by desert bandits.

It's easy to underestimate the gravity and the persistency of the cold war, for most of the front lines are a long way from Washington. But we are heavily committed. And undercutting of our own forces and our own people by refusing them proper financial support not only, as the President said, is "the worst kind of economy," but it also is dangerous in terms of our future security from further Communist encroachments.

Address by Hon. Clifford P. Case, of New Jersey, at Rollins College, Winter Park, Fla.

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. SMITH of New Jersey. Mr. President, on Friday, June 7, at the commencement exercises of Rollins College, Winter Park, Fla., my colleague, the distinguished junior Senator from New Jersey [Mr. CASE], received an honorary degree and delivered the address of the occasion. I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR CASE OF NEW JERSEY ON THE OCCASION OF RECEIPT OF AN HONORARY DEGREE OF DOCTOR OF LAWS AT THE ROLLINS COLLEGE COMMENCEMENT, WINTER PARK, FLA., JUNE 7, 1957

One of the great issues of our time is posed by the development of nuclear and thermonuclear weapons of truly awful capacity. We have created forces capable of destroying all living things. We cannot allow a situation to arise, or circumstances to develop, in which we are at the mercy of such forces instead of in command of them. We can, and we must, keep them under conscious control.

This means first of all, I believe, that we cannot afford to rely wholly, or almost wholly, on the threat of unlimited nuclear retaliation for the defense of ourselves or the free world. Either we keep ourselves prepared to fight little as well as big wars, and in various parts of the world, or we may face a choice between slow strangulation by gradual Communist encroachment and unleashing an allout thermonuclear catastrophe. And it is generally agreed that in such catastrophe the chances of our survival would be negligible.

In the second place, it confronts us with the question, no less difficult but equally of essential importance—Is there no way in which we can put an end to the sterile and sensely competition in weapons of total destruction?

Deep concern as to the possible hazards to our own and to future generations from radioactive fallout has been expressed by responsible scientists in the current hearings before the Joint Committee on Atomic Energy. They are not agreed as to the degree of danger, but to us as laymen the importance of their testimony is the added urgency it gives to efforts to limit nuclear competition.

There are other considerations which impel attention. There are now three nations which have demonstrated their capacity to produce thermonuclear weapons. Surely no one will welcome the entry of other nations into this field. Nuclear weapons in many hands could not help but create new tensions and dangers. But, in the absence of some limitation internationally agreed to, is it realistic to expect that other nations will not proceed with nuclear weapon development on their own?

Ignoring the recent series of Soviet tests, Communist propaganda has stepped up its efforts to excite fear and apprehension among the people of the world. We can recognize the propaganda for what it is. But this does not, cannot, justify failure on our part to search out every path that offers promise of lessening world tensions and lightening the dark cloud of potential catastrophe that now hangs over the world.

As the President put it at a press conference a few weeks ago:

"It seems to me that the more any intelligent man thinks about the possibilities of war today, the more he should understand you have got to work on this business of disarmament. * * * I think our first concern should be making certain we are not ourselves being recalcitrant, we are not being picayunish about the thing. We ought to have an open mind and make it possible for others, if they are reasonable, logical men, to meet us half way so we can make these agreements.

"Now, on the other hand, any nation that is facing a government which has a history of breaking treaties, and so on, that we have encountered in our dealings with the Soviets over these past years, we have to be especially careful of the inspection systems, systems in which we can have confidence. We must, at the same time, though, keep our minds open and keep exploring every field, every facet of this whole great field, to see if something can't be done. It just has to be done in the interest of the United States."

And that is what the United States is doing in the disarmament talks now going on in London.

The very fact that serious negotiations are taking place provides some ground for hope that the unhappy impasse in which we have been living for some years now may finally be broken.

Let me emphasize I am not suggesting we can or should expect full blown disarmament. Practical and political obstacles preclude any such possibility. Rather what we seek to achieve is a first step that would serve to impose some degree of control over armaments and that could provide a base for later steps. Thus the news reports indicate our representatives are exploring such possibilities as establishment of mutual aerial inspection zones and some measure of ground inspection, some limitation on the testing of at least the larger nuclear devices as well as of nuclear stockpiles through the diversion of future output of fissionable material to peaceful uses. In addition, there are suggestions looking toward reduction in conventional arms and forces.

It has been suggested that our policy up to now has been to consider no agreement which was not to our net security advantage. I doubt that this is in fact a true statement if by it is meant that we would considered no agreement unless we believed it would improve our position in relation to our enemies.

But whatever the situation may have been in the past, we surely cannot let any such narrow limitation control our future policy. The security of this country must always be our first objective. But surely the attainment of that objective requires our willingness to explore all avenues and all possibilities which have any reasonable promise of reducing the awful threat which nuclear and thermo-nuclear weapons pose to all mankind alike.

Of course, no agreement should impair our relative position in regard to our enemies. But true progress can only be made, and this should be our goal, by reaching agreements which are to the mutual advantage of all nations and all peoples. Especially in this vital area, no agreement is possible unless all parties are convinced, at the outset and at the end, that its attainment will leave them in no worse position in relation to other nations.

The administration needs to be upheld in what I believe it is trying to do in the direction of a limited, first-step agreement. The path is difficult. For example, as the President suggested at his recent news conference, we must include our allies in our deliberations at the same time as we get down to serious negotiations with the Russians. But the will is there, I believe, and we ought not miss any chance to negotiate.

Whether at this time real progress toward disarmament can be achieved I do not know. In view of the stakes, the effort to reach agreement is surely worth making. Indeed a nation under God and dedicated to peace can do not less.

Department of the Army Report to the House of Representatives Committee on Armed Services on the Subject of Close Air Support

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks, I would like to insert the Department of the Army's report to the House Committee on Armed Services on the subject of close air support:

DEPARTMENT OF THE ARMY REPORT TO THE HOUSE OF REPRESENTATIVES COMMITTEE ON ARMED SERVICES ON THE SUBJECT OF CLOSE AIR SUPPORT

1. Introduction: The following excerpts from Department of Defense directives are pertinent to an understanding of the Department of the Army's position concerning close air support:

(a) Close combat air support of Army forces is assigned to the United States Air Force as a primary function by paragraph A5 of section VI, DOD Directive No. 5100.1, October 1, 1953.

(b) DOD Directive No. 5160.22, March 18, 1957, clarifies the above stated responsibilities as follows: "The United States Air Force includes among its primary responsibilities those of furnishing close combat and logistical air support for the United States Army. These responsibilities are continuing in nature, from the immediate outset and throughout the course of all combat operations, and for peacetime training. While extent of such support, by nature, is not readily susceptible of specific delimitation, it must at all times meet the reasonable requirements specified by the United States Army, either for combat operations or for training, and the United States Air Force shall be prepared to devote an appreciable portion of its resources to such support and to the establishment and organization which may be required therefor."

2. Relationship of the services: The Army is an essential member of the Army-Navy-Air Force team which, through appropriate combination of mutually supporting capabilities of all the services, develops the military strength necessary to deter war or to be victorious in war if the deterrent fails. The Army's support of the concept that the components of the 3 services must operate in concert to obtain national objectives extends through all levels of operation—from the application of global strength to the tactics of the lowest echelon involving the use of forces from more than 1 of the armed services. This includes, of course, the theater level where the Army believes that no one component is sufficiently self-contained or capable within itself of achieving the theater mission.

The Army's support of this balanced force concept is set forth in the Army field manual which contains its doctrine for combat operations, FM 100-5. This publication states in paragraph 5, "During periods of peace and war, Army forces in conjunction with Air and Naval forces have the overall mission of supporting national policies and objectives. Their maintenance and proper balance are essential if the objectives of national policy are to be attained. Forces in proper balance are those allocated from land, naval, and air forces or the elements of any one or more of these to meet the requirements of a given mission and trained to operate in concert for a single purpose."

3. Command relationships necessary for optimum close air support: History has clearly demonstrated that unity of command is a prerequisite for success in battle. In other words, only one commander should be responsible for the success of a particular combat operation. The Army believes, therefore, that the responsible commander at each echelon must be vested with the authority necessary to control the operations of all forces which have been provided to him for the accomplishment of his mission.

The location in the chain of command and the service of this responsible commander will vary with the situation. In a small task force operation, he could be the commander of an Army battle group or a parallel Naval, Air Force, or Marine formation. In larger operations, the responsible commander should be at a higher level and will be a member of the service which has primary responsibility for the success of the operation.

The field army commander is responsible for the success of ground combat operations related to his mission. This responsibility is delegated to corps, division, and subordinate commanders as they are assigned the subordinate objectives necessary to the success of the overall mission.

One of the most important means of influencing the outcome of ground combat action is the commander's flexible and versatile application of supporting firepower. To accomplish his mission the commander must be provided the capability and the authority of massing available firepower quickly upon critical targets.

In the employment of its artillery, the Army follows a procedure which permits both centralization and decentralization of this authority as dictated by the situation. In view of the requirement for the immediate responsiveness of supporting fires to the responsible commander's wishes and needs, control of artillery firepower is habitually decentralized to the lowest possible echelon; however, provision is always made for its rapid return to higher commanders when necessary.

Combat aircraft utilized in close support of the field army are primarily utilized to extend the ground commander's firepower. The integration of aircraft firepower with that of maneuvering land forces is difficult to achieve, even under the most favorable conditions. Lack of control of this firepower by the appropriate ground commander results in (a) unacceptable delays in the delivery of the close support required, (b) the necessity to coordinate rather than direct the fire support furnished by aircraft, and (c) inability of the ground commander to rely upon aircraft being available when required. These three factors combine to prevent the ground commander from making the most effective use of all of his firepower, either in planning or in the conduct of operations. As in the case of artillery, optimum results require tailoring of control authority to fit the needs of the battle. Inflexible centralization of this control is impracticable for the varying conditions of ground combat.

The Army expresses its quantitative requirements for close air support in terms of one Air Force wing of about 75 aircraft per Army division in contact with the enemy. This requirement is, however, only a yardstick for operational planning and does not mean that a wing should invariably be assigned to support each division involved. The Army recognizes that these wings will have missions other than close support of divisions and may have to be massed for use by corps, army, army group, or for theater-wide assignments, air or ground. However, the Army believes that, normally, the general direction and control of that portion of the air effort allotted to support Army units should be subject to decentralization, as appropriate, to corps or divisions, with the proviso that the tactical air force retain at all times the capability to regain centralized control for immediate diversion to higher priority missions as directed by higher authority.

4. The effect of missiles on close air support: The increasing development and use of surface-to-surface missiles will improve the effectiveness and range of the organic weapons available to the Army commander. Combined with improving means for finding targets and evaluating the success of fires on these targets, these missiles are expected to be more effective than fighter-bombers in providing accurate, responsive, and all-weather close support. However, the Army considers that for the foreseeable future there continues to be close support missions which will require piloted aircraft. These include: tactical reconnaissance, target acquisition, protection of Army formations deep in enemy territory from attack by enemy aircraft, attacks on fast moving enemy targets, attacks on targets beyond the range of Army weapons, attacks on targets protected by the terrain from ground weapons, and the augmentation of Army fires on critical targets.

As Army missile and rocket units are phased into the force structure and the Army develops improved target acquisition systems, there will be a concurrent downward adjustments in the Army's requirements for tactical air support. This might well result in a reduction in the number of Air Force tactical wings. The Secretary of Defense and the Joint Chiefs of Staff are aware of this problem, and it is currently under study by a joint Army-Air Force committee. However, in connection with improved target acquisition means, there will probably develop a requirement for relatively high performance aircraft capable of vertical or short takeoff and landing to search the so-called midrange areas of the combat zone, 30 to 100 miles in front of the line of contact. This requirement will have to be met by the Air Force or by Army aviation.

5. Training: The doctrinal differences between the Army and the Air Force concerning close air support, until resolved, will impair the effectiveness of joint training. The Army considers that, through trial, objective analysis, and mutual concessions during peacetime training, differing views can be resolved and joint doctrine and procedures established. In this connection, appropriate agencies of both services are concurrently endeavoring to settle the existing divergencies of opinion on the matter of air support.

6. Conclusion: It is the Army's opinion that elements of theater air forces which are allocated to the close support of a field army must be immediately and fully responsive to the requirements and direction of the responsible Army commander. Tactical air employed in an air-ground role in the field army combat zone is in support of the ground commander and must be immediately responsive to his general direction and control. General direction and control is defined as the authority to direct missions to be flown by aircraft allotted to the close support of Army forces and to prescribe targets, type of munition, time over targets, and the degree of neutralization or destruction desired.

National Safety Council Traffic Safety Award to Virginia

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. L. James Harmanson, Jr., general counsel for the National Council of Farmer Cooperatives, together with a newspaper article.

It is very gratifying to me that Virginia has received the award from the National Safety Council mentioned in the letter and article.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL OF FARMER COOPERATIVES,
Washington, D. C., June 7, 1957.

Hon. HARRY F. BYRD,
Senate Office Building,
Washington, D. C.

DEAR MR. BYRD: I am enclosing a clipping from the Washington Post and Times Herald of June 6, 1957, reflecting that the National Safety Council has awarded its highest traffic-safety award to the State of Virginia. You will note that Virginia was the only State in the Nation in 1956 to achieve 85 percent or more on all sections of traffic-safety activities which is the basis for this citation.

I am sure it will be gratifying to you as it was to me, as a native Virginian, to see that Virginia has a record of such outstanding performance in traffic-accident prevention.

This demonstrates what the individual States can do, and I believe should do, in the area of promoting safety on the highways, rather than having the Federal Government take over in this field functions and activities that the States and their localities are best equipped to perform.

Sincerely yours,

L. JAMES HARMANSON, Jr.,
General Counsel.

[From the Washington Post and Times Herald of June 6, 1957]

VIRGINIA GETS TOP AWARD FOR TRAFFIC SAFETY IN 1956

CHICAGO, June 5.—The National Safety Council today gave its highest traffic-safety award to the State of Virginia and the cities of Detroit and East Lansing, Mich.

The three were cited for outstanding performance in traffic-accident prevention and traffic management. Basis for the citation was the annual inventory of traffic-safety activities for 1956, considered the Nation's lone overall measurement of traffic-safety performance.

The awards of honor go to any State achieving 85 percent or more on all sections evaluated in the inventory. This year, Virginia was the lone State falling into this category.

Awards also are made to any cities achieving 80 percent or more on all evaluated sections.

Certificates of achievement were given an additional 337 cities and 25 States. Washington, D. C., received certificates for maintenance of accident records, safety organization, improvement in the traffic-death record, and noteworthy performance in traffic-safety activities.

United States Exhibits at World Fairs

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which was published yesterday in the Washington Post and Times Herald, entitled "Poles Crowd United States Display at Trade Fair."

I brought this subject to the attention of President Eisenhower in the winter of 1954, following my visit to Bangkok, Thailand, where I witnessed an international trade fair, at which the United States was endeavoring, but not very successfully, to show a picture of what America has done not only in the field of machine development but also in the fields of culture, art, and human relations. Both the Soviet Union and Japan had very impressive exhibits.

Later in 1954 President Eisenhower wrote a letter to the Committee on Appropriations recommending that $5 million be appropriated for United States exhibits at international trade fairs.

At that time I issued a press release with reference to the appropriation.

Therefore, Mr. President, I ask unanimous consent that both the article and my statement of August 2, 1954, be printed in the Appendix of the RECORD.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of June 10, 1957]

POLES CROWD UNITED STATES DISPLAY AT TRADE FAIR

(By Colin Frost)

POZNAN, POLAND, June 9.—Thousands of luxury-starved Poles stampeded the United States exhibits at the opening of the Poznan International Trade Fair today. Scores of extra police were called in to control them.

The American display of the products of 300 firms gave a dazzling answer to the now diminished propaganda that capitalism means poverty. By nightfall about 50,000 Poles had seen it.

Twenty-nine countries packed their products into the 40-acre grounds. Western nations dominated the show.

The United States is taking part in the fair for the first time since World War II. Its exhibition is calculated both to boost business and to show the Communist world how the United States lives.

It includes a typical American home packed with the household appliances that most homemakers in this part of Europe can only dream of.

There were displays of textiles, radios, household gadgets, sports goods, toys, frozen foods, and all the other consumer goods that crowd United States store windows but are rarities here.

Premier Josef Cyrankiewicz and other officials were among the earliest visitors.

The Premier told United States trade officials: "I am glad to see you here and I hope we shall be doing good business together in the future."

The reaction among most Polish visitors was sheer amazement. "We cannot even believe that things like these exist," said one woman.

"Is it true that ordinary people can buy these things abroad?" asked another.

"Suren," a Polish-speaking United States Embassy officer told her.

Some private visitors wanted to buy—especially the toys. A few pulled out wads of dollars—part of the great underground reservoir of greenbacks that is almost a second currency in Eastern Europe.

West Germany's exhibit—covering the whole range of booming German industry—is the largest. It takes more than twice the space of either the British or United States.

The United States exhibit is in a huge pavilion built of aluminum and covered with plastic.

SENATOR THYE URGES EXHIBITS BY UNITED STATES IN WORLD FAIRS

Senator EDWARD J. THYE expressed strong approval of action taken by the Senate Committee on Appropriations in connection with the supplemental appropriations bill in meeting the request of President Eisenhower for additional funds to permit participation by the United States in international fairs and expositions during the coming year. The President had advised tht committee that there will be approximately 75 such international trade fairs and that the administration feels that participation in at least 30 of them would be useful in drawing attention to American products and the benefits of the free enterprise system. The Senate Committee on Appropriations allowed $5 million for this and related purposes.

"I am convinced that American participation in these international trade fairs is of great importance to this country in its international affairs and I am very much pleased at the action taken by the Senate Committee on Appropriations of which I am a member. It will enable our Government to help in coordinating American exhibits and make possible a better rounded and more impressive picture of what America has done not only in the field of machine development but also in the field of culture, art, and human relations.

"When I returned from my trip to the Orient last winter one of the first things I did was to bring to the attention of President Eisenhower my impression of a visit to a trade fair being conducted at Bangkok in Thailand where I saw the extensive and well displayed exhibits of the Soviet Union in a building which dominated the fairgrounds. The automobiles and farm machinery displayed did not in any manner compare with machines and equipment of American manufacturers, and I question whether some would be serviceable in actual field operations. But they did capture the imagination of the people and thousands saw this exhibit and passed through the Soviet building.

"I know that the totalitarian Government of Russia can simply commandeer the material for such exhibits and is willing to spend thousands to set them up, but I am certainly also that American industry and business under the encouragement of our Government could far exceed anything the Soviet Union can do in this field.

"It seems to me that the United States should assume reasonable participation in international fairs both in our fight for markets in the international field and in showing to the people of the world what has been achieved in the United States under our free enterprise system and our democratic principles of government. I am sure that much good will flow from this effort and I strongly endorse it on the basis of my own observations in the areas where it is so important that America be understood and appreciated by the people."

Discovery of the Columbia River

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. NEUBERGER. Mr. President, because Oregon will commemorate its first century of statehood in the year 1959, it is important that the people of the Nation understand the historical background of our great State.

On May 11, 1957, the Astorian Budget, which is published in the city located at the mouth of the vast Columbia River, printed a splendid editorial describing the first sighting of the Columbia by Capt. Robert Gray, of Boston, who gave the name of his ship, *Columbia*, to the principal river of our Pacific seaboard.

I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FINE PLACE FOR A FACTORY

"This day saw an appearance of a spacious harbor abreast the ship, hauled wind for it, observed two sandbars making off, with a passage between them to a fine river * * *. The river extended to the northeast as far as eye could reach, and waters fit to drink as far down as the bars, at the entrance. We directed our course up this noble river in search of a village * * *. Captain Gray

named this river Columbia's and the north entrance Cape Hancock and the south point, Adams. This river, in my opinion, would be a fine place to set up a factory.

The date was May 11, 1792, and the writer was John Boit, supercargo on the United States merchant ship of Boston, Capt. Robert Gray, master.

It was just 165 years ago—a century and two thirds ago—that the ship *Columbia* entered the great river of the west that had eluded navigators during several previous searches by famed and experienced explorers.

Captain Gray and his ship spent several days in this river, trading with the Indians, before departing on a mercantile voyage that eventually carried this vessel of the young American Republic around the world.

All students of American history of course are aware that the discovery of the Columbia River was one of the important bases of the claim the United States Government eventually made for ownership of this disputed country, and which today causes us to be citizens of the United States rather than subjects of the British Queen or servile, brainwashed proletarians of the Soviet Empire.

When we stop to think about the possibility that Russia might own this land, we can be even more grateful to such men as Captain Gray and his crewmen who helped claim the Oregon country for the United States.

The *Columbia* came here primarily in search of sea otter—a commodity which has long since disappeared in commercial quantities and is now virtually extinct.

That isn't the only change that has occurred hereabouts in the brief space of a century and two-thirds.

The river channel is deeper and there no longer is risk of a ship of the size of the *Columbia* running aground in the main channel, as happened in May 1792.

The river entrance is marked by jetties and a lightship, so a navigator would have no trouble finding it. And the population is grown considerably.

However, the men who live here now are still, we like to think, "strait limb'd, fine looking fellows" as Boit found them, and the women are still "very pretty."

But the inhabitants are paler than they were in those days—although still eager for trade with ships that come in across the river bar.

And the men no longer go naked, while the women today wear considerably more than the brief aprons of woven leaves which greatly intrigued Boit and the other "gentlemen" of the *Columbia's* party.

But the mouth of the Columbia still "would be a fine place for to set up a factory" and we'd all be very happy if some more explorers would come to these parts and do that very thing.

Time to Curtail Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Billions for Foreign Aid" from the June 8–9 issue of the Griffin (Ga.) Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BILLIONS FOR FOREIGN AID
(By Quimby Melton, Jr.)

The last day of the month, June 30, marks the end of the present fiscal year. By that time it is estimated that the United States will have poured out $62 billion in foreign aid since the end of World War II. Also we will have another $8 billion balance authorized for foreign aid but not yet spent, making the total $70 billion. President Eisenhower is asking for $4 billion more for the next fiscal year. That would make $74 billion.

That staggering amount, of course, is more than the entire gigantic Federal budget which is under fire all over the Nation. In other words, our foreign aid expenditures amounted to more than the complete cost of running our entire Nation for a full year at the biggest price tag in history.

We have no doubt that some of the foreign aid money was spent wisely and well. There were days immediately after World War II when entire nations crumbled in ruins. They had been laid bare by bombers. Invading armies had brought further destruction. Hunger, misery, and lack of hope were commonplace. Under such circumstances a victorious Christian nation such as ours had no choice but to rush to the assistance of the vanquished. From a practical standpoint, we had no choice either. Communism flourishes upon hopelessness.

And so some of our foreign aid money served a good purpose for a while.

Then came the international blackmail. "Incidents" were created. Nations reported that they were teetering on the brink of communism and only an infusion of American dollars could save them.

Blackmail. We paid it.

So now we see the United States of America taxing its own citizens to the hilt to throw money to the four corners of the earth. The time has come to curtail this mad throwing away of our money.

The Plodding Doughboy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the ground forces of our defense have now adopted "Those caissons go rolling along." This is a marvelous marching song. There is none better and it should enthuse those who belong to the artillery branch of the service. There are many who believe that the ground forces will have a very small part in the wars of the future. The ground forces, infantry or doughboy, have always been the queen of battle.

In generation after generation it has been prophesied that something would take his place, but when wars come the plodding doughboy is there to take the ground and hold it, and that is what wins campaigns and wars.

There is a very good editorial on the subject Keep the Army Rolling Along, in this morning's Philadelphia Inquirer, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEP THE ARMY ROLLING ALONG

When the Caisson Song first roared from the throats of dashing United States artillerymen it was strictly for the galloping guns and the snorting gee-gees that pulled them around in battles and on parade.

"Those Caissons Go Rolling Along" with its "hi-yi-yee" touch came from the pen of Lt. Edmund L. Gruber, Fifth Artillery—later Brigadier General—in 1908. The Diesel Age, tanks, self-propelled guns weren't even dim dreams then.

All along, the Caisson Song has been the song of the gunners. Until now, when "the caissons" don't roll any more. It is finally announced that the Army has taken it over—same inspiring tune, to the words, "The Army Goes Rolling Along."

Some little difference, perhaps, but the theory's not bad. It's a great tune, with a great background. And, in view of the chipping away of military manpower, particularly in the Army, we hope it sustains the idea that the Army will go rolling along, strong enough and fighting-fit to do any job it needs to do.

The Right of Trial by Jury

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two excellent editorials on the right of trial by jury. The first is from the June 5 edition of the State, of Columbia, S. C., and is entitled "A Wise Provision." The other is entitled, "On Jury Trials" and is taken from the June 5 edition of the Orangeburg, (S. C.) Times and Democrat.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbia (S. C.) State, of June 5, 1957]

A WISE PROVISION

Administration forces fell before six Democrats and a Republican on the Senate Judiciary Committee who insisted upon including in the so-called civil-rights bill a proviso guaranteeing trial by jury to persons accused in court in civil-rights cases. In supporting the amendment, as a poor substitute for killing the bill, Senator EASTLAND explained that the section would give civil-rights defendants the same right now enjoyed by trade unionists in labor injunction cases.

The development does not, however, meet with the approval of Attorney General Brownell, who has been playing out of position before now in lobbying for controversial and doubtful legislation, arraying section against section and class against class. He complains the proviso would permit practical nullification of proposed civil-rights legislation. In the words of Orphan Annie, "Would that be bad?"

One wonders just what the advocates of such legislation are after. Could they be seeking to destroy the Constitution?

Brownell is correct in saying that contempt cases normally are taken before judges and not juries. It could also be argued forcefully that this is a flaw in our judicial system. It could be criticized as a relic of the feudal system, giving too much

power to one individual, who, being a human being, is subject to human quirks and prejudices. It is conceivable that judges could and possibly sometimes do, pass judgment of contempt as the result of injured vanity.

Everything considered the section guaranteeing jury trials to defendants in civil-rights cases follows the orderly procedure defined by the Founding Fathers as to the rights and dignity of the individual. Trial by jury is one of the cardinal triumphs of our Constitution as inherited from Magna Carta. There is no reason why any exception should be made to gratify the unilateral zeal of special interests of self-appointed reregulators.

[From the Orangeburg (S. C.) Times and Democrat of June 5, 1957]

ON JURY TRIALS

The committee in the Senate which has been considering the civil-rights bill has added an amendment to the bill which would allow persons accused of contempt to be given jury trials. Many Senators who were and are in favor of the civil-rights bill are supporting this amendment.

We do not see how Congress can go wrong in providing jury trials for persons accused of contempt. While we do not wish to join in a wholesale assault on the judiciary of this Nation, it is nevertheless true that the judiciary—like the other branches of the Government—must have its limitations.

No one branch of our Government functions perfectly, nor is it made up of perfect citizens. The judicial branch has assumed increasing power in recent years and it would be wise to safeguard the right of persons to a trial by jury because of what might follow if this right is denied citizens. It may be that only one issue is involved at present, but the future might well turn up an undesirable situation in which the principle wherein judges who find American citizens guilty of contempt, exercise such unlimited powers concerning various issues and freedom that any bill limiting the right of jury trial would be a tragedy and result in injustice to many Americans.

We do not believe that any one section of the country has a monopoly on all the good people in the United States. We believe that trial by jury is the best possible system establishing guilt and that the people themselves, who make up our juries, will come nearer seeing that justice is done than any group, acting individually, no matter how talented the various individuals may be.

Property Rights Voided

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Property Rights Voided," published in the Augusta (Ga.) Chronicle, of April 30, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPERTY RIGHTS VOIDED

The United States Supreme Court, as it is now constituted, seems bent on stripping the States and individuals of their most cherished and fundamental rights.

Pursuing its policy of forced integration, the Court has ruled that Philadelphia's Girard College cannot exclude Negroes although it was established from funds left in a will which specifically directed that the school be built for poor white boys.

The high tribunal said that the board of directors of City Trust of Philadelphia, which administers Girard College, is an agency of the city of Philadelphia; therefore, the Court decided, the college must come under the terms of its desegregation edict.

It mattered not to the Justices that Stephen Girard, who died in 1831, directed the city in his will to establish and operate the college with admission limited to poor white orphan boys.

What the Court has said, in effect, is that a will which was binding in 1831 is not binding today; that a citizen of the United States, indeed, cannot direct the disposition of his own property.

What are we coming to in this country when the judiciary usurps the right of private property?

It is noteworthy that this right was upheld, as it properly should have been, by the Pennsylvania Supreme Court which found itself reversed by the United States Court in upholding the will. In the State court's opinion, it said:

"It is one of our most fundamental legal principles that an individual has the right to dispose of his own property by gift or will as he sees fit. This right is so much protected that a testator's direction will be enforced even though contrary to the general views of society."

Those who believe in constitutional government were astonished when the Supreme Court, in its desegregation edict, made a decision based on sociology rather than on law. They are appalled now to see the Court, in its Girard College ruling, nullify, in effect, the right of the individual to do what he wants with his own private property.

The possible far-reaching effects of this latest judicial decision are frightening.

In view of this decision, does any citizen of the United States any longer have the right to dispose of his own private property as he sees fit?

This time, the High Court hung its decision on the peg that this particular trusteeship constituted an official agency. Next time, it might decide that it doesn't need any peg at all—that a man's will must be administered according to the whim of the Court.

Dr. Frances Densmore

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles which appeared in the Minneapolis Tribune on June 6 and 7, 1957, paying tribute to an outstanding citizen of Minnesota, Dr. Frances Densmore. I believe the RECORD should contain this outstanding person's life history.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of June 6, 1957]

DR. DENSMORE, AUTHORITY ON INDIANS, DIES

RED WING, MINN.—Dr. Frances Densmore, 90, authority on the music and culture of the American Indian, died here Wednesday.

Since 1893, Dr. Densmore has been studying the music of the American Indian, making more than 3,000 recordings and publishing more than 100 articles and books on the subject.

Her interest was aroused when as a child in Red Wing, she could hear the drums and songs of the Indians who lived across the Mississippi River from her home.

First a musician, Dr. Densmore attended Oberlin conservatory and later studied with music masters in Chicago and at Harvard university, Cambridge, Mass. But the music of the Indian was to be her life's work.

In 1893, Dr. Densmore stood, pencil and notebook in hand, behind Geronimo, Apache war chief, and jotted down his humming while he worked in the Indian village of the Chicago world's fair.

Her first field trip was in 1905 to Grand Portage, Minn. Since then, Dr. Densmore has traveled America, listening and recording Indian melodies.

So great was her knowledge that modern Indians came to her to find out about their own tribal customs.

The first Indian to go before a recording machine was a Chippewa named Big Bear. It was 1907 in Detroit Lakes, Minn., and Dr. Densmore had to do the persuading.

This recording won an award from the bureau of American ethnology of Smithsonian institution. It also began an association of more than 40 years. Much of Dr. Densmore's work was done in Washington at the Smithsonian.

Among the many honors bestowed on Dr. Densmore was that given by the Chippewa tribe. They hailed her as "the world's greatest recorder of American Indian music."

In 1950, she received an honorary doctor of laws degree from Macalester College, St. Paul.

A lifelong Minnesota resident, Dr. Densmore recently completed a bulletin for the Smithsonian on the music of the Pueblo Indians.

She celebrated her 90th birthday here May 21.

Dr. Densmore's only immediate survivor is a cousin, Mabel Densmore, Red Wing.

Funeral arrangements are not complete.

[From the Minneapolis Tribune of June 7, 1957]

DR. DENSMORE: A TRULY GREAT SCHOLAR—MINNESOTAN WHO WON INTERNATIONAL REPUTE WITH INDIAN MUSIC RECORDINGS DIES AT AGE OF 90

(By Jay Edgerton)

Frances Densmore, who died Wednesday in Red Wing at the age of 90, was one of the most remarkable women of Minnesota and one of the truly great scholars of our times.

It is a strange bit of irony that her name may come with an unfamiliar ring to thousands of Minnesotans; yet she was one of that little handful of the State's citizens, along with Sinclair Lewis and Charles Lindbergh, whose names are honored all over the world wherever men value human achievement.

I remember going to a great museum in New York several years ago to buy one of Miss Densmore's books on Indian music. Many of these, long out of print, are now hard to acquire and are collector's items. But she had told me where I might be able to find one.

At the museum, a starchy receptionist informed me grimly that I was asking the impossible.

"But Miss Densmore told me that you still have a few copies left."

"Do you know Dr. Densmore?" The reproof was plain in the emphasis on the word "doctor," but reproof was mingled with awe in the fact that I had "once seen Shelley plain."

She vanished through a door to the inner sanctum and within a few minutes was back

with a gentleman who turned out to be no less than the head of the institution. And a few minutes later I had my copy of the Densmore book.

Miss Densmore came of old Minnesota stock. Her grandfather, Judge Orrin Densmore, was a member of the pioneer legislature, and her father, Benjamin Densmore, was a civil engineer in St. Paul in territorial days. She was born in Red Wing 2 years after the close of the Civil War.

Miss Densmore studied music at Oberlin conservatory in the 1880's and later worked under John K. Paine of the Harvard music department. It was while she was living in Boston in the 1890's that she became interested in the work of Alice Fletcher, one of the early recorders of Indian music.

Returning west, Miss Densmore obtained the assistance of Sioux Indians, living on Prairie Island above Red Wing, in preserving their native music. By 1903, Good Bear Woman, a fullblooded Sioux, was singing the old songs to her. In 1907 she moved into the norther part of the State and recorded Chippewa music.

Her recordings brought prompt recognition from the Bureau of American Ethnology at the Smithsonian Institution in Washington. An award was made to her, and this led, in turn, to long and fruitful association with the Smithsonian extending over more than 40 years. She produced 22 books, and recordings and transcriptions of more than 3,000 songs of the American Indian.

Miss Densmore traveled far and wide recording American Indian music before the old people, who knew it, died out. She rode "bull boats" on the Missouri. She saw an authentic Sioux sun dance—one of the few white persons ever to witness the genuine ceremony. She became the adopted daughter of a chief.

The monumental Densmore collection has now been recorded by the Library of Congress on long playing records.

Miss Densmore lived in a comfortable, old-fashioned house on a tree-shaded street in Red Wing.

Her rooms were almost austere. Her vast collection of Indian articles had long since vanished. Most had been given to the Smithsonian.

"A museum is the place for things like that," she said.

Pictures of Carl Sandburg and Joseph Conrad, the Polish sea captain who became one of the great modern English novelists, stood on her shelves. Sandburg was a personal friend. Conrad she never knew—but she liked his "warm, strong, human face."

She never sentimentalized or romanticized either Indians or her work. "I had a job to do," she said simply. The records of the Smithsonian and the Library of Congress prove that she did it—and did it superbly well.

Cancer: Killer on the Loose

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an effective and moving editorial entitled "A Killer on the Loose," published in the Pendleton (Oreg.) East Oregonian of May 31, 1957.

The editorial emphasizes the urgent need for an all-out "crash" program by the Federal Government in an effort to find the cause and possible cures for the dreaded killer of mankind, cancer. I am very much pleased that the editor of the East Oregonian, Mr. J. W. Forrester, has seen fit to endorse my proposal for a $500 million appropriation to be made available to the National Cancer Institute for special research projects, with the stipulation that the sum remain available from year to year until totally expended.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A KILLER ON THE LOOSE

A "crash program," with a half-billion dollars in Federal funds pledged for medical research against cancer, has been urged by Senator RICHARD L. NEUBERGER, of Oregon, so that the skills and facilities of the Nation's laboratories can be amassed in assault on the medical mystery which imperils 40 million Americans now alive.

"Cancer threatens to strike 2 out of every 3 American families," NEUBERGER said. "Yet our entire research expenditure against cancer, including all Federal, State, and voluntary contributions, was only $45 million last year—the approximate cost of 1 atomic submarine."

NEUBERGER made his appeal before a Senate Appropriations Subcommittee on Labor, Health, Education, and Welfare in support of his proposal to appropriate $500 million to the National Cancer Institute, with the provision that the sum remain available until totally expended.

NEUBERGER argued that if the Government can spend $44 billion on armaments, why not dedicate half a billion dollars to try to solve the "most terrible threat to every person on the face of this globe."

NEUBERGER further declared:

"Approximately 40 million people now alive in the United States will have some form of cancer during their lifetime, and 26 million of those now alive will die from cancer unless new preventive measures are found.

"I was shocked when I found the record-breaking budget of the national administration, despite its $72 billion size, actually would reduce by 3 percent the Federal funds appropriated for cancer research during the coming fiscal year."

NEUBERGER pointed out that only a generation ago the three leading causes of death in this country were pneumonia and influenza, tuberculosis; and diarrhea and enteritis—all diseases of a communicable nature.

"These three disease groups then accounted for one-third of all deaths in this country. Yet, in 1956, these three groups together accounted for only one-twentieth of all deaths in the United States.

"Medical research had provided much of the answer—antibiotics, specific drugs effective against tuberculosis and higher levels of public-health care. If we developed a cure for cancer, who could measure its value in terms of all mankind? As the span of human life is extended to the underprivileged parts of the world, cancer rises in its incidence. It shows an upward swing in all parts of the world. What price, then, a cure against a universal killer?"

NEUBERGER thinks development of a half-billion dollar research program against cancer will require launching of a large training program for research workers. In answer to the question, "Where will we get the men?" NEUBERGER said "We get the men by telling the medical schools and other medical institutions in this country that we are in business for keeps in this field, and we will help them train these men."

NEUBERGER explained that Congress provided funds 2 years ago for a pilot program in the detection of cancer of the cervix.

"Uterine cancer cell examination was applied for the first time to more than 100,000 women in Memphis, Tenn. Of these, 800 were found to have cancer. Half of these cancers were in extremely early stage, with nearly all of them completely unsuspected. In this one small project, does anyone know how many lives we have saved and how much tragedy we have averted?"

NEUBERGER added that the United States has the scientific potential to wipe cancer from the face of the earth and needs only the determination to do it.

Just how well his program is faring is not known. But it is probable, with an economy-minded Congress, that his plan will get little more than a casual glance.

A killer that rivals the atomic bomb in bringing death and agony to millions deserves more than just a casual glance.

Integration in New York

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Integration in New York," published in the Washington (Ga.) News-Reporter, of May 2, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTEGRATION IN NEW YORK

A program of forced racial integration in the public schools of the Nation's largest city, New York, is stirring up discontent and controversy.

The controversy may even reach the point that it will attract some of the attention away from the South.

That will be good. It's not that we wish controversy and troubles for other sections, but it's simply the fact that what is happening in New York City is caused by the same things that have provoked disturbances in the South.

Racial integration is being forced in New York schools, regardless of existing neighborhood patterns and customs. School authorities are even going so far as to arrange school bus routes of miles in length, to transport pupils from one neighborhood to another.

If a school has been predominantly all white, Negro children are being carried by bus from other neighborhoods to achieve a "balance." If it has been mostly all Negro, white children from other sections are being forced to attend.

Such action by school authorities eliminates the right of freedom of choice by the individual.

It will force families to move from homes they have owned for years, for many persons believe they have the right to choose their own neighbors and associates. Instead of creating harmony and understanding, the enforced intermingling will bring strife and misunderstanding, for children will not be able to understand why they are having to lose old friends and playmates, and make new ones.

There's nothing in the United States Constitution, nor in any of the Supreme Court's edicts, which says that racial integration must be instituted in the public schools.

The Court's interpretation of the Constitution is that segregation cannot lawfully be

maintained. But no law has yet been voted by the people, or passed by their representatives, which says that racial integration is mandatory.

New York already is having troubles, and they will get worse. It shouldn't be a cause for joy that others are having disorders and difficulties—but there is satisfaction in knowing that others will gain a better insight into some of the reasons why the South opposes forced racial integration.

The Need for Army Aviation

EXTENSION OF REMARKS
OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. GAVIN: Mr. Speaker, under leave to extend my remarks, I would like to insert an article by Maj. Gen. Hamilton H. Howze, United States Army, Director of Army Aviation, Department of the Army, the Need for Army Aviation, which appeared in the Officer published by the Reserve Officers Association:

THE ARMY NEEDS AVIATION

(By Maj. Gen. Hamilton H. Howze, U. S. Army, Director of Army Aviation, Department of the Army)

The degree to which a military force could move, shoot, and communicate has been a determining factor in the outcome of battles for centuries. Every organized force has possessed these three capabilities to some degree and almost without exception the force which was able to attain superiority in one or more of these areas has been victorious.

Hundreds of years ago communications consisted of primarily "whoop and holler." Shooting was limited to throwing stones or stone axes, and movement was limited to that which could be accomplished by the two legs of the soldier. As man's general knowledge increased the art of war improved. The "whoop and holler" communication was augmented by smoke signals, signal flags, telegraph, telephone, and radio. The art of killing progressed from stones to spears, and the bow and arrow. Then came gunpowder and the rifle, artillery, rocket missiles, and atomic warheads. Mobility was augmented by the use of animals, ships, railways, automobiles, trucks, tanks, and armored personnel carriers.

With each of these advances the tide of battle ebbed and flowed according to superiority in these three areas. No nation dared deny its commanders the use and command of these new tools of war.

Since the term "commander" is used very loosely at times, the commander referred to in this article requires identification. Specifically this article refers to the commander charged with the responsibility of accomplishing an assigned mission. He may be a member of the Army, Navy, Marine Corps, or Air Force, but whatever his service, full responsibility is his and he must answer for the actions of his command. His victories are shared with all ranks, but the responsibility for defeat is laid at his feet and he may share it with no one. Because of this, the commander must be given every available tool of war needed to accomplish his mission. It is not sufficient to make such tools available upon request—many battles have been lost because the needed elements did not arrive on time. These tools must be under the command of and therefore immediately responsive to the will of the commander.

The latest item of mobility made available to our Armed Forces, in large numbers, was the aircraft. Like the automobile, truck, railway, ship and other means of movement, the aircraft is a necessary tool of war for all our forces—Army, Air Force, Navy, and Marines. Like the commander, each service has its assigned mission and area of responsibility. In many instances the basic tools of war are modified in accordance with needs and assigned mission of the service concerned. For example, the mission of the Air Force requires aircraft which will transport bombs, bullets, rockets, photographic equipment, electronics, personnel, supplies and equipment. And because of the great distances involved, the necessity to fly over enemy territory, and to defeat the enemy in the air, the aircraft must be heavily armed, fast, and have long-range operational capability. On the other hand, the Army commander is charged primarily with defeating the enemy on the ground. His battle area is much smaller in size than that of the Air Force. The terrain is rough; natural and manmade obstacles are numerous. Rapid shifting of his force is difficult and observation of the enemy is very restricted. Therefore the Army has modified the aircraft to render it capable of operating from the pastures, fields, and roads of the battlefield. This capability, not high performance, is a prerequisite.

The original need for aircraft in our Armed Forces was to observe the enemy and adjust fire upon him. This resulted in the use of captive balloons during the Civil War. Later when powered flight became a fact the Army used airplanes for this purpose. The need for such observation became so great that eventually a command was needed to direct the efforts of such a force. As a result the Army Air Corps was organized as a part of the Army. As the state of the art improved the aircraft assumed more utility. New concepts in air warfare were proven. Emphasis shifted from observation to close support of ground forces and eventually to attaining air superiority—isolating the battlefield—and strategic bombing. With this shift in emphasis it was necessary to make observation aircraft organic to the artillery to observe and adjust its fires.

The Air Corps eventually became so large—and so important to our national effort—that it was made a separate service and given equal status with that of the Army and Navy.

Creation of the United States Air Force and its new missions left the Army with its organic aircraft to perform the vital mission of observation of the battlefield. The utility of these observation aircraft during World War II was such that they were made organic to all the arms and several of the services.

New weapons, new tactics and techniques and new concepts of warfare, world wide, have altered the Army's methods of operation as drastically as it has that of the Air Force. The scope of future conflict is so great that each service will be hard pressed to dominate its area of responsibility, in fact, each might well find itself committed in a life and death struggle for survival. Each tool necessary for victory must be in the hands of the commander concerned. No service must be dependent upon another for equipment needed in performance of its primary mission, whether it be trucks or tanks or aircraft.

To the average citizen an airplane is an airplane and there have been many debates on such questions as "Why does the Army want its own aircraft—can not the Air Force or the Navy furnish this support to the Army? Isn't Army aviation a duplication of the air effort of the other services?" These questions were asked in all sincerity and are most deserving of an answer.

In a broad sense these questions were answered in the above discussion of the missions of the Army and Air Force. Air Force missions, well known to the public and in general, are characterized by supersonic, high flying, long range aircraft. Compare with these the missions of Army aircraft which are characterized by low flying, relatively slow aircraft having a very short landing and takeoff capability.

Army aviation has many missions. The first of these we call aerial observation. The word "observation" was used long before the aircraft came along. Commanders have always sought high ground from which they could observe the enemy's location and activities. With the advent of indirect fire capabilities the commander established personnel on high ground where they could, by certain conduct of fire procedures, bring fire to bear upon the enemy. These installations were called observation posts. Elevation of these observation posts by means of aircraft was a logical extension of the ground observer system. This observation performed by aircraft was limited to adjustment of artillery fire initially. However, the Army was not long in broadening it to include many other functions. In fact observation now consists of an overall surveillance of the battlefield, conducted continuously and systematically by visual, electronic, photographic, and other means in order to gather intelligence data concerning the enemy. Products of this surveillance are: location, verification and evaluation of the enemy and his installations and the adjustment of fire upon those installations; study of the terrain; road and bridge condition and location; and obtaining other information on the enemy forces not obtainable by our own ground observation or by air reconnaissance agencies of the other services.

The team which performs these missions requires discussion. This team consists of an aircraft, a pilot, and may also include an observer to assist the pilot. First a discussion of the aircraft.

Flight capabilities of the aircraft utilized on these missions are of critical importance to the Army and must be changed as necessary to meet the demands brought on by new weapons, new tactics, and techniques of operation. The Army uses currently the L–19 and L–20 fixed-wing and the H–13 and H–23 rotary-wing aircraft for observation. In World War II it used the L–4 and L–5 fixed-wing aircraft. In order to keep abreast of the changing requirements in this field, the Army must constantly review the flight characteristics of its aircraft and improve them where necessary in order to retain this vital capability. Observation over the battlefield of the future will require the aircraft to pass from friendly to enemy territory and back again, a number of times, in the course of a single mission. In order for the pilot to survive and accomplish the mission under these circumstances, the Army needs a new aircraft with a greater maximum speed to add to its inventory of observation aircraft. While this aircraft must have a greater speed, it must retain the capability of flying at the slow speed necessary for a detailed examination of the ground and of operating from relatively short unimproved landing areas. It should be capable of carrying such detection equipment as electronic or infrared detectors, cameras, and radiological-survey equipment. It should have the capability of marking targets with smoke and providing battlefield illumination with aerial flares.

Now a brief discussion of the aviator. To accomplish these many observation missions it is obvious that the aviator must know the tactics and techniques, strength and weakness, and general temperament of the force

he is working for. The mission of his unit must be so vital to him that he is willing to give his life in its accomplishment. This goal cannot be attained with a pilot from another service; he must be a permanent member of the Army team. It must be kept in mind that the Army aviator performs in the immediate battle area—the little picture, pinpoint locations, and detailed study of terrain and enemy. For each function the pilot must have the knowledge of a ground commander, must be able to differentiate between items having primary and secondary importance, and recognize tactical advantages and disadvantages.

Such well-known missions as a command, liaison, communications, airlift of critical supplies, and aeromedical evacuation will not be discussed in detail. The use of Army aircraft for radio relay and laying telephone wire is old business. The whole world knows of the thousands of sick and wounded the Army evacuated during the Korean incident and the many lives saved thereby.

Army aviation has been given the mission of providing airlift for troop movements on this unusual battlefield of the future. This airlift is not normally from airfield to airfield but from ridge to ridge, pasture to pasture and over manmade and natural terrain obstructions. It provides air movement of Army combat units, supplies and individuals within the combat zone, for combat and logistical operations. This function includes the movement of units to execute "small scale air landed operations," the movement of reserves, and the shifting and relocation of units within the combat zone. The small scale air landed operations are short-range actions executed by use of cargo helicopters and are of four general types, each of which offers possibilities which will prove advantageous tactically. (1) The movement of troops across natural obstacles, such as rivers, swamps, lakes, canyons, and escarpments; (2) movement of troops across terrain made difficult of passage by the defensive preparations of the enemy; (3) movement of troops to capitalize on superior mobility and speed; and (4) movement of troops to exploit shock effect of atomic fire power. We may further subdivide each of these 4 types into 2 general categories:

(1) Actions against undefended or lightly defended objectives. There are many occasions on which the seizure of carefully selected, relatively undefended terrain will seriously compromise or even destroy the value to the enemy of his heavily defended positions;

(2) Actions against strongly defended objectives. On the surface this may seem infeasible but a careful development of a technique, related to use of atomic weapons, may prove the helicopter operation to be less expensive in human life and more remunerative tactically, than conventional armored or infantry action.

The aircraft employed in these operations will be subject to the normal hazards of combat. A well-planned action calculated to exploit enemy weakness, achieve surprise, and employ the best routes and techniques of approach will minimize these hazards. Low level flight and exploitation of night and inclement weather are considered to be the primary defensive measures for tactical helicopter operations. Ground fire poses a primary threat only during daylight operations since normal flight operations will be at altitudes below enemy radar detection.

For these missions of airlift in the combat zone the Army has provided helicopter and fixed wing tactical transport companies. These companies are currently available in numbers. The ability of the helicopter to fly contour and land in minimum air and ground space makes it invaluable for short hauls in the forward areas. Fixed wing tactical transport aircraft provide more efficient operation, cost less and can fly faster over longer ranges. However, they require comparatively more airspace for maneuver and landing and must fly higher. Because of these factors they are more suitable for and normally are used on type missions which are less subject to enemy air or ground action.

Army aviation has the mission of providing "air mobility for land reconnaissance." To overcome the extended distances and fluidity of the atomic battlefield our Army must have this capability. This is the mobility provided air-land short-range reconnaissance forces designed to perform missions normal in earlier wars to horse cavalry and later to armored reconnaissance forces. To provide this air mobility for land reconnaissance the Army is working toward development of "Sky Cavalry." This sky cavalry, or aeroconnaissance, if you prefer, is being designed to provide the mobility differential essential to the units which must perform the missions classic to highly mobile light elements. Reconnaissance, security of open flanks, gaps in the battlefield, seizure of critical areas, pursuit, and to some extent exploitation. These aeroreconnaissance units will have both light fixed-wing aircraft and helicopters as a primary means of mobolity. They will perform reconnaissance and screening missions on a wide frontage. The range of vision and speed of movement possible to the aircraft, will make execution of these missions more rapid than that of conventional reconnaissance units and in most cases more reliable. The development of electronic and infrared detection devices will provide an increasing capability in poor visibility. Such an organization will provide aircraft to perform the bulk of the reconnaissance part of the task, and permit concentration of the strength of ground elements at critical points as they develop. In such actions as pursuit and seizure of critical areas, helicopter-borne riflemen—preceded by reconnoitering aircraft—may be used to seize an important bridge, crossroad, or terrain feature. The tactical value of the successful execution of such missions is obvious.

As a firm organization of this type is developed, the division reconnaissance companies and a portion of the reconnaissance battalions may be converted to this type of organization. The successful development of good organization and technique will provide a bold commander with important new capabilities, and in fluid situations, will permit the execution of maneuvers infeasible under present circumstances.

The field is wide open for new ideas and concepts on the use of Army aviation on the future battlefield. Missions which may be performed successfully by Army aviation are limited primarily by the initiative of the pilot and the capability of the aircraft he is flying. Missions which will be performed by Army aviation during the next war depend upon the state of the art of aircraft development and the boldness of the commander.

Von Clausewitz, the great military teacher, said, "The theory of warfare tries to discover how we may gain a preponderance of physical forces and material advantages at the decisive point. * * * It is the nature of war to advise the most decisive, that is, the most audacious." The southern forces used Jeb Stuart and his cavalry to attain this objective in the Civil War. In World War II the German General Staff attained this goal early and almost defeated the world. It was only through the combined efforts of the Allied Nations, with their overwhelming numerical superiority, that Germany was contained, isolated, and eventually defeated.

In this era of rapid scientific development, an era which has no parallel in history, the military planner is faced with extremely difficult problems. The development of better weapons and weapons guidance systems are having a profound effect on military concepts. Experts the world over are working feverishly in an attempt to determine, in true perspective, the impact of science and technology on the conduct of battle.

However obscure the military future, certain facts stand out clearly. One of these is that military forces can no longer afford to concentrate in small areas for long periods of time for fear of annihilation by atomic or thermonuclear weapons. A second is that guided missiles of all types will have increasing effect on our tactics and techniques. Combat operations in the next war are expected to be characterized by great fluidity and increased dispersion, with units operating over large areas both laterally and in depth. The battlefield envisaged will have large, unoccupied patches between units, and an intermixture of units, friendly and hostile, is to be expected. The clear definition of friendly and hostile territory by a well-defined front may no longer obtain.

The United States Army must remain the most modern and versatile in the world. To accomplish this, we must take every advantage of the advance of science and technology. We must turn to the aviation industry for a vital ingredient of battle success: Superior mobility—the speed differential over a slower antagonist which allows the possessor to place destructive firepower at the right time and place to do the most hurt to the enemy. This, then, is the Army's need for organic aviation.

Our Civic Responsibilities

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. SPARKMAN. Mr. President, recently Mr. Walter Wiesman, of Huntsville, Ala., addressed the group at the Alabama Conference on Citizenship on the subject of Our Civic Responsibilities. Mr. Wiesman is one of the German scientists in this country who came here after the war. He has been intimately connected with the development of our missile program. The address is a very fine one by a new citizen, regarding his attitudes after becoming a citizen. I think it can well be read with a great deal of interest by everyone.

Mr. President, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR CIVIC RESPONSIBILITIES

(Address by Mr. Walter Wiesman, Alabama Conference on Citizenship, Tuscaloosa, Ala., February 22, 1957)

When we talk about civic responsibilities, we are discussing our daily duties as citizens of a unique democratic system, we are discussing politics, and we are discussing what should be fundamental knowledge to many people who do not quite understand anymore the significance of these United States.

Telling the story of our brand of democracy is the only way to keep its full impact before the eyes of the present and future generations. It has to be told by those who believe in it with all the enthusiasm and energy they can muster.

You will find that newcomers to the United States are eager to tell you about

their feelings. They may not be capable of expressing themselves in the most select language and may have all kinds of accents and dialects.

Why do immigrants and new citizens have such strong convictions about the system we live under? Why particularly the newcomers of the last 20 to 30 years?

Most immigrants of recent decades have witnessed in their former countries a system of men above laws. In most cases, the very reason for coming to this country was the passionate desire to escape from such systems. You will find in their spirit and works a parallel between the Hancocks, Shermans, and Franklins of 1776 and the Rosellis, Goldbergs, and Guzenkos of our time.

Why is this?

Both groups of people have experienced hardship and tyranny that will come over nations when men destroy laws made by and for the people. They knew firsthand the meaning of losing what we so casually call our basic freedoms.

For these reasons it is very natural that new citizens have a much greater appreciation of the United States than any natural-born citizen.

Let me tell you a story here. Before a prospective citizen can appear in court to obtain his naturalization papers, he has to study and understand many things about his future country. A little blue booklet becomes his main source of knowledge in regard to the history of the United States and the political philosophy. Most of the details are the ones forgotten by most citizens right after graduation from high school, if they were ever taught at all. A newcomer really has to buckle down to grasp all this. Some of my friends looked through the booklet, looked at me with some pity, and offered just one comment, "God, am I glad I was born here."

When Hitler came to power in Germany I was 12 years old, certainly an age where a child cannot be expected to have extensive political knowledge or feelings. So you might say that I spent my juvenile and some adult years under a rather one-sided political development. I was brainwashed without ever feeling any pain. The system was simple. Press services were government controlled, radio stations government-owned, school systems and teachers were influenced by political pressure and even history books rewritten to suit the political philosophy of the government. After a while, parents did not find the courage anymore to tell their children what a different system of government could look like for fear their own children might report them as enemies of the State. In other words, all sources of information were either influenced or cut off. Since you cannot compare what you are told with any other system or experience, your sense of judgment is eliminated. You simply and firmly believe what your government has determined as the proper doctrine for you.

The government is doing everything for you and has the nation's life and development organized all the way from birth rates to funeral procedures. With economy and living conditions improving steadily, most people feel that the system is exactly what the doctor ordered. The young ones most of all, since they have no way to compare to former times and different forms of life.

If you don't know what freedom and independence is like, how can you ever miss it?

I grew up under a perfect case of government of men rather than of laws. And then one day, after a destructive and eye-opening war, a young man of 25 is offered the opportunity to come to the land known to millions in the world as the country of hope and freedom. Let me state here that neither I nor any other member of the former German guided missile group was forced to enter into employment with the United States Government. It was by my own free choice that I accepted the offer without hesitation and with the greatest expectations. And may I say now that I have never regretted this step for a single second.

What did I find in the United States?

The best and the worst of everything. Positive and negative extremities in every field. In short, a democracy.

I began by absorbing as much as possible from papers, magazines and radio as my limited knowledge of the new language would permit. There was a zest in me for wanting to find out what was going on, for being able to get the news through free sources of information. However, for some time it was a rather disappointing activity. When a newcomer begins to listen to a number of well-known commentators, he is bound to get totally confused. Between Walter Winchell on one side, Drew Pearson on the other, and Gabriel Heatter with social security problems in the middle, the immigrant will be willing to retire to some deserted island because he finds out that these United States just are not worth living in. This phase, of course, is the first practical lesson of having the privilege of getting the news regardless of slant, color, or lament. To learn that a writer or commenator interprets the basic news item according to his views and taste. And that the citizen is entitled to his own interpretation as long as he is able to get the news. Sort of a big public debate of the issues. A very stimulating process, whether you appreciate certain views or not. With the information I received, I began my own thinking particularly on matters of public concern.

Then came another phase of learning for me. Where I came from in Germany, in a town of over one-half million people, there were no problems on new schools, teachers' salaries, symphony orchestras, operas and stage plays, recreational facilities and many other important contributions to educational and cultural development. When I asked my first question why it was necessary to have membership drives every year to keep alive the civic orchestra, I found out that the people of the United States do not want any level of government to mingle into what is considered outside the constitutional jurisdiction of government. An oldtimer clarified the issue for me by saying, "Son, once the boys in city hall begin to pay for the orchestra, next thing you know they will be telling the conductor what to play."

I got the point. I also made my first big mistake. By my line of questioning, some civic-minded person detected a trace of interest in me. And they just happened to have a vacancy on the campaign team. Life for me has never been the same since.

I learned about the value of civic organizations. They may be looked at by many people as knife and fork clubs or to promote only business relations in a selfish interest. There may be some of that kind. However, I have had the privilege over the past 11 years to meet thousands of hard-working men and women of all walks of life in many organizations. They give of their valuable time and energy, and often their money, to work on projects which improve our communities and our standards of living. They are an excellent way of having a representative group speak for the people. Community action is a vital part of our democratic way and civic clubs demonstrate the value of this action every day.

There was one organization in my civic development to which I shall be indebted forever. It all began one night after I had moved to Huntsville in 1950. A friend of mine took me to a meeting of a group of young men which had been organized just 4 weeks earlier. They knew little about parliamentary procedure, they had no money in the treasury, they complained about the meals, meetings lasted until shortly before midnight. All the things that would normally break a club. Not this outfit. Their spirit and aggressiveness balanced all other shortcomings. They had plans, big ones that nobody else was willing to touch. They made mistakes, spent their evenings away from their families, added their bosses' time to make things worse. But they moved, made their own members and other people think and act.

They were Jaycees.

And I made another mistake. There was something in that first administration about the finances that I just did not like and which made me state my position on the floor. You have one guess who their next treasurer was. From there on I went through an experience which is unequalled by anything I have learned since in civic work. And if I needed any proof of the spirit of Jaycees and the country of my choice, it came one meeting in 1952 when 110 young men disregarded my place of birth and the fact that I was not yet a citizen of this country and elected me their president.

After that how could I say "No" if civic work had to be done?

A third, and very important point for the newcomer is the realization that as an individual he becomes part of government. The feeling that he can do his part to determine what should be done for the welfare of community, State and Nation. Not just by enjoying the privilege to vote but by expressing his views in the proper form to the proper people.

But the newcomer also sees alarming signs which he just cannot understand. He finds that a great number of citizens in this country enjoy all the privileges without realizing the duties of a citizen in a democracy such as ours. He finds a complete apathy toward the affairs of our Government. He detects that many people do not appreciate the advantages offered to any member of this great family called the United States.

In general, it can be said that the citizen of a democracy has considerably greater responsibilities and has to work more to make his system effective than under any other form of government. I found it well defined by President Grover Cleveland who said "a government for the people must depend for its success on the intelligence, the morality, the justice, and the interest of the people themselves."

Being an American citizen requires that one should not only be aware of this God-given privilege but just as much, or more so, of the heavy duties which must be fulfilled if one desires to retain these privileges for his own and coming generations.

The duties involved can be stated in one simple sentence: Active participation in all the actions of governments on all levels.

This is a very time-consuming process, which can be divided into three main phases.

The first one is the necessity to be informed. Informed without censorship and restrictions about the events in community, State, Nation, and the world. Knowing what is going on and getting the facts is the prime requisite for self-government. Let us just have the plain facts. The people have always been able to do their own thinking. Sure, sometimes it seems to take forever to get public opinion to move. But with the proper information the people will show the natural qualifications and instincts to do right. I like the slogan on the editorial page of one of our large newspaper chains where is says, "Give light and the people will find their own way." Yes; let us have light without fear or prejudice.

Once a citizen is informed, he cannot help entering the second phase of his responsibility. The evaluation of what he has learned and the alertness to keep a watchful eye on certain events. No easy task at a time when our various levels of government are increasing in scope, responsibility and

budget so fast that it takes highly specialized personnel for each phase of activity. But how can we convey to our legislators what we want them to do for us if we do not understand the issues?

And that brings us to the last phase of active self-government. To express ourselves in sober and plain language toward our elected or appointed officials. We have to express our thinking and our demands without hesitation. If we fail to do so, then we have no right to complain about laws and rules which we dislike.

And we also should remember at this point that the most powerful way to express ourselves is at the ballot box. Not every person may be capable and willing to speak up publicly but it is inconceivable how anybody can fail to utilize the most potent weapon of a free citizen, the right to vote.

Thus we find ourselves confronted with the fact that the responsible citizen faces a never-ending effort to keep up, or better even, stay ahead of his government.

The greatest enemy of this effort is an easily understood complacency in a nation where continuous increase in payrolls and the highest standard of living in the world creates a lulling effect. A few times a year we hear public speakers tell us how well off we are under our form of government. We enjoy hearing about our fine heritage. We feel grand after such speeches, go home in fine spirit, proud to live in this country, feel secure from the evils of the world and—go right on to ignore our responsibility of active participation in government.

We cannot live on the memory of a heritage forever. A heritage is like a well-constructed building. Even the most qualified architects, the most solid foundation, and the best building material will not guarantee that a structure lasts for eternity. It will not endure without maintenance and improvements. We need to tell ourselves and the next generation about this house called heritage and how much of our interest, thinking, time, and money it will take to preserve the structure.

We must ask ourselves regularly whether we really understand what is meant when we use the expression "the American way of life." Is it a system of merely being well fed, well dressed, and equipped with the latest models of everything? Or does it stand mainly for what God intended men to have, freedom, and self-respect?

What action should you and I, as people already active in civic affairs, take?

First of all, we must realize that we count on only a relatively small percentage of all citizens to be active in civic affairs. This is a sad state of affairs, but we must be realistic about this in order to make any plans for the promotion of citizenship.

I have been asked frequently what my political plans are. My participation in community activities was interpreted by many people as a prelude to a political career. These people are confused. This is not a prelude; I am in politics. Any work leading toward community action and improvement, any letter to a legislator, any participation in Government is politics. All of you in this audience are in politics Please don't shudder. When I say politics, I am referring to the area which has been defined as "The study of influence and the influential." The purest and cleanest form of being part of government.

Too many of us have come to take for granted that politics is a cover name for something that goes on instigated by people called politicians. Many citizens are convinced that it takes men and women of some doubtful character and background to be a politician. Certainly a most discouraging indication when we look for such qualifications to choose public officials. The only thing wrong with a number of politicians is the fact that we elected them. And probably by staying away from the polls.

There should be no doubt in our mind that citizenship, civic responsibilities and politics are inseparable. They are the very lifeline of government in a democracy.

We must draw a greater number of professional citizens into active civic work. Their education and talent, their thinking ability and logic make them most suitable to plan and prepare action which our communities should take. We do not pay our public officials enough to expect all the qualifications of top executives. Particularly city and county governments depend heavily on the work of boards and commissions comprised of appointed members. These boards should not be packed with political cronies, but with the most qualified brains available. Which in turn means that these brains have to be willing to serve, get into ticklish issues, risk public criticism, and stand their ground.

Next, we should always remember that our duly elected lawmakers should hear from us regularly. We believe in government by laws but we fail to inform our lawmarkers of our position. Legislators cannot work efficiently by using a crystal ball. They need to know what we, the people, really think and want. You will hear from many citizens that government these days is influenced by pressure groups with plenty of money and power at their disposal. I submit to you that there is one lobby capable of exerting more influence than any other individual or organization. This group has millions of powerful lobbyists. It has a simple but highly important name, the people.

Another important immediate action should be an evaluation of how and what we are teaching our children in regard to the pros and cons of democratic and dictatorial forms of government. It is not enough to salute the flag in the morning when our children don't understand the principles it stands for. Telling them with standard phrases that they live in the best country in the world is not good enough. The continuous teaching of the advantages this country offers must lead to the complacency found in the present generation. Students must be told about the pitfalls commonly occurring in a democracy. They must learn what to look out for in order to preserve the privileges they usually take for granted.

This method will require teachers who will not just depend on standard textbooks. I am sure most of you remember some phases of history and political science so vividly because somebody taught you with conviction, enthusiasm, and a realistic interpretation. This brand of education will penetrate and stimulate the student. And when I say student, I mean to include grammar school grades. It is never too early to bring children in touch with the most important features of their future life. Let us not underestimate their capacity to grasp and remember these teachings about democracy. Television has taught children below 10 years of age what many adults have never learned and may not even understand. Our children talk in scientific terms that baffle their parents and they know statistics on many accomplishments of this country, but they fail to understand the basic reasons which, in our way of life, lead to these facts.

There are three specific issues foremost on my mind these days which I consider a direct threat to our democratic way. In a way the issues are connected since one leads to the other. We should not be afraid to speak up and discuss the potential danger around us once we have realized and pinpointed where it is located. Indeed, it is our solemn duty to do so.

First, there is a growing tendency toward conformity. Sure, there are some rugged individualists left who do not care much for conformity and will contribute to those newspaper headlines which will stir up public interest and debate. One glance at the history of the United States or at any significant event in world history demonstrates that there was always a driving force of nonconformity, liberal spirit, and voluntary action. These factors have contributed immensely to our present political and economic advantages. It is said, "Whoso would be a man must be a nonconformist." If we want to be that man, then we cannot wait for the ideas and the opinion of our neighbors and friends before we dare say anything. Once we think that it is not nice or fashionable to object and speak up, then we have delivered the first deadly blow against democracy. We do not want to be led by the hand by anybody. We want to be as independent as we were meant to be when nonconforming men wrote the world's greatest political documents, the Declaration of Independence and the Bill of Rights.

An individual leaning toward conformity will soon be a citizen without an opinion of his own and thus a voter influenced by everything but his conviction.

The second issue, usually a result of conformity, is the growing danger of socialism. How many projects have your city and county governments undertaken in recent years without asking for Federal and State financial assistance? How many times have you complained about Federal and State interference in your local affairs? Well, what do we expect? We seem to forget that government help of any kind has to be authorized by a law. Once a law is passed it requires administration, regulations, controls, and investigations. Exactly the things we don't appreciate. Still, we are asking for more and more every year. Our recent staggering national budget is the result of this development. Too much for free from the government creates too much government.

Let me ask our States righters or constitutional liberals, and I consider myself one, whether they are willing to pay for their own affairs in city, county, and State governments. Do they dare request the abolition of certain laws that seem to be of assistance but in reality are a poor return for each dollar sent to Federal or even State level? Will our legislators have the courage to ask for the repeal of laws which provide something for free to their constituents? Better yet, are we willing to demand from our lawmakers to take this position?

Once we have become just a mass of human beings then we approach the issue we have to guard ourselves against as the greatest danger, the communistic system.

This doctrine of Marx and Lenin is so strange to us that we often feel it just cannot be that way. Our basic desire for a Christian and independent life is so opposite the teachings of communism that many citizens fail to realize the potential danger. If the American way of life ever had one true enemy it will be found in communism. The ideological battle may be much more important in the future than a military conflict. But we should apply the age-old military rule that you have to know and understand your enemy before you can begin to fight him. We must include in political science teachings the facts on communism. Burning books with Communist tendencies is the first sign of fear that we cannot handle this issue. It is not enough to tell our children that dictators are bad men; so are gangsters and criminals. We have to discuss the system and its goals. We have to demonstrate the difference between our way and their way to make our point. Our teachings must be supplemented with demonstrative civic action.

The surest way to bring communism to a halt at our borders is to keep the people working in an environment of free enterprise and strong, healthy communities. These are the basic ingredients for strong States and an even stronger Nation. By fulfilling our civic responsibilities, we have the

opportunity to raise the level of our communities in many fields. Our active participation in government is the key to our effort to keep the free spirit of America alive.

You must be the leaders in this hard task. You will have to devote even more time to this effort. In these turbulent days of hot and cold wars, more than ever before in the history of this great Nation, you and I have to assume our full share of public responsibility.

Let us exercise this privilege by remembering the words of the philosopher, Goethe, who more than 150 years ago reminded freemen of their possible fate when he said that, "None are more hopelessly enslaved than those who falsely believe they are free."

Rural Life Sunday

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. CURTIS. Mr. President, on May 26 Rural Life Sunday was observed. I ask unanimous consent to have printed in the Appendix of the RECORD a sermon delivered by the Reverend John Streng, of Beatrice, Nebr., pastor of St. John American Lutheran Church of Beatrice.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

GOD GIVETH THE INCREASE

(Sermon by Rev. John Streng, D. D., St. John American Lutheran Church, Beatrice, Nebr., for Rural Life Sunday, May 26, 1957)

(Text: Psalms 67: 5–7)

This is Rural Life Sunday, whose conscientious observance is so warmly recommended by church and State. Its purpose is to emphasize the meaning of the Christian way of life in rural areas, and city folk in Nebraska are not so far removed from the farm to sever connections. The Lutheran Church has always been strong in rural places. For many centuries the church has stressed the relations of soil conservation to religion. This Sunday during the so-called Rogation season immediately after Easter is well suited. The idea is of ancient origin. History tells that Egyptian leaders, both religious and national, observed certain times for ceremonies of the blessing of land and seed at the time of planting. Ancient people always sought the favor of their gods; and since human life depends so much upon crops of the field this was one way in which all the people could unite to appease their gods and worship them.

Surely we Christians have every right and reason to seek God's blessing upon our land and seed and cultivation. Our home and church and community life depend upon the relation of soil and soul. If our land brings forth good fruit in due season under the benevolent providence of God, the soul of the Christion rejoices and he gladly uses proportionate giving in thanksgiving to God for His blessings.

Many youth organizations and local farm groups of children and adults are also recognizing the spiritual value of a nationwide observance of gratitude to God. If Communists and others can gather on Sundays and weekdays to denounce the Christian religion, to plot the overthrow of a peaceful government, to sow seeds of dissention and distrust among people, to try and irritate family against family and nation against nation, surely Christians realize that their whole life and future are at stake in thanking God for preserving this land of liberty; where everyone is entitled to food, shelter, and clothing; where everyone is endowed with life, liberty, and the pursuit of happiness under divine protection and guaranty. We are very happy and honored indeed that we have several groups of Christian youth and adults as our guests today uniting with us to thank God for all His benefits and invoking His Grace that our land may long be bright with freedom's holy light. We Americans can never thank God enough for the unlimited benefits, which we take for granted. Many fail to even say: "Thank you."

Martin Luther, the great reformer of the 16th century, said in his famous table talks: "God could be exceeding rich in temporal wealth if He so pleased. If He came to the emperor, the pope, the king, the bishop, the rich merchant, the wealthy farmer, and said: 'Unless you give me 100,000 crowns you will die on the spot,' everyone would answer: 'I will give it with all my heart that I may live.' But now we are so often unthankful, though we receive of Him to rich overflowing such great benefits. If God caused every human being to be born with 1 leg, and 7 years later gave him the other, and in the 14th year gave 1 hand and in the 20th year the other, we would be much more grateful than we are. So also all the gifts that God gives to man and brute beast. He maintains birds and such creatures that are worth comparatively nothing. Scarcely a small proportion of the earth bears corn, and yet we are all maintained and nourished. I verily believe that there grow not as many sheaves of corn as there are people in the world, and yet we are all fed, and there remains a good surplus of corn at year's end. This should make us see God's blessing."

America is truly the 20th century land of milk and honey. In spite of much inequality in many ways, no one needs to go to bed hungry at night, or awaken wondering about clothing and shelter. It is a sad commentary indeed that some parts of our country still barely exist on the soil and the people scarcely make a living. It is not right that public and private wealth is apparently squandered in the millions, while honest, courageous, sincere, poor people slave to try to make ends meet.

The farms and ranch lands of the Nation bear an annual burder that is incalculable.

Food, air, water are still basic to human life. All are God-given. Land is a challenge to farmer and factory worker to realize God's magnificent bountiful plan of plenty for all. God has again and again charged man to use land wisely and pass it on to future generation in the best possible condition. This is God's earth. And we must give account for the use of or abuse of every inch of it. The more Christian a country, the more its people will look upon the land as God does, namely, a noble heritage from which, next to His grace, all life, liberty, and the pursuit of happiness must originate. We would not dare to or care to mutilate the property of others, realizing that their very life depends on it and that they have worked hard for what they own. Neither have we a right to scar and scour God's green earth through willful neglect or greed.

When the Lord created the earth He put a protective cover of living soil over it. Statistics show that it averages only about 9 inches. It is a restricted, immensely valuable area, for it produces all the food for almost uncounted millions. It is a thickly populated private zone of microscopic life which changes natural vitamins into plant food. Without this wonderful design of God, the earth would become a barren desert and soil would soon blow away. Soil erosion, careless farming, floods, military and business installations, and numerous other factors have greatly reduced the American area to sustain our Nation and most of the others in the world.

Many leaders in church and state are deeply concerned about teaching people that we are God's stewards, mere managers of His wonderful earth. That is one reason why the man of God, speaking in our text, calls upon the nations of the world to consider their Creator and rouse the people to praise the Lord for His loving kindness. Do you thank God every day for life and health and all that's good? Do you say grace at the table, praising God from Whom all blessings flow? Do you remember those lovely words: "The eyes of all wait upon Thee, O Lord, and Thou givest them their food in due season. Thou openest Thine hand and satisfiest the desire of every living thing"? How encouraging and inspiring to watch people on the land give God glory and share with Him His gracious blessings. The psalmist knows that it pleases God immensely when people stop to think about what He is doing for them, and say "thank you." Listen: "Then shall the earth yield her increase; and God, even our own God, shall bless us. God shall bless us and all the ends of the earth shall fear Him." This is the result of realizing the priceless worth of good soil. The conscientious tilling of land in agreement with God's published laws is the concern of the church just as much as the state. The church, as God's representative, must speak out against ravishing and ruining good land. The strength of the church, and the character of the country people, is in direct ratio to their recognition of God as the Giver of all good things.

God's handiwork is evident everywhere on and in the soil. Grass and fruit, domestic and wild animals, birds, and beasts all praise God in their own way. Mountains, rivers, clouds, and celestial constellations are God's satellites to help benefit the earth. It is so important that we carefully nurse and nurture good, productive land. The raindrop has preached a powerful sermon through soil conservation, waterways, grassways, dams, and other installations. The ray of sunshine has brought to man a gospel of temperature and its careful regulation. Every farm boy knows that God's wonderful mystery of the soil begins with rock and its slow integration as nature, water, acids, organic life, and other forms work timelessly to produce rich land. The farm picture is changing, we are told. This week a newspaper editorial published data from the National Income Division of United States Census Bureau, that in 1955 agriculture accounted for only 12 percent of national income.

We stand in awe at the fathomless wisdom of the Creator. We have learned that good soil can easily vanish if we are careless with it. Just as the body suffers through neglect, so the soil and soul of man deteriorate where divine life-giving sources are not preserved. Man's needs increase as population continues to mushroom. Millions of mouths are added each year. Each one deserves good, nutritious food for strong, healthy bodies.

What shall it profit a nation to build huge planes and lose its plains? Why build skyscrapers and guided missiles and yet blow up the earth? Thank God for the alert battalions of conservation corps and church leaders who everywhere fight for the freedom of the wilderness.

Let us remember the psalmist's invitation to praise God as the source of all life. May we honor God and country and city by the manner in which we respect God's earth. Amen.

The Fast Growth of Union Power

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. GOLDWATER. Mr. President, recently Mr. Donald Richberg finished work on a book which has just been published, entitled "Labor Union Monopoly." In yesterday's Wall Street Journal Mr. William Henry Chamberlin wrote what I consider to be an outstanding review of Mr. Richberg's book. His review is entitled "The Fast Growth of Union Power." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BOOKSHELF: THE FAST GROWTH OF UNION POWER

(By William Henry Chamberlin)

It sometimes happens that a former sympathizer with the ideal of communism becomes strongly critical of what communism has turned out to be in practice.

In much the same way, a man who was sympathetically associated with organized labor at a time when only a small minority of workers were unionized and when conditions in many industries left much to be desired, may feel a sense of shock at the vast increase in union power during the last quarter of a century.

This is the state of mind of Donald R. Richberg, legal adviser to unions in the Twenties and last head of one of the more short-lived alphabetical experiments of the New Deal, the NRA. He has prepared a short, hard-hitting indictment of what he calls the unchecked growth and continuous spread of labor-union monopolies in which he sees a grave menace to our free economy and our free government.

"Fifty years ago," writes Mr. Richberg, "the picture of the labor union as a weak, idealistic organization of downtrodden workers struggling against an oppressive concentration of property power was often accurate. Any such picture of an established union today is not merely ridiculous; it is willfully or ignorantly untruthful."

The immense growth of union membership on an industrywide and nationwide basis is what creates the conditions of monopolistic power, in Mr. Richberg's opinion. There was a time when the existence in one plant of a closed shop or a compulsory union shop did not mean denial of the right to work to the man who preferred not to join a union. This is no longer true when big industrial unions enroll all the workers from Maine to California, from Minnesota to Florida.

As a result of the huge influx of new members and the tendency to raise initiation fees and dues, unions have become very rich. Although exact financial figures are not available, the author suggests as a careful estimate that union revenues from dues alone probably exceed $450 million a year.

The McClellan committee has turned a spotlight of publicity on some financial abuses in one big union. But Mr. Richberg is concerned with the power of the union leadership, rather than with individual cases of corrupt practice.' The labor unions, he says, are the organizations that spend the most money trying to persuade or bulldoze Congressmen to vote for their private interests.

And, as he puts it: "There is grim humor in the constant complaint of the unions against alleged business monopolies, when the only widespread, long-standing, and effective monopolies in the business world are those maintained and constantly expanded by labor unions. Their legal exemption from prosecution, combined with a legal expenditure of vast sums of money and an illegal use of physical violence and terrorism, creates for them a monopolistic power which no business combination could possibly exercise."

As an example of how the shoe of oppression is now on the other foot, Mr. Richberg recalls the old so-called yellow dog contracts under which employees were required not to join a labor organization. These have long since been made illegal. But now the individual worker may find his freedom of choice just as effectively curtailed through the union shop agreement, under which every employee is forced to be a member, pay dues, and submit to the discipline of one particular union.

Mr. Richberg sees several factors as having combined to enhance the power of union leadership. The Wagner Act and other New Deal legislation, imperfectly balanced by the Taft-Hartley Act, tipped the balance heavily on the union side and increased the pressure which those in control of the union machinery could exert in industrial disputes. Certain rulings of the Supreme Court have extended the exemption of unions from the laws against monopoly and conspiracy in restraint of trade.

He cites the prolonged although unsuccessful strike at the Kohler plant in Wisconsin as an example of the use of violence and intimidation when union bosses are unable to enforce their will in any other way.

"Squads of strong-armed thugs," he writes, "have been sent from Detroit to intimidate strikers as well as nonstrikers and to carry on the rough stuff that will discourage both strikers and nonstrikers from working for Kohler. The cynical practice of calling these criminals and muscle men educators who are sent as experts to aid in collective bargaining is a good example of the arrogance with which high officials in the huge monopoly unions sneer at the public opinion which is expected to support their lawless procedures."

As remedies for labor monopoly evils Mr. Richberg submits the following three propositions: The creation and exercise of monopoly powers by labor unions should be made unlawful. Compulsory unionism, a form of involuntary servitude, should be abolished by law; this is a duty of Congress under the thirteenth amendment. The right to strike should be qualified and limited by defining the lawful objects, the lawful methods, and the lawful occasions of strikes.

Specifically, strikes against the public health, safety, and welfare, strikes to compel political action, strikes without a preceding reasonable effort to avoid a strike, and strikes conducted with the aid or toleration of criminal violence should be held unlawful.

Here the author grasps a very prickly pear—the question how the prohibition of a strike could be enforced. The late Senator Taft once asked Mr. Richberg how you could put 10,000 men in jail. His reply, as repeated in this book, is that nothing of the kind would be necessary; it would be necessary only to deal with the leadership.

The Richberg recommendations go farther than would seem politically possible, especially at a time when public opinion, although startled by the revelations before the Senate investigating committee, has not recently been stirred by any strike which poses a clear threat to general safety and well-being.

All the same, Mr. Richberg has posed in vigorous controversial form issues which figure in the State "right to work" laws and which enter into the whole fabric of a modern industrial society.

Idaho Power and Tax Writeoffs

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, June 11, 1957

Mr. CHURCH. Mr. President, an exceptional service in the interest of responsible government is currently being rendered by the Senate Antimonopoly Subcommittee under the chairmanship of the distinguished Senator from Tennessee [Mr. KEFAUVER]. The startling exposures already made by this committee in its investigation of the rapid tax writeoffs recently granted the Idaho Power Co. at Hells Canyon are causing widespread public indignation. An excellent summary of the committee's accomplishments to date is contained in the column written by Doris Fleeson and published in yesterday's Washington Evening Star. I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IDAHO POWER AND TAX WRITEOFFS—SHERMAN ADAMS' ROLE IN CASE PROBED; KEFAUVER PRESSING SENATE INQUIRY

(By Doris Fleeson)

The Eisenhower administration once again has stubbed its toe on the power issue. In no other field has its performance been so consistently clumsy or its results so ilifated.

The administration's nemesis, as it was in the Dixon-Yates case, is again Senator Estes Kefauver. Leading a pack of determined senatorial investigators, he took up the unpromising looking Dixon-Yates contract last year.

By the time he was through the Government was forced to back out hurriedly. The Dixon-Yates combine's claims for compensation are still pending before the United States Court of Claims.

Senator Kefauver is now investigating the circumstances under which the Idaho Power Co. was granted permission to build three low dams on the Snake River in preference to the single high dam which public power advocates had hoped the Government would construct at Hell's Canyon.

The dogged inquisitor has already drawn an embarrassing amount of the administration's blood.

According to the testimony of Jerome Kuykendall, chairman of the Federal Power Commission, Idaho Power got its certificate of convenience and necessity for construction of its three low dams on the basis of understanding by the commission that the dams would be built at no cost to the Federal Government. Yet Idaho Power immediately sought quick tax amortization for the costs of the dams under the defense emergency.

Director of Defense Mobilization Gordon Gray granted the quick tax amortization privilege although, as Senator Kefauver drew out, Secretary of the Interior Seaton had written a letter to Mr. Gray strongly protesting the award to Idaho Power.

The Chief of the Accounting Division of FPC testified that by virtue of the fast writeoff, the cost to the taxpayers would

amount to more than $83 million. Idaho Power, he testified, might eventually benefit as much as $339 million through its tax privilege.

In the face of this, Chairman Kuykendall said that the Commission had made a mistake.

Now the Kefauver committee is looking into the flurry of activity in Idaho Power Co. stock on April 15, the day on which Mr. Gray had approved the fast tax writeoff.

The decision was not announced publicly until more than a week later. On that day 4,500 shares of Idaho Power changed hands as against a previous average daily sale of 700 shares.

The committee has issued subpenas for the records of both the New York and San Francisco Stock Exchanges. This week it will begin a study of all transactions in an attempt to see who, if anybody, had inside information and took advantage of it.

The committee is also expected to ask for a list of Idaho Power's stockholders. Idaho Power, despite its name and area of operation, is a Maine corporation.

The name of Presidential Assistant Sherman Adams which often figured in the Dixon-Yates case has entered the Idaho Power controversy as well.

Senator KEFAUVER drew from Mr. Gray the fact that the latter had conferred with Mr. Adams relative to the announcement of the grant of rapid tax amortization, but beyond that Mr. Gray pleaded executive privilege.

Mr. Adams may again be asked to testify although the committee is certain he will refuse to do so.

Since the committee is unlikely to get Mr. Adams as a witness and since other Government officials refuse to testify as to conversations they have had with Mr. Adams, Congress may never learn the part he has played in the administration's approach to power problems.

Nevertheless it is Mr. Adams' intransigent attitude on the question of public versus private power which many Senators blame for the administration's consistent difficulties in this field.

Justice to the Memory of Senator McCarthy

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, June 10, 1957

Mr. BARRETT. Mr. President, on my return trip to Washington after attending the Wyoming stock growers' convention in Lander, Wyo., on June 6, last, I read with a great deal of interest David Lawrence's article, "Justice to the Memory of Senator McCarthy," from the June 7 issue of U. S. News & World Report.

I have been greatly impressed with the logic and reasoning of David Lawrence's editorials, but it seems to me that he documented and marshaled his facts and ideas on this particular occasion with great clarity and conviction.

Upon my return to Washington, I received a letter from my old friend and former United States Senator from Wyoming, E. V. Robertson, a part of which reads as follows:

I have a great regard for David Lawrence. I have always had the highest possible regard of Joe McCarthy. I am suggesting to you that you have this article published in the RECORD. I, for one, would greatly appreciate it.

I am informed by the Public Printer that the manuscript is estimated to make 3¼ pages of the RECORD, at a cost of $250.25.

I ask unanimous consent that the article by David Lawrence be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUSTICE TO THE MEMORY OF SENATOR MCCARTHY

(By David Lawrence)

True liberalism often requires the championship of causes that at the moment may be unpopular. For true liberalism is not intimidated by the passions of the hour. True liberalism fights for the ultimate verdict—the justice that sometimes comes only in the court of public opinion.

Liberal-minded President Wilson once said in a public speech:

"I would rather fail in a cause that I know some day will triumph than to win in a cause that I know some day will fail."

True liberalism challenges us today to rectify a wrong done to the cause of freedom of speech in America.

Such a wrong was committed on December 2, 1954, when the Senate of the United States adopted a resolution in which it cited specifically the views expressed in public forums by Joseph R. McCarthy, the junior Senator from Wisconsin, and then formally "condemned" his utterances as "conduct" tending "to obstruct the constitutional process of the Senate."

For either House of Congress to adopt a resolution "condemning" a Member because his views may be distasteful, or because the individual who uttered them may himself be disliked, is to restrict, if not to deny, freedom of speech in America.

We may accept as our guide to true liberalism the historic definition of free speech bequeathed to us by Justice Oliver Wendell Holmes of the Supreme Court of the United States—the greatest of the liberal jurists. He wrote in a famous opinion that free speech is "freedom for the thought we hate."

We must ask ourselves, then, liberals and nonliberals alike: Are we tolerant enough, are we courageous enough, to endure the opinions of those in public office whom we dislike?

Now that Senator McCarthy is dead, it may be possible to examine without feelings of personal rancor the basic issues involved in the controversy which raged in the Senate in the autumn of 1954. It may be, of course, that there are still men in the Senate who cannot forget their personal animosities or their wounds of pride. But at least they can strive to reconsider impersonally the issues involved. They can examine their consciences and ask themselves in all humility whether the vote as taken should be left unchanged in the proceedings of the Congress of the United States, or whether it should now be reversed on the initiative perhaps of the very men who originally pressed it for passage.

For, if the resolution stands, it will remain as a blemish on the picture we have painted to the world of a nation dedicated to free speech. It is today a blot on the record of constitutional guaranties long extolled and respected in America.

To refresh our memories, it is necessary to read anew the full text of the resolution itself. It was in two sections.

One of the two sections said:

"Resolved, that the Senator from Wisconsin [Mr. McCarthy] in writing to the chairman of the Select Committee To Study Censure Charges, after the select committee had issued its report and before the report was presented to the Senate charging three members of the select committee with 'deliberate deception' and 'fraud' for failure to disqualify themselves;

"In stating to the press on November 4, 1954, that the special Senate session that was to begin November 8, 1954, was a 'lynch party'; in repeatedly describing this special Senate session as a 'lynch bee' in a nationwide television and radio show on November 7, 1954;

"In stating to the public press on November 13, 1954, that the chairman of the select committee was guilty of 'the most unusual, most cowardly thing I've heard of' and stating further: 'I expected he would be afraid to answer the questions, but didn't think he'd be stupid enough to make a public statement'; and

"In characterizing the said committee as the 'unwitting handmaiden,' 'involuntary agent' and 'attorneys-in-fact' of the Communist Party' and,

"In charging that the said committee in writing its report 'imitated Communist methods—that is distorted, misrepresented, and omitted in its effort to manufacture a plausible rationalization' in support of its recommendations to the Senate, which characterizations and charges were contained in a statement released to the press and inserted in the CONGRESSIONAL RECORD of November 10, 1954, Senator McCarthy acted contrary to senatorial ethics and tended to bring the Senate into dishonor and disrepute, to obstruct the constitutional processes of the Senate, and to impair its dignity; and such conduct is hereby condemned."

This is an indictment of free speech. However unpleasant may be the words and however displeasing to individual Members of the Senate, the fact remains that Senator McCarthy's statements were expressions of opinion concerning the members of a committee who, Senator McCarthy was convinced, were unfairly trying to stigmatize him.

It will be noted that none of Senator McCarthy's statements was made during sessions of the Senate. The Senate, by its rules, may call to order anyone who speaks discourteously of another Senator on the floor of the Senate, and, of course, any Member of Congress who is criticized outside the sessions of Congress may have recourse to the courts, where the laws of libel and slander can be invoked.

The Senate of the United States is, however, not vested with the power to punish its Members for speeches made or even acts committed outside the Senate, except that it may expel a Member for any reason whatsoever.

But the Senate did not in its action in the case of Senator McCarthy raise the question of expulsion. It adopted instead a resolution of condemnation. The comments it considered objectionable were all made outside the Senate and on subjects highly controversial—emotional expressions of bitterness that were obviously the result of continuous provocation.

PROVOCATIVE SPEECHES

Indeed, the select committee itself, which considered the censure charges, said in its report that it had eliminated one of Senator McCarthy's denunciations of a fellow Senator as a basis for "censure" and acknowledged frankly that his outburst was due to the other Senator's "provocative speeches."

What price provocation? If we examine all the statements made against Senator McCarthy in the long period of controversy prior to the time when the Senate voted its resolution, we will find that the words he is cited in the resolution as using are mild and restrained as compared with the epithets and invectives hurled against the junior Senator from Wisconsin by some of

his colleagues, both on and off the floor of the Senate.

Let us examine a few of them:

1. On September 28, 1951, a United States Senator demanded in the Senate the expulsion of Senator McCarthy. In a 10-point indictment Senator McCarthy was accused of lying under oath, accepting influence money, hoaxing the Senate, practicing calculated deceit, engaging in election frauds, and making irresponsible, libelous, and false statements.

2. On February 10, 1952, in a speech outside the Senate, the same United States Senator declared that Senator McCarthy "has now added blackmail" to "deceit and falsehood" in attacking those who disagreed with him.

3. On May 7, 1954, a United States Senator characterized the hearings being conducted by Senator McCarthy, chairman of a Senate investigating committee, as "unsavory" and "sordid" and declared that "the American people can see at first hand some of the methods that have been employed, such as doctored pictures and counterfeit, phony letters."

4. On June 1, 1954, a United States Senator said of Senator McCarthy: "Were the junior Senator from Wisconsin in the pay of the Communists he could not have done a better job for them." The same Senator added later:

"The real heart of the mystery concerns the personal relationships of the Army private, the staff assistant, and the Senator."

Another statement:

"His (Senator McCarthy's) anticommunism so completely parallels that of Adolf Hitler as to strike fear into the hearts of any defenseless minority."

5. On June 12, 1954, another United States Senator, in a public speech outside the Senate, said:

"What is the source of the most effective damage being done to the United States today? What network of Communist spies and saboteurs could have succeeded in turning this Nation upside down and inside out, in paralyzing the Army and Congress and in sabotaging the defense effort in terms of delay and interruptions beyond any reckoning of it? No Communist could have done it. But McCarthy has accomplished it as a mere side effect of his activities."

6. On June 13, 1954, a United States Senator, in a nationwide television broadcast, declared that Senator McCarthy was seeking to be the sole private eye, prosecutor, judge, jury and sentencer.

7. One June 27, 1954, a United States Senator made a statement similar to one of June 1 about Senator McCarthy's position. He said: "It very closely parallels the fanaticism that Hitler had over his people."

8. On July 18, 1954, a United States Senator, in a speech in the Senate, referred to the excesses and crimes of Hitler and fascism and then declared:

"Each of these features finds its parallel, though it must be admitted to a weaker degree, in the career of the junior Senator from Wisconsin."

Need there be given any more citations of contumacious conduct or of vilifying statements against Senator McCarthy in the months that an organized campaign against the junior Senator from Wisconsin was being carried on, which was finally climaxed by the Senate's decision to appoint a committee to consider the proposal of censure.

Every one of the statements recited in the Senate resolution which condemned Senator McCarthy was made by him after the Senate committee on censure had assailed him, either at its hearings or in its report filed on September 27, 1954.

It might be argued that the long list of statements by other Senators excoriating Senator McCarthy should also have been subject to a resolution of condemnation. If, indeed, the precedent established in the resolution voted by the Senate itself on December 2, 1954, became Senate law, then not only was the Senate remiss in 1954, but it is remiss now in failing to pass resolutions of condemnation of the statements of similar import made inside and outside the Senate since 1954 by those Senators who have publicly impugned the character and integrity of their colleagues and of the President of the United States.

A RULE FOR ONE SENATOR ONLY?

It is difficult to see why, in view of the record of abuse directed at Senator McCarthy, it is what he alone said that was considered contrary to senatorial ethics. Will history say that only a Senator who had the temerity to fight, though clumsily at times, the menace of Communist infiltration in America was singled out for condemnation? Must it not be conceded that Senator McCarthy was the center of a very bitter controversy and that he fought back as viciously as did those who fought him?

Do words themselves actually obstruct the constitutional processes of the Senate? If so, then why is it that a filibuster by an individual Senator lasting hours and hours, tactics designed deliberately to block the passage of legislation desired by a majority, is never made the basis for a resolution by the Senate such as that which was voted against Senator McCarthy? Are there any rules even now that can be applied equally to all Senators who may be guilty of violent outbursts, or does the rule apply only to a certain type of Senator with certain types of views?

The answer must be that, no matter how intemperate the expressions of opinion, it is the intent of the Constitution to allow all manner of speeches to be recorded in Congress and to let the jury in the court of public opinion decide on the wisdom of such utterances.

It is necessary next to examine the remaining section of the resolution adopted by the Senate. It reads, in full text, as follows:

"*Resolved*, That the Senator from Wisconsin, Mr. McCarthy, failed to cooperate with the Subcommittee on Privileges and Elections of the Senate Committee on Rules and Administration in clearing up matters referred to that subcommittee which concerned his conduct at a Senator and effected the honor of the Senate and, instead, repeatedly abused the subcommittee and its members who were trying to carry out assigned duties, thereby obstructing the constitutional processes of the Senate, and that this conduct of the Senator from Wisconsin, Mr. McCarthy, is contrary to senatorial traditions and is hereby condemned."

This refers specifically to the efforts of the Senate Subcommittee on Privileges and Elections to obtain in 1951 and 1952 testimony from Senator McCarthy with respect to various unproven charges which were in circulation at the time.

But the Senate Subcommittee on Privileges and Elections said on January 2, 1953, in filing its final report on the subject, that "a number of its aspects have become moot by reason of the 1952 election." This was one way to take cognizance of the fact that Senator McCarthy had won reelection to the Senate. In this connection, the report said:

"Such facts therein as were known to the people of the States particularly affected have been passed upon by the people themselves in the election."

For it is a fact that all the important issues in the proceedings of the Senate Subcommittee on Privileges and Elections were published in the press before or during the campaign of 1952 in which Senator McCarthy was up for reelection.

Indeed, when the people of the State of Wisconsin on November 4, 1952, had an opportunity to defeat Senator McCarthy, they knew virtually everything he had said and all that had been said against him in his controversies. For this was a matter of record in the press of Wisconsin.

There were a few incidents later on—after the election. One was the refusal by Senator McCarthy of a written invitation to testify, sent him by the same Senate subcommittee on November 21, 1952. Incidentally, this was the first formal invitation to testify ever sent to Senator McCarthy by instruction of the subcommittee during its 16 months of life. He actually had testified voluntarily before this subcommittee on July 3, 1952, and could then have been asked any questions the members desired. For the charges against him had been widely published by that time.

Another point cited against Senator McCarthy was that he wrote on December 1, 1952, a denunciatory letter in which he charged that the Senate Subcommittee on Privileges and Elections had impugned his honesty and integrity without evidence to support its charge. He declared also that the subcommittee was politically motivated.

But these are plainly expressions of opinion by a United States Senator. If they were violations of senatorial conduct, the Senate had a right on January 3, 1953—the day after the subcommittee's report was submitted—to ask Senator McCarthy, as he presented his credentials of admission for a second term, to step aside while his qualifications for membership were examined, and to ascertain whether he had "obstructed constitutional processes." Indeed, Senator McCarthy reviewed the charges against him in the subcommittee's report on the day it was filed—on January 2—and publicly challenged the Senate to refuse to seat him. But the Senate ignored the subcommittee's report and admitted him the next day for a new term.

It is a fact, moreover, that the same Senate subcommittee which had been investigating Senator McCarthy never issued a subpena requiring the presence of the Senator at its hearings. It merely issued "invitations." No Senate rule, therefore, was violated by Senator McCarthy in refusing to testify a second time. No legal processes were "obstructed."

Again and again Senators for various reasons decline "invitations" to testify. So do many citizens. It is an established custom. It amplies no illegality.

THE LA FOLLETTE PRECEDENT

What, however, were the "senatorial traditions" in cases in which a Senator was under charges of misconduct? The record shows that the elder Robert M. La Follette, senior Senator from Wisconsin, in a parallel case, declined to testify before a Senate Subcommittee on Privileges and Elections and ignored letters from the same subcommittee.

The case arose when a resolution was offered in the Senate demanding the expulsion of Senator La Follette because he was charged with being "a teacher of disloyalty and sedition, giving aid and comfort to our enemies, and hindering the Government in the conduct of the war." The charge was first filed by the Minnesota Commission of Public Safety in September 1917, during World War I, because of speeches made by Senator La Follette allegedly interfering with the prosecution of the war. Both houses of the Legislature of the State of Wisconsin, by overwhelming vote, requested the United States Senate to expel the Wisconsin Senator.

Senator La Follette, however, demanded the right to cross-examine witnesses and said publicly that the committee "denies me the right to a definite statement of the offense of which I am accused and the evidence upon which the charge is supported—a right which is accorded to every man called to answer even for a mere misdemeanor."

This was precisely the position taken in 1952 by Senator McCarthy. He said that he

would appear in response to a subpena but that he would demand the right to have his attorney cross-examine witnesses and to be advised of the charges against him. The Senate Subcommittee on Privileges and Elections never issued such a subpena. It never assured him of the right to cross-examine witnesses and to be advised specifically of the charges against him. Though this is the very code that so-called liberals have lately espoused in urging similar rights for those accused of communistic activities or associations, the subcommittee did not afford Senator McCarthy "due process." Only when the censure committee started its proceedings were Senator McCarthy and his counsel permitted to cross-examine witnesses. He himself was interrogated at length and submitted to cross-examination.

The record shows that, when Senator La Follette appeared briefly before the Senate Subcommittee on Privileges and Elections on October 16, 1917, he filed a long letter and defiantly walked out without permitting any questioning or cross-examination. The committee heard Gilbert E. Roe, attorney for Senator La Follette. He made a lengthy argument disputing the Senate's right to punish Senator La Follette except by expulsion. A number of constitutional lawyers of eminence in the Senate at the time sat on that committee. Mr. Roe told the committee:

"Now, the power, under the constitution of the Senate, to expel is unlimited. The power, however, to punish is limited to punishment for violation of its rules and for disorderly behavior. And in this case either Senator La Follette's speech is sufficient to put him out of the Senate or no action can be taken upon it at all."

"Do you think," Senator Kenyon, of Iowa, "the Senate has inherent power to censure?"

"No, sir, not at all," replied Mr. Roe. "There is no doubt about that question."

The Senate subcommittee finally decided not to recommend the censure or expulsion of Senator La Follette.

Yet the Senate in December 1954 said, in effect, that refusal by Senator McCarthy to accept an invitation to testify and his denunciation of a committee for activities which the Wisconsin Senator deemed improper and politically motivated made him guilty of obstructing the constitutional processes of the Senate and of having acted contrary to senatorial traditions.

Can the Senate today in all fairness disregard the precedent established in the case of Senator La Follette, whom it has now selected as one of the five great Senators whose portraits are to be placed in the Senate's own hall of fame?

The vote in 1954 on the resolution to condemn Senator McCarthy was bitterly partisan so far as the Democrats were concerned.

While the Republicans split and voted 23 to 22 to condemn Senator McCarthy's refusal to testify before a Senate committee and 25 to 19 against condemnation of Senator McCarthy's utterances, the Democrats voted solidly in favor of both sections of the resolution of condemnation.

Why wasn't there a single Democratic Senator, out of the 48 in the Senate at that time, willing to recognize the free-speech issue as transcending party passion?

This is so out of keeping with the traditions of the party of Thomas Jefferson, and so far afield from the great traditions of the Democratic Party itself, that apparently only ephemeral considerations of partisan politics influenced the Democrats to vote as they did.

Unquestionably at the time the Republicans were embarrassed by the split in their own party. It was presumably considered "good politics" by the Democrats to compound the embarrassments of the Republicans.

But the record of the Democratic Party on the subject of intemperate language and invectives is not too clean, either.

President Truman, in a speech in Oklahoma City on September 28, 1948—as recorded and transcribed by the New York Times—said:

"The fact of the matter is that the Republican Party is unwittingly the ally of the Communists in this country. This is clearly shown in the election record of the Communist Party."

Yet some Democrats have been saying they felt aggrieved at Senator McCarthy because he had implied that the Democratic Party was a party of treason.

Both implications are to be deplored. Yet, after all, these are expressions of opinion, and certainly it is a sorry day for the American Republic when formal resolutions are adopted in the United States Senate condemning one of its Members for mere words in the polemics of the political forum.

No Senator, moreover, should have been permitted to sit in judgment on this case who had himself been a party to the proceedings against Senator McCarthy—neither the members of the committee which sought to uncover alleged irregularities in his personal affairs nor those who filed censure charges on the floor of the Senate. Did not these Senators constitute themselves simultaneously as judge, jury and prosecutor? Should not many of these Senators have voluntarily disqualified themselves from voting? Senator McCarthy, to his credit it must be said, was present but did not vote for or against the resolution condemning him.

If a Senator commits an offense on the floor of the Senate, he is subject to the rules of the Senate. No resolutions of condemnation are adopted when Senators speak ill of each other. The presiding officer merely calls to order, and the speakers proceed as usual.

The Constitution itself says explicitly that Senators and Representatives are immune from arrest during their attendance at the sessions of their respective Houses and that "for any speech or debate in either House, they shall not be questioned in any other place."

If any Senator or Member of the House is convicted of a crime in a court of law, he is properly subject to expulsion from Congress. But the least that traditional justice has required is that the courts of law be permitted to take their natural course. It is not justice to administer punishment to any man until his guilt is proved in a court. To do so is to condone a form of lynching.

For what the Senate Subcommittee on Privileges and Elections was undertaking, prior to the election of November 1952, was an investigation of the personal income taxes and finances of the junior Senator from Wisconsin. It so happened that the Internal Revenue Bureau had begun an inquiry as a result of widely circulated charges on these very points. Senator McCarthy rightly refused to furnish political capital to his enemies by dignifying the charges.

OFFICIAL RECORD ACQUITS

In October 1953—more than a year before the so-called censure resolution was voted on—the Attorney General of the United State wrote to the Senate Committee on Rules and Administration that the report of its Subcommittee on Privileges and Elections with respect to the personal affairs of Senator McCarthy—submitted to the Department of Justice in January 1953—had been carefully reviewed by the Criminal Division of the Department "as to possible offenses within the Department's jurisdiction" and that the "report fails to show the Commission of any such offenses."

At that time—in 1953—the Department of Justice said it had not yet received the report of the Internal Revenue Bureau on the income taxes of Senator McCarthy. The same Senate subcommittee had implied previously that the Senator did not report in his income certain sums, allegedly used for his personal benefit, which were raised to finance his fight against communism. The Treasury Department under the Truman administration had investigated the same charges, as did the succeeding administration. Then on April 19, 1955, Senator McCarthy received a check from the Internal Revenue Bureau of $1,046.75 as a refund for overpayment of taxes. The Bureau's letter of that date gave him a clean bill of health for all the tax years in dispute, from 1946 through 1952.

These have always been properly matters for the Bureau of Internal Revenue of the Treasury Department to settle or prosecute, as the case may be. It has never been the province of a Senate committee to prosecute alleged violations of the law.

This final action by the Treasury Department on April 19, 1955, came less than 5 months after the Senate had adopted its resolution of condemnation. The official record, therefore, now attests that Senator McCarthy was found innocent of any crime and that there was no deficiency in his income taxes—that, in fact, he had overpaid them.

Will the Senate now do justice to a man proved innocent of the charges and innuendoes levelled against him by a "kangaroo court" of the Senate?

The writer, in an editorial on these pages on October 29, 1954, wrote with reference to the "censure" resolution then pending in the Senate:

"The proposed action is unprecedented in the entire history of the Senate.

"There have been three cases in the past in which 'censure' has been voted. Two of them involved physical behavior—fist fights on the floor of the Senate—and the third was concerned with the ineligibility of a member of a Senator's own staff to attend executive sessions of a committee over which the Senator in question presided as chairman.

"While the Constitution specifically grants to the Senate the power to punish its members for 'disorderly behavior,' there has been no censure ever voted for 'disorderly' speeches or statements of individual Senators. Before the special select committee submitted its report proposing to censure Senator McCarthy, there was never offered in the Senate such a proposal to curtail freedom of speech.

"The Senate, of course, can adopt any new rules that it pleases. But never in the past has the Senate sought by ex post facto action to apply retroactively any new rule or code of behavior. To do so violates the spirit as well as the letter of the Constitution. It is not dislike of a man which is the issue, but a procedure that will affect our system of government for generations to come. It is of transcendent importance to the preservation of the freedom of the Senate itself to examine the basis for the most unusual action now recommended."

Fortunately, the Senate did decide finally not to use the word censure in its resolution. Nor did it claim that the resolution was being passed under the power to "punish" which is mentioned in the Constitution. For no penalty was imposed.

By the use of the word "condemned," many Members of the Senate undoubtedly felt they were softening the blow. They declined to apply "censure" in the legal sense in which the term "contempt" is used.

But the whole world was nevertheless informed that in the Senate of the United States, whenever the views of a minority member do not find favor with the majority, he may receive the "condemnation" of his colleagues. He is warned and may be intimidated by the prospect that, if he does not alter his views or mode of speech to conform to the majority will, he may be subject to punishment by expulsion.

SENATE CAN ERASE ITS MISTAKE

The Senate can undo today the grave injury it has done. It can adopt a simple resolution expunging from the record the vote of December 2, 1954, with respect to the junior Senator from Wisconsin. This would serve notice to generations to come that the Senate in a moment of passion, in a moment of political bitterness directed at a Senator who had himself been the victim of provocative statements, passed a resolution which does not belong in the record of the Senate of the United States. Millions of voters feel that the death of Senator McCarthy on May 2, 1957, was due in part to a physical condition brought on by months of agonizing tension growing out of the persecution he suffered at the hands of the Senate. These are matters of sentiment. What we are concerned with here are principles that are above personalities—principles of constitutional law and of simple justice.

It may be that more years will have to elapse before Senators now still harboring their grievances against Senator McCarthy have passed from the stage, and other Senators are elected who will in due time examine impartially the whole record and do justice. But it would be a tremendous encouragement to true liberalism in the world today and a fine example of confession of error for the Senate now to cast from its record the resolution which it passed on December 2, 1954.

Just as the elder Senator LaFollette is now elevated to the Hall of Fame of the Senate—thereby setting aside the many bitter things that were said about him and apparently forgiving him for his refusal to testify before a Senate committee—so today may the Senate restore its own dignity and repair its own prestige by showing that it has the courage to admit that it made a mistake in its resolution of December 2, 1954.

Joseph R. McCarthy, twice elected Senator from Wisconsin, is dead—but the memory of the injustice done him by the Senate of the United States lives on. When will justice be done? Must history wait?

Work on the St. Lawrence Seaway Reaches Its Peak

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. WILEY. Mr. President, as a sponsor or the St. Lawrence seaway bill, I am, of course, deeply interested in its problems, and the progress of work on this great project.

I was pleased to note in the New York Times of Sunday, June 9, a very fine article containing the facts and statistics of current work on the seaway as it reaches its peak.

We recognize, of course, that there are a great number of problems yet to be resolved, including the setting of tolls at a reasonable rate, problems of costs, construction, and others.

I am, however, glad to note that this project, despite a great many obstacles, is going forward. I request unanimous consent to have printed in the Appendix of the RECORD this article from the New York Times, on the current progress of the work on this great seaway.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORK ON SEAWAY REACHES ITS PEAK—VISITING ENGINEERS MARVEL AT SCOPE OF PROJECT ON WHICH 8,000 ARE BUSY

(By Richard Amper)

MASSENA, N. Y., June 8.—A gigantic construction rodeo is at its top pace today on the St. Lawrence River.

Eight thousand men are working around the clock with $75 million worth of equipment to bridle the wild water. They have it corralled. Now they are hurriedly preparing to harness it for navigation and electric power.

The $1 billion show is "The Taming of the Sault," the beautiful rapids opposite the Massena area that have challenged explorers and engineers since Jacques Cartier discovered the St. Lawrence.

"One of the century's most fascinating construction undertakings," says the American Society of Civil Engineers.

"The greatest collection of machinery ever gathered in one area in time of peace," says Col. Loren W. Olmstead, head of the Buffalo district of the Army's Corps of Engineers. "The work is at its peak right now."

A river of concrete is flowing like the St. Lawrence. The current totals 13,000 cubic yards of it a week. Five cubic yards of it at a time fall from buckets dangling on the ends of booms of railed Gantry cranes weighing 375 tons each. The concrete being used would be enough to provide each man, woman, and child in the Nation with a 43-pound slab.

A total of 185 million cubic yards of earth and rock is being excavated. If loaded into 50-ton rail cars, the excavation would fill a train 2,200 miles long.

Some 200 members of the engineering society and engineers from as far away as Ecuador and Beirut, Lebanon, ended a study tour today of the seaway and power project undertaken jointly by the United States and Canada.

The St. Lawrence rushes eastward from Lake Ontario to the Atlantic at a rate of about 237,000 cubic feet per second. Stanley B. Hunt, the father of the seaway project and chief of engineering of the Buffalo corps, estimated this as enough water to provide every one of the Nation's 165 million population with 920 gallons a day.

In the 40-mile International Rapids section between Prescott and Cornwall, Ontario, the river has an 85-foot head. This is engineering argot for the drop in water level that permits effective use for hydroelectric power. The bigger the head, the more power to turn the turbines connected to generators and transformers that produce electricity.

The problem was roughly analogous to an effort by four persons working in cooperation trying to control water from a bathtub faucet so that it ran down one side of the tub only in sufficient amount to permit Junior to sail his boats in it, and simultaneously creating a lake while the water flowed down the drain.

The five cooperating agencies in the St. Lawrence project are the St. Lawrence Seaway Authority for Canada, the St. Lawrence Ssaway Development Corporation of the United States, Ontario-Hydro Electric Commission, New York State Power Authority and the St. Lawrence River Joint Board of Engineers.

The project is in stages varying from 55 percent to 85 percent of completion. It is expected to be ready for modified use next year with full operation in April, 1959.

When it is completed it will consist of four major works in the International Rapids section. These are the 3,200-foot-long power dam, which will have 32 generating units and stand 162 feet above the foundation; the 2,250-foot Sault Dam, about 145 feet from top to foundation; the Iroquois Dam, 2,540 feet long and 67 feet high; and the 10-mile Sault Canal, with 2 locks.

The dams will convert into an abrupt step the 85-foot drop in river level that is now a gentle ramp. The canal and locks will lift vessels up the 80 feet in 2 steps.

The river runs in two major channels separated by Barnhart Island. The powerhouse dam extends from Canada to the island's eastern end, the Long Sault from the United States to the western tip of the island. The Iroquois Dam, some 35 miles up river, is designed to control the level of Lake Ontario and by controlling the flow of water, prevent formation of frazil ice glutinous chunks that impair turbine operation in the powerhouse.

The river was kept flowing during building of the dams. This was done by the use of cofferdams, interlocking giant drums of steel filled with earth and rock. They diverted the river to a single channel to permit the permanent dam construction.

The Long Sault Rapids used to attract tourists to their wild beauty and lure adventurous canoeists, who tried to master the treacherous current. Today the site is an empty river bed of silt and rock.

The Long Sault Canal is being built in the dry, that is, on land. It is on the American side of the rapids section.

Why Skilled Military Fliers Resign

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. GOLDWATER. Mr. President, there is an old English proverb which says, "Don't be penny wise and pound foolish." That is exactly what the military arm of our Government has been doing in the years since the war. It has neglected to pay for skills, and it has not taken kindly to the Cordiner report which was recently submitted to Congress, a report which, if accepted, would have taken care of the rather alarming rate of nonreenlistment by members of the armed services, particularly the Air Force. An outstanding columnist of California, George Todt, has written for the San Fernando Valley Times an article on this subject, entitled "Why Skilled Military Fliers Resign." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY SKILLED MILITARY FLIERS RESIGN

(By George Todt)

"Don't be penny wise and pound foolish" (English proverb).

Four thousand United States Air Force pilots resigned from service in fiscal 1955. Their training, alone, had cost the Government—pardon me, the American taxpayers—$480 million. That was an average training cost of $120,000 per man. Why did they leave the service?

In the majority of cases, it was simply a case of false economy by the Government: Too little pay to keep these men in uniform—with all their valuable and vitally

needed experience. All their tremendous acquired skills. All these qualified veterans' know-how down the drain.

It is not their fault, either. In the face of rising costs of living, they simply cannot afford the hardships and antiquated pay scales to which they are treated. Look for the blame elsewhere. What are we going to do about it?

Actually, it is the same throughout all the services—Army, Navy, Air Force, and Marines—and many of the best men are moving out, going in ever-increasing droves. This is stupid and may even become fatal one day, unless the Government does something about it before it's too late.

It is patently foolish to spend untold billions on training men in all branches of the Defense Department—and then not have them stay on. Especially in this day of modern electronic warfare between total economies. It is the technically trained veteran who will count in any world war III, not the partially trained—certainly not the raw recruit.

Warfare has now become so technical in its scope that the serviceman must also be at least a little of the scientist and the technician together. Even in the lowest ranks nowadays. This means training, training, and still more training for skills and proficiency. A small force of experts can do incomparably more damage to the enemy with modern weapons of war than 10 times the same number of men relying largely on mere numbers no further back than the last World War. The present emphasis is on technical know-how and experience.

Therefore a tremendous turnover in the armed services, as at present, is working to our great disadvantage from the military standpoint. When we consider that it is largely because of "penny wise and pound foolish" rates of pay which is the real area of blame, then it is time we asked ourselves some serious questions. Isn't it better to pay our skilled personnel enough to attract them to stay in the service, thereby save new and additional training costs involved in grooming replacements?

Wouldn't it be better for us to have fewer men, if necessary, if it meant having a nucleus of highly trained technicians with many years of experience—and therefore the greatest amount of standby know-how—available for ready action in time of emergency?

Wouldn't it be better for us along this same line of thinking, to concentrate only on the highest type of volunteer "career men" for our armed services? Men who from the outset wanted to stay in for 10, 20, or even 30 years—providing it was a career which was financially solvent and progressive?

And wouldn't we be more advanced if we got rid of those who don't want to stay in any longer than necessary—and concentrated their wasted pay on men who proudly serve their Nation with real zeal and devotion to the service?

I think this needs to be done without delay. We must keep our best trained men—not lose them to higher paying civilian jobs which call for doing the same kind of work. We must separate the wheat from the chaff—and keep only the best wheat among our service personnel. This kind of good wheat may be expected to cost more than the kind of unrefined wheat which has wheat and chaff mixed together. But it is worth it to us and to our national security in the future. So let's get on with the job. On land—in the air—and on the sea.

Anything less than an effective arrangement here will stamp us as penny wise and pound foolish in the end. Can we afford this kind of false economy today?

Sonic Boom

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article on the sonic boom, the new sound of air power, written by the junior Senator from Arizona [Mr. GOLDWATER], which appeared in the May 29 issue of Planes, published by the Aircraft Industries Association of America, Inc., Washington, D. C.

As my colleagues know, the Senator from Arizona is the only qualified jet pilot in the Senate, and we are proud of him.

I commend it to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SONIC BOOM

(By Hon. BARRY M. GOLDWATER, of Arizona)

(EDITOR'S NOTE.—Senator BARRY M. GOLDWATER, of Arizona, is a colonel in the United States Air Force Reserve, and the only Member of the United States Senate who is a qualified jet pilot. He has flown most of the supersonic fighters in the Air Force inventory. Senator GOLDWATER joined the Air Force in 1941 and during World War II served in the Far East with the Air Transport Command. He attended Staunton Military Academy and the University of Arizona. Senator GOLDWATER was elected to the city council of Phoenix in 1949 and reelected in 1951. He was elected to the United States Senate in November 1952. He is a member of the American Legion and the Veterans of Foreign Wars. Senator GOLDWATER is chairman of the board of Goldwaters, of Phoenix.)

A new sound of air power progress will become more apparent as America opens its doors to the summer season, and more supersonic aircraft are delivered to the military services. This sound is the sonic boom—manmade thunder. It is one of the most widely misunderstood phenomena of high-speed flight, and has been blamed for damage that couldn't have been inflicted by an atomic bomb.

The United States Air Force recently reported some initial findings of a study of sonic booms to find out how they are caused, the damage they can do and, even more important, the damage they cannot do. The study was made by scientists and structural engineers of the Wright Air Development Center, largely based on investigations of claims from citizens who thought, correctly in a few cases and incorrectly in most cases, that their homes had been damaged by the sonic boom.

The researchers found out many things, but it should be a matter of relief to the citizenry that the study proved the sonic boom, from usual operating altitudes:

Cannot crack foundation walls or pavement.

Cannot crack plaster walls installed according to most building codes.

Cannot cause roofs to buckle or crack.

Cannot do any structural damage, but under some circumstances can damage glass panes and improperly installed doors.

There is nothing mysterious about the sonic boom. In fact, muleskinners in my State of Arizona once created booms of a minor variety when they crackled their whips over the teams. The tip of the whip actually exceeds the speed of sound and causes the characteristic sharp crack.

Basically, sound is wave lengths of various pressures hitting the ear, and they result from any surge of energy. The strong arm of the muleskinner provides the energy that creates the crack of the whip. The wave lengths can be compared to the ripples created by a rock tossed into a still pond. Ordinary conversation is a series of pressure wavelets pulsating against the ear like ripples of water slapping the shore of the pond.

An explosion is no more than a very strong pressure wave created by a sudden release of energy. These strong waves of pressure are known as shock waves because of their intensity.

The sonic boom can also be explained by this established law of sound. Shock waves are not visible except under laboratory conditions where highly specialized photographic equipment can catch their distinctive shape. If the shock wave created by a supersonic aircraft in flight were visible, it would resemble a shallow dish as it attaches to the airplane at the exact speed of sound. The speed of sound varies according to altitude and temperature. At sea level, it is 760 miles per hour, and at 40,000 feet the speed of sound is 660 miles per hour.

When the plane exceeds the speed of sound, the waves are swept back from the nose at sharp angles until they form the cone shape of a funnel. Here is the making of a sonic boom.

The shock wave travels through space, but, unlike the ripples of water that it basically resembles, there are only one or two ripples. This wave, which has been formed by the tremendous energy of the aircraft flying at supersonic speed, reaches the ground at the speed of sound. However, the shock wave is obstructed by anything it comes against—trees, buildings, automobiles—anything it touches. The power it possesses is constantly dissipated at it passes through the air. It is robbed of its energy by the friction it creates in its passage through the air and on the ground. Guided missiles create a sonic boom as they move through the air, as do aircraft capable of supersonic flight during climb. But this sonic boom never reaches anyone's ears since it dissolves in its upward flight.

However, when the increase in pressure occurs at the eardrum, we have a sound. Anyone in the path of the cone's high pressure air will hear the sound as the cone passed over him. The aircraft dragging the cone along is travelling at a very high rate of speed, and, since the high pressure is concentrated in a very small volume, this sound is a sharp crack which sounds much like a thunderclap.

This, essentially, is all there is to the cause of the sonic boom. It is man-made thunder with the aircraft playing the role of an electrical discharge or lightning.

A loud thunderclap can generate a pressure of about a half-pound per square foot, and a loud sound from a boiler factory will produce a pressure of about one pound per square foot. The noise of a sudden thunderclap will startle or frighten people while the boiler room noise, which is continuous, will do neither, simply because it is expected. Reducing the analogy even further, a person shouting "boo" behind a man will startle him more than a "boo" shouted by someone he sees before him. It's only fair to note, however, that the degree of surprise depends on who is doing the booing.

The Wright Air Development Center engineers and scientists made a thorough in-

vestigation of representative cases of the damages alleged to have been caused by the boom. They had a substantial background of experience in shock waves caused by explosions to draw upon in arriving at their conclusions.

First, the engineers and scientists observing the effect of shock waves generated by atomic explosions never detected structural damage to the flimsiest structures at pressures less than 70 pounds per square foot. In tests where aircraft have dived from 35,000 feet, exceeded the speed of sound, and then pulled out at 25,000 feet, the pressure of the wave created has been no greater than 5 pounds per square foot. Even when the aircraft descended to 10,000 feet before pullout, the pressure did not reach 10 pounds per square foot. Supersonic operations are rarely performed at altitudes less than 20,000 feet since the pilot requires this altiture as a safety factor for recovery from the dive. The Air Force even carried its recording instruments to a mountain top to obtain a pressure reading. They registered an aircraft flying at supersonic speed 280 feet away and the maximum reading was 33 pounds per square foot. The jet pilots I know are much too wise to attempt supersonic flight at an altitude of 280 feet except for the most urgent operational reasons.

Air Force regulations also state that sonic and supersonic speeds during straight and level flight will be commenced and terminated at altitudes above 30,000 feet over land areas, and above 10,000 feet over water areas. Sonic booms are not intentionally performed during tactical missions, and when training programs require speeds that could produce a sonic boom, the flight must be conducted over specially designated areas under close supervision. These regulations governing training missions are also applied by the aircraft industry in conducting test flights of new aircraft.

By simple arithmetic, the pressure produced by the usual sonic boom is less than one-twentieth the pressure required to cause structural damage to a flimsy structure. The behavior of homes and industrial buildings of brick, block, and frame construction tested by nuclear explosions reveals that it takes pressure on the order of 150 to 300 pounds per square foot to cause damage ranging from plaster cracks to wall and roof cracks.

The WADC engineers made a calculation study of a wood stud wall with a plaster inside surface. The walls were between 8 and 10 feet in height and constructed from 2 by 4 studs. Suppose we overlook the strength contributed by the sheathing, siding, and plaster and assume that the stud takes all the load. On a single stud the load is about 67 pounds. The maximum tension in the stud at the middle is 200 pounds per square inch of stud.

Most building codes require that the stud be fastened to the plate by three 12-penny nails. These nails provide the shear resistance. The shear strength of the nails is about 300 pounds and the tensile strength of the wood is at least 1,000 pounds per square inch. Building authorities say that in order to prevent plaster cracks, the deflection at the middle of the beam should not exceed 1/360th of the span length.

As long as a 10-foot stud does not bend more than one-third of an inch at the middle from its normal position, the wall plaster will not crack. By calculation, the deflection of our wall stud under the heaviest load imposed by a sonic boom would be only 30 percent of the deflection required to crack the plaster.

Calculations of this kind can be extended to various elements of the house—roofs, side walls, and porches. The sonic boom falls far short of causing sufficient load to crack plaster, floors, roofs, and walls. The force exerted by the boom is like a giant giving the whole house a very light and very quick touch.

So far the structure has been discussed as if it had no openings. Now let's take a look at the windows and doors. The sash and frame of a window, of course, are more than strong enough to withstand the relatively minute force of the boom.

The window glass is another matter. Glass, in one sense, is a strong material, but it is brittle compared to other building materials when used in thin sheets. The methods by which it is manufactured are apt to produce internal lockup stresses. In addition, the glass may be bent ever so slightly when it is installed. Thus a light, sharp blow can shatter a glass pane.

I do not want to imply that a sonic boom will always break windows. Ordinary window glass, properly installed, will break at pressures of 18 to 70 pounds per square foot, a much greater force than the boom produces. In fact, the Air Force, in a recent demonstration, directed some booms at a large plate of glass held in a frame. Five successive sonic booms failed to shatter the glass and only when the glass was loosened in its frame did the boom cause it to shatter.

Doors, with the exception of their glass area, are strong enough to resist boom forces. The weak points are the lock and hinges. If a lock is loose fitting, the impact of the boom may be sufficient to jar the opening and cause the door to slam against the wall. Under this condition or if the door is slightly ajar, the hinges might pull loose or cause a split in the door jamb.

Bricks, plaster, and mortar do not have any measurable ability to creep or move along its surface. When laid up into walls or ceilings, they also get locked up stresses which are caused by curing of the mortar or plaster, shrinkage due to the drying out of mortar or plaster and the effect of expansion and contraction between hot summer and cold winter temperatures.

These materials have very little give or resilience. They stand these force combinations indefinitely or fail after 1 or 2 seasonal cycles. If the boom forces were appropriate, brick, block, or plaster stressed near the point of failure by a combination of locked up or seasonal forces might be overloaded; but since the boom force on a structural element is far less than a good stiff windstorm or, in most cases. less than that of a healthy boy jumping on the floor, it is difficult to see how a wall could remain poised just at the point of failure for any length of time without being tipped in or broken by other more frequent forces.

Ground vibrations are another matter subject to misunderstanding for very good reasons. For example, it was reported to the Air Force that structures were shaken violently and the ground was jumping up and down an inch or two when large aircraft flew overhead. Even the scientists sent to investigate the matter admitted to this feeling. Yet, measuring devices with the most sensitive instruments available indicated no movement, but slamming a screen door drove the measuring device completely off the scale.

The scientists found that we get false perceptions of movement because the sense organs in the skin only require pressures measured in a millionth part per square inch to cause a sensation of movement. It is difficult for anyone to believe there is no vibration, but the most exacting scientific tests have proven there is none.

The sonic boom will not cause ground vibrations, that could damage basement walls, floors, or concrete walks and driveways. Investigations of nuclear explosions which produce many times the pressure of a sonic boom show that there is very little effect on the ground near the point of impact or on pavements, pipes, or foundation footings.

The question then arises as to why structural damage is claimed after a sonic boom. Basically, this is because the homeowner, after hearing a sonic boom, is certain that the noise must have caused some damage. He makes a careful inspection of his home, probably the first time he has gone over the house looking for damage in several years. And, of course, he finds crack after crack. The immediate conclusion is that the boom caused the wall and ceiling cracks. The owner is convinced that the cracks did not exist before the boom occurred. This is a completely natural reaction. The cracks hadn't been detected before, simply because the householder had never looked carefully for them.

A simple test will prove this point. Take a flashlight and go over your walls and ceilings. You will find numerous cracks that you didn't know existed. It is also possible to check whether the cracks are recent or not. Where the plaster has parted, the edges of the rupture will be gray or weathered on an old crack and the plaster will be white on a recent crack.

The Air Force has a dual responsibility on damage claims. It is the policy of the Air Force to make prompt payments for damage caused by its operations. At the same time, the Air Force has a tremendous obligation to the taxpayers to expend each dollar appropriated in a proper manner. The great bulk of the claims received are from people who are honestly convinced that the damage was caused by Air Force operations. The Air Force completely respects the right of the citizen to claim this damage, and a thorough investigation is made. But the scientific knowledge acquired by their investigations of what a sonic boom can do and cannot do must be considered in denying or approving the claim. This is evidence that cannot be ignored.

There are, of course, cases where the claims are patently ridiculous. During a recent demonstration, several sonic booms were deliberately made. One man's residence was located 13 miles from the airport where the boom was directed. The atomic bombs dropped on Hiroshima and Nagasaki did not cause damage to Japanese residences beyond an 8-mile radius. This fact, however, didn't stop the owner from claiming damage from a sonic boom at almost twice the damage limit of an A-bomb.

Another man with two business establishments and a house located in a triangle 7, 5 and 2½ miles apart, with the closest corner of the 3 buildings located 4 miles from the airport, promptly put in a claim for damage on all 3 buildings.

The Air Force, like all Government agencies in a democracy, is highly responsive to the demands of the public it serves. Protests to the commanders of air bases across the Nation and to the Pentagon are given prompt attention and remedial action is sought. In many cases, a simple fix is possible; in other cases, the Air Force cannot eliminate the cause of the protest without serious damage to operations.

It is difficult to readily identify the aircraft causing a sonic boom. This is due to the high altitudes where most supersonic operations are conducted, and a sonic boom created at high altitude may be heard 20 to 30 miles away from the path of the plane. Atmospheric conditions play a significant part in the propagation of these sound waves.

Although Air Defense identification zones are in existence, aircraft operating within them, once identified as friendly, receive no further attention. These zones are established to identify aircraft entering the zone from an outside point.

Absolute identification of the aircraft causing the sonic boom is further complicated by the fact that, except for certain

required position reports en route, a jet aircraft may not be known to be in a designated area at a certain time.

The Air Force now has under consideration the development of an instrument that would automatically record the time, position and flight direction of a plane when it exceeds the speed of sound. Such an instrument will be vital in fixing the responsibility for any damage a boom may cause.

The noise created by turbojet engines is a thorny problem in the relations between the Air Force and the citizens of cities they defend. But the Air Force started an intensive program of public education on jet noise.

Community leaders were invited to nearby airbases for tours; they talked to the commanders and the pilots of the jet aircraft. Landing patterns were rearranged so that the least inhabited areas were in the flight path. The Air Force explained that a jet taking off at 2 o'clock in the morning was not prompted by the desire of a pilot to get his flying time. An unidentified plane had been reported, and the jet was ordered to make an interception.

Once these points were explained, the complaints on jet noise dropped. In fact, jet noise complaints apparently reached their peak last year, and the Air Force estimates that fewer complaints will be received this year despite a growing number of aircraft entering service equipped with high-thrust jets. The noise of the jet planes still exists and will continue to exist for many years, but the annoyance has been lessened through public understanding.

Public appreciation of cause and effect, of necessities that far outweigh inconveniences is an invaluable national asset. Certainly we would not want to equip our Air Force with supersonic aircraft and then forbid the pilots to fly at these speeds. Pilots must know the performance capabilities of their aircraft if they are to be employed some day against the enemy.

The sonic boom is a new noise that we must accept as part of freedom's price.

The Advantages of Private Medical Care

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. H. CARL ANDERSEN. Mr. Speaker, the Association of American Physicians and Surgeons' Freedom Programs, Inc., annually sponsors a national essay contest the purpose of which is to stimulate high-school students' interest in Americanism and private enterprise. This program has much to commend it and I am sure many, many young men and women throughout our Nation have developed a better understanding of the subject in the course of the preparation of their essays.

This year, I am especially proud of the fact that Miss Sonia Gustavson, of Olivia, Minn., in the district I have the honor to represent, won the first national prize of $1,000 cash with her essay, The Advantages of Private Medical Care. The award was presented to Miss Gustavson on her 18th birthday by my good friend Dr. J. A. Cosgriff, Sr., of Olivia, Minn., who was the attending physician at her birth. Miss Gustavson, who was valedictorian of her high-school class, plans to use the contest money to finance her first year at the University of Minnesota as a student of premedicine.

Under leave to extend my remarks in the RECORD, I am including this splendid essay in the hope that many may read it and find from this talented young lady's reasoned arguments a better understanding of the functions and responsibilities of an unfettered medical profession in the United States of America:

THE ADVANTAGES OF PRIVATE MEDICAL CARE

"May the love for my art actuate me at all times; may neither avarice, nor miserliness, nor thirst for glory, nor for a great reputation engage my mind; for the enemies of Truth and Philanthropy could easily deceive me and make me forgetful of my lofty aim of doing good to Thy children." [1]

The art of medicine is the great art. Its practicers are dedicated; its appreciators are fervent. Surely it is the wish of all thinking, discerning men that members of the medical profession know an atmosphere which will enable them to maintain the high quality of health care that they are giving Americans at the present time. That atmosphere is one which is free from Government control or intrusion. American medical men possess this freedom now, and they must continue to possess it.

A look at the advancements in the health standards of the American people will readily show us just what has been accomplished by doctors operating under this private practice system.

Since the founding of our Nation, life expectancy has increased 39 years. Contributing factors lie in all fields of medicine. Since 1900, the death rate has increased for eight diseases, while it has decreased for 21 diseases. The increase is due to the fact that, since that year, the population of America has doubled. For every 1,000 babies born in 1957, some 130 live who would have died 50 years ago. The number of people over 65 has quadrupled, and these people account for the marked rise in the death rates for cardiovascular diseases, cancer, and other diseases of old age. The decrease is due to the discovery and perfecting of antibiotics, improved surgical methods, quicker diagnosis and reporting, and to the work done in the field of preventive medicine.

Such splendid achievements could not arise from a profession with low standards of quality. The medical profession requires of its prospective members 10 years of advanced education in any of the Nation's 82 approved medical schools and under intern and residency programs. Postgraduate courses are offered by schools, societies, hospitals, and other health agencies. Standards are elevated in auxiliary fields of medicine such as laboratory technology and occupational therapy. Financial aid can be secured by deserving medical students. A record number—7,686—entered medical schools in the 1955–56 academic year. What may appear to be, in some areas, a shortage of doctors, in actuality is maldistribution. This is being remedied by placement programs which inform communities of doctors desiring locations and inform doctors of communities desiring medical care.

One of the arguments for socialization of medicine frequently used by uninformed people is this: "If the Government takes control of medicine, we'll get free medical care." Medical care, like every other necessity, costs money. There is no reason why anyone should hesitate to go into debt to meet medical costs. There are three ways that a man can pay for medical care:

(1) Cash. It is cheaper to pay for home or office calls than to pay taxes to the Government on the chance that you might need this kind of service.

(2) Savings, securities, loans. Should a man find it necessary to delve into his savings to pay a medical bill, he can do so. If this is not necessary, the savings will remain on hand to meet other types of expenses that may arise. If medical bills were met with Federal taxes which are, in this case, compulsory savings, a man could not use these funds for any purpose other than to meet medical expenses.

(3) Commercial insurance. In exchange for premiums, you are paid for the costs of more serious illnesses and operations. The uncertainty of a large expenditure is replaced by the certainty of a small one. The advantage of voluntary health insurance over compulsory health insurance is this: The individual reserves the right to select his own doctor and hospital. At the present time, over 60 percent of the estimated eligible population carries some type of voluntary hospital expense coverage, and approximately 50 percent is protected against some of the insurable costs of surgery. The voluntary health insurance movement has already surpassed the goals originally charted by the pioneers in the field. It has been on a voluntary basis that all great progress in America has been achieved, and only on that basis can the Nation be assured of progress in this field.

A look at the country of England will show us some of the dire results of the socialization of medicine. Under the national health program, that country proposed to give the indigent, the poor, the average, and the wealthy the same quality and quantity of medical care, and maintain the quality and quantity that the wealthy were accustomed to under private practice. What happened? In London, wealthier districts have an average of 1 doctor for 1,261 patients, and poorer districts have twice as many patients per doctor. The farming and mining communities suffer even more from lack of medical services. In February of this year, the British Medical Association advised 21,000 English general practitioners seeking a pay raise to quit Britain's socialized system of medicine. The association recommended the adoption of a pay-as-you-go plan.

From bitter experience, Britain has learned some of the inevitable results of government medicine.

(1) Administrative costs of collecting the taxes and redistributing them as sicknesses occur make the entire program less than worthwhile.

(2) The physician-patient relationship, always confidential, has been disturbed by this third party intruder, the government.

(3) Physicians lose autonomy in diagnosis and treatment that they possess in private practice.

(4) Political influences enter into the sphere of medicine.

(5) Regimentation occurs in conditions of employment for doctors: the number of hours they must work, their income, and their location.

(6) Standardizing the treatment of patients slows down research.

Should anyone feel that the indigent and the chronically ill are being neglected under America's present system of medicine, let us investigate these areas. The chronically ill are, of course, excluded from private medical plans because the risk is too great. However, in this country there are private institutions that give considerable amounts of aid to the aged, the sick, and the handicapped. Doctors often treat these people at reduced costs. Indigent people are those who can neither afford medical care nor the other necessities of life. They are supported by welfare programs, and are the only people

[1] "Daily Prayer of a Physician" by Maimonides.

who should receive Government aid. If the Government stepped in to furnish all of us with medical care, all private resources would dry up and the taxpayer would have to shoulder the entire load. The Government already takes one-third of our income, so why make it necessary for it to take more, when private medicine is less expensive and so much more efficient. Let us not forget that it is the intrinsic natufe of bureaucracies to get bigger and bigger, more and more wasteful, costlier and costlier and, at the same time, to get further and further out of touch with the individual and his or her particular needs.

In 1939, in a small country town, a woman was stricken with simultaneous influenza and pneumonia. For several days her life hung by a thread, and during these days her family doctor was unfailing in his efforts to strengthen that thread. It was a personal matter with him; a battle in which he pitted himself against death itself. In the late hours of the night and the small hours of the morning, he was available to administer stimulants when it seemed the thread could hold no longer. As a last resort, this country doctor sent to a larger city for a new drug that had just appeared on the medical scene which, through his constant studying, he had just learned about. This forerunner of the "miracle" drugs—sulfanilamide—along with the doctor's dedicated care, saved the woman's life. Picture this same case under socialized medicine. During the day, the doctor would have been too harrassed by petty rules and regulations of diagnosis and treatment to give his undivided attention to the saving of this life. After hours, when stimulants were needed immediately, the "night doctor" would have had to have been called. In all likelihood, there would have been no case-continuity nor any of the vitally important feeling for the patient on the part of the "night doctor" working his "shift." When the new drug was wanted, there would have been red tape to cut, and forms and requisitions to fill out. By the time the drug would have arrived, the thread of life would have been completely and finally severed.

When I see this woman now, 18 years after her illness, a gracious old lady bringing joy to all those around her, it seems to me that she is a living embodiment of the advantages of private medical care.

New Dimensions in Farming

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "New Dimensions in Farming," delivered by Hon. True E. Morse, Under Secretary of Agriculture, at a banquet sponsored by Charles Pfizer and Co., Inc., honoring 20 winners of 4-H Club animal health scholarships, at Terre Haute, Ind., May 28, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW DIMENSIONS IN FARMING

(Address by Hon. True D. Morse, Under Secretary of Agriculture and President, Commodity Credit Corporation)

We have gathered here to do honor to farm youth. Through diligence and demonstrated superior ability you young people are emerging as leaders of tomorrow's American agriculture. My hearty congratulations to all of you and to the 17 States from which you come. Best wishes for a most successful and satisfying life of service.

This is another demonstration of how American business goes beyond strictly commerical activities to lend inspiration and encouragement to agricultural leadership. Much of the amazing progress in agriculture has been through the teaming up of farming and businesses. Here is a 108-year-old company, I am told, spending some $8 million on research, and claiming to be the largest producers of antibiotics—going beyond what might be considered its usual service through products, to help develop farm leaders.

Farm and industry—are partners in progress.

This is an expression of two major needs for tomorrow. One is for able agricultural scientists—many of whom will become agricultural extension workers—to serve the farms and homes of farm families. The other is for a more profitable animal agriculture.

Twenty of you college juniors prepared, extension teaching plans on animal health.

"A technological revolution is occurring on American farms," according to Secretary of Agriculture Ezra Taft Benson. "This creates a new dimension in farm policy." There has been more farm progress in the past 50 years than in all prior recorded history. Now we are in the atomic age. This terrific surge forward will continue. The Secretary says, "There is no sign that the current phase of the technological revolution in agriculture has run its course."

There is growing recognition in Congress that certain laws need to be changed, to allow farmers to take full advantage of expanding opportunities. For example, the price support program for the basic commodities was originally designed to combat the effects of a general depression, and had considerable justification on that basis.

The program was overhauled during the war for the purpose of expanding production, a need which it served in commendable fashion.

Our present need is not that of combating a general depression, nor of stimulating production to meet the needs of war. Our need is for agricultural adjustments to accommodate the tremendous technological revolution through which agriculture is passing.

There is a growing demand by farm leaders that we move in the direction of more freedom for farmers to produce. Farmers want to make full use of the new dimensions in farming.

A new rural America is fast developing, bringing an integration with industry and urban life and with nonfarm people. It is a highly desirable change for our great industrial Nation—but we need to be adjusting to this new dimension. For example, in Michigan, nonfarm people living outside of towns and cities now outnumber the farm people—and large numbers of farmers are members of labor unions.

There is an "explosive dispersal of city people into suburban and rural areas," according to many authorities.

Our economists are pointing out that suburban communities—like clusters of leaves along the main stem and branches of highways and roads—have grown in recent years at about 3½ times the rate of the gain in national population.

The levels of living of farm and city people are more nearly alike now than they were in previous years. The gap will continue to narrow.

More and more rural residents will be going to urban schools, churches, shopping centers, and to recreation and entertainment facilities.

Our economists suggest that a new agricultural community is emerging which might be described as city life widely spaced.

The rural community and farmers will become even more dependent on industry and urban centers.

Just before World War II, only about 25 percent of farm production supplies—fertilizers, seeds, feeds—came from urban-industry sources. Now, farmers get more than 60 percent of these supplies from cities and factories. With the march of technology, the percentage might reach 75 or more before 1975.

Many chores once done by farmers themselves are now often performed by urban industries or individuals. Some of these services include contract hauling of livestock and other farm products, pickup of eggs and milk, custom harvesting, weed control, insect control—to name just a few. The upward trend in this direction is expected to continue.

Farmers will be able to produce more—and better quality products—and at lower costs per unit—making ever-growing use of this new dimension in farming.

Farm programs must be kept in step with the revolution taking place on farms and in rural communities. There is need for more able and more versatile agricultural-extension workers for the dynamic era to which you young people will be giving your leadership.

Animal agriculture can help balance production and consumption. The need for such balance is agriculture's most urgent central problem. Therefore plans such as those on which you young people have worked, to improve animal health, can make a major contribution to progress in farming. Never fail to take account of such facts as these:

Livestock and livestock products account for over half (54 percent) of farmers' cash receipts from marketings.

The products from over two-thirds (70 percent) of our harvested crop acres are marketed in the form of animal products. Livestock condense about 7 pounds of dry matter, including grain, to about 1 pound of dry matter in the form of meat, milk, and eggs.

People want more meat, milk, and eggs than they are getting.

Markets for these products can be expanded. Dr. Sumner H. Slichter, noted economist of Harvard University, says, "Although America is the richest nation in the world, it is still on a hamburger standard of living. Americans would gladly double their consumption of steaks if they were availabe at moderate price. But that would require doubling the cattle population."

We now have a population of over 170 million people—an increase of 29 percent since 1940—and the increase is continuing at a rapid rate.

In 1956 the average person had more red meat, 167 pounds, than since records began in 1899—and thus had opportunity for more vigor and better health.

We can still go a long way in shifting consumption to the high-nutrition foods—to animal products in particular. It is a golden opportunity.

Our success in dealing with surpluses depends upon the quality and desirability of the food with which stomachs are filled—also whether many hungry stomachs are filled regularly—and with good food.

Animal agriculture can be expanded in dimensions that will increase farm profits. At the same time it will provide more vigor and better health for all our rapidly growing population. That is the challenge.

You represent 4-H Clubs. You selected winners represent America's number one voluntary educational program, of voluntary character, for rural young people. There were more than 2,164,000 members last year.

These young people were enrolled in 90,500 4-H Clubs and did their work under the

guidance of approximately 500,000 volunteer leaders, a tremendous army of devoted people helping to carry the advances in agricultural science to the homes and the farms of the Nation.

Each of these volunteer leaders is further supported by the county extension workers who serve in every agricultural county of the United States. These extension workers are fortified by the great wealth of information gained through scientific research.

You, in your work and studies, represent the basis of all major progress—research and education.

There are certain basic or enduring values that do not change. We tend to forget them under the pressures and rush of this atomic age. Yet they are basic to our Christian and American way of life.

They have given us our great America. They have led us into the spiritual, cultural and economic growth that has given us the abundant life which we enjoy.

I am referring to "the ideals we live by"—the faith by which men and women of character live. They were present in the minds and hearts of our forefathers, they exist in our form of government, and we must be ever vigilant to protect and hold fast to them.

Our honored and cherished American system of free enterprise is founded on spiritual values—not material values. We have a rich heritage in the Constitution and the Bill of Rights. These instruments of our form of government were prepared in an atmosphere of spiritual guidance with thoughtfulness, sincerity, and a devotion to the importance of freedom of the individual. They help provide the foundation for our ideas of understanding, cooperativeness, tolerance, and human dignity. Because of this, our land is a "land of the free" with opportunities unlimited—a land that has given us the freedom and right to speak, to work, to assemble, and to worship after the manner which we believe to be right.

You young men and women will soon be starting on the career of your choice. You were free to decide on the college you entered, the curriculum you followed, and maybe even how hard you studied. You continue to be free to decide what you will do, where you will work, where you will live, the organizations which you will join, and whether or not you will own property. You are assured the right to manage your own affairs, to enjoy the freedom and equality of opportunity, and to succeed or fail in your vocation depending upon your own initiative and ability.

Our political ideals are the outgrowths of the conviction that all men are created equal.

This conviction has been a major factor in our accomplishments of the past and present. It assures us of an ever new and expanding, limitless dimension for our abilities and for the future of agriculture and of all of America.

Furthermore, we here in this country, as President Theodore Roosevelt said a half century ago, "hold in our hands the hope of the world, the fate of the coming years; and shame and disgrace will be ours if in our eyes the light of high resolve is dimmed, if we trail in the dust the golden hopes of men."

Domestic Parity Plan for Wheat

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my distinguished colleagues my introduction of legislation to provide a domestic parity plan for wheat.

We are all concerned with overproduction of our agricultural commodities. We all want to find an adequate and profitable outlet for our overproduction above our domestic needs. We need this two-price plan in order to maintain domestic prices at the desired level and at the same time sell our surpluses on the foreign market.

Under the two-price plan, which could apply to commodities other than wheat, each producer would be given an allotment covering his share of the domestic consumption of his product at full parity. The remainder could be sold on the world market or carried for future use.

In introducing this bill it is my desire to fill a serious need for a farm program tailored to a specific commodity and which will at the same time fit into the overall agricultural picture. I am sure many of you are familiar with it. It appears evident that with the passage of time more serious consideration must be given to the relative merits of a new farm program. The domestic parity plan is a workable plan for the agricultural producers of our Nation to salvage and build anew a sound economy.

The domestic parity plan for wheat is highly favored by many people of the Fifth District of Kansas. It is my sincere intention to work for the passage of this bill.

Don Blanding

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. BURNS of Hawaii. Mr. Speaker, the people of Hawaii and his friends in every part of the world mourn today the unexpected passing of Don Blanding, poet laureate of Hawaii, who died on June 9 in Los Angeles.

His love of adventure and his lust for life led him to many parts of the world. He fought under foreign flags in revolutionary wars; in World War I he was a pilot in France. He established his reputation in New York as an artist and interior decorator and poet, but his spiritual home, until the day of his untimely death, remained in the islands.

No matter where he pursued his restless talents it was always to Hawaii and to the people of Hawaii, for whom he had an overwhelming affection, that he returned.

Donald Benson Blanding was born 62 years ago on his father's ranch in Kingfisher, Okla. The world beckoned and at the age of 17 Don left Oklahoma, never to return. Soon thereafter he was fighting in the small wars of revolt plaguing the Central American Republics at that time. When World War I came he became a military pilot and flew with the American forces in France. Returning to the United States after the armistice, he paused in New York. There he witnessed an event which was to alter his life and shape the course of his destiny.

This was his attendance of a revival of the stage production Bird of Paradise, whose locale was the exotic South Seas islands. That night, Blanding has told us, he heard the call of paradise, and he responded eagerly.

Hawaii did not disappoint Don Blanding. Under its tropical skies Blanding's great artistic gifts and creative capacity were energized and inspired. His first volume of verses about Hawaii appeared. Then another and a third, Vagabond's House, which sold 150,000 editions and established Blanding as a major poet.

His artistic versatility grew. As an artist, he illustrated his own published works. He staged Hawaiian pageants, designed the colorful Polynesian costumes and stage sets.

In 1928 Blanding originated Hawaii's famed Lei Day, which is celebrated annually on May 1 and has become an internationally noted event. One of Hawaii's most delightful festivals and the only one of its kind in the world, it is dedicated to the lei as a symbol of Hawaii's hospitality, aloha, and wealth of beauty.

Travelers from all over the world came to witness its annual celebration.

Because he knew Hawaii and her people so well, Don Blanding loved them both.

A dozen volumes of his verse attest to this love and understanding which he tried to communicate to the world. But, he rhymed, it was not enough to read his poems in order to become one with the gentle peoples of Polynesia. In Vagabond's House, Blanding warned, you will never know Hawaii:

'Til you've seen the lunar rainbow's phantom arch across the blue
And having watched the Southern Cross dip in the sea;
'Til the singing boys have stabbed your heart with music through and through
'Til you've raced the silver surf at Waikiki.

Don Blanding was in every sense of that meaningful Hawaiian word a true kamaaina, son of Hawaii.

He left to the people of Hawaii, and to all of us, a legacy of the love of laughter and beauty, of wisdom and wit. With him go the appreciation, the love and the deep aloha of all that knew him.

Status-of-Forces Treaty

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story entitled "Foreign Courts Tend to Leniency for GI's" from the respected newspaper, the Christian Science Monitor. This story, which appeared in the Monitor of June 8, 1957, should be of interest to the Congress particularly at this time

when the Girard case in Japan has caused another rash of attacks on the status-of-forces treaties between the United States and several other nations throughout the world where our Armed Forces are stationed.

FOREIGN COURTS TEND TO LENIENCY FOR GI's

(By Volney D. Hurd)

PARIS.—"A few Congressmen are waving the flag about the injustices done to American soldiers tried by foreign courts. The fact is, they invariably get much easier treatment than our military courts would give them."

An American Army headquarters press officer was speaking on the Girard case in Japan, which had suddenly opened up this subject after it had rested dormant for well over a year.

The press officer continued, "The result is that this arrangement is injuring our disciplinary setup. These boys are spoiled by the foreigners by getting terms much shorter than we would give them. So they gain no benefit from the experience in the disciplinary punishment which they obviously need.

"This, in turn, puts us in the ridiculous position of agreeing in one way with the protesting Congressmen, who, in fact, threaten our whole overseas military program by trying to upset the delicate situation covered by our status-of-forces treaties."

SUPPOSE IN WERE UNITED STATES

Leaning back in his chair and looking thoughtfully out the window, the officer continued, "Can you imagine how tough the American public yould be about crimes committed by foreign soldiers on our soil, particularly if they were stationed there by the thousands? Can you imagine other countries trying to negotiate a treaty with us which would make this arrangement acceptable?

"Well, we have had to do that with everyone of the many countries where our men are stationed. Months of delicate negotiations were involved. Painful exploration through the jungles of sensitive national feelings had to be carried out.

"The end result is a remarkably fine set of treaties which are clearly in our favor. More important, they are carried out by these friendly foreign nations in a spirit of generosity far beyond the limitations of the letter of the treaties. These nations are more understanding and lenient with our men than we would be with them under the same juridical circumstances."

FILES CULLED

Flipping through his files, the officer produced copies of foreign court sentences imposed on American soldiers here; and after some figuring, he said: "The average sentences by foreign civil courts are 1.7 months. Had the soldiers been tried before our military courts, they would have received sentences averaging 8.5 months."

The officer said that this difference in sentences explained why American soldiers abroad rarely protest being tried before a foreign court, but rather favor this procedure.

"Then our Congressmen talk about our troops tried in foreign courts as being subject to 'cruel and unusual punishment.' Unusual, yes, because unusually lenient," said the officer.

The French courts bear out, in dealing with American military men, the commentary on French sentencing made by the former French Minister of Justice, Guerin de Beaumont. He said, "If I had committed a crime, I would prefer to be tried in Britain—and then be sentenced in France!"

French sentences given American soldiers are so light that they disturb not only the officers of the United States forces here, but American residents, embarrassing them no end.

There was, for instance, the case of an Air Force private who stabbed and killed a Frenchman while they argued over a girl in a bistro at Fontainebleau. He was not only let off with a 6-month sentence, he also was allowed to marry the girl while still a prisoner.

Then there was the case of an American Army corporal who took a light truck without permission from an Army station near Paris, drove it wildly through the Bois de Boulogne at night, swung down the middle of the road, crushing a small French car, killing four occupants, and then jumped out and ran away from the scene.

There appeared to be no extenuating circumstances, yet this American received only 6 months in prison. He, too, was allowed to marry a French girl while a prisoner.

While there has been plenty of anti-Americanism in France, the judges, as intelligent informed men, are conscious of why the troops are here. They are definitely influenced by the idea that these men are stationed here to fight for France, if necessary, so why be too hard on them?

SEVEN POINTS GUARANTEED

Under the basic minimum requirements for all the status-of-forces treaties now in effect with foreign countries, a soldier is automatically entitled to:

1. A prompt and speedy trial.
2. To be informed, in advance of the trial, of specific charges made against him.
3. To be confronted with the witnesses against him.
4. To have compulsory processes for obtaining witnesses in his favor if they are within the jurisdiction of the receiving (foreign) state.
5. To have legal representation of his own choice for his defense or to have free or assisted legal representation under the condition prevailing for the time being in the receiving state.
6. If he considers it necessary, to have the services of a competent interpreter.
7. To communicate with a representative of the government of the sending state and the United States and, when the rules of the court permit, to have such a representative present at his trial.

Hawaii

EXTENSION OF REMARKS

OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. BURNS of Hawaii. Mr. Speaker, support for Alaska-Hawaii statehood grows daily among the people of the United States and in the Congress of the United States.

While many people have objections in which they are convinced, others have been misinformed. I include for the information of Members of the Congress editorials of several newspapers which shed light on the subject:

[From the Rapid City (S. Dak.) Journal of April 19, 1957]

TIMID REASONING

It is inconceivable that the great majority of Hawaiians are or are likely to become Communists. And it is bewildering that the great United States of America should fear to admit Hawaii to the Union on the ground of Communist influence allegedly wielded by Harry Bridges. This is giving Bridges, whose union was kicked out of the CIO some years ago, too much power and influence in the policy of the Nation and the Congress.

Statehood for Hawaii will not automatically change the Territory's internal situation with regard to the Communist question, but it will automatically bring the Hawaiians closer to these United States. Refusal to admit Hawaii because of Harry Bridges only magnifies his importance and can even help to give him a real or a seeming influence beyond his real power.

This reasoning smacks of timidity which is unworthy of us, and can cast a reflection on the policies this country has followed in Hawaii since the islands became United States Territory. Most certainly, we can hold the loyalty of Hawaiians should Hawaii become the 49th State. Here, as in other situations, the thing we must really fear is fear itself.

[From the Wilmington (Del.) News of April 4, 1957]

COMMUNISM AND HAWAII

There are Communists in New York, perhaps more than in the other 47 States combined. Should New York therefore be deprived of statehood?

This is an idle question: New York's statehood cannot be legally taken away, even by constitutional amendment. But a similar question about Hawaii is not idle. Hawaii is not yet a State, and the presence of Communists there may again this year become a pretext for denying statehood to Hawaii's 500,000 Americans.

If Hawaii were actually controlled by Communists, or in danger of being, hesitation to grant statehood would make sense. But there is no indication of that. Hawaii has relatively few Communists. The International Longshoremen's Union of Harry Bridges is strong there, but it is also strong in our own Pacific Coast States. It doesn't run Hawaii any more than it runs California, Oregon, or Washington.

During the Korean war, when Communists the world over were dedicated to opposing the United States and the United Nations, the Communist-dominated Bridges union was totally ineffective. Since then, Communist strength in the Hawaiian Islands has sharply declined. Communist propaganda hasn't got to first base in Hawaii.

Hawaii deserves statehood. President Eisenhower is strongly in favor of it. Interior Secretary Seaton says Hawaii's admission to the union would be "simple justice," and other Interior officials have come out strongly for it. If the issue of communism in Hawaii were more than a bogey-man, these officials would not give unqualified support to statehood.

One of the real motives behind the opposition is the fact that Hawaii is a racial melting pot, where many peoples live together in harmony. Racial discrimination is not totally absent, but it expresses itself mostly in social snobbery and minor economic exclusions. If Hawaii elected Senators and Representatives to Congress, their votes on civil rights issues would not please southern congressional leaders. The issue of communism is just a blind.

The admission of Hawaii would, in fact, further weaken the Communist propaganda campaign against America as a "colonial power." Communism, both abroad and in Hawaii itself, has more to gain than to lose from another refusal to grant statehood. The opponents of statehood are actually refusing to strike a blow against communism.

[From the Knoxville (Tenn.) News-Sentinel of May 5, 1957]

ONE STAR COMING UP?

If the 49th State gets into the Union this year, it will be Alaska. Our vast, untapped northern Territory, long ridden by bureaucratic domination, has a better chance of being admitted as a sovereign State than Hawaii, her sister Territory.

Alaska and Hawaii both have valid claims to citizenship.

The residents of those Territories are taxpaying Americans who long since have earned the privileges of other Americans. Alaska has been a Territory since 1867, Hawaii since 1898. No 1 of the 48 States waited nearly so long as Alaska to be accepted into the family. Only New Mexico remained a Territory longer than has Hawaii.

Alaska and Hawaii are adult entities in our Republic. They carry the responsibilities of States, but are denied the privileges. They are dependencies in no more sense of the word than the recognized States. We reject colonialism for others, but impose it, in essence, on some of our own people.

It is time we come of age with respect to our fellow Americans in Hawaii and Alaska.

If the friends of Alaskan statehood, in and out of Congress, will turn on the steam now they can pass the bill. And passing it is a matter of national honor and fairness.

[From the Westerly (R. I.) Sun of May 2, 1957]

TIMID REASONING ELEVATES FIRED BOSS

It is inconceivable that the great majority of Hawaiians are or are likely to become Communists. And it is bewildering that the great United States of America should fear to admit Hawaii to the Union on the ground of Communist influence allegedly wielded by Harry Bridges. This is giving Bridges, whose union was kicked out of the CIO some years ago, too much power and influence in the policy of the Nation and the Congress.

Statehood for Hawaii will not automatically change the Territory's internal situation with regard to the Communist question, but it will automatically bring the Hawaiians closer to these United States. Refusal to admit Hawaii because of Harry Bridges only magnifies his importance and can even help to give him a real or a seeming influence beyond his real power.

This reasoning smacks of timidity which is unworthy of us, and can cast a reflection on the policies this country has followed in Hawaii since the islands became United States Territory. Most certainly, we can hold the loyalty of Hawaiians should Hawaii become the 49th State. Here, as in other situations, the thing we must really fear is fear itself.

Status-of-Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the text of a resolution unanimously adopted by the members of the Long Island General Assembly, Fourth Degree—Patriotic—Knights of Columbus, Kings County, Brooklyn, N. Y., at their meeting on May 25, 1957:

Whereas on July 15, 1953, the Senate consented to the request of the President for approval of the Status of Forces Agreement of the parties to the North Atlantic Treaty Organization which confers upon the courts of foreign nations the power to exercise criminal jurisdiction over American Armed Forces personnel stationed within their boundaries; and

Whereas article 1, section 1, of our Federal Constitution states that "all legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives";

Whereas provisions of the NATO status-of-forces and other similar agreements reflect a callous disregard of the rights of American Armed Forces personnel and is in violation of the Uniform Code of Military Justice for the government of the Armed Forces of the United States, which was enacted by the Congress under article 1, section 8, clause 14 of the Constitution; and

Whereas there has been introduced in the present Congress, House Joint Resolutions 11, 16, 39, 61, 134, 149, 177, 211, Senate Joint Resolution 40, Senate Concurrent Resolution 15, and House Concurrent Resolution 36, which propose to nullify that part of the NATO and similar status-of-forces agreements which deprive American citizens of the protection of the United States Constitution while serving in the Armed Forces overseas: Now, therefore, be it

Resolved, That the Long Island General Assembly, Fourth Degree—Patriotic—Knights of Columbus, Brooklyn, N. Y., reaffirm their support of legislation which would restore the protection of our Federal Constitution to the fundamental rights of United States citizens serving abroad as members of our Armed Forces, who, when being accused of crime are now denied the right to be tried for their alleged offenses before tribunals established by the laws of the United States; and therefore, again petition the Congress to rectify the present unjust discrimination against our Armed Forces personnel which has been caused by treaty and international agreements.

Sincerely yours,

JAMES F. MORGAN,
Faithful Navigator.

What's With the Marines?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the American Weekly of June 9, 1957:

WHAT'S WITH THE MARINES?

(By Gen. Randolph McC. Pate, Commandant of the U. S. Marine Corps)

In the last year you've heard a lot about the United States Marine Corps. A lot that wasn't good. You've been reading about Parris Island and you've seen stories about Marine drill instructors. Some of what you read you didn't like. The stories weren't pretty. No American liked them. I didn't like them.

The difference was that I was in a position to do something about the story behind those stories—and I did.

As I begin this report to you, I remember the brutal truth of General Sherman's words before a group of young men back in 1880. "There is many a boy here today who looks on war as all glory, but boys," General Sherman said, "it is all hell. You can bear this warning voice to generations yet to come. I look upon war with horror."

You and I—all of us—make up a generation yet to come. We know how horrible war is. We know—and this is part of this generation's knowledge—a ghastly new alphabet. It begins with the "A" bomb, runs through the "C" bomb (for cobalt) and continues on through "H."

I say we know how horrible war is. That's an exaggeration. Some of us know, perhaps most of us. But not all of us. Some still think of war as "glory"—as a spectacular movie with bullet-proof heroes. Some still think of military training as a kind of lark, a fun-filled hyphen between two periods of civilian life. It isn't.

If Sherman was right, if "war is hell," you don't train for it with soft-drink machines, color television, and mom's apple pies. We know that a boot camp is a rugged place where recruits learn some rugged subjects. It's not a fresh-air outing, not a recreational holiday.

The camp at Parris Island or its sister Recruit Training Command at San Diego, Calif., is not a huge amusement room where jolly games are played. We know that the boy sweating through 12 hard weeks in boot camp isn't there to learn an industrial skill, see the world, or mark time before going on to college.

He's there to learn the trade of war. And learn it for keeps. He's there to take out a life-insurance policy for himself and his nation. He's there to learn instant obedience to commands—commands that might save his life or win a battle; probably both. He's in boot camp to learn how to fight as a member of a team and how to fight alone, as a self-reliant United States marine.

In Parris Island the recruit learns how to get along without the comforts of home, the pleasantries of a 9-to-5 life. He learns how to defeat fatigue and to triumph over the enemy of civilized man—loneliness. And he's there to learn about his country's victories.

In a Parris Island boot classroom he learns some proud history he won't forget. When he gets through he won't lack an answer to the question, "What am I fighting for?" Some Americans lacked that answer. Psychologists found that out among the boys who surrendered in Korea.

I mention all this to you because I want you to know that your Marine Corps is every bit as realistic today about its job of training men as it has been throughout its 182 years of service. We know that any weakening of our rigid standards of discipline and training would cost America dearly in any new conflict. Surely we haven't forgotten the price our country paid on December 7, 1941, for not being ready.

Eternal vigilance is the price of liberty.

I want to make one thing unmistakably clear: There has been no hedging of Marine standards, no lowering of Marine goals, no softening of Marine training in the past year. That would have been an easy out. It would have erased the headlines, cut down the criticisms and complaints.

It would also have been disgraceful. It would have been an unforgivable violation of the Marine motto: "Semper Fidelis." To have weakened the training program would have been a breach of faith with the American people. You have counted on us before—you may again—and I can assure you of one thing: Your Marine Corps today is ready to fight now, as ever, "in every clime and place where we could take a gun."

If you were to pay a visit to Parris Island, S. C., in the company of one of the old, battle-scarred marines with a good memory for "way back when," he would tell you that Marine training today is pretty much the way it has always been.

By that he'd mean that the fundamentals of our battle-tested recruit training program are unchanged. The schedule, as he would note, is 3 months long without leave or liberty. He would show you that the wooden

walls on the obstacle course are still 12 feet high, that the sand fleas bite just as hard as they did when the camp was established in 1915.

You would learn, in the company of such an oldtimer, that today's bivouacs are just as long and as lonely as yesterday's; that the 7-mile march hasn't grown any shorter, and that recruits today, like the marines before them, have to sweat and struggle to prove they're fit to be a marine. Yes, fit.

Every recruit who goes into Parris Island and San Diego—and I'm proud to say that they are arriving in large numbers—is taught one thing the first day: "You weren't forced to be a marine; you have no inherited right to be a marine; you must prove that you are fit to be a marine."

While an oldtimer would be relieved to note, in a return visit to Parris Island, that there had been no changes in the fundamentals of recruit training, he would, nevertheless, be aware of a number of improvements.

Now I come to the point in this report to you where I should delineate the story behind the stories you've read, an examination of the conditions that made those stories happen.

You have read about a dozen or so marine drill instructors who were charged with various offenses, from manhandling recruits to making them eat candy until they were sick. But perhaps you haven't read about the more than 700 marine drill instructors at Parris Island who were never "front page news." They weren't "news" because they did their jobs in the best traditions of the marine drill instructor.

I remain convinced that the training of recruits must be conducted by the men from whose lips they will receive their orders in battle, the backbone of the corps—the noncommissioned officer. At Parris Island and San Diego the enlisted drill instructor is today, as he was before, the keyman in the process of turning out marines.

Today, however, he has more help. Before our recent improvements the DI was severely overworked. There were just two DI's to every 75 recruits—and they tried to be everything to their "boots": father, friend, teacher, adviser, taskmaster, trainer.

The public isn't aware that, in addition to teaching young recruits how to march, the DI has other chores, homely ones, that keep him going from before dawn until after dark. He teaches his "boots" how to press their uniforms, make their beds, clean and assemble rifles, and even how to write letters home.

Another element of the "story" behind the Parris Island story was the fact that there was inadequate officer supervision. The concept of letting the recruit train under noncommissioned officers had gone beyond our tradition. It needed to be changed and it was.

That is a part of the background, and here is a summary of the decisions I made to improve recruit training. Most of what we have done in the past few months is designed with one objective in mind—to aid our drill instructors achieve the ultimate in their performance of duty.

In Washington I appointed a major general as inspector general of recruit training. His mission: To assist me in maintaining a close watch over every aspect of recruit training. Later I combined his duties with those of the regular inspector general.

At Parris Island and at San Diego I took the extraordinary measure of establishing separate recruit-training commands operationally divorced from the bases at which they were located. This enabled the commanding generals of the recruit-training commands at Parris Island and San Diego to report directly to me.

I assigned 140 additional officers to the training job at all levels—company, battalion, and training command. These men are free from administrative duties and are able to devote their full time to supervising the training and activities of recruits.

The objective of these measures was to insure scrupulous compliance with the recruit-training policies I issued. In strong words, I directed that illegal punishment, degradation, and humiliation of recruits cease at once.

Here is an excerpt from one such directive: "Hazing is to be absolutely eliminated and any treatment incompatible with accepted American standards of human dignity is also to be eliminated."

Specifically, here are some of the things we've done to improve our marine recruit-training programs:

We have doubled the number of drill instructors. There are now 4, not 2, to every platoon of 75 recruits.

An inspection-instruction staff consisting of nine captains has been established at each depot to supervise night and day training.

To instill even the greenest of marines with our traditional esprit de corps, each boot platoon is issued its own banner which it displays. It bears any streamers marking special achievements of the platoon.

We have replaced the old fatigue cap with a bright new silver helmet with a functional purpose in addition to serving as a morale booster. Bearing the marine insignia, it is 10 percent cooler than the old cap. It has reduced heat prostration on the parade ground.

We abolished the "Private Skinhead" haircut that was the traditional one for 50 years. Now recruits get an abbreviated Ivy League crew cut.

For the drill instructors we have established advisory councils, improved living conditions with better quarters for bachelor DI's, reissued the famous Marine campaign hat with its broad brim and colorful tradition dating back to the Boxer Rebellion.

We have provided means of relieving instructors of problem recruits who formerly demanded an exorbitant share of the instructor's time.

In addition, we have:

Extended the recruit training program from 10 to 12 weeks. It is now the longest basic training period in the armed services. The additional 2 weeks enabled us to establish an unequaled physical training program which has paid tremendous dividends—to the recruits and to the corps.

Another program was created to enable near-illiterate boys to catch up on their homework quickly.

Beyond this I have established even higher standards for noncommissioned officers who are candidates for the honored position of drill instructor. As part of their training they are exposed to a psychological examination that is even more thorough than in the past. Today one-third of the men selected for DI training do not pass all the tests and are washed out.

I personally selected the top officers now on duty at Parris Island. They will make certain that there are no more marches to Ribbon Creek, which is forever off limits.

In the past 12 months I have received thousands of letters asking: (1) Will traditional Marine training be preserved? and (2) have the abuses of authority been eliminated?

The answer to both questions is "Yes." The Marine Corps recruit training program has never been sounder, stronger, or more wholesome than it is today. That is why I'm proud of Parris Island. However, there is in the corps—as in every large organization—the human element. Regrettably, I don't believe we can ever completely eradicate abuses. But we can try. I am dedicated to making that try.

The corps will, I am confident, remain the kind of corps Americans want it to be. In the past year I received hundreds of letters from mothers, many with messages like this one from Mrs. Virginia Greer of Falls Church, Va., which reads in part:

"As the mother of a son whose ambition it is to follow in his father's footsteps as a marine and to devote his life to a career in the Marine Corps, I ask that the corps does not shelve its methods of discipline which my son and so many young men of the next generation are so sorely in need of for their own preservation. Please hold steadfast to the principles we associate with the United States Marine Corps."

We will. America can count on us.

Sewanee—The University of the South Celebrates Its Centenary

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. EVINS. Mr. Speaker, the University of the South at Sewanee, Tenn., in the district I have the honor to represent, is one of the great educational institutions of the South and of this Nation. The beloved Bishop James Hervey Otey, its first chancellor, expressed the aims of this great university in his address to the first trustees on July 4, 1857, as follows:

We affirm that our aim is eminently national and patriotic. * * * We contemplate no strife, save a generous rivalry with our brethren as to who shall furnish to this great Republic the truest men, the truest Christians, and the truest patriots.

A hundred years have passed since those words were uttered and Sewanee has ever since striven to live up to them faithfully and with great success. Next month this great institution which has left its impress upon its region and the Nation as few have done, will celebrate its centenary. I ask unanimous consent to extend into the RECORD the following article from the Nashville Tennessean magazine which recounts the history of this fine university.

The article entitled "To Furnish the Truest Men" follows:

TO FURNISH THE TRUEST MEN

(By Louise Davis)

Sewanee builders, from the 6-foot 4-inch, raw-boned bishop nicknamed "Cherokee" to the ladies who sat with raised umbrellas in the leaky first chapel, never wavered in their purpose: to "furnish the truest men."

And celebrants of the 100th birthday of the University of the South this year will find blood-and-heartbreak bonds with those founders in the ancient flags that hang overhead in hallowed All Saints Chapel.

The tall bishop was James Hervey Otey, and the oldest flag in the chapel today whipped out in a sudden gust to enfold him as he stood on a mountaintop speaker's stand on July 4, 1857, to address the first meeting of the university's trustees.

It was 4 years before the Civil War, and Bishop Otey wanted to be sure that tension mounting between North and South did not mar plans for the Oxford-like university to be set up as "the greatest center of learning in the South."

"We affirm that our aim is eminently national and patriotic, and should commend itself to every lover of this country," the stern-faced bishop stated pointedly to the audience clustered about him on Lookout Mountain, near Chattanooga.

"We contemplate no strife, save a generous rivalry with our brethren, as to who shall furnish to this great Republic the truest men, the truest Christians, and the truest patriots."

At that moment, the American flag that had hung limp on its staff beside him was stirred by a sudden breeze and "seemed to be seeking the person of the speaker * * * causing his words to come, as it were, from the midst of the flag's folds."

The flag had been especially made by order of President Fillmore to hang above the American exhibit at the world's fair in London in 1851. It had been flown at official gatherings around the world, but from the moment it wrapped itself around the bishop who first envisioned Sewanee, it has been the cherished memento of the university's founding.

But the fierce-eyed bishop—first Episcopal bishop of Tennessee and first chancellor of the University of the South—was dead before the university opened its doors. War came as a particular blow to the man who had ridden horseback through rain and frontier squalor to minister to churches from Florida to Missouri. But the southern cause was the "just one * * * under the Constitution," he believed, and he served it to exhaustion, dying in 1863.

Sewanee's beginning was so entangled with the fury of the War Between the States that every trace of the prewar university was destroyed and its cornerstone, laid in October 1860, was blown to bits.

Getting the 6-ton stone up the mountain had been a major triumph for a mountain youth who hitched 36 oxen to his father's wagon and landed the stone on the spot by sundown of the same day.

"My old man gave me 3 days to do it, and General Polk laughed at the idea." I. T. Miller recalled years later. "I had full control and only my father's trusty darkies to help me. * * * Bishop Polk came riding up at the last hard pull and insisted on my parking for the night. * * * I remarked to him that * * * I would land that stone there by sundown or kill two yoke of my oxen doing it."

The Tennessee marble, cut at Elk River, was to be the cornerstone of Sewanee's first permanent building, which was planned on massive lines not unlike that of the Capitol at Washington.

On the bright autumn day that it was laid, with valuable documents sealed inside, the whole mountain came alive with bishops and bands, choirs and caterers, notables of the church from New York to Texas.

They arrived by the "mountain goat," the unpredictable, track-jumping coal train that hauled coal the 7 miles from mountaintop mines to Cowan in the valley. And they stayed in quarters that the first administrators of the university had spent the whole summer preparing: rows of log cabins with connecting halls and piazzas running all the way around.

The piazzas were covered with canvas and furnished with cots * * * placed in long rows to accommodate the distinguished guests. And on October 9, the night before the great festivities, out under the stars, bishops led the band and the impromptu choir * * * in preparation for the next day.

"October 10 was an ideal day," one witness reported, "and from early dawn, people by the hundreds arrived from the valleys, on foot, on horses, in buggies, and wagons; and trains were arriving every hour from Tracy and Decherd filled with people, all gathered together to the number of nearly 10,000.

"At 11 o'clock the procession formed in the open ground where Hoffman Hall now stands and moved through the forest to a knoll * * * where the cornerstone, a Tennessee marble beautifully polished, was to be laid.

"A splendid sight it was, those * * * bishops in their robes, followed by the clergy in their vestments, and hundreds of prominent laymen. * * * The absence of Col. Robert E. Lee was greatly deplored, as he had been selected as the most fitting man to be vice chancellor."

When the solemn services were over and the crowd reassembled at the shed built nearby for the oration of the day, South Carolina's famed orator, John S. Preston, stirred the audience to the soul with predictions of the calamity in store for the country if Abraham Lincoln should be elected President the following month. Lincoln would bring war, the orator said.

Even after the mammoth festivities, with food prepared by caterers from Nashville, the guests streaming off the mountain by every train and carriage for the next 24 hours had only one shadow on their hopes for the new university: war.

Less than a month later, Lincoln was elected. And a month after he entered the White House, the War Between the States began.

On April 12, 1861, the very night that the first shell was fired at Fort Sumter, Union sympathizers set fire to every home at Sewanee. The wife and children of Bishop Leonidas Polk barely escaped with their lives, and Bishop Stephen Elliott's home also burned to the ground.

The arsonists' hellish attack on Sewanee that night is said to have determined Bishop Polk to lay aside his church vestments and take up the sword "for constitutional liberty * * * and for our hearthstones."

As a West Point cadet in the 1820's, Polk had been converted and had turned the whole academy toward a religious awakening. To the disappointment of many, he had turned his back on the military life and had become one of the Nation's great churchmen. He alone had raised enough money for Sewanee's endowment in the 1850's to assure its rivaling Harvard or Yale within 5 years of its opening, and he was reluctant to give up his dream of peaceful settlement of differences.

But at last he gave in to President Jefferson Davis' entreaties to accept a commission as general in the Confederate army and lead in the defense of the Mississippi. And at the end of 3 years' unparalleled fighting, he stood on a Georgia hilltop surveying the battlefield one Sunday morning when cannon fire struck him down.

Oddly enough, when the second chancellor of the University of the South fell dead that June 14, 1864, a soldier on the opposite side of the firing line held in his hand a small stone that would have touched the fighting bishop to his heart.

It was a bit of the Sewanee cornerstone that had been blown to bits the year before by idle Union soldiers camping there, and the Union captain had been so grieved at the vandalism of war that he carved a sliver of the Tennessee marble into the shape of an open Bible and carried it in his pocket throughout the war.

The tiny stone Bible, eventually presented to the university, is enshrined in All Saints Chapel, heart of the campus now, but the gap between that stone and the chapel that houses it is beyond measure.

There was nothing but ashes of the old building left when the war was over. The 10,000-acre domain that had been given to the church for establishment of the university had grown up into an almost pathless wilderness, and only the fields of daisies on the mountainside showed where Union soldiers has camped.

The southern dioceses of the Episcopal Church that had pledged hundreds of thousands of dollars for the rich endowment of the university were bankrupt. The university that had been conceived in southern prosperity now existed on worthless paper; the money promised it 10 years before had belonged to men now dead on the battlefield. Their widows and sons were hungry.

The land given to the university would revert to its former owners if classwork were not in progress by 1869. Many despaired of saving the dream, but Bishop Charles Todd Quintard took the lead in the fight to save the university.

The Connecticut-born bishop of Tennessee had been a physician practicing medicine in Memphis when he fell under the spell of Bishop Otey's preaching and became a minister himself. During the war, he served as chaplain of the Army of Tennessee, and after the war he worked hard to heal the rift between northern and southern branches of the church—with the reestablishment of the University of the South as a strong motive.

He needed not only the churches of the North but the Church of England to help him in the project. And when he went to England for support, he won the enthusiasm of the archbishop of Canterbury. Through him, generous gifts of money and books came from English churches and universities, and the University of the South barely made the deadline for retaining its vast domain.

Bishop Quintard was first vice chancellor of the university (chancellor is an ex officio title at Sewanee, held by the ranking bishop of the owning dioceses; the vice chancellor is the actual head of the school). And the first building on the rebuilt campus was a little frame chapel named St. Augustine's in honor of the first Archbishop of Canterbury.

On the morning of September 18, 1868, when 9 students and 4 professors showed up for the opening session, the chapel was barely finished.

"As the procession entered the modest little chapel," Bishop Quintard wrote, "I stepped aside to allow the plasterer to pass out with his mortar board and trowel."

The little chapel grew, with wings for classrooms, until it was an architectural monstrosity. But the daily worship services and the daily classes there made it heart of the campus until All Saints' Chapel was opened for use in 1911.

Handsome buildings cropped out over the mountaintop to house library, hospital, classrooms, fraternities, dining halls, inns—but work on the new chapel was slow. And it seemed wasteful to put more money into repair of old St. Augustine's while the new structure was being built. It was then that the dauntless ladies of Sewanee began raising their umbrellas during services to ward off the showers.

The pews, lectern, altar, credence table in that first St. Augustine's chapel are in use today in the little side chapel of All Saints. And Sewanee students who attend daily services in the tiny chapel can find initials that earliest students whittled in the pews almost a century ago.

The first faculty had been trained at Heidelberg, Cambridge, the University of Virginia, West Point. Gen. Robert E. Lee came close to accepting the invitation to become first vice chancellor. Jefferson Davis and Gen. Joseph E. Johnson were among the early planners.

The military permeated every phase of campus life—from uniforms to crisp courtesy. Even today students at Sewanee Military Academy, the preparatory school operated in connection with the university, wear uniforms, have weekly parades and march in a body to Sunday church services as their band plays the stirring religious march, "Onward Christian Soldiers."

And from the first, Sewanee students have been noted for their elegant appearance.

founders selected the mountain-top site to insure students against the distractions of town life, but they had no intention of allowing the campus to drift into seedy ways and careless dress.

They encouraged two French tailors to open shop at Sewanee in 1870, and one of them, M. Pillet, became a campus figure in his dapper frock coat and high silk hat. He made all uniforms for generations of students, embellishing them with elaborate braiding and brass buttons. The shirts and suits he made were so elegant that Sewanee men ordered their clothes from him for years after they had graduated. And his very French menage, even to the little dog that wore a blue ribbon to Sewanee games, was part of the charm of the mountains.

The tight little island of learning atop the 2,000-foot mountain had such a close-knit village life, made up of the noblest idealists with the sternest intentions of keeping those ideals alive, that Sewanee people regard it as nothing less than idyllic.

The vice chancellor has all of the authority of a mayor, chief of police, and feudal lord on the domain, and he determines which tradesmen may set up shop there, who may lease land to build homes, who may be buried in the village cemetery.

Among the early shopkeepers were a Swiss butcher, an English cabinet maker, a huge, ruddy-cheeked baker from Scotland whom the students and children of the village adored. They called him "Bishop" and gathered at his tiny green-shuttered shop for "candies and confections * * * ice cream when in season."

All students boarded in private homes in the earliest years, before the stone dormitories went up, and the muddy roads that connected them were trod by pet pigs and geese, chickens, and cows.

There were no street lights, no carriages except the old hack that met the trains for many years after the university was founded. But social life was gay, dances and plays and oratorical contests were frequent, and students on their way to Old Forensic, center of campus social life, held their lanterns high. The whole mountaintop twinkled with the bobbing lights on nights that merrymakers made their way to festive gatherings.

To take advantage of cool summers on the mountaintop, the university held classes through the summer, had vacations in midwinter. Until 1909 Sewanee held to the custom, and thus ladies who spent their summer vacations at the cool retreat where there were endless parties, hay-rides, hikes, cave-exploring expeditions.

And in autumn, Sewanee's early football teams kept the mountain at fever pitch. Chief rivals of Vanderbilt for years, Sewanee was for a time the outstanding team in the old Southern Intercollegiate Athletic Association. In 1899, when the Sewanee team made a swing around the South and won five SIAA games in 6 days, they set an all-time record.

There are ghost stories, romances, stories of courage by the hundreds at Sewanee. The Confederate widows who came there to educate their sons and run boarding houses for the students gave the community an air of sad gentility that somehow made the years of struggle and poverty seem privileged.

And the marriages between old Sewanee families have so knitted the offspring of bishops and generals and professors that the "mountain dwellers" are a breed apart.

They are accustomed to the honors that have come to the 40 graduates of their seminary who have become bishops. They are accustomed to the influence that editors, writers, college presidents, business tycoons graduated from the university have on world affairs.

In the brief period when Sewanee had a medical school, it turned out graduates like Dr. Cary Grayson, personal physician to Woodrow Wilson, and Maj. Gen. William Crawford Gorgas, conquerer of yellow fever at Panama.

In the brief years that Sewanee had a school of law, it turned out distinguished lawyers, judges, professors of law. In 1892, Sewanee published the first literary quarterly in America, and today the Sewanee Review is read in 35 countries, has a wider circulation in India alone than in Tennessee.

Sewanee's graduates have won more Rhodes scholarships than any other college its size, have captured so many honors in the scholastic world that in every reputable rating it is ranked in the top 1 percent in the Nation.

But not yet has the university attained the splendor envisioned by its founders more than a century ago. As one professor put it, "Sewanee is not yet at the top of the top 1 percent," and no less a grasp of the wisdom of the ages will furnish the "truest men."

Voice of Curley

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement enclosed with the newsletter issued by the Independent Editorial Services, Ltd., of Washington, D. C., concerning the former Governor of the Commonwealth of Massachusetts, and formerly one of our colleagues, for whom we have the greatest respect and admiration:

THE VOICE OF CURLEY

A book written by James M. Curley, of Boston, has appeared, but it apparently has not been greeted by the brilliant success of the fiction book which inspired it, The Last Hurrah, by Edward O'Connor.

The reason is that the aging ex-governor and ex-mayor has not been able to translate the incredible drama of his political fights to paper. There have been three works based on Mr. Curley's career, or parts of it. They are The Purple Shamrock, by Joe Dinneen, of the Boston Globe, and the two above.

The Dinneen book is far more readable than the latest by the subject himself, because Dinneen is a polished writer who saw Curley in action and in his prime. He also had the advantage of being an observer.

The O'Connor book has the flavor of Curley, but there is also some of the spirit of Frank Hague and Ed Kelly of Chicago in it.

Curley did more to and for Boston than anyone in more than three centuries of its long and salty history. Few men in public life on the American political scene in the past 60 years have had the combination of talents which were those of James Michael Curley.

If he had gaged his course more carefully, and had had the money to back it up in the early days, he would have been seated in the chair of Daniel Webster in the United States Senate for the past 50 years.

As a platform figure, he was a nonpareil. He was a fit successor to Bryan as a foremost orator of his time. But his expansive needs and his imperious pride forced him time and time again to go back to the Boston wards to compete for local offices, posts that his talents had long outgrown.

The physical aspects of Curley in his prime were hypnotic to his listeners. He was a powerful man—not tall, but compactly and very strongly built. He had a shock of iron-gray hair, and bold, dark eyes which smiled and blazed alternately.

But in his voice he exercised his real power. His voice rang true and clear, like an organ note in the lower register, and the English that he used was flawless and precise. He rolled out his sentences, phrase upon phrase, clause upon clause, with emphatic and stunning impact.

He never got folksy or trite. He would devote the same solicitude to a handful at a rally in the late hours of the night in a cold and dim slum hall that he would over the linen and silver at the Copley Plaza, or before a vast audience in the Boston Garden, jammed to the girders.

Curley at his best would cast a spell. Erudite, eloquent and magnificent in his rolling baritone, he left his audiences enthralled. Best of all, he never took himself too seriously. The strife and ruffianism of the ward fights were things apart. Before friendly or hostile audiences, the result was always the same. Curley would transport his listeners to another world.

When radio came along, he missed the advantage of the device completely. He still needed a live audience, and while other politicians were developing radio techniques, he still thundered in the halls and on street corners.

Curley is a classic example of a potentially great man, diverted by petty politics.

South's Progress Impresses All Sections of the Nation

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. HUDDLESTON. Mr. Speaker, it is encouraging and gratifying to note almost daily evidences of growth and progress in the South. The basis for the South's development and expansion in the years to come can be attributed to our section's many outstanding advantages, such as manpower, climate and natural resources.

Our great prospect for future progress is now well known throughout the Nation. Other areas are demonstrating a high regard for the South's tremendous potential. It is high time for all to take stock of the South's important position in the America of tomorrow.

It is my privilege, under leave heretofore granted, to insert an editorial entitled "People of Nation Are Impressed by South's Progress Prespects," which appeared recently in the Birmingham (Ala.) News, one of the South's leading newspapers, which is published in my district.

The editorial follows:

PEOPLE OF NATION ARE IMPRESSED BY SOUTH'S PROGRESS PROSPECTS

In recent years it has been widely evident that the people of this country have been specially impressed by advantages of the South and its economic prospects. Much comment to that effect has been backed up by the coming of many new citizens from other sections to this region and by the marked growth of business and industry that already has occurred.

The advantages of this area in manpower, natural resources, climate have, of course, been major factors in this advance. But fundamentally what has counted most has been the growing recognition by the people of the South and of the rest of the Nation of the opportunities these advantages afford. Whatever stimulates and extends such recognition contributes to the expansion of fresh initiative and further growth.

It is highly gratifying, then, that the results of a poll announced yesterday by the American Institute of Public Opinion emphasize anew the recognition by the people of the Nation as a whole of this region's potentialities for continuing advance.

Dr. Gallup's interviewers put this question to a carefully balanced cross section of adults: "Which section of the country—East, Middle West, South, or West—do you think will go ahead most rapidly in the next 20 years?"

The West led in the replies but only by a small margin over the South. Thirty-five percent named the West, 31 percent the South, 19 percent the Middle West and 16 percent the East.

As was to be expected, sectional loyalty influences judgment on such a question, the survey indicated. Naturally many are strongly inclined to think well of the prospects of the region in which they live. But despite such feelings, objective considerations obviously entered very importantly into the formation of answers. For instance, more people in New England put the prospects of the West and South above those of the East than put their own section first.

Clearly the high regard for the South's future shown over the country is a widespread and effective influence that can make for more newcomers, more activity, more investment in this region. The survey indicated a high degree of confidence also among the people of the South, with 65 percent of those interviewed in this area putting its prospects first.

Whatever southerners can do to expand sound realization of this region's opportunities and advantages will contribute toward new progress. What we certainly can do is to strive to see our many continuing problems as comprehensively and as realistically as possible and to press on to the utmost with our efforts toward constructive solutions. Effective endeavor of that kind makes both for growing realization of our advantages and potentialities elsewhere and for soundly increasing confidence among ourselves.

Let's find fresh impetus in the appreciation of this region's possibilities in other parts of the country and get on with our many tasks. And may Americans in other areas achieve more and more understanding of our special problems and of the key importance of our own efforts in striving to work them out and of the need for adequate latitude and responsibility in doing so.

Civil Rights

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. DORN of New York. Mr. Speaker under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following text of a resolution passed by the executive committee of the New York Republican State Committee at a meeting at the Hotel Roosevelt, New York City, June 6, 1957:

Whereas the Republican Party in the State and Nation has, since its beginning, always championed the civil rights of all citizens; and

Whereas the Republican Party in the State of New York has remained in the forefront in fostering and advancing the civil rights of all its citizens; and

Whereas President Eisenhower's civil rights program is now threatened in Congress by a proposed amendment which could nullify the effect of the entire program: Be it therefore

Resolved, That the executive committee of the New York State Committee, in session assembled, does hereby unanimously endorse and support President Eisenhower's civil rights program, and strongly supports the President in opposing any weakening amendments to his civil rights program now pending in Congress, and does hereby urge all members of Congress from the State of New York to vote for the civil rights program advocated by President Eisenhower.

Long Misplaced Friendship

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times, February 14, 1950, and an answering letter to that paper from Hon. Persio C. Franco, Ambassador to the United States from the Dominican Republic prior to the advent of Generalissimo Trujillo as dictator of that unfortunate country:

[From the New York Times of February 14, 1950]

HAITI'S BICENTENARY

The biggest celebration ever held by the smallest American Republic started on an appropriate day—Lincoln's Birthday. It was Abraham Lincoln who advocated recognition of the Republic of Haiti and signed the bill acknowledging its independence. On Sunday the International Section of Haiti's Bicentenial Exposition celebrating the founding of Port au Prince was inaugurated and yesterday the United States pavilion was opened by Assistant Secretary of State Edward G. Miller, Jr.

There are more reasons to note this event than mere politeness. Haiti has earned good will and encouragement from her fellow Americans. Once France's richest colony, richer in 1749 than all the Thirteen English Colonies put together, a long, bloody and tragic period brought her to the depths of misery. A new era began with Roosevelt's good-neighbor policy. The riches were still there, at least potentially, in the coffee, sugar, cocoa, and banana crops, but so were the overpopulation, malnutrition, disease, illiteracy, deforestation, and erosion. Thanks to a United Nations health mission and to United States money, much is being done in these years with outside help, but much more is being done by the Government of President Dumarsais Estimé

At the moment Haiti is in conflict with her neighbor to the east, the Dominican Republic. It is a dispute over plots and counterplots, which is being investigated by the Council of the Organization of American States and is therefore sub judice. However on the general proposition of which country deserves the sympathy and encouragement of the United States, there can be no question. One could not today imagine an American Assistant Secretary of State paying a visit to Ciudad Trujillo and delivering a tribute to a dictatorial regime that virtually all Americans—North and South—deplore. One of the things that the State Department can do in encouraging democracy in Latin America is to show favor and friendliness to those nations whose ideals and aspirations approximate our own, and to refuse to help the anti-democratic regimes. From that viewpoint Haiti is a good neighbor, and all Americans can wish the greatest success to the Bicentennial Exposition.

[From the New York Times of February 17, 1950]

AIDING DEMOCRACY IN LATIN AMERICA—CABLEGRAM FROM LA HABANA, CUBA, FEBRUARY 15, 1950

To the EDITOR OF THE NEW YORK TIMES:

As a Latin-American and particularly as a Dominican I wish to thank you for your editorial "Haiti's Bicentenary."

If the United States did the simple thing you recommend, which would not cost its taxpayers one penny—that is, to "show favor and friendliness to those nations whose ideals and aspirations approximate our own and to refuse to help the anti-democratic regimes"—in a few years democracy would reign completely in Latin America, resulting in the immeasurable strengthening of America's role in world affairs.

PERSIO C. FRANCO.

Government Man

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial which appeared in the Lancaster (S. C.) News, Monday, June 10, 1957:

GOVERNMENT MAN

When Dwight D. Eisenhower became President of the United States he had a pretty clear idea of what the people in this country wanted in the way of government. They wanted lower taxes and a balanced budget. They wanted a curtailment of America's fantastic global spending. They wanted government itself reduced in size to something less than the many-tentacled octopus created in the Roosevelt-Truman era.

Because he knew these things he promised them and because he promised them he was elected. The people of the United States sent him to Washington as their representative to clean up the mess he would find there. He made a start during his first term and for a time there was high hope that he would master that thing we call Government, that thing which has outgrown the governed and now exists and perpetuates itself for its own sake.

Recently it has become abundantly clear that it is Eisenhower himself who has been mastered. He has become a Government man, speaking for Government instead of the people of the United States. When he

said that he knew to the exact dollar what it would cost the United States to wage peace, he was speaking as a Government man backed by rank upon rank of job-holding experts.

When he said that cutting foreign aid one iota would wreck the whole grand plan of the administration to keep us out of war he was stating the position of Government men who can always prove they need more money and power if their self-assigned goals are to be achieved.

These experts, anonymous in their very multiplicity, have so increased in prestige and authority that they can create their own issues and sell them to Congress and the President as proved necessities. Eisenhower is espousing Federal aid to education because he was convinced by his experts that a real emergency existed. State after State has denied the existence of any emergency and has called attention to major errors in the Government survey.

Because a little foreign aid proved a good thing in Greece and Turkey, the idea was expanded to the point where foreign aid has come to exist as a thing in itself, giving jobs to thousands upon thousands of specialists in the art of finding places to hand out taxpayers' money. Ask any one of them if he could get along with a dollar less and the reply comes back: "We are fighting international communism. Send us $2 more or the battle will be lost."

As a military man, President Eisenhower is familiar with the historic causes of war. Wars have been fought for plunder and subjugation, for religious objectives and for reasons of trade and commerce. It is generally agreed that most modern wars have been fought for trade reasons with plundering as an additional objective.

If Eisenhower had not become a Government man, wedded to the one-world position of the State Department on foreign trade, he could see the futility of waging an expensive peace while giving away this country's trade and commerce at a rate no plundering nation could hope to achieve. Because Cordell Hull's program for helping Latin America neighbors with carefully negotiated trade treaties looked promising, the State Department adopted the idea as a diplomatic weapon to be used on a global basis.

Now foreign trade is in business for itself. Government men, who neither weave nor spin, go to Geneva and barter away the lifeblood of our American economy on the theory that our resources and enterprises are an offense to the rest of the world. Their slogan was "Trade, Not Aid," but the fact that we go merrily on giving away both is an indication that peace and war are not so much at stake as are the careers of Government men.

Perhaps the taxpayers will eventually call a halt to foreign aid. But the giveaway in foreign trade is so insidious that no stand can be made against it which cannot be beaten down with cries of "selfish interest." An error in tactics was made by the State Department in selecting cotton textiles for the first major sacrifice. The industry united in such strength that a retreat was necessary. "Voluntary" restrictions were imposed on imports of cotton textiles.

But the smaller segments of American industry are being traded off one by one. Plywood is facing ruinous foreign competition. American factories making bicycles, watches, pottery and many other products are closing down. Appeals and protests are useless. Government men have decided this country can get along without them.

If all this is a part of waging peace, it has a curious smell of Munich. To paraphrase a famous statement, the American people did not elect Mr. Eisenhower to preside over the liquidation of our way of life. He became head of a government no longer responsive to the people, a government which has mastered the technique of divide and rule. That he himself has now joined this superstate and speaks with the voice of a Government man raises the question of whether any President can ever be more than honorary chairman of the board of United States Government, Inc.

Address by Thomas E. Dewey

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the text of an address by Thomas E. Dewey given at the Ninth Annual Dinner of the New York Republican State Committee at the Hotel Waldorf-Astoria, New York City, Thursday evening, June 6, 1957.

The address follows:

It is good to see so many people in one room who are proud they are Republicans and willing to pay a hundred dollars to show it. From some of the complaints I hear about the administration in Washington, you would think the New Deal was back in power with 10 million unemployed and a world war just ahead of us. It occurs to me that if some people got the moon on a silver platter, they would still complain because the platter was not made of solid gold.

It is true that the Executive Mansion in Albany is not occupied by a Republican. By now that is obvious to everybody. But the electorate is entitled to make a mistake once in a while. Perhaps we have to endure that ordeal periodically in order to appreciate good Republican government.

Some years ago when we dreamed up this annual dinner, a lot of people told Dean Taylor, Bill Pfeiffer, and me that it could not be done. Then after it was a great success, a good many others said it could not be done without a republican administration in Albany or City Hall. Well, the attendance here tonight indicates to me that there are a lot of people in this State with principle who are willing to give of themselves and their substance in a cause in which they believe. It makes me prouder than ever to be a Republican.

Another nice thing about being a Republican is that we don't have to be embarrassed when we pick up the morning newspaper and read what our party leaders have said. Recently the advisory council of the Democrats put out an official declaration describing the state of the Nation and the world. According to them our national fiscal affairs "are approaching a crisis"; "the rich are getting richer and the poor are getting poorer"; the people are being exploited by small wage increases, inflation is running rampant, and the world situation has degenerated into chaos. It read just like the official Communist line in Pravda. The New York Tiwes made its own comment on that diatribe, saying:

"Rarely, if ever, has any presumably responsible group issued a formal statement of comparable length containing so many accusations ranging from the unsubstantiated and unprovable through the dubious to the untrue and the ridiculous."

I'll make a small bet that the so-called leaders who signed that document have awfully red faces—if they are capable of blushing at all. I'll bet, too, that the real Democrats of this country would like leadership capable of offering something better than wild charges which are unprovable and range from "the dubious to the untrue and the ridiculous."

I repeat, it is mighty nice to be a Republican.

The trouble with these Democrats is that they can't forget their own failures. They are obsessed with wars, deficits, and inflation. So they talk about these tragedies whether they exist or not. They don't even recognize the United States when it is at peace, when it is prosperous, and when it has a balanced budget. These are Republican conditions and the entire country has reason to be grateful for them.

Back in 1944 Franklin Roosevelt said in a speech that one should never mention a rope in the house of a man who had been hanged. The Democrats ought to follow his advice. They should never—no never—be heard to talk about wars, inflation and Government spending.

And to think of them—of all people—complaining about a budget. Why, with three balanced budgets in a row, the Republicans have produced as many balanced budgets as there were in the preceding quarter of a century.

These people must think nobody can remember anything that happened yesterday. The budget for Mr. Truman's last year in office was 19 percent higher than the budget now before the Congress and it was proposed, passed and spent by a Democrat President. These people should hang their heads in shame when they mention the cost of government. On the record, I can say with assurance, that if they were in power today, the budget would be at least $10 billion higher.

The Secretary of Defense made a salty comment the other day in contrasting the debate in the Senate this year with that of a year ago.

Do you remember what was going on just a year ago? Solemn hearings went on for weeks designed to prove that the defense of America was being starved and that we needed thousands more airplanes and everything else; millions of dollars were voted and forced on the Department of Defense when it did not need them or want them.

Today, the very same people are holding hearings trying to make the American people believe that the Department of Defense has too many airplanes and is spending too much instead of too little. I thought it was quite appropros for Secretary Wilson to point out that our enemies could not be 10 feet tall last year and suddenly only 5 feet tall this year. The Communists are the same today as they were a year ago. It's a little sad to see personal political aspirations injected into the defense of human freedom.

Now I am perfectly well aware of the fact that the Democrats have not asked my advice but if they want anybody to listen to them seriously, I really think they ought to change the subject.

In approaching a political speech these days, one of the most difficult tasks is to avoid spending all the time talking about the vagaries of the opposition. Their statements sound like those of a man from Mars who knows nothing about the American scene. If we do not watch out we will spend all our time knocking down their strawmen. That is tempting and a lot of fun but it does not advance public understanding of the incredible achievements of the last 4 years.

We do not need to recall that the Nation was in a desperate, suicidal war in Korea which President Eisenhower brought to an end; that he helped achieve a truce in Indochina and saved the Republic of Vietnam for the free world; that he prevented a war over Formosa; that he brought into being the Southeast Asia Treaty Organi-

zation and today we are stronger than ever before in a most difficult area; that our President, by sheer personal force, dominated the Geneva Conference and turned the hearts of men to our side. These things by now are known to everyone.

We do not even need to point out that the leaders of nations from every corner of the globe come to confer with our present leaders, not just for their own prestige but because at last this country is giving strong, moral leadership in the cause of decency and freedom. Surely nothing less would have brought Mr. Nehru here for his fruitful visit, or all those other leaders from Europe and Asia. These men came here because they recognize that the United States has again achieved a moral leadership in the cause of decency.

By this I do not mean to convey that the battle for the minds of men is won. It waxes and wanes and I sorrowfully concede that it will undoubtedly continue during our time and probably that of our children. An ambitious Communist dictatorship is determined to conquer the world. Only last Sunday Mr. Khrushchev told us on television that our grandchildren will surely live under socialism.

We cannot look ahead with complacent optimism. The bad news is that the Russians have nuclear power, airpower, the largest ground armies and the largest fleet of submarines in the world, and a fanatic determination to take the whole world by force if they cannot get it by treason and subversion. There is no doubt that only our nuclear superiority has prevented this catastrophe up to now.

But we must never forget that we cannot continue to exist as a free nation—and our children cannot look forward to happiness and security—if we ever have to stand alone against a Communist-dominated world.

The stark truth is that already the Communist world numbers 900 million people. The armed Communist masses outnumber us 5 to 1. Who is the bold soul who will stand before us and say that our allies and the neutral nations of the world are not vital to our freedom and our security?

Supersonic jet planes and guided missiles with atomic warheads have shrunk the world to the size of an orange. Our defense and our survival are interlocked with the defense and survival of our neighbors in the free world. Our mutual assistance program is the only practical means by which this coalition can be effectively maintained—to deter the Communists from launching a war and to increase our chances of victory if war ever should come.

I have seen at first hand the power and effectiveness of this program all around the globe. There are still 800 million free people living across Asia from the Mediterranean to Japan. They are trying to build their independence and resist the persistent efforts of the Soviet to engulf them. These people want to remain free. They want to determine their own future and they want to enjoy a decent, 20th century standard of living. But they need our help and they need it desperately. Thus far, we have helped greatly in their progress and have gone a long way toward insulating them from Soviet domination. But, if we should slam the door in their faces we should be delivering our friends and our potential allies into the hands of the men of the Kremlin.

There were those who opposed the Marshall plan for Western Europe and there are still some who say it was a waste of money. But which of these people could deny today that the Marshall plan saved Western Europe for the free world? The Marshall plan is over, and still do they say they would oppose it? If free Europe had fallen, according to Communist plan, Red Russia would today be our neighbor on the other side of the Atlantic.

Can we buy friends with money? Of course not, and nobody with any sense wants to try. What we can do is help decent people try to live in a free economy so they will not fall to Communist conquest. We would not long survive in a Communist world and I firmly believe we have the sense and the courage to do what is necessary to keep a free world alive.

May I remind those who would recklessly curtail our mutual assistance program of the final broadcast by the Hungarian patriots as the Russians crushed their newborn freedom? I'll never forget that appeal! Remember—here's what they said:

"On the watchtower of 1,000-year-old Hungary, the last flames begin to go out. The Soviet Army is attempting to crush our troubled hearts. Listen to our call. Help us. Our ship is sinking. The light vanishes. The shadows grow darker."

We must make certain that no such tragic message shall ever be broadcast from America. If it ever should, there would be no free peoples left anywhere to hear us.

And still, my friends, there are those who say that our mutual assistance program is a giveaway. But developments in the Middle East alone prove the wisdom of the President's policies.

The cards seemed to be stacked against any acceptance of American aid throughout the Middle East. Yet the program was finally passed by the Congress. Then, quietly, nation after nation has accepted this opportunity to become genuinely independent and free from the fear of foreign domination.

Nearly everyone was writing Jordan off and the puppet mobs in the streets were sure that they could deliver it to Moscow. They failed.

The latest news is from Syria. Here a strong and articulate group is insisting that its government move back into the orbit of freedom.

We can increase these gains country by country by steadfast adherence to hard labor and modest sacrifice. The truth is that consistent hard labor in every country, by earnest and devoted people, and the great moral leadership from Washington have deeply strengthened the cause of peace. The cost is dollars but our sons are not dying in combat.

I suppose there is no citizen who would not have sincere suggestions for changes in the budget and in foreign and domestic policy. They might disagree with each other and probably would. Be that as it may, the towering strength of our moment in history is that we move steadily forward on all fronts for the good of our people and of all mankind. At last the peoples of the world are learning to believe us, to trust us, and to respect the decency of our purpose. We Americans have at last acquired a government whose moral standards are respected at home and throughout the free world.

As Americans, we can be proud of these mighty achievements. As Republicans, every one of us can be proud that we helped bring this kind of government to the United States in our time.

A City Sets Its Goals

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. HUDDLESTON. Mr. Speaker, the city of Bessemer, Ala., one of the larger municipalities of the Ninth Congressional District of Alabama, has set its goals for the coming years. Bessemer, a city of multiplying businesses and noted industries, is taking great interest in the prosperity and well-being of its population. This community has grown by leaps and bounds during the past few years and has not only greatly increased its population, but has expanded its business and industry far beyond many expectations.

Now, the Bessemer Chamber of Commerce has launched a vigorous campaign with the view of keeping pace with modern times. Their desire to improve highways and streets, recreation facilities, education and other projects can be seen through the progress that has already been made.

Under leave heretofore granted, I am pleased to insert in the CONGRESSIONAL RECORD an editorial entitled "Bessemer Plans Growth Campaign," from a recent issue of the Birmingham News.

The editorial follows:

BESSEMER PLANS GROWTH CAMPAIGN

The Bessemer Chamber of Commerce has launched an ambitious campaign for civic expansion and growth designed to help the Bessemer area keep pace with tomorrow. It is holding a series of group conferences with business and professional men and women and is undertaking to raise $25,000 a year to promote the program. Among the projects being planned are expansion of the retail business area, additional annexations to the city, street and highway improvements, development of a source of industrial water, and better recreation facilities.

We wish the Bessemer chamber well in its campaign. That community's future prosperity will depend in large measure on such cooperative efforts by its people to stimulate growth and expansion.

All of us in this district share basic common interests and will go forward together.

How Long?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Gen. Hugh S. Johnson from the New York World-Telegram of July 8, 1939, which, except for the references to Gen. George Marshall and to a couple of unscrupulous dictators now no longer exerting their tyrannical influence on earth, might have been written today. The pattern is exactly the same, yesterday and today. How long, oh Lord, how long?

THE BUTCHER BOY

Now we are witnessing another display honoring Señor Trujillo from Santo Domingo. Of all the bloodstained terrorists that now encumber the earth, his record is the worst. He may not have piled up such pyramids of skulls or spilled as great a gallonage of blood as some, but that is merely because his field is so limited—just half a little island. But in proportion to population his batting average is tops. It is even suspected that members of his Gestapo wiped out an

rolled political opponent in New York City. It is at least certain that the deceased was a political opponent and that he has been liquidated.

I am all for General Marshall as Chief of Staff, but he isn't the proper American official to entertain this butcher. J. Edgar Hoover is. Rafael Trujillo is probably responsible for the bloody death of 20,000 helpless human beings.

This whole business stinks to heaven. Our great legal firm of Ambassador Davis and Donald Richberg represents—or did represent—this sweet-smelling geranium. The President and other officials may shake his hand, but there is not enough water in the Potomac to wash it clean enough of bloodstains to be grasped by theirs.

We should watch closely what Trujillo does. He has already got a lot of kudos. He ought to get Alcatraz. He probably will get a few careless millions from our Treasury.

We are a good neighbor, an enemy of dictators, and a friend of the democracies.

This is the pompous strutter who had the nerve to change the name of the original capital of Columbus, admiral of the Ocean Sea in the New World. He changed it to the City of Trujillo. He had his bootlicking Congress declare him "Generalissimo" and "Benefactor of the Fatherland." He is a reincarnation of the Emperor Jones or of his own actual incredibly cruel Negro predecessor—Christophe.

Let's send for Hitler and Mussolini and give them the kind of ovation that we gave the British King and Queen. It would be exactly as appropriate as turning ourselves inside out for this blood-spattered bully.

A Permanent Police Force Should be Provided U. N.

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. REUSS. Mr. Speaker, on May 2 I joined in introducing a bipartisan concurrent resolution urging that a force similar in character to the U. N. emergency force be made a permanent agency of the United Nations.

More than a month has elapsed since then and I have noted with satisfaction the widespread support which has greeted this resolution. I am therefore hopeful that hearings will soon be scheduled before the Foreign Affairs Committee.

I was particularly pleased that the Milwaukee Journal has endorsed the measure, and, under leave to extend my remarks, I am glad to present an editorial from the May 17, 1957, issue of that newspaper.

A PERMANENT MILITARY FORCE SHOULD BE PROVIDED U. N.

On duty along the Egyptian-Israeli border are 6,000 soldiers from 10 smaller countries of the world. As members of the United Nations emergency force (UNEF), they are serving as international policemen to keep forces of Egypt and Israel apart and prevent border clashes that could kindle a new Middle East war.

This is the force that was hastily mustered after the U. N. worked out a cease-fire agreement to end the Suez fighting. Thus far it has fulfilled its assignment of keeping order in commendable fashion—in fact, in excellent fashion when one considers the differences in language, national background, and experience of the participating units and the helter-skelter way in which they had to be assembled. However, UNEF is an adequate substitute for a permanent U. N. force that could be equipped, trained, and held immediately ready for assignments like the present one.

That such a permanent organization doesn't exist is not because the need for it was ignored. The U. N. Charter, formulated in 1945, provides for a U. N. military force, and in the last 10 years several attempts have been made to create one. Russia has blocked these attempts.

Now a new effort is in the making, inspired by the UNEF experience. Resolutions have been introduced in both the Senate and House to put Congress on record in favor of establishing a force similar in character to UNEF as a continuing agency of the United Nations.

Congress should give these resolutions prompt approval. Endorsement will spur this country's delegation to work actively for creation of a permanent force at this fall's meeting of the U. N. General Assembly.

If the U. N. is to grow in influence as an agency to keep the peace, it must have a military police arm. It should not have to scramble about for such a force every time a crisis appears.

A Tribute to a Maryland Veteran: Wm. R. Clay

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. GARMATZ. Mr. Speaker, in May of 1957, the National Commander of the Disabled American Veterans, the Honorable Joseph F. Burke, on the behalf of the department of Maryland at the State convention of this organization held in Baltimore, Md., presented to William R. Clay a certificate of recognition for outstanding service to the veterans of our State.

Mr. Clay, a 38-year-old Government career attorney as well as a civic and veterans' leader, received the highest citation which the Disabled American Veterans award, for "his years of outstanding service in the field of veterans' legislation in the interest of the veterans of the State of Maryland."

His many friends know this leader as "Honest Bill Clay," the veteran's friend. He has been active since 1944 in the DAV and the American Legion, having held national, State, and local offices in both organizations. Over a period of 10 years he has addressed thousands of veterans in our State and in the District of Columbia relative to programs of interest to both organizations.

For the last 7 years, Mr. Clay has served as department legislative officer for the Disabled American Veterans, and since 1953 has been a member of the committee for the American Legion, serving as department legislative chairman during the years 1955–56.

At the present time he is vice chairman of the Allied Maryland Veterans Council whose membership comprises the Veterans of Foreign Wars, the American Legion, Disabled American Veterans, Military Order of the Purple Heart, AMVETS, Jewish War Veterans, Spanish-American War Veterans, World War I Veterans, Catholic War Veterans, and 29th Division Association, whose combined membership represents well over 60,000 veterans of our State.

As a result of his knowledge of rights and benefits of veterans and their dependents and his legislative background, he is considered by veteran leaders, members of the State legislature, and by the Maryland congressional delegation as a complete and dedicated veteran's friend.

Every Day

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. JOHNSON. Mr. Speaker, June, the dairy month, is with us once more, and if you look into the background you will understand why Wisconsin residents are happy to have their neighbors across the country hearing of the merits of milk. On May 29, the Clark County Press at Neillsville, Wis., complimented another dairy county, this one in Arkansas, on its growing dairy industry. Then it went on to show that approximately 66 percent of the income in its Wisconsin county is derived from the dairy industry. Because the article demonstrates the tremendous impact of dairying and the milk market on Wisconsin farm folks, I would like to submit the editorial here:

EVERY DAY

Not long ago we picked up a trade paper which carried a reproduction of a full-page promotional piece used by an Arkansas dairy. The effect of the piece was to brag about the fact that the county of Arkansas in which this dairy plant was located produced $1 million in dairy products annually.

Now, even in these days of astronomical figures, $1 million is still a tubful of money, and more than most of us even see in a lifetime. Our friends in that area were proud of their accomplishment in this vital sector of the agricultural economy. They wanted to do a little bragging about it—and it was to their credit that they felt the pride of accomplishment, and the pride that most of us have in doing a good job.

Their promotional piece no doubt had an effect in building the prestige and local market for dairy products. It had an effect of impressing on the people of the area generally the immense importance of the dairy industry in that section of Arkansas.

On that basis, however, Clark County should be shouting almost 16 times as loud. One of the top 100 agricultural counties of the Nation, Clark County has placed its emphasis on the dairy industry. In the last year for which figures were available, Clark County's farm income from milk—and just milk, without natural by-products or increases due to manufacture—amounted to $15.9 million.

That placed it fourth in the State; it was the seventh greatest dairy county in the Nation. No other county in the Nation produces as much American cheese as do the factories of Clark County.

One plant in Clark County alone—the Wuethrich plant out of Greenwood—produces more than 8 million pounds of butter per year under two score or more labels; Neillsville boasts one of the largest units for condensing of milk in the State, and it has 1 of but 6 or 7 spray milk drying units now in operation in Wisconsin. A second spray dryer is right now being installed at the Hediger plant at Christie.

To move $15.9 million worth of milk to the processing plants of Clark County requires a fleet of trucks which once were figured to travel 7½ times the distance around the world at the equator in the course of a single year.

Add to these, then, the number of people associated with this gigantic, sprawling countywide dairy industry—there are hundreds of them ranging from plant to quality improvement fieldmen, and even salesmen—and one begins to get an idea of the tremendous reliance we of Clark County have on the dairy industry.

It is the source of more than 66.1 percent of our farm income; it is the basis for the economy of our whole countywide income.

Dairying, to the 31,000 people of Clark County, means the same as chewing gum to William Wrigley, automobiles to Henry Ford III, and whale blubber to the Eskimos.

So, we're sure, the people of that Arkansas dairy plant we spoke of will pardon us if we sing out the praises of the dairy industry. The State and Nation, too, will understand as we in Clark County launch the 1957 June Dairy Month promotions with enthusiasm. This is the one time during the year that we make a real, concentrated shout about it to the rest of the Nation.

But (we're not letting our readers in on any secret) for us in Clark County, every month in Dairy Month; every day is Dairy Day.

Red China Trade

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Boston Evening American on June 4, 1957:

RED CHINA TRADE

It is a fact that Britain's survival depends on trade. It is equally a fact that the British decision to lift its trade embargo, to the extent of some 200 items, with Communist China is a psychological surrender in the cold war.

Britain's decision will directly aid Red China's industrial strength, which is the basis of its capacity to make war. As Senate Republican leader KNOWLAND commented, such items as electric motors and generators, locomotives, motor vehicles, and tractors, chemicals and rubber must be considered strategic by any rule of reason.

Beyond this, we wonder just how much Britain stands to gain. The jubilant expectations of her businessmen are not shared by their counterparts in Hong Kong, who have a closer and more realistic view.

Ever since Britain recognized the Peiping regime, Red China has given British diplomats and business interests an arrogantly hard time. Japan, whose trade needs are ever more relentless than those of Britain, sent an exploratory trade mission to Communist China last year. It returned with a very low estimate of trade potentialities. Britain may learn the hard way.

The Communists will exploit the psychological aspect of this cold war victory with all their skill.

They will use it to try to create an irreconcilable division between the United States and its allies. To permit this to happen, however much we dislike the British action and condemn it, would be to give the Communists a far greater victory.

They will use it to bring pressure on the United States to extend diplomatic recognition to Red China. It would be unspeakable even to entertain the thought of recognizing a ruthless enemy that holds American prisoners and has not accounted for 450 American soldiers missing in the Korean war and now written off as dead.

The Communists will use it to try to force their way into the United Nations. If Red China ever walks into the United Nations, the United States should walk out.

Principle Versus Expediency—The Girard Case

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of June 7, 1957, on the subject of the William S. Girard case:

PRINCIPLE VERSUS EXPEDIENCY

Louis Greco, district commander of the American Legion, not only voiced the sentiment of former servicemen, but of many other local residents yesterday in a communication to this newspaper in which he protested vigorously against the trial of William S. Girard, an American soldier, in Japanese courts on charges of killing a woman scavenger near a United States practice range.

The administration in Washington supposedly acted under terms of an agreement with Japan, but the general impression is one of expediency since the commanding officer reported the soldier was on duty. Under these circumstances, he was subject to court-martial for an infraction, if any.

When the Department of Defense ordered Girard kept in Army custody, Japan protested. Apparently at this point the Department of State intervened and the Department of Defense reversed its position, bowing to Japanese pressure.

The killing of a Japanese woman is a serious matter, to be sure, and it is likely a United States court-martial would take a dim view of the episode if it could be established the soldier were guilty of a breach of discipline.

On the other hand, a compromise with principle and justice as a sop to Japan will not set well with the American people. Our relations with Japan are not that important and never will be.

If the President of the United States, as Commander in Chief of the Nation's Armed Forces, has let this American soldier down, let Congress, in the name of the American people, rush to his defense. Maybe the time is at hand for Congress to review not only the status of forces treaties, but the Nation's entire foreign policy. This well might be the straw that breaks the camel's back.

Post Office Deficit

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. TEAGUE, of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received by me from the legislative affairs committee of the chamber of commerce, Bryan, Tex., concerning the post office deficit.

I think the suggestions contained within this letter are meritorious and should receive consideration by this body in enacting any type of postal rate increase legislation.

The letter follows:

BRYAN CHAMBER OF COMMERCE,
Bryan, Tex., May 28, 1957.

Hon. LYNDON B. JOHNSON,
United States Senate.

Hon. RALPH W. YARBOROUGH,
United States Senate.

Hon. OLIN E. TEAGUE,
United States House of Representatives.

GENTLEMEN: The legislative affairs committee of this chamber of commerce has given special attention to the matter of the postal deficit and the proposals for elimination of same for the future. We would offer the following suggestions:

1. With reference to the suggestions that third-class mail rate be increased, it has come to our attention that a very large majority, if, in fact, not all, the loss sustained by the Post Office Department on third-class mail is due to the fact that the Department must pay a per-piece charge on this class of mail when it is carried by train or truck (long haul). Thus, when New York, Detroit, Chicago, Nevada, Missouri, and other centers originating large quantities of third-class mail sends out a mailing of such material to be distributed throughout the United States a big loss is sustained over and above the 1½-cent postal rate. Our information is that about 60 to 75 percent of third-class mail is long haul.

On the other hand, third-class matter mailed and delivered locally, with the same 1½-cent postage as that paid by the New York or Chicago mailer, can be delivered by the local carrier at no, or practically no, additional cost of delivery.

We would urge that you support an adjustment in the rate applicable to long-haul third-class mail matter which would at least take care of the present deficit on long-haul third-class matter. The third-class deficit of $172 million is very probably brought about by the long-haul per-piece charge.

We would suggest that the present rate of 1½ cents be kept in effect and made applicable only to local third-class mail.

In fact, we can see no reason for not zoning the country for third-class mail similar to the zoning for parcel post. Why should the Post Office Department carry bags and bags of third-class mail all the way across the continent for the same price that it delivers in Bryan a piece of mail deposited in the Bryan office. If large quantities of this mail

is sent from New York to Bryan, Tex., the charge should certainly be more than for delivering it from New York to Philadelphia.

There is no reason for charging more for delivery of parcel post to distant points but charging only 1½ cent rate on third class regardless of the distance.

2. We notice in the Post Office Department's report for the year ending June 30, 1955, Controlled Circulation Publication, shows a deficit of $1,402,509. This we understand, is house organs of various organizations with distribution limited to their respective membership. We can see no reason for special consideration being given such organizations just so that their members may receive their propaganda and the taxpayers pay the bill. Such mailing certainly should bear the cost of handling by the Post Office Department.

There are other items in the Department's 1955 report which probably should be made to carry its full share of the load, such as "nonpostal service" and probably second class mail should come in for consideration.

We shall appreciate your careful consideration of available facts and information, and using your influence to place the burden where the service is rendered.

Sincerely yours,

GREENE H. BUCHANAN,
President.

PROPOSALS BY POSTAL RATES SUBCOMMITTEE OF LEGISLATIVE AFFAIRS COMMITTEE

1. Post Office Department report for fiscal year ending June 30, 1955, shows surplus of $62,325,144 on first class mail.

Domestic air mail shows surplus of $20,266,779.

Controlled circulation publications shows deficit $1,402,509.

Third-class mail shows deficit of $172,039,091.

Special postal services shows deficit of $47,726,076.

And other smaller deficits and surpluses.

(Postmaster General has stated that the 1957 deficit will reach $515 million and 1958 will reach $651 million.)

2. It is our information that the Post Office Department must pay a per-piece charge on all third-class mail handled by train or truck—a so-called long haul charge.

3. It is also our information that from 60 percent to 75 percent of all third-class mail handled by the Bryan Post Office is long haul mail.

4. Our proposal is that the present 1½ cent rate be made applicable to local third class mail only, and that long haul third class rate be increased sufficiently to take care of the deficit being created by the charges paid for the long haul mail.

5. We suggest that special study be made of the other deficit items with steps taken to eliminate the deficits they are creating.

Status of Forces Agreements Should Be Repealed

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. GROSS. Mr. Speaker, I have long urged repeal of the various status of forces agreements, which permit the trial of American servicemen in foreign courts, and introduced one of the original resolutions to accomplish this.

The decision to turn over Sp3c. William S. Girard for trial in a Japanese court has served to emphasize that this body should take action on one of the resolutions presently pending before the Foreign Affairs Committee.

In this regard, I wish to include as part of my remarks the following letter which I received from Robert J. McGregor, adjutant, Walter T. Enneberg American Legion Post, No. 358, St. Ansgar, Iowa:

WALTER T. ENNEBERG POST, No. 358,
St. Ansgar, Iowa, June 5, 1957.

Hon. H. R. GROSS,
United States Congress,
Washington, D. C.:

We most urgently request that you assist in the stopping of the Japanese prosecution of Army Sp3c. William S. Girard.

Is it fair to ask a United States soldier to defend our United States when our country apparently will not defend him?

We also urgently request your cooperation to repeal the status of forces agreements.

If a member of the military forces of the United States is accused, try him under United States justice, and then if found guilty, permit him to serve his sentence in the United States prisons.

Respectfully,

ROBERT J. MCGREGOR,
Adjutant.

H-Bomb Petition Confiscated

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MULTER. Mr. Speaker, the following excerpt from the syndicated column of Drew Pearson, which appeared in the Washington Post and Times Herald of June 3, 1957, makes interesting reading.

Obviously, some of our people in Government fail to understand the difference between engaging in partisan political activity and engaging in nonpartisan political activity looking toward the protection of those rights which are guaranteed to Americans by our Constitution.

One of those very important rights is that of Americans to petition their Government on any and all matters that are of concern to them. Anyone who attempts to interfere with that right is looking for trouble. Mr. Pearson's comments follow:

PETITION CONFISCATED

Government scientists who tried to circulate a petition against continued H-bomb tests suddenly found their constitutional right of free petition yanked from under them at the National Institutes of Health at Bethesda, Md., last week.

About half of the scientists and medical experts at the Institutes had signed the petition when suddenly Dr. Francis Arnold, a dentist working with the Institute of Dental Research, seized it. He refused to return the petition on the ground that it was being circulated on Government property and on Government time.

This aroused a terrific backstage furor at the Institutes, where many scientists are concerned about whether strontium-90 in H-bomb fallout increases leukemia and other forms of cancer. Many doctors also felt strongly regarding the Eisenhower position taken last fall against Adlai Stevenson's proposal to ban H-bomb tests—if Russia would agree.

Dr. Arnold was not available for comment. However, Dr. James A. Shannon, Director of the Institutes, confirmed the fact that the petition had been confiscated by Dr. Arnold and that it had not been returned. He said he had supported Dr. Arnold's action because Government scientists should not be allowed to circulate a political petition.

Asked whether scientists lost the power of engaging in politics merely because they worked for the Government, Dr. Shannon said he was in a delicate position, but that he would return the petition to the scientists if they agreed to circulate it only in their homes and not on Government property.

World Trade Week

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to point out that the third week in May was recently celebrated as World Trade Week. In my home city of Richmond, Va., the Export-Import Club, cooperating with the Virginia State Chamber of Commerce and the Richmond Chamber of Commerce, did a fine job in publicizing this celebration. All over our country, like groups called to the attention of the American people the increasing importance of world trade to the welfare and prosperity of the United States.

Here in the Washington area, Mr. Philip M. Talbott, an outstanding business leader and a longtime resident of my home State of Virginia, who was recently elected president of the Chamber of Commerce of the United States, made a most able address on the subject of foreign trade at a dinner sponsored by the World Trade Committee of the Washington Board of Trade.

Mr. Talbott pointed out that our national trade policy must be truly in the national interest and he warned against repeating our occasional excursions into protectionism. We all have in mind, as an example of these excursions, I am sure, such unfortunate steps as the administration's tariff increase on watches.

As a matter of fact, the domestic watch manufacturers have subsequently demonstrated that protectionism inevitably breeds more demands for protectionism. Not content with the tariff increase they received, they are now seeking additional Government intervention to eliminate overseas competition. Instead of contemplating ways and means of further reducing Swiss watch imports into the United States, the administration should be working on ways and means of expanding our foreign trade in consonance with our avowed objectives.

Mr. Talbott has urged United States businessmen to do everything they can

to help our Government maintain policies which facilitate the growth of freer foreign trade. He reminded his audience that the Chamber of Commerce of the United States had urged liberal foreign trade principles over many years. I am proud to say that the Virginia State Chamber of Commerce, which I once served as president, has always been in the forefront of business groups working toward an increase of mutually helpful world trade.

I hope every Member of this House will read Mr. Talbott's remarks, which follow herewith:

ADDRESS OF PHILIP M. TALBOTT, PRESIDENT, CHAMBER OF COMMERCE OF THE UNITED STATES, BEFORE THE WORLD TRADE COMMITTEE, WASHINGTON BOARD OF TRADE, WASHINGTON, D. C., MAY 21, 1957

It seems to come as a great suprprise to many persons to find out that the United States is the greatest trading nation in the world today. No other nation comes even close to our monetary stake in foreign trade.

Great Britain is the second most important trading nation, but her exports and imports are less than three-fourths those of this country.

Germany ranks third in international trade, but her exports and imports are less than half of ours.

The foreign trade of the United States equals the foreign trade of all the rest of North America and South America combined.

Foreign trade might well be defined as the producer of vitality, well-being, and security for the Nation, and yet the extent to which it influences our domestic economy is not always fully realized.

There may be a very human reason for this. It is probably because nearly three-fourths of our imports are crude foodstuffs, raw materials, or semimanufactured products. The balance of our imports are processed foodstuffs and finished manufactures.

In addition, we buy from other nations many different services, such as insurance, banking, transportation, and tourist facilities. But in the main, articles of foreign manufacture do not strike us in the eye. They are not likely to be found in the average household.

It is possible that our parents were more foreign-trade conscious than we are. The children's toys came from abroad. So did dyestuffs and other chemicals.

The word, "imported," had a magic ring to it which it began to lose with the advent of the First World War.

It might make a rather good quiz program question to ask a contestant to name 6 import items within the space of 2 minutes. I imagine he would instantly come up with coffee and tea and probably bananas and cane sugar. But unless he lived in a community where foreign-made automobiles are a fairly common sight, he would probably fumble around for a fifth item and have considerable trouble rounding out his quota of six items despite the diversity of our imports.

Our exports are even more diverse. Over one-third of the goods we export consists of machinery or transportation equipment; one-fifth, agricultural products; one-tenth, metals and manufactures; another tenth, nonmetallic mineral items, primarily coal and petroleum products.

The remainder comprises a wide variety of goods, notably chemicals, tobacco, manufactures and forest products. We also sell transportation, insurance, and many other kinds of service to other nations.

United States exports have now reached a record rate of more than $19 billion a year. Part of the rise has been due to emergency oil shipments to Europe and extraordinarily large shipments of wheat and cotton.

Those particular exports will possibly decline. But our exporters have booked larger orders for industrial products such as hard goods and chemicals, and these will likely remain high.

Our imports have increased more slowly than exports, but they are now at the rate of more than $13 billion.

Hence, the gap between exports and imports has risen to some $6 billion. Some of the gap is made up by United States private investment abroad, which rose in phenomenal fashion from $1.2 billion in 1955 to a recent rate of more than $3 billion.

In the same period of time, dollar outlay for services abroad—such as travel and transportation—has risen by some $6 million.

Despite these increases, foreign trade is still a very small percentage of our domestic trade and production—so small, in fact, that its importance can easily be underestimated.

In 1956, for example, exports equaled only 5.6 percent of our gross national product, and imports amounted to only 4.8 percent of our gross national product.

It is only by examining the character of this trade that its real significance to the domestic economy becomes apparent.

The importance of foreign trade to the continued growth of our economy is most apparent in the field of natural resources. We must depend on imports for a number of critical raw materials.

It should be realized that when the United States sends goods and services abroad in excess of goods and services purchased abroad, the balance can be financed only through foreign aid and private gifts, the export of capital, or the purchase of gold from other countries. When the United States exports capital, however, it does so in the anticipation of returning at least some of the profits of that investment to this country and ultimately the invested capital itself.

When the United States takes gold from countries, this in no way adds to the stock of goods and services available to American consumers unless the United States at some time uses this gold to purchase goods abroad.

In either case, the United States, in the long run, can recover its capital exports and profits and utilize its gold purchases only by importing more goods and services. And if exports are to continue their growth, imports must also grow.

As of today, our imports provide the dollars for approximately 85 percent of our exports.

One way to grasp the significance of foreign trade in our domestic economy is to imagine that the foreign markets for the products we are now exporting heavily were suddenly wiped out. We can easily see what would happen. Our resources which are now devoted to production for export would be shifted to other products, and the competition for domestic markets in many cases would be so severe as to create serious adjustment problems.

Foreign markets are even more important to American agriculture than to American industry. It is estimated that the product of some 40 million acres of farmland goes into foreign sales.

Hundreds of our manufacturers today are finding that exports are protecting and even expanding their profit margins. Moreover, this direct contact with overseas markets is also helping them to check on international competition and observe the technical innovations and improvements developed beyond our borders.

A healthy expansion of mutually beneficial foreign trade is actually so vital to our national well-being, that it behooves the businessman to do all he can to help our Government adopt and maintain policies which will facilitate this growth. The question is, what can he do?

The Chamber of Commerce of the United States has long advanced the objectives of a liberal trade policy. The chamber first endorsed the concept of the reciprocal trade agreements program a year in advance of its enactment by the Congress in 1934. Our membership has consistently supported this program in its many extensions by the Congress since that time.

For a long time, our organization has also urged the simplification and modernization of customs administrative provisions of the United States tariff laws. A good deal has been achieved in the past 2 to 3 years, and the Congress changed the law regarding the basis of valuation of imports so that some of the uncertainty will be eliminated.

Through representations to the Congress and by working directly with the administrative agencies of our Government, we believe we have contributed substantially to improvements along these lines.

Our membership also recommended a complete revision of the dutiable list of the Tariff Act of 1930 for the purpose of clarifying the customs classification of imported articles.

The United States Tariff Commission has undertaken a study to bring about the changes necessary to improve the customs classification system and to revise the lists.

I should like to read a brief paragraph from our national chamber policies which has to do with increased imports:

"Our industrial machine and our national security require raw and semimanufactured goods for production and stockpiling. These imports alone, however, are not sufficient to supply America's foreign customers with sufficient dollars to maintain United States exports at a level commensurate with the importance of the export industry to the total United States economy. Therefore, for the benefit of the economy of the United States as a whole, business and Government should encourage increased imports into the United States."

So ends the quotation.

American business needed not fear imports, and yet this fear does persist, and is often reflected in the Congress.

In fact, the fear can be found outside of the business community in far larger measure than within the business community.

There is a feeling that imports might jeopardize American jobs, and in addition to the various fears concerned with importation there is an abiding sense of complacency.

Many people are convinced that we are virtually a self-sufficient nation, and there is just enough truth in it to make it difficult to explain the importance of imports to the economy as a whole.

We have a feeling that we could rather easily find a substitute for almost anything we do not have, and I am quite sure that every school girl knows that her mother used to wear stockings made of Japanese silk whereas she wears nylons.

Even a cursory examination of the pattern of industrial growth in this country should allay our fears of imports. The pattern of our growth has been one of new, rapidly expanding products which are soon overtaken by even newer products, the former slowing down and in some cases being partially displaced.

Such shifts from less to more profitable lines of activity are constantly going on—not as a once-for-all shift, but as a shift for the next round.

This is progress.

We are, in fact, moving toward the greatest era of progress in our history. Before us lies the challenge of taming the atom—of making it safe for us to live with and be obedient to our wishes.

We have yet to harness the source of all earthly energy—the rays of the sun—but I am confident we shall get around to it in the not too distant future.

As of today, only one-tenth of 1 percent of that energy is put to use.

Our population has doubled in the past 50 years, and we have a reasonable expectancy of adding 35 million people in the next 25 years.

All this adds up to a definite challenge to our ingenuity and our imagination, and to meet this challenge there is a constant need for concerted, articulate effort to preserve the free-enterprise system as a living, developing force which is able to meet new conditions and produce new benefits.

Understanding and acceptance of fair competition is part of the challenge, and it is a matter about which we cannot afford to temporize if we are to grow, for restrictionism would make certain the slow strangulation of our free-market economy.

The prospect of a European customs union and free trade area will emerge as a substantial influence in the next decade for which we must be prepared.

Unless the United States is in a position to speak consistently and commit itself in a meaningful sort of way for progressively freer trade, the movement in Europe could result in more protectionism on both sides of the Atlantic.

The customs union planned by France, Germany, Italy, Belgium, Holland, and Luxembourg promises to provide a tremendous stimulus to efficient production and improved living standards in Europe. So say all the experts on the subject.

But if the six nations find themselves confronted with increased restrictions elsewhere, they will tend to look inward toward their own large, unified market and to raise barriers against outsiders to the detriment of United States trade.

The official policy of the United States has been to encourage the common market as a means of bolstering Western Europe's economy and to provide the United States with strong, more self-reliant allies.

This common market must, however, be run in accordance with the provisions of the General Agreement on Tariffs and Trade—which we commonly call GATT—if United States exporters are to be sure of fair, nondiscriminatory treatment in Europe.

Related to this, is the President's proposal for United States participation in an Organization for Trade Cooperation—which is best known by its short name of OTC. This would serve as the administering body for GATT.

A bill to authorize United States membership in OTC was approved by the House Ways and Means Committee a year ago, but never reached the floor. The current bills on this matter incorporate a number of amendments recommended by that committee in its report last year as well as some new provisions which are intended to answer the arguments offered in good faith against last year's bill.

The administration's drive for approval of this measure began in the midst of a swarm of high tariff bills introduced early this session. If the pattern of the last Congress is repeated, however, they have little chance of passage.

GATT itself is the instrument through which trade negotiations take place. The authority for United States participation in GATT is based in the trade agreements program authorized by the Congress.

Through tariff negotiations carried out within GATT, the United States has received tariff concessions from foreign countries worth more than $7 billion, and our reciprocal concessions amounted to about the same.

Within this structure, 14 Western European nations lifted quota restrictions on more than 60 percent of their dollar imports between the years 1953 and 1955.

These concessions signaled a major increase in United States exports to Western Europe—worth hundreds of millions of dollars to United States exporters and to the 4½ million American families whose incomes are estimated to be directly dependent on export trade.

You may be interested in the results of a survey which undertook to relate the importance of United States exports to the individual and to his community.

The survey was made by the Battelle Institute just a few months ago and concerned itself with our exports to Canada.

The survey examined the geographic origins of united exports to Canada, and its findings were dramatic. They show a widespread export business throughout the States.

They also show that these exports are not concentrated in a few large firms as might be expected, but rather in medium-sized businesses which have a larger share in exports to Canada than they have proportionately in the domestic market.

The national chamber considered these relevations so significant to a better understanding of the importance of our export trade that it obtained permission to publish a digest of the findings for the information of our membership.

Another recent study in this general field was made by the American Management Association. This had to do with the interests of member companies in entering new foreign markets. Its conclusions show not only steadily increasing trade in new markets but growth in licensing and manufacturing activities in such area.

Major obstacles cited included regulations and restrictions by foreign governments, primarily import restrictions and controls; the lack of qualified personnel for overseas employment; the increasing national development of local industries in some areas, and the fact that in some cases there are better financing terms available from European competitors of American products in those areas.

A lack of dollar exchange and low standards of living in underdeveloped countries were listed as handicaps to expansion. Nevertheless, optimism was expressed about opportunities and plans for entering new foreign markets. The geographical choices were Latin America, Europe, the sterling area, and the Middle East—in that order.

Still another survey of primary interest was conducted by the national chamber recently with particular reference to the foreign-aid program of the United States.

A questionnaire was sent to representatives of 250 member companies with overseas operations. They were asked about the role of private capital investment in the less developed areas of the world. We received some 500 replies from 56 different countries.

The respondents felt very strongly that expansion of private capital investment in the less developed areas could ultimately replace a good measure of economic and technical assistance.

A major advantage of private capital is the fact that it carries with it a highly valuable technical, management, and marketing know-how, and in addition, it has the multiplier effect of creating additional service industries.

It was noted, however, that political instability is a deterrent in some cases to the attraction of private capital. In others, the lack of basic facilities is an important factor. In some instances, the labor market is the missing element, and in others the unavailability of resources.

Nevertheless, American private capital investment opportunities are available, and our respondents made specific suggestions as to how foreign investment might be stimulated.

For example, through negotiation of commercial treaties incorporating provisions which would contribute to the creation of a more favorable investment climate.

Negotiation of tax treaties for the elimination of doube taxation on foreign investments. Arrangements for mutually lowering trade barriers, and exacting stronger guaranties against nationalization and discrimination and for assuring repatriation of reasonable profits in dollars.

Some of the respondents urged the encouragement of the licensing of patents and techniques to foreign producers to help meet needs for replacement parts for repair and maintenance of American-made equipment.

In the main, the respondents to our questionnaire insisted that expanded international trade would not only enhance the effectiveness of United States economic assistance abroad but would hasten the day when such aid could safely be discontinued.

Many of them stressed the need for improvement in the quality and availability of commercial intelligence at home and abroad. Businessmen's missions to and from the United States and other countries, as well as participation in trade exhibits and fairs were highly favored.

In my own opinion, this should definitely be a two-way street. There is some doubt that businessmen of other countries who are anxious to sell in the American market are always as alert to that market's demands as they should be.

There is a tendency to overlook the fact that the American consumer is the most pampered in the world. Competition among domestic producers has made the customer the monarch of all he surveys. A foreign-made product has to be at least the equal of its home-produced competitor.

The American customer is not going to buy a foreign-made pocketknife which refuses to take a sharp edge.

He may buy such a knife once, but not again. A bargain price may lure him into a single purchase, but thereafter he swears off all foreign-made tools—the good as well as the bad.

The American housewife is not going to wrestle with a canned ham if no can opener in the house will operate on it. She is very apt to use a hatchet on the can, and then feed the cohtents to the cat.

Our consumers are accustomed not only to quality but to a kind of packaging that has attained the status of a highly developed art.

More foreign businessmen would do well to have personal visits with typical American consumers.

They cannot hope for success by taking us for granted.

However, we are also sinful now and then in the matter of taking things for granted. We are sometimes inclined to take our private enterprise system and our many other freedoms too much for granted—as if they were inviolate and invulnerable to successful attacks.

The philosopher Santayana, once attempted to define the American, and he phrased his definition like this:

"He dreams of helping to carry on and to accelerate the movement of a vast, seething, progressive society, and he actually does so. Ideals clinging so close to nature are almost sure of fulfillment. The American beams with a certain self-confidence and a sense of mastery; he feels that God and nature are working with him."

I would say that Santayana's tribute is truly magnificent, but it implies a trust of which we must, at all times, strive to be worthy.

FBI Anti-Red Efforts Hit Hard by Court

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include the following article from the Washington Daily News of June 10:

TEN ADVERSE DECISIONS CITED: FBI ANTI-RED EFFORTS HIT HARD BY COURT

(By Jack Steele)

The Supreme Court, in 10 major decisions handed down in a little more than a year, has greatly weakened the Government's legal drive against Communists and subversives.

Some of the Court's rulings have limited drastically the scope of antisubversive laws and regulations. Others have made it much more difficult for the Justice Department to prosecute alleged violators of these laws.

NEW TRIALS

In still other cases, the Court has ordered new trials for alleged Communists on technical grounds which dissenting Justices have called picayunish and immaterial.

The Court has split on most of these rulings. But three members have concurred in all 10 decisions. They are Chief Justice Earl Warren and Associate Justices William O. Douglas and Hugo L. Black.

Justice Felix Frankfurter has concurred in all but two decisions. Justice William J. Brennan, Jr. has concurred in all five of the decisions reached since he joined the Court.

SUMMARY

(Justices Tom C. Clark and Harold H. Burton have dissented from most of these decisions. Justice John M. Harlan has concurred in 6 and dissented in 4. Justice Charles E. Whittaker has not participated in any of the cases.)

Here is a brief summary of the Court's actions in the 10 cases:

Communist Party case: Sent back to the Subversive Activities Control Board (SACB) on grounds that testimony of three of the Government's witnesses might be tainted. The Board threw out the disputed testimony, but the Court will have to pass again on its finding that the party is Soviet-dominated.

Cole case: Limited the Government's security risk program (under President Eisenhower's Executive Order 10450) to employees in sensitive jobs.

Slowckowner case: Invalidated a provision of the New York City charter which provided for dismissal of city employees who took the fifth amendment.

Gold case: Ordered a new trial for labor leader Ben Gold, who had been convicted of lying when he signed a non-Communist affidavit. The decision was based on the technical ground that FBI agents, investigating alleged jury tampering in another case, had questioned members of the Gold jury. The Government has dropped prosecution of Gold as a result.

Kremen case: Ordered new trial for Shirley Kremen and two others convicted of sheltering Communist leader Robert C. Thompson while he was a fugitive from justice. Court held FBI lacked warrant to search the mountain cabin in which Thompson was hidden.

Nelson case: Upset conviction of Communist leader Steve Nelson in Pennsylvania State courts on ground Smith Act gave Federal Government exclusive jurisdiction in subversive cases. This decision has blocked all prosecutions of subversives under State laws.

Nelson case: Ordered new Smith Act trials for Steve Nelson and 4 others on ground testimony of 1 Government witness might be tainted.

Konigsberg case: Overruled California courts to force applicant to be admitted to bar even though he refused to answer questions about past Communist associations.

Schware case: Upset New Mexico's refusal to admit to the bar an applicant who admitted past Commmunist Party membership.

Jencks case: Ordered new trial for Clinton E. Jencks, labor leader convicted of lying when he signed non-Communist affidavit, on grounds trial court had denied him access to FBI reports.

President Eisenhower's Reply to Congressman Sheehan's Letter on 11th Illinois District Public Opinion Poll

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. SHEEHAN. Mr. Speaker, on May 27 I released the results of my annual public opinion poll—see CONGRESSIONAL RECORD of May 29, page A4169. At the same time I sent these results, with a letter, to President Eisenhower, and the contents of this letter were embodied in my news release of May 27, as follows:

In each of the 7 years that I have been in Congress, I have polled a cross section of the people in the 11th Congressional District of Illinois to ascertain their viewpoints on important questions of the day.

I attempt, in every possible way, to make this poll impartial, and this year, sent approximately 120 questionnaires into every voting precinct in my district; so that, approximately 1 of every 4 voters in the area received the questionnaire. In selecting the names from the poll sheets, we have no prior knowledge of the politics of the recipients.

It is my political philosophy that, as a Congressman, it is my duty to speak to the Congress and to vote the issues before the Congress on the basis of the will of the majority of the people in my district, assuming my people are informed as to pertinent facts on the issues and their will is not contrary to the general welfare of the country. In other words, my vote on issues before Congress will be predicated upon the will of the majority of my constituents unless the will of the majority is not clearly discernible; then a Congressman must use his own wisdom and conscience in voting for whatever is best for his constituents, bearing in mind the general welfare of the whole country.

The only way I could, in clear conscience, oppose the will of the majority of my people would be on the basis that I knew of facts or circumstances which were not known to my people, or that, by following the will of my constituents, I would be voting against the greater good of the country as a whole. In that event, it would be incumbent upon me to go back to my people and explain to them the circumstances and conditions of which I knew, and of which they had no knowledge.

It is to be noted that a rather stable percentage of the people in the 11th Congressional District, varying from 64 to 73 percent over the last 5 years, are overwhelmingly in favor of the United States continuing as a member of the United Nations. There has been a very noticeable and decided lessening of support for the foreign-aid program, so that this year's poll shows the high point of nearly 79.8 percent of the people opposing the proposed $4.4 billion foreign outlay. The comments from many of the people of the 11th District in answering the questionnaire clearly show their low regard of this program. One of the interesting aspects of a public-opinion poll of this type is the very great amount of comments we get from people answering the questionnaire, who put their views on the side, on the back, and frequently attach many other pages of comments stating their views on the questions. It is to be noted that question No. 11, "Do you favor more adequate laws providing for full disclosure to the public and to the United States Government of the operation of union pension and welfare funds?" received the highest percentage of favorable replies of all the 15 questions on the poll. This question also showed the least amount of people, 3.6 percent, who had no opinion on the subject.

With reference to questions No. 3 and No. 4, "Do you approve of the Republican foreign policy in general?" "Do you approve of the Eisenhower administration to date?" I have written a similar letter to both President Eisenhower and the Honorable Meade Alcorn, national chairman of the Republican Party, as follows:

"President DWIGHT D. EISENHOWER,
"The White House, Washington, D. C.

"DEAR MR. PRESIDENT: Knowing from previous reports that you take note of congressional public-opinion polls, I am respectfully calling to your attention the results of my 1957 survey.

"As a Republican, I am most deeply concerned with the answers to questions No. 3 and No. 4, results of which you can observe from the enclosed copy of my extension of remarks to appear in the Appendix of the CONGRESSIONAL RECORD on May 27.

"You will note that on question No. 3, 'Do you approve of the Republican foreign policy in general?' in 1953, 78.5 percent of the people replied favorably; and in 1954, only 52.9 percent agreed. And you will further note that in Cook County, Ill., in 1954, the Republican Party suffered one of its worst defeats in 20 years. In 1955, the percentage of those in favor of the Republican foreign policy increased to 56.9 percent, and in 1956, to 62.3 percent—the year in which you and the Republican Party had a great victory in the State of Illinois.

"The present 1957 percentage has dropped to an alltime low, i. e., only 35.9 percent in favor of the Republican foreign policy. In my opinion, this means that since last November, our policies have lost most of their appeal to the type of voter residing in my congressional district.

"The yearly trends are as follows on question No. 4, 'Do you approve of the Eisenhower administration to date?'

"Year:	*Percentage approval*
1953	84.2
1954	58.0
1955	65.3
1956	76.4
1957	41.8

"You will note that the previous low point in 1954 showed very disastrous results for the Republican Party in the elections held in Illinois. The present survey also shows an alltime low for support of the Eisenhower administration to date, and I would be very fearful of the results of any elections held at this time.

"It is to be fervently hoped that by the time the November 1958 elections roll

around, the Republican foreign policy and the domestic aspects of our administration will be changed in order that the people of the 11th Congressional District and the State of Illinois will again support the policies which had been received with such wide acceptance up until the election of November 1956.

"Respectfully,

"TIMOTHY P. SHEEHAN,
"Member of Congress."

President Eisenhower acknowledged my letter of May 29 as follows:

THE WHITE HOUSE,
Washington, May 29, 1957.

The Honorable TIMOTHY P. SHEEHAN,
House of Representatives,
Washington, D. C.

DEAR MR. SHEEHAN: Your poll reminds me that public support for any given program waxes and wanes here and there over the country even though the program is not basically changed.

Your poll indicates that last year the Nation's foreign policy was favored by almost two-thirds of your correspondents. For the same foreign policy your poll indicates support by one-third in 1957 and by one-half in 1954.

Obviously foreign policy cannot ricochet about in the same fashion. The administration will hold steadily to the course deemed essential to the national interest. The alternatives to our present efforts are grim. They are, in this order, a fortress America, then a bankrupt America, then a regimented America — finally, a defeated America. My belief is that most citizens are well aware of these alternatives. I think our people will hold fast in the effort to keep this Nation on a sound road in world affairs.

As for our domestic policies, these conform to the pledges of the Republican Party in its platform adopted 9 months ago in San Francisco and to my own campaign commitments based on those pledges. I have no intention of welching on my own or the party's word. I think no loyal Republican should. For us to do so would be, in my opinion, a long step toward party defeat and dissolution.

Sincerely,

DWIGHT D. EISENHOWER.

George W. Williams, Wilkes-Barre Newspaperman

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of June 7, 1957, on the passing of George W. Williams, outstanding Wilkes-Barre newspaperman, educator, and public official:

GEORGE W. WILLIAMS

In newspaper parlance, death wrote "thirty" to the life of one of Greater Wilkes-Barre's most colorful newspapermen yesterday afternoon in the restful quiet of a Dallas home, far removed from the bustle of the city room and the turmoil of politics, two fields to which he devoted a busy and at times, turbulent half century.

We often hear of a lawyer's lawyer, and a doctor's doctor, meaning an outstanding practitioner, admired and respected by the profession for his skill and talents. George Wayne Williams, reporter, correspondent, columnist, editor, general manager, publisher, public-relations man, educator, public official, and politician, was a newspaperman's newspaperman, the finest compliment we might pay a fellow craftsman. He was as versatile as he was capable.

In appearance, he was a far cry from the popular concept of a swashbuckling reporter and rugged editor, but he had what it takes in both roles. A slight build concealed a human dynamo whose efficiency not even the ravages of time seemed to impair. At 70, he could, and did, produce copy as fine as in his heyday, which is saying a great deal.

Quiet in manner and modest to the point of retirement, George Williams possessed dogged tenacity in ferreting out the facts of a story, especially if it were in the public interest and selfish individuals placed obstacles in the path. He thrived on challenges and his industry and resourcefulness were richly rewarded on occasion. He had a facility with words which rounded out his capabilities.

But we always thought he was at his best in the field of human interest. He could weave an entrancing tale out of some trivial incident. And sit him at a typewriter to turn out a piece like this about another and he was superb. Yes, he was indeed a newspaperman's newspaperman.

We might go on indefinitely, singing his praises and recalling feats of journalism, but we would not add anything to the record of his achievements on Wilkes-Barre's four newspapers, and in publications from coast to coast to which he contributed. While he was on the staff of our morning contemporary when he retired 2 years ago, this newspaper, which he served as a writer and editor, salutes his memory as an old and esteemed colleague. Of him, it might be written:

Well done.

Administration's Civil-Right Measure Faces Crucial Test on Jury Fight

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. BAKER. Mr. Speaker, I should like to insert in the Appendix of the CONGRESSIONAL RECORD a very fine editorial, entitled "Administration's Civil-Right Measure Faces Crucial Test on Jury Fight," which was published in the Knoxville Journal, Knoxville, Tenn., June 9:

ADMINISTRATION'S CIVIL-RIGHT MEASURE FACES CRUCIAL TEST ON JURY FIGHT

This week will be crucial in either the passage or rejection of legislation which has the strongest support possible from the Eisenhower administration.

As reported out of committee, the civil-rights bill does three things: It provides for an additional Assistant United States Attorney General to be in charge of a Civil Rights Division of the Department of Justice. It creates a Civil Rights Commission to investigate civil-rights violations and to determine the need for more legislation. Finally, it permits the Attorney General to apply and obtain from the courts injunctions to prevent violation of a citizen's voting rights or other civil rights. This procedure makes the Government a party to every suit, and the bill as reported out by the committee provides for contempt hearings for persons ignoring the court's order to be heard by a Federal judge and not by a jury. It is upon this last issue, the right of trial by a jury, that there is cetrain to be a full week of fireworks in the House this week, and it may be that this issue will be the rock upon which the whole civil-rights effort will founder.

Not many citizens who really believe in our traditional form of constitutional government find any fault with special legislation to safeguard the civil rights of all citizens, notably that of franchise. We think that Congress itself reflects this viewpoint. However, there is no more firmly fixed conviction in the minds of our people than that which holds any citizen facing a criminal charge has a right to ask for, and be given as a matter of right, a jury trial. This principle has been embedded in English law from the time of the Magna Carta. Thus, many of those who favor the objectives of the administration's civil-rights proposal see in the denial of trial by jury as serious a violation of the civil rights of any prospective defendant as is the denial to another citizen of his voting rights, for example.

It is this contradiction in principle, the proposed adoption of dangerous means to a good end, that may spell the end of all efforts to enact civil-rights legislation at this session.

Family Reunification Immigration Bill

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill to reunite the families of certain United States citizens and lawfully resident aliens in this country. I call this measure "the family reunification immigration bill."

One of the basic tenets of our immigration policy and immigration laws throughout the years has always been the principle of uniting families. It is logical and humanitarian. It makes for better citizenship. It makes sense.

I am not the original author of this bill. That credit belongs to our distinguished colleague from Pennsylvania, the Honorable FRANCIS E. WALTER, who is the chairman of the House Immigration Subcommittee. His bill is based on the traditional American principle of uniting families. In introducing this measure, our colleague has shown that he possesses a keen understanding of the problems and devotion to the best ideals in American life.

Mr. Speaker, I want to take this opportunity to extend my sincerest congratulations to Congressman WALTER for his wise action in this matter. In fact, I am going a step further in associating myself with his action by introducing his bill in order to give it added strength. I hope this will encourage others in Congress to do likewise by associating themselves with Congressman WALTER in his efforts to unite these families.

Briefly, the bill provides that relatives of United States citizens and lawfully resident aliens, who are eligible for second and third preferential status under the Immigration and Nationality Act, shall be admitted as nonquota immigrants. This applies specifically to parents, wives, and children under the age of 21 of such citizens and resident aliens. It is these people, these separated families, whom this bill would unite without any quota charge.

I am informed that the total number of people involved in this bill, and by that I mean the number of people abroad who would be eligible for admittance to this country if this bill is adopted, is estimated at about 17,000 to 19,000. Of these, about 11,000 would be from Italy, and the remainder from Greece and other European countries.

These are mostly people who had applied for entry to the United States under the Refugee Relief Act of 1953, but for various reasons remained behind when the breadwinner of the family came here first to establish firm economic roots. In the meantime, the Refugee Relief Act expired at tahe end of last year and the families remained separated and stranded. In most instances they were from Italy and Greece, and the quotas of these two countries are heavily oversubscribed so that no other relief is possible for the reunification of these families.

Unless we take action along the lines advocated by Congressman WALTER in his bill, these families face many long years of separation and great hardships. It would be most heartrending and inhumane to continue such separations. I believe it is morally incumbent upon Congress to take early steps for the enactment of this legislation and reunification of these families, and in this way correct some of the faults and frustrations of the Refugee Relief Act.

Mr. Speaker, the proposed legislation is a step in the right direction and a laudable beginning. We are faced with a pressing situation and it should be dealt with promptly. It cannot wait until we have had a thoughtful and complete reexamination of our immigration policy. For this reason, I strongly urge that action be taken on this measure at the earliest possible moment during the current session of Congress, and thus save these families needless hardships and long delays.

Proposed Amendment to Natural Gas Act

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me to the Committee on Interstate and Foreign Commerce today on the proposed amendment, H. R. 6790, to the Natural Gas Act:

Hon. OREN HARRIS,
Chairman, House Interstate and Foreign Commerce Committee, Washington, D. C.

DEAR MR. CHAIRMAN: May I take this opportunity to testify in opposition to H. R. 6790, the bill before your committee that would amend the Natural Gas Act so as to remove Federal controls over the sale of gas at the wellhead.

I am very deeply concerned over the effect of such legislation which would mean higher gas bills for the consumer—the little man who is now feeling the pinch of inflation.

Mr. Chairman, I represent the Second District in Massachusetts which is hundreds of miles away from the section of the country where natural gas is obtained. My constituents are captive consumers of natural gas. They buy it from a distributing company which in turn buys from a gas transmission line company. If the controls are removed, you can readily see who is going to dig down into their pockets to pay for the increased costs of this gas to the gas transmission line company at the wellhead—the little consumer, of course. The intermediary consumers will merely pass the added costs down the line.

Remove the Federal regulations with this legislation and you wipe out the price protection that the gas user now has and is entitled to under the Supreme Court's ruling in the now celebrated 1954 test case of the Phillips' Petroleum Co. That decision conclusively stated that the Federal Power Commission does possess regulatory authority over the independents under the act.

To strip the Commission's authority to control natural gas prices at the wells would be a direct financial blow to the end consumer. This bill before your committee should be rejected in the public interest.

Sincerely yours,

EDWARD P. BOLAND,
Member of Congress.

Automobile Manufacturers Association Recommending Safety Rather Than Speed

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. COAD. Mr. Speaker, I was greatly pleased to learn last Friday that the Automobile Manufacturers Association had decided to change their emphasis in advertising from speed to safety.

There are too many deaths on our highways and this and every other safety program should be utilized to decrease this loss of life and property.

A letter which I have received from Mr. William J. Cronin, managing director of the Automobile Manufacturers Association, and the resolutions passed follows:

AUTOMOBILE MANUFACTURERS ASSOCIATION,
Detroit, Mich., June 6, 1957.

The Honorable MERWIN COAD,
House Office Building,
Washington, D. C.

DEAR MR. COAD: Sharing the public interest in increasing the safety of highway travel, the board of directors of the Automobile Manufacturers Association, meeting in Detroit today, unanimously adopted a significant resolution.

Specifically, it recommends to all members of the association who manufacture passenger cars that they not participate in racing activities and not advertise or publicize their cars in any way that suggests speed.

Because of your personal interest in the subject, we are enclosing the text of this resolution.

Very truly yours,

WILLIAM J. CRONIN,
Managing Director.

Whereas the Automobile Manufacturers Association and the members of this board of directors share the public interest in increasing the safety of highway travel; and

Whereas the manufacturers of automobiles have directed their efforts for many years toward developing and maintaining the performance characteristics of vehicles at levels consistent with highway conditions and the requirements of the using public, utilizing research and testing facilities, laboratories, and engineering proving grounds to conduct tests under controlled and scientific conditions and standards, and can best serve the public by continuing these efforts; and

Whereas the Automobile Manufacturers Association believes that the automobile manufacturers should encourage owners and drivers to evaluate passenger cars in terms of useful power and ability to provide safe, reliable, and comfortable transportation, rather than in terms of capacity for speed;

Now, therefore, this board unanimously recommends to the member companies engaged in the manufacture and sale of passenger cars and station wagons that they:

1. Not participate or engage in any public contest, competitive event or test of passenger cars involving or suggesting racing or speed, including acceleration tests, or encourage or assist employees, dealers, or others, or furnish financial, engineering, manufacturing, advertising, or public-relations assistance, or supply pace cars or official cars, in connection with any such contest, event, or test, directly or indirectly;

2. Not participate or engage in, or encourage or assist employees, dealers, or others to engage in, the advertising or publicizing of: (a) Any race or speed contest, test or competitive event involving or suggesting speed, whether public or private, involving passenger cars, or the results thereof; or (b) the actual or comparative capabilities of passenger cars for speed, or the specific engine size, torque, horsepower or ability to accelerate or perform, in any context that suggests speed.

Dedication of Altoona (Pa.) Memorial K4 Steam Locomotive at Horseshoe Curve on the Pennsylvania Railroad System

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. VAN ZANDT. Mr. Speaker, on Saturday, June 8, 1957, it was my privilege to participate in the dedication of a K4 steam locomotive as a memorial to the long history of faithful srevice of steam locomotives and those who built and operated them over the Nation's ribbons of steel.

This K4 steam locomotive No. 1361 was presented to the city of Altoona by the Pennsylvania Railroad Co. as a per-

manent monument to the historic partnership between the community, the railroad, and the iron horse.

Old No. 1361 was one of the earliest of the 350 K4's built at Altoona, Pa. It was placed in service May 18, 1918, and for more than 35 years it hauled trains of the great Pennsy passenger fleet over the mainline between New York, Harrisburg, and Pittsburgh. Countless of its trips were around the famed horseshoe curve which is one of the great triumphs of railroad engineering. When old 1361 was finally retired to make way for the modern diesel No. 1361, it had rolled up nearly 2½ million miles—the equivalent of nearly 100 trips around the world.

K4 locomotive No. 1361 is an especially appropriate memorial for the city of Altoona, Pa., where 5 generations of skilled workmen built a total of 6,783 steam locomotives for the Pennsylvania Railroad.

The following program marked the dedication of the K–4 memorial locomotive during which time I delivered an address on the historical development of the steam locomotive:

PROGRAM

Presiding, Howard W. Lindaman, director of water, parks, and public property, city of Altoona.

Music, massed bands, Altoona public and parochial schools.

National Anthem.

Flag-raising, color guard, Blair-Bedford Council, Boy Scouts of America.

Invocation, Rev. Cedric Tilberg, First Lutheran Church.

Presentation, Pennsylvania Railroad, George R. Weaver, assistant manager, heavy repair shops; Walter W. Patchell, vice president, research and development; Morton S. Smith, vice president and regional manager.

Acceptance, Mayor Robert W. Anthony; Deborah Hersperger, kindergarten, Adams School; Martin Hughes, Jr., first grade, Holy Rosary School.

Prayer of dedication, Rabbi Nathan Kaber, Temple Beth Israel.

Remarks, the Honorable James E. Van Zandt.

Benediction, Rev. Father John P. Manning, St. Leo's Church.

Taps, Kenneth Woodring, William Mackey.

Civic committee: Howard W. Lindaman, chairman; Mrs. Samuel Albright, Miss Helen Barclay, Thomas Bloom, Robert W. Boyer, Francis T. Brown, Dr. A. Bruce Denniston, George P. Gable, Robert L. Hite, J. E. Holtzinger, Mrs. Lynn Hunter, Will Ketner, H. L. Kimble, David M. Langkammer, Mrs. Harold McCullough, Rev. Francis A. McNelis, Mrs. Matilda Madden, Dr. Fred Miller, Louis H. Murray, Edward Scala, C. F. Schick, Lawrence Schrenk, Mrs. Luke Sill, Capt. William Stephens, Roy Thompson, G. R. Weaver, Gerald P. Wolf, Hon. James E. Van Zandt.

REMARKS OF THE HONORABLE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE DEDICATION CEREMONIES OF THE K–4 LOCOMOTIVE AT THE HORSESHOE CURVE, ALTOONA, PA., JUNE 8, 1957

This is a historic occasion.

My contribution to this program is summed up in the well-known saying, Time Marches On.

Yes; time has marched on, because it was in the year 1804 when a steam locomotive was developed which could haul loads over a fixed track.

However, the steam locomotive which was to serve as a model for many years was not developed until 1829.

Therefore, it is proper to say that this K4S locomotive, No. 1361, built in the Pennsylvania Railroad shops by the ingenuity and the hands of Altoona residents, will stand for years to come as a monument to the era of steam locomotives.

History tells us that back in the year 1829 the locomotive, that was to serve as a model for many years, was the famous Rocket built by the Stephensons in England. It weighed but 5 tons and was the first locomotive with a horizontal tubular boiler.

Burning wood for fuel, it hauled 36 carriages, with a total of 90 tons weight, at a speed of from 12 to 15 miles per hour. Under favorable conditions, and if the carriages were unloaded, the speed could be increased to 28 miles an hour.

From about 1830, locomotives were American built, the first being Peter Cooper's Tom Thumb, which weighed less than 1 ton.

In December 1830, the locomotive named "Best Friend" was built in New York City and started regular service on the Charleston & Hamburg Railroad. It was the first locomotive to haul a train of cars in regular service.

The first coal-burning locomotive was built in 1852.

From that time until the turn of the century, improvements were made, until locomotives with 6 pair of driving wheels, weighing over 100,000 pounds and burning coal were developed for heavy duty railroad traffic.

During this same period, air-brake equipment was developed, together with track tank and scoop for taking water on tenders. Among the inventions of the period was the automatic coupler. The first bituminous coal-burning locomotive made its appearance.

Beginning in 1900, locomotives became larger and more powerful. Their designs were different, and their hauling power and speed were increased.

In 1939, locomotives equipped for both freight and passenger service continued to become larger and to keep pace with the march of time—they were streamlined from coupler to coupler.

The last steam locomotive, built by the American Locomotive Co., was completed in 1948, after 97 years of continuous production.

Since that date, this plant and other outstanding locomotive producers has converted to full-scale diesel electric production.

The year 1950 marked the end of commercially built steam locomotives for mainline service in the United States, and the switchover of railroad power to other forms, principally diesel, had its beginning.

The first diesel electric-powered train was the Burlington "Pioneer Zephyr," with a 600-horsepower locomotive, which twas about one-fourth the size and one-fifth the weight of the steam engine of the same horsepower in 1933. The first diesel for road freight was put into service in 1941 by the Santa Fe Railroad.

Thus the trend toward complete dieselization was marching forward. From the early 1940's to the present time, many improvements have been made in railroad motive power.

Not only have the power and speed of the diesel been increased considerably, but also electric motors have been installed and gas turbine electric power has been developed.

Challenging the present diesel electric era of railroad motive power is the gas turbine locomotive equipped with a 20,000-gallon tender, supplementing the 7,500 gallons of fuel carried in the locomotive body tanks.

This gas turbine locomotive is capable of traveling almost 1,500 miles without refueling. This type of locomotive provides operating improvements and decreased maintenance costs that indicate—it could prove to be the locomotive of tomorrow.

Speaking of tomorrow, and mindful of the fact we are living in the nuclear age, one may find 10 to 15 years from now atomic-powered locomotives that depend on a small charge of atomic fuel in a nuclear reactor smaller than a good-sized trunk, capable of providing enough energy to power the locomotive a distance equal to more than once around the earth at the Equator.

At this moment, five of the Nation's largest railroads, together with some half dozen large manufacturing corporations, are sponsoring the construction of the atomic-powered locomotive.

This locomotive will generate as much steam as the biggest conventional steam locomotive now on the rails. Instead of steam being produced by coal or oil, several pounds of uranium will do the job.

Yes, time marches on.

In 1804 the steam locomotive was born. Then came the diesel electric locomotive, followed by the gas turbine locomotive. And now, the atomic-powered locomotive is "just around the corner."

Truly, in dedicating this Pennsylvania Railroad K4S locomotive, No. 1361, we give lasting recognition to one of the most exciting chapters in the history of the railroad industry.

At the same time we pay a marked tribute of respect and esteem to railroad employees who built these locomotives and those who manned them as they traveled countless miles over ribbons of steel.

May "Old 1361" also prove a constant reminder, not only of the greatness of the America of yesterday, but also of the strong, modern America of tomorrow—as time marches on.

The Jury Trial Amendment Is a Monstrous Sham

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. CRETELLA. Mr. Speaker, I entertain no doubts that the so-called trial by jury amendment as advanced by certain Members of this body will be soundly defeated when it comes up for a vote. This thinly veiled attempt to destroy the effect of the administration civil-rights bill is exposed simply as a means whereby southern juries, composed of white persons, can ignore the facts and the will of the court by imposing no punishment on those who deny voting rights and other constitutional rights to Negroes.

I am including at this point two editorials, one from the Wilmington Journal Every Evening and another from the New York Times, on this subject, both of which clearly see the jury trial amendment as one which nullifies the law protecting a person's right to vote.

The editorials follow:

[From the Wilmington Journal-Every Evening of June 1, 1957]

TRIAL BY JURY

The right of an accused person is a basic American right. So is the right to vote. Good liberals and good conservatives uphold both. But in Congress some of them may be confused when Southerners tell them they must not pass a civil-rights law protecting the right to vote because that law would take away the right to trial by jury.

It is a false issue. The proposed legislation says that officials who try to keep people from registering and voting may be enjoined to stop the process by a Federal court. And if they disobey the court, they may be sentenced for contempt. Now whether a man has obeyed a clear court order is a matter of fact easily established. No jury is needed to protect his rights because they aren't in danger. Obviously, if he obeys the court, the court is not going to punish him for disobeying.

This principle is so well established that it has hardly been brought into question until now. In matters far less important to us all than the right to vote, judges issue injunctions and punish defiance of them, all without the help of juries. Some of the very States which profess to be concerned over the right to vote have passed laws forbidding the NAACP to engage in activities such as assembly and propaganda, which are constitutional rights. NAACP officials who engage in such activities are subject to injunction, and to punishment without trial by jury if they disobey.

The reason Southern Congressmen are insisting on trial by jury of persons charged with violating civil-rights injunctions is that they expect Southern juries to acquit guilty officials in disregard of the facts. If you think they wouldn't do just that, you haven't read about what happened this week in Montgomery, Ala.

A jury there acquitted 2 young white men charged with bombing 4 churches, a Negro taxi stand, 2 ministers' homes, and other houses. Were they guilty? Their lawyer talked as if he thought they were.

The lawyer said their acquittal would give encouragement to every white man, woman, and child in the South who wanted to preserve "our sacred traditions" of segregation. He said a verdict setting them free would "go down in history as saying to the Negroes that 'you shall not pass.'" Clearly, an acquittal could not have such effects if the accused were innocent.

The right of trial by jury is basic. It is not threatened by long-established injunction practices. But it is grossly perverted wherever juries acquit men they know to be guilty. If the civil-rights law is amended to permit—and encourage—such perversions, the right to a jury trial will not be strengthened but weakened.

[From the New York Times]

JURY TRIAL

The silent filibuster that has been going on all winter and spring against the administration's mild civil-rights bill has now ended in the House, and formal debate on the measure has begun at last. The bill has a good chance of passing there; but even if it does it will come up against much tougher—and longer-winded—opposition in the Senate.

Very different from the filibuster threat, and in some ways even more serious, is the jury-trial amendment that will be proposed as an addition to the bill in the House and that has already been added to it in the Senate version, which is still in committee. This amendment is the brain-child of the astute Senator ERVIN of North Carolina; and there is no doubt that it has a specious appeal. But it is really a device to undermine one of the most important provisions of the pending bill.

As introduced by the administration, the bill permits the Attorney General to seek injunctions in Federal court to prevent local officials from denying voting or other civil rights to anyone. The Ervin amendment provides jury trial for persons cited for contempt for violating injunctions so issued. Since trial by jury is one of the great guaranties of the individual against the power of the State, it may seem at first glance that this is only a reasonable effort to insure that justice is done.

But actually it is a means to block enforcement of the Court decree either until it is too late to do any good or indefinitely—inasmuch as few if any southern juries would be likely to approve Federal action in such cases. Jury trial for contempt citations under the circumstances envisaged in the civil-rights bill is not and never has been a normal legal procedure. As Senator CASE of New Jersey pointed out yesterday, none of the Southern States in the forefront of the effort to defeat the right-to-vote legislation "has a provision for jury trial in contempt cases of the kind here involved."

The procedure envisaged in this bill is designed primarily not to punish an official for committing a crime, but to prevent him from committing a crime. The Court's right to punish him for ignoring that kind of restraint is an expression of the authority of the Court itself—an authority which, in Chief Justice Taft's words alluded to by President Eisenhower, "is essential unless we are prepared to embrace anarchy."

Nearly 2 months ago Senator DOUGLAS of Illinois entered in the CONGRESSIONAL RECORD a detailed and interesting brief on this whole subject, pointing out that the jury-trial amendment is not only meant to hamstring enforcement of the law but may well be unconstitutional itself. It would "deny to the Government of the United States its duty and its power to give the citizen effective protection in his right to vote and in his fundamental rights to equal protection and liberty and security under law."

Inflation Race—Who's Ahead, Who's Behind

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution on the high cost of living as it affects the low-income Federal civil-service annuitants, which was adopted by the Massachusetts Federation of Chapters, National Association of Retired Civil Employees, in convention assembled at Springfield, Mass., on June 1, 1957.

The resolution follows:

MASSACHUSETTS FEDERATION OF CHAPTERS, NATIONAL ASSOCIATION OF RETIRED CIVIL EMPLOYEES IN CONVENTION ASSEMBLED, SPRINGFIELD, MASS., JUNE 1, 1957

Whereas the high cost of food, clothing, shelter, drugs and especially medical-surgical treatments have attained and are still climbing to fantastic levels of expense, already without the reach of thousands of low-income Federal civil-service annuitants; and

Whereas each month of the year marks the passing of many of the more than 12,600 retired civil-service employees native to and living within our great State of Massachusetts, leaving their widows to survive them on a pitifully low survivorship income; and

Whereas the civil service retirement fund has steadily grown in 37 years from its start at zero to more than $7½ billion and, under Public Law 854 passed by the 84th Congress providing 13 percent of the Government payroll plus 3 percent interest on the balance in the fund as assured income. The fund is certain to increase at such a fast rate in the years ahead that in 25 years it will be close to $25 billion; and

Whereas 149 Members of Congress, including Hon. EDWARD P. BOLAND, Hon. LAURENCE CURTIS, Hon. HAROLD D. DONOHUE, Hon. THOMAS J. LANE and Hon. TORBERT H. MACDONALD from Massachusetts, recognizing the loyal service of retired Government employees, have introduced bills to provide deserved increases for this group of aged, sick, and disabled retirees, to be paid from the civil service retirement fund for 3 years, and Congress has delayed action on these bills for 5 months; and

Whereas under Public Law 854 the Retirement Fund will increase so rapidly that the payment of the increases for the employees retired before October 1, 1956, will neither jeopardize the solvency of the fund nor the equity in it of future retirees; and

Whereas the extraordinarily large number of bills (149 providing retirees a modest increase in annuities, are still under the consideration of the United States Civil Service Commission and the fate of this proposed legislation may rest entirely upon a favorable and early report to the House Post Office and Civil Service Committee: Now, therefore, be it

Resolved, that a copy of this resolution be forwarded to all Representatives in Congress from the State of Massachusetts, urging them to use their joint and personal influence with Hon. SAM RAYBURN and Hon. JOHN W. MCCORMACK toward persuading the Honorable TOM MURRAY, Chairman of the House Post Office and Civil Service Committee, to immediately appoint a subcommitte to consider H. R. 4, H. R. 97 and the 138 similar House bills calling for a modest increase in United States Government retired civil service employees.

Adopted unanimously at Springfield, Mass., this 1st day of June 1957.

WM. M. KEENEY,
President.
ROBERT A. WILLIAMS,
Secretary.

[From the U. S. News & World Report of August 3, 1956]

INFLATION RACE—WHO'S AHEAD, WHO'S BEHIND

With prices climbing again, here is the record on inflation:

For most people, incomes have risen faster than prices. But some gain more than others.

This survey shows where the gains are biggest—and who is falling behind.

A great majority of Americans in 17 years of rising prices, have managed to keep well ahead of inflation. The incomes that people earn have gone up a good deal faster than the prices and taxes that people pay.

The net result is that despite high prices and high taxes, the average family in this country, so far as purchasing power is concerned, is better off today than ever before.

The gains in income have varied greatly from one family to another, depending on what the breadwinner does for a living. Some people are enjoying more than twice as much real income as they did 17 years ago.

Now, with prices rising once more, there is to be a new test of the ability of people to keep a jump ahead of inflation. The cost of living, as reported by the Labor Department, has been climbing for several months, and now stands at an all-time high. Most things the average family buys are getting more expensive—food, clothing, rent, transportation, medical care, recreation.

Living costs are expected by the Government to rise still higher in the months just ahead. The question is whether incomes will rise as rapidly as prices.

MORE GROUPS IN TROUBLE

Besides the farmers and bondholders, there are other large groups that have trouble keeping up with inflation.

People living on pensions are in trouble, unless their pensions are increased as the cost of living rises. This rarely happens. Payments to retired Federal workers, for

example, are adjusted by Congress only occasionally. Last year these payments were increased an average of 10 percent. But this still left such retired workers worse off than in 1939.

[From the Evening Star, of May 10, 1957]

PRICES INCREASE—NEW WAVE OF INFLATION—CONSUMERS BEGIN TO FEEL PRICE-INCOME SQUEEZE

(By Sam Dawson)

NEW YORK, May 10.—With living costs still climbing a price-income squeeze is hitting many consumers today—just as the price-cost squeeze troubles many businessmen.

Business is in a leveling off period both as to activity and profits. Consumers wonder when the leveling off trend will extend to the cost of living.

Fortunately it hasn't yet hit total consumer income which is running above last year—but some segments of income have been hit, notably in loss of overtime pay in layoffs in some industries.

This is where the squeeze on consumers is occurring. It shows up in such things as slower collections on installment debts and retail charge accounts—and in sluggish sales of appliances and less than hoped for sales of new cars.

INDEX UP 4 PERCENT

The Government's cost of living index is now around 4 percent higher than this time last year.

SERVICE COSTS MOUNT

But in one important segment of the cost of living—services—the climb has been pronounced and shows little signs of slowing. The cost of services depends more on labor costs and increased demand than they do on raw material prices.

Services take a larger and larger share of the family budget. In one sense the increased demand for services has become a badge of the advancing standard of living in America.

For about a year now consumers have cut back on their spending for some things, as the auto and appliance makers can attest. But they continue to spend more and more for services, for recreation, for travel.

But where incomes don't rise while the cost of living continues to, a squeeze could develop that would cut consumer spending.

Secrets

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Wall Street Journal of June 3, 1957:

SECRET FROM WHOM?

A "secret" Government letter was made public the other night and its publication by the Justice Department threw a little more light on some reasons for Government secrecy.

The circumstances were these: The United States Border Patrol, an arm of the Immigration and Naturalization Service, had been in the habit of sending men to pistol and rifle matches about the country at Government expense. Vouchers for the trips ended up in the General Accounting Office where Comptroller General Joseph E. Campbell read them with a cold eye since the explanations for the expenses were given as "to perform official border-patrol duties."

Mr. Campbell reasoned that the trips seemed more in the nature of athletic or sporting events and that since Congress had not authorized such expenditures there was some doubt that the border patrol acted with propriety in expending its funds for such purposes. He asked the border patrol under what authority it acted and back came a letter to him marked "secret." It finally took the Justice Department to wipe off the secrecy label and throw the case before the general public.

As it happens, in the letter marked "secret" the border patrol gave some fairly logical reasons why, if expenses of its top sharpshooters to pistol and rifle matches are not authorized by Congress, perhaps they should be. That, though, is not the question; the question is why did the border patrol surround the whole set of circumstances with the cloak of secrecy?

It would take a more vivid imagination than ours to believe that knowledge about trips at Government expense to rifle matches could in any way endanger national security, which is the only acceptable reason for a secret label on a Government document having to do with the public business.

Then from whom was this Government agency trying to keep this affair of the questioned vouchers secret?

The answer is so obvious that to give it would be to insult the intelligence of the general public.

Nashville Retail Merchants Expand

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert editorials from the two Nashville, Tenn., daily newspapers of June 7 on the excellent expansion and development of a great southern city, Nashville, the capital of Tennessee.

These editorials pay tribute to the foresight and initiative displayed by the larger retail merchants in the metropolitan area and the constructive contribution made to the progress of this community.

The editorials follow:

UPTOWN FUTURE GROWS BRIGHTER

How Nashville, enjoying no particular boom, happened to lead all cities of the Southeast last year and again this year in increased department store sales is no particular mystery.

Nashville happens to be a city of superior merchandising talent, which may prove to be the only really effective means for combating the flight of retailing to the suburbs.

Urban renewal programs, freeways, and bypass routes to relieve traffic, increased parking space, all of these may help.

But the determining factor may well be the degree of aggressiveness and inspiration of any city's large retail merchants. Nashville's merchants have those qualities in abundance.

No more eloquent testimony can be offered in evidence than Harvey's latest announcement of expansion, the recent progress reports on construction for Cain-Sloan's new $8.5 million store, and Castner's plans for multi-million-dollar additions.

In Nashville's retailing picture the big merchants have what it takes to preserve the uptown center of retail sales concentration and high tax revenue that for many American cities soon may be a thing of the past.

RETAIL CENTER GROWING: A CITY ON THE MARCH

If ever there was doubt on anybody's part concerning the solid, consistent growth—and the reassuring future—of the Nashville business community, such doubt must have been dispelled by now, by current developments and investments in the heart of this retail business district. Of that expansion trend, soundly based on marketing realities, yesterday's announcement by Fred Harvey provides timely, additional emphasis.

It is a notable extension of merchandising facilities by this firm, expressing confidence in Nashville's continuing progress as a retail center. It is doubly significant because it is part of the uptown growth—which has seen numerous establishments enlarging or rebuilding for ample accommodation of patronage.

Cain-Sloan Co., vacating the premises now leased by Harvey's, will occupy a great new building at the corner of Fifth and Church.

Sears, Roebuck & Co., recently moved into its vast new quarters on Lafayette Street.

Castner-Knott Co. contemplates substantial expansion of its operations, having acquired additional property adjoining its present site.

National Stores Corp. has expanded local retail operations uptown with removal to the building formerly occupied by Sears.

The W. T. Grant Co. is building one of the largest and most modern stores in its nationwide chain.

There are other evidences of steady business growth, not just on the skyline, but in property improvements manifesting a spirit of progress by which commercial establishments stay abreast of the swelling tide—and substantiating the fact that Nashville is on the march.

The expanding picture is a product of many factors—among them industrial gains, bringing new residents and new payrolls.

Nashville has been the hub of a retail trade region—a vast, productive Middle Tennessee; abundant and prosperous agriculturally, and blessed with a family of industrial enterprises old and new. It is attracting more of these.

Residential areas urban and suburban are swelling a metropolitan stature requiring an ever greater retail business community, and accounting for the steady increase in volume of sales which statistical studies—as in Federal Reserve District figures—reflect.

These are not sporadic upshoots, or eccentric up and down movements, but a steady climb sustained over the years; a fact on which investments can be soundly predicated. Business investors carefully appraise prospective developments, by scientific measurement and planning. They do not move in the dark.

The Federal Reserve Bank (Atlanta District) for example, in its report on weekly department store sales for Nashville, shows that for the year—from January 1 to May 25—retail sales in this city were in dollar amounts 8 percent above the same period of a year ago. This metropolitan area was second, in this point of improvement, only to Miami. It was 7 percentage points above Atlanta.

Nashville's retail business in 1956 chalked up a sales volume of $373,481,000, compared with $355,712,000 in 1955. And in the language of a statistical publication, Sales Management, Nashville stands out as a high-powered market, with families earning more and spending more than those in most parts of the United States.

These are facts expressive not only of a growing, confident population, but of a growing, confident, retail business community. On them rests the faith by which—to keep pace—business itself is expanding.

Lyndon Johnson, Statesman

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. THORNBERRY, Mr. Speaker, Mr. William H. Stringer, chief correspondent for the Christian Science Monitor, has written an article analyzing the brilliant foreign policy speech made by the majority leader of the Senate, LYNDON B. JOHNSON, of Texas, last Saturday night.

Mr. Stringer, one of our most distinguished and able Washington correspondents, considers the speech a landmark in foreign-policy development. He refers to it as leadership of high caliber, along the lines of that exercised by the late Senator from Michigan, Senator Vandenberg, and former Senator George, of Georgia.

Under unanimous consent I insert this article in the Appendix of the RECORD.

The article follows:

THE WASHINGTON SCENE

(By William H. Stringer, chief, Washington bureau, the Christian Science Monitor)

LYNDON JOHNSON, STATESMAN

WASHINGTON.—It is not simple for the Democratic majority leader in the Senate to don the full toga of bipartisan statesmanship. His first job is to shepherd legislation through that august upper Chamber, to give it a Democratic flavor, to write a farseeing record on which his party can run in the next election.

But LYNDON B. JOHNSON, the Senate majority leader, in a quite remarkable speech at New York, has sounded an eloquent plea for imagination in foreign policy, for getting on with the disarmament negotiations with Moscow, and for boldness in a radio-TV exchange of ideas between the United States and the Soviet Union.

And, noting the way in which this plea parallels and supports what President Eisenhower is trying to do in the difficult, painstaking field of disarmament, Washington is immediately reminded of Senator Walter F. George and how he cleared a "space for maneuver" around the President before the summit conference at Geneva and at the time of the Formosa resolution. And one thinks of the late Senator Arthur H. Vandenberg and his conversion to internationalism, and how this so markedly saved the day in the United States Senate for Marshall plan aid and the NATO alliance.

Senator JOHNSON made his New York speech before the United Jewish Appeal, at a moment when President Eisenhower needs domestic allies in his endeavor to explore the prospects of first-step disarmament with the Soviet Union.

Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, has declared that the Soviets cannot be trusted in any sort of agreement. The Chairman of the Atomic Energy Commission, Lewis L. Strauss, has stressed many technological reasons why genuine disarmament is next to impossible. Without Mr. Eisenhower's own wish to wage peace, disarmament expert Harold E. Stassen's hands would be almost impossibly tied at the London talks, and indeed he already has had to return to Washington for further talks because of snags in the discussions.

This is a significant moment in Soviet-American relations. It is a time for caution, as always. But it may also be a moment when careful diplomacy can make some headway on the arms-control front. And it is a moment when the breach in the Iron Curtain represented by the Khrushchev radio-television interview a week ago can conceivably be exploited into a larger exchange of fusillades in this war of ideas.

Into this picture strides Senator JOHNSON with a speech in which he urgently calls for action on five phases of disarmament, most of them closely approximating the Eisenhower administration's own thinking and proposals. Thus the Senator from Texas throws his powerful weight inferentially against those who would so hedge and restrict Mr. Stassen at London that he could not reach a first-step arms-control agreement this side of the next appearance of Halley's comet.

Controlled reduction of military forces, a start on the open skies inspection system, a search for methods of suspending tests of the big weapons, a reduction in nuclear-weapons stockpiles, and a global agreement not to make new fissionable materials for weapons—by the present atomic powers and the fourth nation, too—these are the Johnson proposals.

Simultaneously, he makes an imaginative bid for reciprocal exchange of broadcasts through the Iron Curtain—in which the United States would present its own case on disarmament in detail to the Soviet people via Soviet radio and television. In return the Soviet leaders would be allowed to broadcast over the American networks.

Let the reciprocal broadcasts be every week of the year if need be, say Senator JOHNSON.

This address was a useful contribution to American policy. It should stir American thinking. The administration should welcome it. It is the voice of a new and wide-visioned Texas. It is the voice of the Senate in its most thoughtful traditions. It is the view of a Senator whose energies, dedication, and generalship have given his opinions great weight in that gentlemen's club.

If Senator JOHNSON continues in this vein, he will help bipartisanship where it most needs helping. He has already brought a Jeffersonian breath of fearless mental freedom into the current worry about whether Mr. Khrushchev's talk contaminated the American people. Of the Khrushchev demarche Senator JOHNSON says:

"I am glad he did so. I have complete trust and faith in our people. * * * Khrushchev is not going to convert the lean, spare Texan who runs the cattle on my ranch into a Communist. He's just plain got too much sense."

Resolutions of the Jewish War Veterans of the United States

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. MULTER. Mr. Speaker, under date of May 21, 1957, Mr. Bernard Weitzer, national legislative director of the Jewish War Veterans of the United States, sent to President Eisenhower a copy of the resolutions passed at the 61st annual national convention of that organization.

I am pleased to commend to the attention of our colleagues Mr. Weitzer's letter to the President together with the resolutions, as follows:

JEWISH WAR VETERANS OF
THE UNITED STATES OF AMERICA,
Washington, D. C., May 21, 1957.

The PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: You may recall that when I had the pleasure of visiting you, last year, with our newly-elected National Commander, William Carmen, we handed to you, copies of the resolutions passed at our 61st annual national convention expressing the full support of our organization for the foreign aid program which you have presented to the Congress in past years. These resolutions included military aid, economic aid in the form of loans and grants, technical assistance through bilateral agreements as well as contributions to expanded technical assistance programs of the United Nations and other types of assistance which buttress the strength of the independent nations of the world.

It is a pleasure to read your strong message to Congress setting forth your detailed recommendations for these foreign aid programs covering fiscal year 1958. According to our convention resolutions, we would have preferred that these outlays be larger than those for 1957 instead of the decrease which you apparently found necessary.

Though we have become accustomed to terming these outlays "foreign aid," our membership is firmly convinced that this "foreign aid" is one of the strongest elements of our own defense and our own national interest. Dollar for dollar, these outlays contribute more than any other dollars we spend directly, for our national defense and besides, they insure a greater likelihood of our living in peace.

We sincerely hope that the Congress will share the views and recommendations of our President on this subject and will, overwhelmingly, vote for the minimum appropriation requests you have made. I am confident that our members all over the country will be listening, approvingly, to your telecast tonight, as you bring your message about our vital need for our foreign aid program to all of our citizens.

With all good wishes.

Cordially,

BERNARD WEITZER,
National Legislative Director.

Whereas our organization has for 10 years, consistently supported the essential elements of the mutual security program and appropriations fully adequate for the need thereof; and

Whereas the military aid, economic support in the form of loans and grants and technical assistance made available under that program, have strengthened our traditional allies and independent nations of the world, especially those newly independent since World War II; and

Whereas the results of the mutual security program have inured to our own country's improved military defense and capacity for swift retaliation in the event of any Communist attack; and

Whereas the combination of our own strength and the capacity of the nations which we have aided, to withstand the subversive and infiltrating activities of the Communists has served to deter Communist aggression and to frustrate their intent to dominate the world: Now, therefore, be it

Resolved, That the National Executive Committee of the Jewish War Veterans of the United States of America at its regular meeting in Washington, D. C., May 25-26,

1957, wholeheartedly supports the President's minimum request for funds to carry out the mutual security program as proposed in the President's message of May 21 to Congress and reaffirms its confidence that the dollars thus appropriated will be the most effective expenditure our country can make in achieving a durable, just peace.

Eisenhower's Turnabout

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. VANIK. Mr. Speaker, President Dwight D. Eisenhower in a recent letter to the Honorable OREN HARRIS, chairman of the House Interstate and Foreign Commerce Committee, indicated that he would favor legislation freeing producers of natural gas from utility type regulation and that the administration's amendments were of possible desirability and that they did not represent his fixed conclusions. This is clearcut evidence that the President has made a "turnabout" of his previously announced position to protect the interests of millions of natural gas consumers who will suffer unrestrained rising gas rates as the result of the passage of this legislation. It is apparent that no further attempt will be made by this administration to concern itself with the welfare of the natural gas consumers of the North, who will be at the helpless mercy of the oil and gas interests of America, who undoubtedly were successful in their efforts to force the White House to back down from a tenable position.

This is another item in the long record of Eisenhower derelictions of the public interest in favor of the powerful oil and gas industry which seems to dictate domestic policy in which it is concerned as thoroughly as it dictates and influences our international policy.

The following editorial in the Washington Post of today entitled "Unredeemed Gas Bill," is well in point:

UNREDEEMED GAS BILL

Patience and improved manners seem to have paid off for the natural gas lobby. The producers now have the President's blessing for a bill that would accomplish approximately what was sought in the legislation vetoed by Mr. Eisenhower last year. And so for the first time in this Congress, there is a chance that the natural gas industry will be freed from Federal utility-type controls on its prices and that consumers will be exposed to considerable price increases as a result.

We remain as dubious about this legislation as ever, even though the "arrogant" tactics employed by the bill's sponsors last year, which led to the Presidential veto, have been supplanted by a quieter type of lobbying. There has been no convincing showing that development of natural gas resources is impeded by the kind of regulation permissible under existing law. On the contrary, there are indications that present regulation is not as firm as it ought to be. The President himself recognized that there are perils in the Harris bill to free the producers from present controls when he proposed that the bill be amended to allow consideration of costs in determination by the Federal Power Commission of fair market value. Now he has withdrawn this recommendation with no more than a verbal shrug, saying that it hadn't been his "fixed conclusion" anyway. This seems a rather casual dismissal of a considered proposal emanating from the Office of Defense Mobilization.

At the least, if present controls are to be modified to encourage natural gas development, some sort of formula for setting prices ought to be retained. Not to do so would make a mockery of the regulation under local laws of gas distributing companies, placing local regulation completely at the mercy of a vague concept of fair wholesale values administered without legal guidance. In the hands of a Power Commission determined to favor the gas producers, even the Eisenhower amendments, now withdrawn, would have been slight protection for the public interest. Without them the bill contains not even the pretense of a safeguard against gouging of the consumer. We think it should be defeated.

Taxpayers Pay for Lobbying of Gas, Oil, and Electric Utilities

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. EVINS. Mr. Speaker, recently a number of magazines have carried full-page ads paid for by the private monopoly electric companies which ask in headlines: "Where Do Your Taxes Go?" These are part of a multimillion-dollar campaign whose plain purpose is to poison the minds of the country against the efforts of the people, through their local and National Governments, to inject an element of competition into the utility business with public power projects. The Senate Lobby Committee accurately described such campaigns as follows:

Newspaper and magazine advertisements which do not expressly support or oppose legislation but tend to accomplish the same result indirectly by subtle means, the cost of which is treated as a business expense.

Because it is treated as a business expense it becomes deductible for income-tax purposes.

Thus the Nation is deprived of income-tax revenue and in effect the taxpayer ends up paying about half the cost of this propaganda. Mr. Thomas L. Stokes has recently devoted one of his excellent commentaries to this subject and, under unanimous consent, I include it in the RECORD.

PROPAGANDA GIMMICK EXPOSED—TAXPAYERS PAYING FOR LOBBYING OF UTILITIES, OIL, AND GAS COMPANIES

(By Thomas L. Stokes)

A propaganda gimmick that is by no means new but is currently being exposed here from several quarters is that indulged in by some business corporations, but especially by electric utilities and gas and oil companies.

Its unique feature is that the taxpayer pays "for the privilege of being lobbied," as the practice recently was described by the Special Senate Committee To Investigate Political Activities, Lobbying and Campaign Contributions.

That is, these corporations write off in their tax returns as "business expense" the cost of "education" campaigns, a refined name for lobbying, and the cost of a type of advertising that is hardly even thinly disguised propaganda. What they avoid in taxes in this manner the rest of us make up. It is amazing how patient and long-suffering we are.

Two lobbying campaigns of which the consumer is now the special victim and dupe are those being conducted by the oil and gas corporations to stop regulation of natural gas producers by the Federal Power Commission and by the electric utilities to check further expansion of public power development.

The device that has most recently become the concern of the Internal Revenue Bureau is that with which we all have become familiar in our reading. It is described by the Senate Lobby Committee as "newspaper and magazine advertisements which do not expressly support or oppose legislation, but tend to accomplish the same result indirectly by subtle means, the cost of which is also treated as a business expense."

Both the electric utilities and the oil companies are doing a lot of this.

Some time ago Senator ESTES KEFAUVER, Democrat of Tennessee, asked the Internal Revenue Bureau to investigate this lobby and propaganda device that is charged off as "business expense." The Senate Lobby Committee made the same suggestion in its final report a few days ago.

In that report is a review of another tax deduction gadget used by many of the oil companies, some of them big ones, that created the Natural Gas and Oil Resources Committee to campaign for enactment of the bill to exempt natural gas producers from regulation by the Federal Power Commission.

That measure, killed in the last Congress by President Eisenhower's veto, is being revived, and the President has endorsed it in general principle with the condition that the consumer be protected. The bill as it stands does not do that.

Most of the companies that contributed the nearly $2 million for the "education" campaign for that measure originally had planned to deduct their donation as business expense, they testified before the Senate committee; but, after the investigation got under way, some of them changed their plans to do that.

"The Government would have lost the taxes on almost $2 million if all contributors had claimed the deduction," the report said.

Quite a number, however, did deduct their contributions, as the committee discovered in the report it got back from the Internal Revenue Bureau to which it had sent a transcript of the hearings.

Another variation on the principle of "the public pays" was discovered by the Subcommittee on Public Works and Resources of the House Government Operations Committee.

This had to do with the publication and distribution by several electric utilities of two booklets attacking the Federal power program. One was entitled "Turn on the Light," the other "The Federal Power Program: Its Background, Growth and Consequences."

The Federal Power Commission, which investigated the two booklets at the request of the House subcommittee, reported that the companies charged off the cost to various operating expenses, including advertising, employees' welfare expenses and pensions, demonstration, general office supplies and expenses, and miscellaneous general expenses.

Though not a large sum was involved—$23,562—this might have developed into quite a widespread tax-dodging device had the subcommittee not exposed it.

Mr. Brundage's Viewpoint Is Extravagant, in the Least

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I want to include in the RECORD a very fine editorial which appeared in the Nashville Tennessean on June 9.

The editorial concerns the peculiar viewpoint of the Eisenhower administration for economy in government and is entitled, "Mr. Brundage's Viewpoint Is Extravagant, in the Least."

The editorial follows:

MR. BRUNDAGE'S VIEWPOINT IS EXTRAVAGANT, IN THE LEAST

After submitting the largest peacetime budget ever, with defense spending requests approaching a $40 billion bite of that, the Eisenhower administration has shown a peculiar disregard at time for ideas on saving money.

It turned down recently and still stands adamantly opposed to a plan which, within a few years, would save the taxpayers an estimated $5 billion dollars in defense spending. That was a committee's recommendations for sweeping changes in the methods of pay for the military.

It was at Secretary Wilson's request that a special committee was appointed more than a year ago to study the personnel retention problem of the services. That committee included tough-minded businessmen, professional people, military, and Government representatives. It was headed by Mr. Ralph J. Cordiner, president of General Electric. Its problem was how to save money on defense by getting the most for the defense dollar.

One of the facets was the loss of skilled, technical, or otherwise highly competent personnel of the Armed Forces. Now the rate at which skilled enlisted men and officers have been leaving the services is shocking. Four thousand pilots left in fiscal 1955 alone, representing a training loss of $480 million. The cost of training technicians is terrifically high, yet 87 percent of these are lost to the greater incentives of civilian life. Replacing and retraining means not only a money loss but a weakening of the combat readiness of the United States.

The Cordiner Committee came up with proposals for modernizing the pay and manpower structure of the military, including a plan for proficiency pay to enlisted men for a demonstrated high quality performance, and a plan to provide additional incentive for selected Reserve officers to remain on active duty beyond their obligated time.

The recommendations, the committee felt, would improve by about 15 percent the combat capability of the United States. Further, they would represent savings or gains up to $5 billion by 1962 or sooner, and they would sharply reduce training accidents now and military and civilian losses in event of war.

But Budget Director Percival Flack Brundage, known as an "accountant's accountant," felt the proposals would be inflationary, and they were rejected. Mr. Brundage is the man who erred and precipitated the fight over the Post Office Department's deficiency appropriation because he "didn't understand the system." Evidently, there are other things Mr. Brundage doesn't understand; one of them being long-range ecoonmy.

In May, Senators STUART SYMINGTON, Democrat, of Missouri, and BARRY GOLDWATER, Republican, of Arizona, introduced a Senate bill designed to implement the Cordiner Committee proposals. A similar bill was introduced in the House.

Since there has been no sign that the Budget Bureau has relented, or that it is able to see the forest for the trees, the only hope for getting this defense savings plan into action rests with Congress.

For all of Mr. Brundage's ideas of extravagant economy and Mr. Eisenhower's remarks about the Democrats' advocacy of the "rubber dollar," Congress so far has shown it has a better fiscal understanding than the administration. Adoption of the plan to modernize the "Methuselah" system of military pay would prove it in spades.

ICA Chief Versus Critics

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Daily News of June 11, 1957:

ICA CHIEF VERSUS CRITICS
(By Peter Edson)

When Foreign Aid Director John B. Hollister was a younger man, during and after World War I, he worked with Herbert Hoover's relief mission in Poland. He became a "Hoover Republican."

Later, Mr. Hollister became a law partner of the late Senator Robert A. Taft in Cincinnati. Then he was a "Taft Republican." As a Hoover and a Taft Republican, Mr. Hollister was made executive director of the Hoover Commission on Government Reorganization in 1953.

When he was promoted from this position to head the International Cooperation Administration in 1954, it was widely assumed his job was to liquidate the foreign aid program.

Now, 3 years later, he is still running the program and he denies all rumors that he is planning to quit.

When Mr. Hollister took over ICA, its nonmilitary appropriations were $1.5 billion. In 1955 they were raised to $1.9 billion, cut to $1.7 billion in 1956, raised back up to $1.9 billion for this year. And this is the amount which the administration is asking for nonmilitary foreign aid next year. It is $900 million for defense support, $1.065 billion for all other economic assistance programs.

When Mr. Hollister is accused of being a New Dealer and a giver-away—in spite of his Hoover-Taft background—he asks his critics what they'd cut out and where they'd begin.

Would they cut out Korean aid? The United States is spending $300 million a year in defense support, to help the Korean economy support a 700,000-man army. Would they cut that?

No, they wouldn't cut that.

Well, then, asks Mr. Hollister, how about Formosa? The United States is spending $100 million a year for defense support of Nationalist China's 400,000-man army. Would they cut that?

No, it wouldn't be wise to let Chiang Kai-shek down.

But how about Vietnam? There the United States spends $250 million a year to support President Diem and his 400,000-man army in their fight against Communist Vietminh and Red China.

No, it wouldn't be smart to drop that one, either.

So what about the Middle East? Ambassador James P. Richards just obligated about $100 million for nonmilitary aid to friendly countries in that area this year.

President Eisenhower's Middle East doctrine message to Congress called for $200 million a year for the next 2 years. This sum isn't identified in foreign aid requests for next year. But this indicates the range of expenditures considered necessary to keep the Middle East from going Communist.

Anyway, with Korea, Formosa, Vietnam, and the Middle East accounting for $850 million of the $900 million sought for defense support next year, there are $50 million left for Africa, South America, and south Asia. This is what the giveaway program to neutral nations boils down to.

When Mr. Hollister asks if this should be done away with he generally gets a reluctant admission it's necessary, too.

Usurping of Power

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present herewith an editorial entitled "New Yorker Hits Usurping of Power" which appeared in the Shreveport Times, Shreveport, La., of Saturday, June 8, 1957. This is a timely and interesting editorial:

NEW YORKER HITS USURPING OF POWER

For a good many months now, the South has noted with growing satisfaction a rising tide of criticism, in other sections of the country, aimed at United States Supreme Court decisions of recent years.

True, little of the criticism in these other areas has been directed at the Supreme Court decision with which the South is most deeply concerned, that relating to abandonment of school segregation. But the basis of most of the criticism has been that the Court's rulings have been a usurpation of authority, and that, of course, is what the South contends in respect to the segregation decision.

Now comes the Saturday Evening Post, a publication not only widely circulated but widely respected, with a guest editorial declaring, in its title, that "The Courts Have No Authority To Amend the Constitution." No mention is made of the Supreme Court's segregation edict, but much that is said applies to it clearly.

Author of the editorial in question is Hamilton Long, described by the Post as a member of the New York bar and a student of constitutional authority. Because of the wisdom of his comment, we reproduce it in full as follows:

"Few subjects are surrounded by more confusion than the function of the United States Supreme Court in interpreting the Constitution. There can be no doubt, however, that the Court has no right to change the basic law or to violate the intent of those who initially adopted it or later amended it. Only the people can change the Constitution, or amend it.

"For the Supreme Court to try to bypass this process, by interpreting the Constitu-

tion contrary to that original intent, is to usurp power never given it.

"The Court's first duty is to protect the people's liberties. This includes restricting the Federal Government to the limited powers granted it by the people in the Constitution. As the then Gov. Franklin D. Roosevelt, of New York, truly stated in his States rights speech on March 2, 1930, these powers do not include authority over many 'vital problems of government, such as the conduct of public utilities, of banks, of insurance, of business, of agriculture, of education, of social welfare and of a dozen other important features. In these, Washington must not be encouraged to interfere.' However, in his 1936 annual message as President, Roosevelt boasted of newly expanded Federal powers which he said, 'in the wrong hands, would provide shackles for the liberties of the people.'

"Although the Constitution has not been amended to increase Federal powers since 1920, the Supreme Court in 1937 abandoned its policy of respecting the original intent of the Constitution—as amended—in defining them. It began to change its earlier definitions of that intent, in order to sanction the Federal Government's exercise of vastly increased powers without amendment of the Constitution. The Supreme Court now exercises power in all the fields which F. D. R. in 1930 said it should not invade. Many of these increases might have been made eventually, but the proper method to make them is provided in the Constitution and should have been followed. For the Court to attempt to make them by interpretation is government by usurpation, the opposite of constitutionally limited government.

"How to restore constitutionally limited government is a major question, especially at a time when concern for the proper limitation of Federal power seems all but nonexistent. This generation, like those which preceded it, is the custodian of the liberties of the people and the restraints on government power which alone can protect them. When he permit judges to interpret these guaranties so as to make them ineffective, we help to sabotage our own and posterity's liberties."

The Supreme Court's usurpation of authority in the field of education is one of the usurpations which Mr. Long denounces as the opposite of constitutionally limited government. Applying the principles which he espouses, school segregation, if accomplished by law, should be done by acts of the individual States or by constitutional amendment.

The broad issue presented by the present trend of Supreme Court decisions is being presented with ever-growing clarity. There is now at least some small hope for a rebirth of a Federal Government functioning according to the limitations which the Constitution sets forth.

Student Conservation Program of the National Parks Association

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. SAYLOR. Mr. Speaker, conservation is not a problem for Congress alone. Neither is it a problem for those who are so old they must find something to occupy their time. It is a problem that vitally concerns every living person in our country and we cannot begin too early to educate our young people in the problems and solutions of conservation.

The National Parks Association is to be congratulated on its student conservation program and the response of students has been most gratifying.

STUDENTS RESPOND TO A CONSERVATION CHALLENGE

Over 200 students from all parts of the country perked up inquiring ears at the announcement by the National Parks Association of the opportunity to participate in a summer of conservation—a summer of helpful, educational activity in our national parks. Some had heard of the Student Conservation Program from their college professors, some from high-school teachers, others from their garden-club mothers, and some from articles in publications of private conservation organizations.

As a result of the efforts of the representatives of the National Parks Association through personal contact and letters, by word of mouth and printed articles over 700 requests for information and application forms from over 200 parents, students, teachers, scout leaders, and National Park Service personnel flooded into the office of the association. Of the 600 lengthy detailed application forms sent out over 100 materialized into high-caliber applications.

And more would have been forthcoming had it not been for the necessity to close the books because the experimental aspect of this first summer's program can offer only a limited number of positions. Selection of only the most qualified applicants to fill these few positions has further reduced the number who may patricipate and benefit from this opportunity.

All of these students have expressed a love of the outdoors. Some want to become professional foresters or rangers and value the opportunity for training and the references resulting from their participation. Others earnestly desire the chance to assist the National Park Service and to "try out" this type of life and experience. Some just want the opportunity to go West into mountain country. All of them wish to learn how to use more fully and to preserve the resources of our country, and to offer their services to assist the National Park Service in Olympic and Grand Teton National Parks.

The overwhelming response of inquiries and applications has come from extremely well qualified high-school-age boys for whom there are 30 volunteer positions to do outdoor work for 3 weeks in Olympic National Park, Wash. This work will contribute to the availability of the park facilities and is under the direction of the Park Service and experienced personnel of the prominent Olympic Community College of Bremerton.

Highly motivated college and graduate women are eager to put their all too often unrecognized scientific and outdoor abilities and talents to useful expression. There was strong competition for the three openings to assist in setting up the new Pioneer Memorial Museum in Olympic National Park and for the four openings in the overall conservation training program in Grand Teton National Park.

In spite of the abundance of wellpaying job opportunities available to college and graduate men, the 16 billets for this group have been filled. Three biologists will conduct necessary and long neglected studies of the wildlife in the back country of Olympic National Park under the direction of the park biologist.

Twelve college men and graduates along with the 4 women will take part in a well-rounded, 2-month, conservation training program by assisting in all the divisions of Grand Teton National Park on a rotational basis, thereby acquiring a complete picture of the structure and principles of a national park. This program wil lbe enriched further by talks from park personnel and by members of the 7 other conservation agencies in the Jackson Hole region, by participation in the seasonal rangers' indoctrination program, and by a 2-day, specially conducted tour through Yellowstone National Park.

This summer these students will not only prove if they can meet this new challenge in the field of conservation, but also whether or not they can provide a useful source of talent for future employment by the National Park Service. They can gain both in personal experience and knowledge and at the same time give their assistance to the overworked staffs in the National Park Service. Through their effort and cooperation, the student conservation program can prove to be a practical and worthwhile undertaking meriting; continuation and expansion under the National Park Service or other Government or private agencies. So far, these students have proved they are willing to meet the challenge.

Kamehameha I: A Great Leader

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. BURNS of Hawaii. Mr. Speaker, today, June 11, is set aside in Hawaii as Kamehameha Day—a Territorial holiday—in honor of the great Hawaiian King, Kamehameha I. It is a day in which the people of Hawaii pay honor and tribute to this first king of all the major Hawaiian Islands, the king who, in the early decades of the 19th century, united the major islands for the first time under one ruler.

It is a day in which the people of Hawaii reflect upon, honor, and express—in feast and celebration—their profound gratitude for the generosity, the tolerance, the almost boundless humanity and friendship which the native Hawaiian, more than anyone else, is responsible for in present-day Hawaiian life, and which characterizes that life as democratic and as American in the deepest senses of those words.

Kamehameha I is perhaps best known generally as a great warrior king, but he was an even greater leader in peace—in fact his exploits as a warrior will be completely misunderstood if they are not viewed as his attempt to realize for all the Hawaiian people a perpetual and joyful peace.

When Kamehameha was a young chief, already controlling the island of Hawaii and showing signs of the greatness to come, a famous Hawaiian kahuna—or priest—appeared before him and prophesized: Kamehameha was to conquer and unite all the islands, thereafter to enable his people to live in a lasting and prosperous peace.

That this was his motive and his vision, Kamehameha gave full evidence at the very first opportunity—immediately after gaining full control of the island

of Hawaii. Among other things, he ordered the planting of foodstuff on all available land, and began the development of an irrigation project considered by later viewers as a most amazing accomplishment.

In his first official act when he had gotten control of all the islands, he told his people to go home and stop fighting, to turn from war to the building of an enduring peace.

He promulgated the famous Law of Mamalahoe which I give here in translation:

O my people, honor thy gods. Respect alike the rights of men both great and humble; see to it that the aged and the children may go their ways in peace, and lie down to sleep by the roadside without fear of harm.

He set up projects to increase food production, and became his own best example to his people by establishing several food farms of his own which he personally worked. To insure free medical service to all he set up a school for medical kahunas, and he set up schools of training for arts and crafts—free for all people.

He issued another famous edict:

There shall be no idle person in the land.

The Hawaiian workday was 4 hours; Kamehameha made plans for occupying the rest of the time with healthful games and play. From time immemorial the Hawaiians had observed the makahiki season, lasting from October through January, as a time of recreation and rest. The season was dedicated to Lono, the god of fertility; it was the harvest time in which warfare and contention were absolutely forbidden. It was unthinkable to the Hawaiian that in harvest, the time of life and growth, men should kill each other and their means of subsistence. First the harvest was gathered, then the taxes collected, and the remainder of the time the people spent in feast and celebration. It is to be noted too that before the coming of the foreigner the Hawaiians had no intoxicating liquor, and the energy and joy that animated their festivity had and needed no artificial inducement. For this season too Kamehameha provided plans to enhance the leisure occupation of his people.

Kamehameha I embodied fully the hopes and aspirations of the people; he was in the deepest sense a man of the people. Often he walked among them disguised to study the efficacy of his government, to ask questions and to solicit suggestions. In work and in play he led his people toward that full life, without bitterness or greed, which he, and his people, saw as their destiny.

The motto of Hawaii—Ua Mau Ke Ea O Ka Aina I Ka Pono—the life of the land is preserved by righteousness—while it was proclaimed by the later Kamehameha III, is most really the expression, in everything he did, of this greatest Hawaiian King, Kamehameha I. When he died in 1819—the year before the missionaries arrived—a great keen, such as never heard in Hawaii before or since, arose over all the islands.

Things did not come true exactly as Kamehameha I visualized them. But his people are great, their generosity and their tolerance vitally characterize American democracy as it exists in Hawaii. Kamehameha I is to his people, and to the people of Hawaii generally, "first in war, first in peace, and first in the hearts of his countrymen." An inspiration and an ideal to all, particularly to his own.

For these reasons, and many more, the people of Hawaii honor today—as many communities in America today honor their own great men of the past—the native Hawaiian people and their great leader, Kamehameha I, for all they have given and mean to Hawaii.

Personally, and on behalf of Hawaii's people whom I have the honor to represent, I express to the native Hawaiian people on this Kamehameha Day the deep gratitude and affection of the people of Hawaii for you, and for all you mean, and will mean in greater measure in the future State of Hawaii, United States of America.

Good Neighbors

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Tuesday, June 11, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting and inspiring address delivered by the Honorable Watson W. Wise, of Tyler, Tex., before the Council of International Relations, of San Antonio, Tex.

Mr. Wise is a distinguished and public spirited citizen of Texas. Although actively engaged in private business, he has taken time to serve his community, State, and Nation in many educational and civic activities. This year he has been chosen by the people of his community as chairman of their annual Rose Festival.

He has also served in national affairs, as State chairman of the Association for the United Nations, and as a director of the National Civil Service Association. In the international field, he made special industrial surveys in Europe, particularly in coal mining efficiency, in 1951, for the Council of Ministers of the North American Treaty Organization.

He has served several years as a member, and now as chairman, of the Good Neighbor Commission of Texas, appointed by the Governor of Texas, with the purpose of developing increasingly friendly relations between our country and our good and perhaps best friends, the countries of Latin America and South America.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BEFORE COUNCIL OF INTERNATIONAL RELATIONS, SAN ANTONIO, APRIL 15, 1957, BY WATSON W. WISE, CHAIRMAN OF THE GOOD NEIGHBOR COMMISSION OF TEXAS

When your president, Mrs. Mamie Dial, invited me to speak to the Council of International Relations at your St. Anthony banquet, I was mindful that she was trading food for conversation. Believing that a fair exchange is no robbery, I accepted. I am very pleased to be here.

I should like to acknowledge my appreciation for the presence of two of my Good Neighbor Commission colleagues—that very able commissioner, Andres Rivera of San Antonio, and Commissioner Frank Kelley of Colorado City, that rugged individual who, with the candor of a west Texan "calls them as he sees them."

Someone has said that "A man who works with his hands is a laborer; a man who works with his hands and his head is a craftsman; a man who works with his hands, his head, and his heart is an artisan; but a man who works with his hands, his head, his heart, and his feet is a salesman."

Tonight, I want to be a salesman. I hope to sell you, with all of these salesman's tools, if necessary, one product, interest. Yes, interest in what may be considered by many, as "stardust." Yet, this "stardust," upon minute examination, becomes a reality, something material from which there emerges a useful pattern or code. Let's call this the "antibiotic," if you will, to assuage the friction by which people live together.

With rapid strides our Latin American trade of a reciprocal nature, and the ties of friendship, yours and mine, which it has accelerated, have become characteristics of our association with these southern countries. This implies to all of us the usefulness and interest of a meeting such as this to discuss the official attitude of the State Department and our personal feelings regarding the current Latin American policy. Put simply, we can inquire what kind of a formula we are utilizing to link together, to weld the Western Hemisphere without the aid of force, but yet to resist aggression, should it be necessary.

The caption of this program is the Good Neighbor Policy. Let's have a look at this, and as well on our domestic front, of a unique organization known as the Good Neighbor Commission of Texas.

The good-neighbor policy may be a nebulous term, when generally applied. I once thought it meant being a do-gooder or greeter. And, during my term as commissioner and later as chairman, I found that only definite projects—well laid, well executed—have any effect or results on people anywhere.

To understand why the Good Neighbor Commission came into being, we must have a look at the attitude and the foreign policy of the United States from the time of the Monroe Doctrine of 1823. That doctrine, if you recall, defined clearly the position of the United States that foreign powers must keep out of Latin America as well as South America. It protected the helpless newly founded Spanish colonies against transfer to other world powers. And we, the United States, recognized them and helped their efforts to become strong republics.

Later, you will remember that our Government assumed an attitude of onlookers, and still later policemen, or the big stick, as our foreign policy with the Latin American Republics. It was this brusque and dictatorial policy that caused suspicion and distrust on the part of the Latin Americans for the United States and its people. Coupled with high tariffs and protection of our citizens' foreign investments and interference in the settlement of problems between their countries, the United States assumed a villainous role in the eyes of these peoples. It was truly a one-way street, policywise, with milestones of resentment from the memory of forced settlement of problems in Mexico, Panama, Nicaragua, Haiti, Cuba, and Santo Domingo, by this influence from the north. Our State Department had considered their acts to be guid-

ance programs of a practical nature; to the Latins they were aggressions against moral and legal rights.

Both William Howard Taft and Woodrow Wilson had a laudable desire to win better understanding with Latin America, but our foreign policy maintained the status quo. "Arbitration" was only a word often mentioned, but not practiced.

The first shadow of our present policy of nonintervention appeared during the term of President Herbert Hoover. He made a trip to the principal countries of South America and upon his return to the United States, he repudiated for the first time the big stick policy of President Theodore Roosevelt and declared unequivocally that the intent of the Monroe Doctrine was against Europe and not against Latin American countries. As a matter of fact, he refused to intervene when trouble arose in El Salvador and the Dominican Republic. Many critics at home whispered that the strong arm of Uncle Sam was withering with weakness.

It was not until the cadenced step of soldiers upon the cobbled streets and the sound of cannon fire was heard in Europe, and until Hitlerism began to show its ugly face of destruction to the world in the Second World War, that our intent to do something about Western Hemispheric defense became a popular cause. President Franklin Roosevelt and the State Department popularized the slogan of "Good Neighbor" in an attempt to change our mutual attitudes and to warm the frigidity of the diplomatic climate in Latin and South America. It was then determined by the State Department, and so publicized, that our policy henceforth relating to the peoples of Latin and South America should no longer be in terms of self-interest—meaning, of course, our self-interest.

Cordell Hull, the Secretary of State under President Roosevelt, promised no interference in the affairs of the Latin American States; and later, at Lima, Peru, promised the inviolate solidarity of the Western Hemisphere. These new declarations of principle and foreign policy were inviting gestures for the peoples of our two continents to join hands across the Western Hemisphere. The question may be asked—did this represent an act of sincerity on our part. Let us see.

We did respect this agreement when Mexico and Bolivia seized and nationalized the foreign oil investments of United States capital. Further, to improve a bad credit relationship, we fostered the formation of the Inter-American Bank, agreeing that all Latin Republics would become stockholders. Maybe our declarations were sincere at last, thought the Latins; and when the United States entered World War II, reciprocal cooperation and support evidenced the rewards of our new foreign policy. We gave Latin America technical and military aid. The governments of the Republics were understanding, but the Latin people—yes, the people—were still suspicious and distrusted our motives. Certainly no less typical was the attitude of many in Mexico, and especially along the Rio Grande border.

You know that Texas has about 1½ million population of Mexican nationals and Latin Americans. Many who migrated to this country did not have the good fortune of an education, nor finances, and were considered peons. Nazi propaganda in Latin America capitalized on the treatment of Mexicans in the Southwest. Texas, as a result, has from time to time been placed on the blacklist, as an indictment for our treatment of Mexican braceros, and as well for our restaurant and hotel discrimination against Mexicans. When these people have experienced, unfortunately, prohibitions in Texas, there is an apparent feeling that they have been mistreated because and only because they are Mexicans. This is unfortunately a survival of the deep-seated antipathy that past generations have nurtured.

It was at this time that Gov. Coke Stevenson of Texas and representatives of the American Ambassador to Mexico, in conference, decided that Texas ought to take official action toward establishing a good-neighbor policy. This decision was enacted into law in 1943 by the Texas Legislature, and the Good Neighbor Commission came into being.

Unique? Yes, it is unique; since this is the only commission of its kind created by legislative act and recognized as an office of the State government of Texas, though there are other groups in parts of the United States acting in a voluntary capacity.

Each commissioner is appointed by the Governor for a term of six years, without pay, and dedicated to its service. The commissioners' principal attention was first focused on education against local prejudices, toward health, education, social discrimination, and economic insecurity. Funds for the commission's activities were first made available by the Coordinator of Inter-American Affairs of the National Government, but later provided by the Texas Legislature.

Have you ever tried to tie a piece of twine around a puff of smoke? That may give you some idea of the frustration some of us have had from time to time as members of this commission. Our budget for expenditures is limited; in fact, it is necessary for the commissioners to pay personally for social functions of a public-relations nature. For example, a short time ago when we brought Ambassador Francisco Urrutia of the Republic of Colombia to Dallas from the Security Council of United Nations in New York to address our people on Latin American affairs, some of the commissioners personally accepted the expense.

Why?—you ask. Chiefly because these 9 members desire in their 6-year terms to make an accomplishment in the field to which the commission is dedicated. And their willingnes stems from the decision that if a job is good enough to accept, it is good enough to improve.

The interest of the commission is laudable; but the application of remedial action has been difficult. Discrimination by Texans, evictions, arrests—often without cause—were investigated by the commissioners in their geographic locations throughout the State (Commissioner Frank Kelley has made many personal investigations in West Texas). Often the results seemed futile, but an amenability of attitude and tolerance by Texans began to develop. It became quite evident that our work would not be advanced by random activity, but by definite projects.

The approach to improve relations along the border and with Mexico began. We found we needed to do a job at home with our people and the Latin Americans.

Two important undertakings became a reality in our work. The Commission sponsored a Pan American Student Forum for children in Texas who had an interest in the Spanish language. In time, some 60 chapters of students of high school age swelled this membership in the State to over 9,000. Teacher sponsors guide the study of the arts, culture, history, the social, and economic features of the Latin American Republics' background.

Once a year under the guidance of Glenn Garrett, our executive director, about 700 selected club delegates, with expenses earned by each club, meet in Austin under our Commission sponsorship and compete in the arts, poetry, literature, folk dancing, handicrafts, and painting under competent judges. The awards are presented at the banquet where Latin American-Anglo friendship has a common meeting ground. These 9,000 students are the Commission's best disciples in the homes of the less tolerant adults. All this is accomplished in the discipline and spirit of a Hi-Y Christian organization. It is indeed impressive to see young citizenship on the march in this manner. We were enlisting some valuable help; we created an interest—we were getting results. Another interest had been created, thanks in great part to Mrs. Myrtle Tanner, founder of this movement.

Secondly, Pan American round tables were formed throughout Texas, some 47 clubs in number, comprised of understanding women who accepted the challenge of service and of ameliorating differences with the Spanish-speaking population. The clubs became our emissaries in many grassroots areas that were steeped in racial differences. The dividends are self-evident.

And with all candor, I wish to speak of a third organization in Texas that has contributed, directly and indirectly, so much to the Commission's work. It is ambidextrous, this Council of International Relations. With one hand it serves the domestic side and with the other, the international side, with grace of spirit and manner. It is one thing to speak of such a beneficent program as an approach to a better way of life, of tolerance and peaceful association. Many preach and profess this doctrine, but few live it. It is another thing to carry it into action. If I were asked to individualize such humanitarian aims, whose thoughtful kindness each day rewards mankind, I can think of no one who has someone who has endeared herself to all strangers of all lands more than your own benefactress, Mrs. Mamie Dial.

Nothing curries favor any better than making oneself the victim of a joke or of a situation. It's been the comedian's stepping stone to stardom and the businessman's introduction card to an atmosphere of humility—yet, many of us trek across the foreign hemispheres and with bated breath await the last word of an otherwise polite conversation, until like a thunderbolt we can drop the ax—"That's very interesting, but do you know in my country we have, etc., etc."—superlatives and supersuperlatives.

Now you may have a valid case that well-traveled people with a sense of sophistication and tolerance do not appear in this role of bad-will ambassadors, but Latin Americans have in the past, at least, taken issue on this point. Miss Shipley, formerly head of the Washington passport department, and President Eisenhower in a New Orleans speech in 1952, both indicated rules of successful conduct away from home. Certainly this is not an admonition to this gracious group, for some of you have just completed a world tour of good will; but it is one of the formidable problems facing the Good Neighbor Commission in plying our trade, especially in Mexico and Latin America. That is why the Commission borrowed the phrase of the Bard of Avon; namely, "I am undone".

Travel is a good correction for mental nearsightedness—if the traveler will cast aside his prejudices and seek the culture and beauty of that country in its atmosphere. Luxury and service should not be a primary commandment—perhaps you would find more luxury and service at home. I am sure few people who travel in foreign lands realize how much one's individual demeanor interprets their country's "typical citizen" to these people visited. I mention this because so much of this kind of thoughtless damage had been done by our citizens to the Good Neighbor policy in Mexico.

Neither has the Commission attempted to urge passage of legislation to correct inequities. We remember the old West Point story, I believe—"Try to push a piece of string and you get nowhere; pull it, and it will go along with you anywhere."

This will illustrate the point: General Quinones, whom many of you know, who for many years controlled the Piedras Negras area of the Mexican border before his retire-

ment from the Army, has become an intimate friend of some of the members of the Good Neighbor Commission, and now an honorary Commissioner. His efforts in our behalf have been tireless. Some time ago our Government opened an Air Force field along the Mexican Border near Del Rio. The Village of Villa Acuna, across the border from Del Rio, was for many reasons made "off limits" to the cadets. Our Air Force decided to protest to the Mexican Government this treatment. Usually in time—possibly six months—denials, investigations, contradictions, flaring tempers follow such a procedure. Gen. Quinones, hearing of the situation, called on the U. S. Air Force Commandant and asked that the protest be withheld for a few days. Quietly, this respected Mexican talked among his own people in Villa Acuna; four days later, he called on the Air Force Commandant and requested him to inspect Villa Acuna; this was done and the Commandant removed the "off limits" signs. Today, the Air Force has many friends on both sides of the border. Yes, the string won't push, but it will pull with you.

What to do about our relations within the interior of Mexico. Former Chairman Neville Penrose knew Mexico well as a young man in the oil business. Basically, disciples for the Good Neighbor Commission were the need. Where to enlist them? School teachers, of course, they have the contact with the youth of Mexico who will be the fathers and mothers of the next generation. Each year, teachers of the Superior Normal School of Mexico City, by competition, are brought to Austin for a special and intense course at the University of Texas, and North Texas Teachers College on the latest methods of teaching English. We arrange for them occasionally to visit in the homes of friends, and make short trips. Just ask the Mexican teachers and their students what they think of the idea of the slogan "hands across the border," and the work of Neville Penrose in this field. Each youth becomes a disciple for us in a new home in Mexico. Discrimination, among peoples, yields to the evolutionary attributes of education, knowledge and the tolerant respect for the dignity of man. Again we are trying to pull this string, not push it.

I want to speak of efforts we have made with another project. As you may know, Mexico has as part of its northern boundary the states of Chihuahua, Coahuila, Nuevo Leon, and Tamaulipas. In a meeting in El Paso in 1954, the Commission adopted a resolution calling on these states to join Texas in forming a permanent international organization dedicated to the solution of common problems, particularly those misunderstandings of the interior and of the border.

It requires the concurrence and endorsement of the governors of the five states. Next came the problem of notifying Federal, State, county, and city officials, civic professional and church groups, as well as interested individuals of the five states of the envisioned plan, and soliciting their support. Complicated and trying? It was, but we are building toward the future.

The first conference was held in Monterey 2 years ago with outstanding representation from both sides of the border.

The five governors' representatives became the Central Council with subcommittees that encompass departmentalized and needed projects—such as, creation of Bi-City Good Neighbor Councils to settle border problems as a united group; it sponsors teaching of Spanish and English in respective areas; it suggests facilities to make travel in Mexico and United States easier; it is developing a pre-disaster program. These are but a few of the projects. It has possibilities of becoming a real force in border, as well as interior, relations between Mexico and the United States. Chairman Jose F. Muguerza, of Monterey, Mexico, with vitality, has worked to bring into effect numerous border and reciprocal agreements, which have popularized this young project.

Possibly the outstanding vote of confidence that has shown the success of this organization is that of providing four Mexican members to the Council, but only one from the United States—and a Mexican national chairman. It is a symbol of faith and trust we have shown the Mexican people, and they have responded in kind.

Yes, that's the story of our effort, with a backdrop of the historic setting in which we entered about 10 years ago. Let's see what this all means in a calculation of a way of life. I have said many times that children the world over are pretty much the same; they are innately, friendly, uninhibited and sincere; the tenor of their life is concerned with few prohibitions. Why then, as adults, is there such a contrast or difference among us? It is, mainly, caused by three disturbing elements—language, religious beliefs and nationalism, or patriotism, if you will. The barriers certainly do not emanate from the age of reason, but the adaptation of their life to a code of thou shalt—thou shalt not. Interrogations of peoples in answer to "Why do you act or believe thus" comes the answer "it has always been so". We are creatures of habit and custom. International association interprets that it matters not whether you walk on the right or left side of the street, if the destinations are identical. Whether it be prayer at high mass, prayer in the mosque, or humble prayer on the barren hillsides, all ask for the same guidance or a better way of life. We must understand and make mankind feel that whether we like it or not Wendell Willkie's "One World" is here. Electronics and flight has erased most of time and distance. The world is like a human body—any unhealthy part affects the well-being of other parts. A small canal 8,000 miles away was closed—consider how it affected the economic life and the standard of living of millions of people.

This Pan-Americanism of understanding, tolerance and the need of closer and enduring friendship between peoples, especially in the Western Hemisphere, is mandatory if our peaceful unity is to endure and thus create a bulwark against aggression. Pan Americanism is not a nebulous Holy Grail, it is a practical approach to a way of life—a full normal life in this hemisphere. Some one said that "time was invented by the Supreme Being in order to give ideas a chance to produce; Pan-Americanism is a great idea, and this is the chance to make it produce.

It seems that all in life fit into three categories: You do good; you do bad; or, you do nothing. Who knows—you may have just the opportunity to participate when you least expect it. Perhaps this diary of our trials and tribulations may better prepare you to express yourselves, and "do good".

On Having a Sense of What Is Vital

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to present here an address by Mr. James Clark Brown, who is an administrative assistant to the Clerk of the House of Representatives, with responsibility for reporting the activities of the House Committees for the Congressional Digest section of the CONGRESSIONAL RECORD.

Jim Brown is a former college classmate of mine and I was genuinely grateful when I learned that he had been chosen as baccalaureate speaker by the student committee of the Washington-Lee School after they had heard him while he was interim minister of the Rock Spring Congregational Church, Arlington, Va. He is presently a lay-reader of Epiphany Episcopal Church, Washington, D. C. Mr. Brown is a graduate of Yale University Divinity School and is an ordained minister.

The address which Mr. Brown presented to the graduating class at the Washington-Lee School last Sunday, June 9, 1957, follows:

ON HAVING A SENSE OF WHAT IS VITAL

On December 17, 1903, Orville and Wilbur Wright succeeded in keeping their home-made airplane aloft above the hills of Kitty Hawk, N. C. They immediately sent a telegram to their sister living in Dayton, Ohio. The telegram read: "First sustained flight today. Fifty-nine seconds. Hope to be home for Christmas." The sister in Dayton was so excited with the news that she took the telegram to the newspaper office and the next morning, believe it or not, the following headline appeared in the paper: Popular Local Bicycle Merchants Expected Home for the Holidays.

You need not be anywhere near a first-class journalist to realize that a bungling editor missed the whole point of one of the truly great and decisive events of man's history. My sympathy, however, is largely with the editor. For, in a larger sense, is not his failure the result of a temptation that confronts us all? The temptation that you and I may live out our lives without having recognized or reverenced those values in life that are truly worthwhile. Do you know these lines of Carl Sandburg:

"I am riding on a limited express,
One of the crack trains of the Nation,
Hurtling across dark prairie and into blue haze
Go 15 coaches holding a thousand people.
All the laughing men and women shall pass to ashes,
The coaches shall become scrap and rust.
I ask a man in the smoker, 'Where are you going?'
And he answers, 'Omaha'."

Now the matter of knowing where we are going in terms of a destiny more divine than Omaha is of particular concern to us as intelligent, Christian people and especially to those of you who are so eager to know life in terms of its fullness, richness, and glory.

Let us think together concerning this matter. Here is a verse of scripture that will underly our thought. It was written by a remarkable man in the first century by the name of Paul; the Apostle Paul. Among the letters he wrote which appear in our New Testament, is one letter written to some friends in the little church at Philipi, a city in Greece. The church there had sent a gift to Paul who was now an old man; a prisoner of Nero's awaiting execution in Rome. In gratitude for the concern of his friends, Paul sends back a letter to them and I would like to read you one sentence from it as Dr. Moffatt translates it in our New Testament. Paul writes: "And it is my prayer that your love may be more and more rich in knowledge and all manner of insight enabling you to have a sense of what is vital" (Philippians 1: 9).

Consider for one matter that it is vital, everylastingly important, that we come to know Jesus Christ as our dearest friend. Of all the influences that affect our lives for

good or ill, surely one of the most decisive is the kind of friend in whose company we want to spend our time. It is just here that coming to know Christ as the best friend whom we will ever have is vital. For with Christ, as with any friend whom you truly know and love and with whom you spend much time, you tend to become like Him.

If, therefore, you want to learn the secret of such a man's life as the Apostle Paul, whose influence has reached out across time and boundaries to bless untold numbers, here is part of the answer: His dearest friend was Jesus Christ. What kind of friend must Jesus have been to have inspired Paul to say elsewhere in his letter to the Philippians, "Whatever happens, make sure that your everyday life is worthy of Christ"? When Paul is inspired to write so eloquently of love in its highest expression as he does in first Corinthians, chapter 13, "Love is patient, kind, knows no jealousy, is never glad when others go wrong but rejoices in goodness, always eager to believe the best, always hopeful, * * * other things pass away, but such love does not end * * *", of whose love was Paul thinking? Who else but that of his dearest friend, Jesus Christ? Again, whose love so strengthened Paul that he could face Nero's persecution with divine power, and ultimately death with triumph, so that today, 1,900 years later, we call our dogs Nero and our favorite sons Paul? Whose love so strengthened him save that of his dearest friend, Jesus Christ?

This fact is all the more remarkable when you realize that Paul never knew Jesus in a physical sense. Our Lord had lived out His life upon this earth even before Paul became a Christian. It was after the death and resurrection of Christ that Paul came to know Him, beginning with that dramatic encounter on the road to Damascus when Christ appeared to Paul in a vision, spoke to him, claimed him, and Paul surrendered his life to Christ in loyalty and love.

I believe there is encouragement for all of us in the fact that for us, as with Paul, we need not have known Jesus in a physical way in order to know him now as our dearest friend. You remember that Paul, following his vision of Christ, was directed to other Christians in Damascus, among them Ananias, and there in the friendship of other Christian men and women Paul's own faith was nurtured, enabling him at last to become so strong an apostle.

So today you and I may come to know the friendship of the living Christ through the fellowship of other Christian people within the life of the church. There, where Christ's life and teachings are proclaimed, where something of His mind and spirit is demonstrated, where by the sacraments of the church, baptism and holy communion, we receive His very spirit into our lives and are inspired to go out from the church to do His work and will, so do we living today come to know Christ as our dearest friend.

The fact that the church makes real to us the person and presence of Christ is why Paul repeatedly speaks of the church as "the body of Christ." The church is the visible, continuing expression of Christ's life and love. Link your life to the church and you will come to know Christ. I do not believe that it is primarily important what denominational label hangs above the church door. Find the church where you can work and worship most meaningfully and you will increasingly discover the reality of Christ's continuing presence. For—

"The church's one foundation is Jesus Christ, her Lord,
She is His new creation, by water and the word.
From heaven He came and sought her to be His holy bride,
With His own blood He bought her and for her life He died."

And it is my prayer that your love may be more and more rich in knowledge and all manner of insight enabling you to have a sense of what is vital, that you may come to know Jesus Christ as your dearest friend.

Consider secondly how vital it is to know Christ not simply as your dearest friend but also as your constant companion. Some years ago a friend of mine whose business involves worldwide travel found herself in a remote seacoast town. When the time came for her to journey on she found herself surrounded by wellwishers for other people who had come to say bon voyage to other travelers but none to speak that word to her. So, partly from a sense of humor but more deeply, I suspect, from an understandable human need, she arranged with an elderly man who was there and alone that in exchange for a generous "tip" he would stand and wave to her and call out "bon voyage" until the ship was out of sight. Life does get lonely at times and one of the great joys of our Christian faith is that Christ is ever with us, our constant companion.

When Paul said: "I have learned in whatever circumstance I am, therein to be content," he was simply saying that he knew the truth of Christ's promise, "Lo, I am with you always, even to the end of the world." If you think this mere Christian sentimentality, would you dare say so to David Livingston, who said it was not just himself who went tramping through darkest Africa; it was David Livingston and Jesus Christ together. Would you contradict Samuel Rutherford, whose Christian faith led him courageously into persecution and prison but who, when there, declared, "Jesus Christ came into my cell last night and every stone flashed like a ruby"? Would you call it mere sentimentality in the presence of Dan Polling, Jr., 1 of the 4 chaplains who, having given their own lifebelts to others, went down on the *Dorchester*? In a previous letter to his father he had said in effect: "Do not be anxiously concerned for my safety, for if ever I find myself alone in a difficult place I know that there shall be Someone with me." "And lo, I am with you always," said Christ our Lord.

The truth that Christ is our constant companion, however, is intended to be more than comfort. It is also a challenge. For, if Christ is our dearest friend and constant companion, will we not be challenged to honor him in the life we live, in the work we do, in the use of the talents and skills and gifts we possess?

So, into whatever work and career your interests and abilities may lead you, think of it as your ministry in company with Him who is your constant companion. Honor Him in the work you do. I am certain that we ought to think of the work we do, not in terms of the so-called sacred and secular callings, but rather to see all of work as sacred when done in company with Christ and done in honor to Him. I have been privileged to know certain Members of Congress, such as my own Congressman ED EDMONDSON, of Oklahoma, and others, on both sides of the political aisle, who regard their public service as conscientiously as do other men their public ministry. Into whatever work you go, may you do so with Christ at your side and make of your work an act of praise unto Him.

Bishop Crotty, in his book The Church Victorious, tells of one such person whose life of labor was in truth such a ministry. She was a young girl whose father and mother had both died and she had been left with the responsibility to provide and care for the other younger children in the family. Thus day by day she gave herself without reserve in labor and in love. Now she lay dying in a London hospital having literally worked herself to death. A visitor to the ward inquired of the nurse in charge if there were any there who were critically ill. When told of the girl the visitor made her way to the side of her bed. "My child, are you baptized?" "No," said the young girl sorrowfully. There had literally been no time to have been baptized. "You are not confirmed in the church?" "No," said the girl. The questions followed one another and all were answered to the dismay of the visitor. Finally the question came, "But my child, what will you do when you die and have to tell God all of these things?" The young girl whose entire life had been lived in hard labor and Christ-like love for others looked into the face of her questioner with eyes too full of confidence to be further disturbed and softly replied: "I will show Him my hands." And it is my prayer that your love may be more and more rich in knowledge and all manner of insight enabling you to have a sense of what is vital * * * that you may come to know Jesus Christ as your constant companion.

Consider finally that it is vital to know Jesus Christ not simply as your dearest friend, constant companion, but most meaningfully of all, your Lord and Saviour! Begin with Him as a friend, live with Him as a companion, and you will come to know Him as Lord! I believe Martin Luther's words are true: "Take hold of Jesus as a man, and you will discover that He is God." The first disciples began their relationship with Jesus thinking of Him as a teacher, rabbi, and friend; but ultimately they came to recognize Him as did Paul, saying, "God was in Christ reconciling the world unto himself."

One of the earliest creedal affirmations of Christians was simply, "I believe that Jesus Christ is Lord." It was, however, manifestly more than simply an affirmation in a creed. It was a demonstrated conviction in life. The early Christians went out into every area of life, personal, political, and social, living out their conviction, "Jesus Christ is Lord."

How vital it is in our world today that in that same spirit we declare "Christ is Lord." How urgently do we need the mind of Christ, His wisdom, His spirit, His lordship, to be brought into rule over the problems that beset us as persons and as a nation. Let me suggest just one matter that illustrates our need: one of the crucial problems involving us all is this difficult matter of human relationships. How do we build a social order where all people are given the opportunity for living life to the full?

You may recall how some of our Puritan forefathers tried to handle this matter in their relations with the Indians. They were bound and determined to dispossess them of their land but how to do so and maintain a Christian conscience? In 1640 in Milford, Conn., the official town record reveals that they tried to handle the problem this way:

"Voted, that the earth is the Lord's and the fullness thereof, voted further, that the earth is given to the saints; voted finally, that we are the saints."

If the spirit of Christ rules we shall do better than that. Let me speak as clearly as I may. If Jesus Christ is Lord, then as a Christian citizen of this blessed land I covet no privilege for myself that I am not willing to share with every other citizen. My opportunities for education, employment, and a chance for a life of dignity are treasured rights granted me by the Constitution of this country and God's intended gift for all of his children. If you would deny me those rights because I am dirty then I can all of His children. If you would deny me those rights because I am not your social equal, then with my best effort and such opportunities as you have so long enjoyed, I can improve myself socially. If, however, you would deny me the rights you enjoy simply because of my color, I can only refer you to God by whose wisdom I was so made.

Jesus Christ is Lord and in him there is no Jew nor Greek, neither slave nor free,

neither male nor female; you are all one in Him. Originally it was the voice of Paul speaking to his friends in Phillipi; but just as truly it is the voice of God speaking to each of us now, saying, and it is my prayer that your love may be more and more rich in knowledge and all manner of insight enabling you to have a sense of what is vital, that you may come to know Jesus Christ as your dearest friend, constant companion, Lord and Saviour.

Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. SAYLOR. Mr. Speaker, the American Federation of the Physically Handicapped was organized to help those persons who were physically handicapped to join together in fellowship and assist each other in many ways.

It has been my pleasure to meet and know one of these physically handicapped persons, Miss Marianne Yambor, whom I believe should be a challenge to not only the handicapped, but also to those of us more fortunate who do not suffer any physical disability.

Miss Yambor has been elected the secretary of the Pennsylvania State Department, American Federation of the Physically Handicapped, Inc., and recently she was the principal speaker at the installation banquet of Pittsburgh Lodge 113. Her address was so inspiring, not only to those present but to all persons, that I urge all to read it in order to glimpse the spirit of this individual:

ADDRESS OF MISS MARIANNE YAMBOR, SECRETARY, PENNSYLVANIA STATE DEPARTMENT, AFPH, INC., PITTSBURGH LODGE 113, INSTALLATION BANQUET, GATEWAY RESTAURANT, PITTSBURGH, PA., MAY 20, 1957

Mr. Toastmaster, distinguished guests, members of AFPH, and friends of the handicapped, it is an extreme pleasure to talk to you on the occasion of your installation banquet. When I received your invitation to be your principal speaker, it really floored me. I didn't inquire as to the length of time you expected me to use. But I shall do my best to pass on some views as to the reason it is important, a privilege, and an honor to be an AFPH'er.

AFPH has meant so very much to me that I hope I can impress everyone here with the same meaning. I can remember the first time AFPH was brought to my attention. That must have been at least 7 years ago, and no doubt that was about the time your lodge was organized. The person who introduced me might not remember; she is here this evening. We're very glad to have you, Agnes Mann.

This is such a beautiful time of year. The time when everything is beginning anew. A new beginning. Rally of a new beginning. This is an appropriate time for us to rally also. All AFPH lodges are beginning another year. And this is the time of the year when we observe AFPH Rally Day. Every last Saturday in May of each year. So, as my theme tonight, I decided on rally. Rally, in observance of National Rally Day.

Many of us here have been in AFPH a long time. And we must admit, AFPH has become an integral part of us. That has happened because we wanted it that way, and because we know AFPH is the solution to many of our problems. AFPH is something we have been looking for all our lives. AFPH knows that a physically handicapped individual is not a statistic, but is only looking for justice, equal rights, and opportunity. All this can be achieved through unity. The more we learn about AFPH the more we are aware of this, and the more rooted it becomes with us. We have rallied for AFPH—but, have we done our best? Have we done enough? Nothing is so good it can't be better.

Usually, becoming a member of an organization is a great thing. But, unless one gets into it wholeheartedly, you do not realize the reason for joining, and you soon lose interest. For instance, if you decide to undertake a new hobby, you don't go at it with a blasé attitude. You try to learn all there is about it by getting all the information possible. Telling your friends about it, and so forth. Do you know most of us take a blasé attitude toward AFPH? Our blasé attitude regarding AFPH is the reason for getting stuck in the mud, so to speak.

Don't be stuck in the mud of selfish gain so that you don't have the vision to see. To rally for AFPH there are three challenges we have to face. These are vision, faith, and courage. The vision to see, the faith to believe, and the courage to do. Let us rally round and render service to ourself and our fellow men, the physically handicapped, and help make the world a better place to live in. Cultivate the vision to see what can be done for our physically handicapped friends. The vision to see what can be done is worthless without faith. And, if we have faith in AFPH, we must embrace trust and confidence as a pattern of life. If we have faith as good as our need, it will open a door.

Then courage. Well, without courage this vision and faith is pointless and fruitless. Let us use this vision here, and look around us. We can see our friends who are also handicapped, friends who are in the same boat with us. Can you also visualize the many millions more who are at home, almost forgotten, except for a relative or friend or two. These physically handicapped are confined to a small room with four walls. It is these physically handicapped we must have the vision to help. These are the people we must have the faith to believe in. These are the people who need our courage.

It does take great effort on our part. But, if we can visualize that, what we do for our fellowmen comes back to us a thousandfold. We all have found some happiness by being members of AFPH, in one way or another. Before we knew about AFPH, there were friends rallying for our cause. Now we have an opportunity to repay them by doing our part for those less fortunate. Many of us cannot "stand tall" but we can "sit tall" and, what's more, we can think tall. Let us be happy in our work. Rally for AFPH, rally for our fellow men, especially the physically handicapped, rally for more members, rally for our lodges, and for more lodges.

Recently, at a banquet in my hometown, I heard the speaker telling of his organization's progress. He told them that they were 10,000 chapters strong. And he told them that they should not be content to stand where they were, but should make every effort to have 50,000 chapters. He continued: "If we go forward we will be happy, if we stand still we will be sorry." This brings to my mind a story about two horseback riders. They were traveling by horseback through a forest. They were hurrying as it was getting dark and they had a long way to go. Suddenly a man stepped out in the middle of the road. They didn't want to run him down so with great annoyance they stopped. The man asked them to dismount, telling them that if they did as he instructed, they would be both happy and sorry. He told them to pick up some pebbles from the road, put them in their pockets, and not look at them until the next morning. Being in a hurry they did not argue because they felt it was useless to argue with a crazy man. They decided to humor him. They remounted and went on their way, soon forgetting the incident. They reached their destination, slept all night, and next morning, while dressing, they remembered. Laughingly they looked in their pockets and were surprised to find the pebbles had changed into beautiful diamonds. The words of the old gentleman came to their minds, "in the morning you will be both happy and sorry." And so they were, happy because they had obeyed, and sorry because they had not taken more pebbles.

And so it is with AFPH. Let us rally to pick up the pebbles and turn them into gems. We have an opportunity at this time. Our national headquarters has asked for volunteers for victory. Let's get on the bandwagon. Are we interested enough to want these things? All of your received the April report from Paul A. Strachan regarding legislation. He stresses the importance of a writein campaign. The State department joins him in urging you to write to Senators, requesting hearings and support of S. 1597, the Federal agency bill. Also H. R. 5396 which calls for tax exemptions for handicapped, and those who support handicapped who cannot care for themselves.

Are we interested enough to want those things, or are we just kidding each other? And letting on that we are interested, let us each ask ourselves if we have done our part. Have I written to my Congressman, and my Senators, telling them what we want? And to those who were interested enough to have these bills introduced. Have we written telling them how much we appreciate their efforts on our behalf? Or are you thinking, let the next guy write. Did you stop to think that he might have the same idea?

Benefits for handicapped don't just happen. Somebody has to propose the benefits, and as we all know, one individual would not have much chance putting any legislation and rulings over, without help and assistance from many others. The goal for which we are striving, is independence and usefulness. Service to others, helpfulness to each other through mutual assistance and cooperation. We are all aware of the fact that our only hope and course is to be organized. So, we are organized. We have members, but are we satisfied with what we have gained so far? Should we stop now? Do you believe we will keep what we have gained, if we do stop? Progress never comes easy. We must continually work for it, and we must sell to others who can and will rally with us. I believe that if we all made an effort to learn more about AFPH, we will be able to sell it to others. Let's become pushers, not wishers.

And now, before closing, I want you all to pledge to go forward despite all obstacles, pledge to support the legislative program. Legislation is very important to our program, because we must continue this battle until there is a real National, State, and local program beneficial to all handicapped people. It is grand to see so many of you assembled here. Thank you for your attention and please accept my personal best wishes to you, Henry Kujawski, president, Pittsburgh Lodge 113, AFPH, Inc., and to the rest of the officers of Pittsburgh Lodge 113. May you have a successful year, and thank you for letting me talk to you. It was indeed an honor and a pleasure.

Thank you.

The Federal Budget for 1958

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith for inclusion in the RECORD an address delivered at the 44th anual convention of the National Rivers and Harbors Congress, held in Washington, D. C., on Friday, May 17, 1957. Hon. Percival F. Brundage, Director of the Bureau of the Budget, ably presented this most interesting address:

THE FEDERAL BUDGET FOR 1958

(Address of Percival F. Brundage, Director of the Bureau of the Budget, before the National Rivers and Harbors Congress, Mayflower Hotel, Washington, D. C.)

It is a pleasure for me to be here today to speak on a subject of importance to all of us—the Federal budget for 1958. I realize, of course, that this convention is primarily concerned with the wise and proper development and use of the water resources of our country. This is a concern which I share, both as Director of the Bureau of the Budget and as a citizen who knows that the orderly development and conservation of the resources of America are vital to our present and future strength.

It is gratifying that this group is also broadly concerned with the entire range of Federal activities. Nowhere are all the Government's activities, and the responsibilities which they reflect, brought into clearer focus than in the budget.

As you know, we in the Bureau of the Budget have the basic job of assisting the President in the preparation of the budget each year. Our ultimate aim is to formulate a sound and balanced overall program which will best serve the interests of the Nation at a minimum of cost. This involves us in a rigorous examination and evaluation of each of the many and varied programs of the Government, both present and proposed. To hold expenditures within our resources requires that choices must be made and priorities established among the many competing demands for Federal service, worthwhile though each may be.

We are all interested in keeping control over the total of Federal spending, particularly in these times of high taxes and of inflationary pressures on our economy. To put it mildly, there has been an outstanding demonstration of public interest in the 1958 budget which, as you know, projects an increase in expenditures. I would like to describe for you, therefore, some of the difficulties we faced in preparing that budget and some of the reasons for the increases in spending over the past few years.

Expenditures for the fiscal year 1958, as estimated in the budget, total $71.8 billion. This has been called the highest peacetime budget, which is very misleading when we consider that the current troubled international conditions make us devote $45.3 billion, or 63 percent of the total, to programs designed for the protection of our country, including the promotion of world peace. This is a heavy burden, but I can assure you that the President analyzed and reviewed the estimates for these programs most carefully before the budget went to the Congress. He considers the expenditure estimates contained in the budget as representing a wise and reasonable measure of protection for the Nation.

Another 10 percent of estimated 1958 expenditures is for interest payments on our debt. These payments, largely attributable to past wars, will amount to $7.4 billion. We are not going to cancel our internal debt charges as the Soviet Union has recently done.

This leaves only about one-quarter of the total, or $19 billion, for all the civil programs and operations of the Government.

The low point of Federal expenditures under this administration was in the fiscal year 1955 when expenditures totaled $64.6 billion. This was a reduction of almost $10 billion from 1953. Some of our critics want us to return to that level of spending. Our estimates for the fiscal year 1958, while still below 1953, are up $7.2 billion, or 11 percent above 1955, and perhaps the clearest way of explaining the budget is to point out the reasons for this increase.

Certain basic economic factors underlie the growth over this 3-year period. Our population has been growing rapidly, from 164 million in the fiscal year 1955 to an estimated 172 million in 1958. Our industries have grown as the Nation has become more prosperous. We have also been faced with rising costs of the goods and services purchased by the Government; prices of materials have gone up; construction costs have risen; and laws have been enacted increasing personnel costs by something over 10 percent by granting salary raises and increasing fringe benefits for Federal civilian and military personnel.

These economic factors are reflected in rising workloads and costs for such activities as the postal service, employment service, tax collection, and the issuance of passports, to cite a few examples. They are also reflected in greater use of our highways, airways ,and national parks, making necessary additional development of these facilities. Our growing prosperity creates needs for added regulatory (including health and safety) and credit activities. Of course, increased costs of personnel and materials raise spending all across the board.

There are also certain program factors which have led to increased Federal spending since 1955. In some cases they result from, and in others they add to, the economic factors I have just mentioned.

The estimated increase in expenditures for protection compared with 1955 represents over one-third of the increase in total budget expenditures. In dollars this increase amounts to $2.6 billion. The rise in protection expenditures reflects mainly the higher costs of procuring operating, and maintaining the new and more complex types of aircraft, ships, weapons, and guided missiles being developed through a rapidly changing technology. For example, a B–36 heavy bomber cost $3.6 million in 1955. The B–52, which is now replacing the B–36, costs 8 million, and the costs of operating it have risen as well.

Closely related to the technological changes being made in our Armed Forces is the development of new atomic weapons and reactors. We will have a rise of $483 million in the estimated expenditures of the Atomic Energy Commission from 1955 to 1958. While we have been giving increasing emphasis to the peaceful uses of atomic energy, expenditures in this area are in major part directly associated with our defense effort.

Interest payments, in spite of reductions in the public debt, have risen by $922 million as compared with 1955, about 12.5 percent of the total estimated increase in budget expenditures.

Expenditures for civil benefits are estimated in the 1958 budget to rise $3.2 billion between 1955 and 1958, accounting for 44 percent of the increase estimated for total budget expenditures. Let me point out for you a few places where major increases have occurred.

Veterans' programs are estimated to cost about $5 billion in 1958. Most of the increase over 1955 is for compensation and pension payments. The number of veterans receiving compensation for service-connected disabilities is expected to be 21,000 more than in 1955, mainly because of the addition of veterans of the Korean conflict to the rolls. The number receiving pensions for non-service-connected disabilities will have risen nearly 275,000. These increases in workload, combined with legislation which raised the benefit rates, have caused expenditures for compensation and pensions to go up $322 million since 1955.

The present administration inherited a set of governmental agricultural activities which did not address themselves to the basic postwar adjustments necessary in the Nation's farm economy. To aid these adjustments, new programs have been initiated and some existing programs have been reoriented. Secretary Benson has just completed a thorough study of the effect of our various programs and has come to the following conclusions which he has set forth in a letter to Senator ELLENDER only 2 weeks ago:

"1. Controls are not effective in reducing overall agricultural production, despite the severe restrictions they impose on farmers' freedom to produce and market.

"2. Agricultural products are likely to continue to be abundant. Under such conditions they cannot be successfully priced as if they were scarce.

"3. The present legal formulas governing acreage allotments and price supports are proving obsolete."

As Secretary Benson has indicated, a technological explosion is occurring on American farms. Production per farm worker has doubled in the last 15 years. This creates a new dimension in farm policy and makes it virtually impossible to curtail agricultural output with the type of controls acceptable in our society.

He goes on to say: "The evidence of the past 24 years is inescapable. Farmers will not accept, legislators will not vote, and from a practical standpoint administrators cannot impose the kind of controls which, at the price objective specified by law, would be necessary to bring production into line with market outlets."

The total agricultural programs will have increased $550 million between 1955 and 1958, and I believe we must meet this issue head on and obtain legislation to correct unsuccessful past attempts to solve this perplexing problem. I hope that you will all support Secretary Benson in this campaign. I have great hope that there is an opportunity this year to do something really significant in this area.

Expenditures for labor and welfare programs have also been rising. Changes in legislation enacted by the Congress have resulted in an increase of almost $50 in the average Federal expenditure for each recipient of public assistance since 1955. Consequently, total annual expenditures for public assistance grants to the States will rise by $250 million.

The increase in population and the growing number of older people have made more critical the Nation's need for more hospitals and training facilities and for more medical personnel. At the same time, scientific advances offer real possibilities of conquering such diseases as poliomyelitis and tuberculosis, and the Congress has enacted laws enlarging grants for all of the health programs. Budget expenditures for the promotion of public health are estimated to be $331 million more than in 1955, an increase of over 120 percent in a field of vital interest to every citizen.

The tremendous growth in the number of children of school age, coupled with the shifts of population, has intensified the shortage of schoolrooms which had been cumulating during the depression, World War II, and the Korean conflict. States and localities have been straining their resources to build a larger number of schoolrooms each year, but have been unable to affect the backlog materially. To help relieve the wartime deficite and stimulate local action, the President has proposed an emergency 4-year program of aid for school construction which will involve expenditures of $185 million in 1958. This is not intended as a permanent program, and will not involve Federal control of education.

Another field in which Federal expenditures have risen substantially is aviation. With increasing traffic, more complex control and navigation facilities are required. Expenditures for promotion of aviation in 1958 are estimated to be about $200 million more than in the fiscal year 1955. The President stated in his budget message that as the costs of aids to aviation rise, it is becoming more appropriate for users of the airways to share with the general taxpayers in paying for them, and I hope that some arrangement in this regard will soon be worked out.

Meanwhile, the President has been urging certain steps to improve the Federal budgetary situation, on which the Congress has not as yet acted. For example, adjustments in postal rates to reduce the postal deficit, which President Eisenhower has recommended for 4 successive years, have not yet been enacted. Nor has the Congress adopted the administration's proposal to raise patent fees to more nearly cover the costs of the Patent Office. Proposals of various agencies to raise fees to beneficiaries of special Government services were deferred as a result of recommendations of two Senate committees. In addition, the President has called for the establishment of interest rates for Government-loan programs which will induce private funds to participate in their financing. In the case of college housing, the Congress has required that interest rates on loans for dormitories be kept unreasonably low and private financing has almost entirely disappeared.

These are some of the highlights which account for the increases in Federal spending. I would like now to make a few comments about the development of our natural resources and, more particularly, water resources.

As I indicated at the outset, the conservation and development of our land and water resources are vital to the continued progress and prosperity of our Nation. This administration has strongly supported, and will continue to support, the development and prosecution of programs to further this end, recognizing, of course, that this is a matter of concern to everyone, the Federal Government, State, and local governments, and private enterprise.

Federal expenditures for natural resources programs amounted to $1.2 billion in 1955 and $1.1 billion in 1956. It is estimated that expenditures for this purpose will increase to about $1.4 billion in 1957, and to about $1.5 billion in 1958. These programs include the construction of water resources and power projects by the Army Corps of Engineers, the Department of the Interior, the St. Lawrence Seaway Development Corporation, and the Tennessee Valley Authority. They also include the various activities of the Federal Government in forest, fish and wildlife, recreational, and mineral resources. Not included in the above figures are the watershed protection and agricultural land conservation activities of the Department of Agriculture which also relate to the development of land and water resources.

You are, of course, particularly interested in the navigation and flood control programs of the Corps of Engineers. During the fiscal year 1957, it is estimated that the Corps of Engineers will spend about $630 million for these programs and in 1958 around $650 million. The 1958 program contemplates that work will be continued on 228 going projects and that work will be initiated on 24 projects, not counting $3 million for small projects costing $400,000 or less.

The Corps of Engineers' navigation and flood control programs for 1958 will be only slightly lower than the $690 million of expenditures in the fiscal year 1953. This, I believe, is clear evidence of the administration's support, particularly since, during the present period of high construction activity, competition for labor and equipment, and strong inflationary pressures, we must keep all of the Government's construction programs within reasonable bounds.

You are, of course, aware of the general philosophy of this administration that local interests should, wherever possible, share in the cost of all types of development, particularly where local benefits accrue. The President strongly believes that when local money is directly involved in a development there is greater interest and cost consciousness. There is likely to be more care in selection of those developments which should go ahead, and there will be more watchfulness to make sure that the most effective and economical methods are being employed. Partnership in water resource development is a sound and time-tested philosophy.

The 1958 budget, as transmitted to the Congress on January 16, represented a careful estimate by the administration of the cost of effecting those existing programs authorized by the Congress plus those proposed by the President to meet the various situations existing today in our country and the world.

Our budgetary problems are formidable, but don't let's forget that we anticipate three balanced budgets in a row—1956, 1957, and 1958—as compared with only three balanced budgets in the preceding quarter of a century, and it is necessary to go all the way back to 1930 for three consecutive balanced budgets. We expect to make annual reductions in the national debt in each of these three successive years. We have had one major tax reduction in the past 4 years, and I personally am hopeful that we will be able to hold expenditures to a level which may permit another reduction in tax rates for part at least of fiscal 1959.

I am not trying to deal with taxes today. When I went to Washington 3 years ago, I thought substantial further tax reductions were the most important objective. We decided, however, that a balanced budget and balanced programs were more important last year and again this year than tax reductions. As long as the cost of living is going up, I'd like to see current monetary policy supported by as much debt reduction as possible even at the expense of postponing tax cuts. I have told you why expenditures are up. We are going to cut them wherever we can without jeopardizing our Nation's strength and defensive power. Our Defense Establishment is tremendous and so are its responsibilities. Perhaps the greatest contribution of this administration is the application of the exceptional skills and knowledge of the President and Secretary of Defense to give us such effective protection without a completely unbalanced budget. Without them we could easily have been confronted with expenditures in the $80 billion area with less effective protection.

It is rather ahomalous that the very severe criticism of our budget and of the administration's programs comes just when they are proving to be successful. On the homefront we have been able to attain the highest level of employment, of gross national product and individual incomes with the most stable price level of the last two decades. Abroad we have seen the satellite power challenged in Hungary and Poland, the repudiation of the Russian debt to their people, and the complete revamping of their whole economic system which has been unable to stand the strain of competition with our own free economy. I am more hopeful today than I have been for a good many years.

It has been a great pleasure to be with you, and I thank you for the opportunity.

The Pay of United States Troops When on Foreign Duty

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. SIEMINSKI. Mr. Speaker, about 34 years ago, in 1923, the writer of the letter cited below and I were schoolmates. We were about 11 years of age and roomed across the hall from each other in Bard Hall, the junior school of the New York Military Academy at Cornwall on the Hudson, New York.

We looked up to the men in the senior school. It had such football and lacrosse stars who later distinguished themselves at West Point as Eddie Messenger, now General Messenger; O. Z. Tyler, now Colonel Tyler; Harbold, now General Harbold; and Bus Briggs, now General Briggs. And it had the Eddy brothers who later distinguished themselves at Annapolis. All of them had valiant records in World War II.

Our commandant of cadets was Lt. Jit McClure, later General McClure. Jit was hale and hearty. He reflected the life he made us live.

World War I had ended a handful of years ago, and students in the senior school seemed bigger and older and heartier than today. Some were World War I veterans who returned to Cornwall to finish their education.

Reveille was at 6:20 a. m. We did calisthenics in the snow. We marched and double-timed to class. Athletic hours every afternoon were from 3:15 to 5. Retreat parades at 5:20, dinner at 6. Study hall at 7 and taps by 10. Classes were from 8 to 12 and from 1 to 3 unless field maneuvers were scheduled. Saturday mornings were for inspection, afternoons for sport. Sunday there was chapel service.

For the growing boy it was a great life, lived in the open as much as one could wish it.

Jack, the writer of the letter, and I parted schools in the midtwenties. Twenty years later, in 1945, we met again, in uniform, in Vienna. We were then both captains in the Army. Again, we parted; I heard from him in 1953, at

the time of the shooting on the House floor, when he had seen me, in the News, relate details of the shooting and wrote to tell me that I was a bit heavier than combat conditions could allow. He was right. All through the shooting on the House floor, as my article in the CONGRESSIONAL RECORD and in U. S. News & World Report shows, I didn't budge from my chair.

Now Jack writes of something that might be of interest to the House, the pay of United States troops when on foreign duty. Jack's early background places his letter in keen focus; does it not?

LA JOLLA, CALIF., *June 4, 1957.*

Representative ALFRED SIEMINSKI,
The House of Congress,
Washington, D. C.

DEAR FRITZ: Once again I shall growl to you about something that is really not my business at all. In this instance, it is about the pay of the United States troops when on foreign duty. My first thoughts on this subject were prompted by the ill will that existed between English soldiers stationed in France and the native poilus during the so-called phony-war period of World War II. At that time, Tommy Atkins was upsetting the even tenor of French economic and social life by earning higher pay for equal work than was earned by his French counterpart.

Later, I debated the problem at some length in Italy with Ernie Pyle and Reynolds Packard (the fabulous United Press character), at which time, our dog-faced Jim Bradys were busily running the prices of everything from the low scale Italian norm (haircuts 2 cents) to the United States of America average of about 50 cents, and solely because the GI had available the money to accomplish the inflation. Had the War Department invested the major share of the GI's pay in war bonds for later claim and had disbursed to GI's only the amount earned by Italian soldiers, haircuts would have stayed at 2 cents and the GI's would have had just as many of them.

Awaiting the returning soldiers, there would have been sizable nest eggs to aid in the transition to civilian life and business. This is a somewhat different problem from that which was contributary to the Formosa riot, yet, once again I would recommend that soldiers live in tents under field conditions and be disbursed some stipend approaching that of the Chinese soldier (the balance to be banked in the United States of America). Had this been done, our soldiers would be more combat ready and our neighbors would stand a better chance of remaining our friends. To me, all of this is such rudimentary commonsense, I am amazed that the really brilliant men at the top of Army planning in Washington haven't long ago accomplished it.

In addition to the matter of pay which has psychological, economical, and sociological ramifications, a purely military consideration would dictate that any troops outside United States territory be alerted and field ready at all times. They should not be living with wives and families, but instead, should be always undergoing the toughest type of conditioning exercises. A rapid rotation of personnel would be necessary, of course, but that is only a minor inconvenience, and well worth the price of displaying to our friends, vigorous, alert, trim field troops, instead of depreciating our worth by garrisoning among them, a mass of fat cats with their retinues of wives and children.

O. K., FRITZ, I'm down off the soapbox.

All the best.

JACK ANGELMAN.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. Chapman Revercomb, of West Virginia, Before the Southern Conference of Young Republicans Federation

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Southern Conference of Young Republicans Federation, in Charleston, W. Va., on April 13, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It gives me real pleasure, indeed, to address this regional conference of Young Republicans. The enthusiastic interest your organization has taken in the political life of the Nation is inspiring indeed, and I commend you for the splendid work you are doing. You are making a great contribution to the Republican Party and to the Nation's progress.

Youth has a very important place in the political life of our country. No institution, however noble its aims and objectives, can long survive or remain strong unless it attracts new vitality. The surest way to kill any institution is to close its doors to young people. You who are assembled here today represent the leadership of the Republican Party of the future. You are wanted—you are needed—for the Republican Party has a place for every American, young or old, from every walk of life, who believes in the basic principles that brought about our party's creation, and which have guided it for more than a century.

The Republican Party can have but one objective if it is to serve its purpose. That objective must be to provide good government in the best interest of all Americans including primarily the maintenance of the liberty of its citizens and the security of the Nation.

Any political party that is to survive for long must be motivated by two things.

One, it must subscribe to a set of basic principles that are vital to the welfare of the country.

Two, it must be capable of meeting new problems as they arise.

Our country is faced with new and serious problems, and we know that they must be solved. This is no time to argue over party labels. This is no time to expend our energies and dissipate our strength in intraparty dissension over trivial issues. We all subscribe to the sound basic principles that have defined the Republican Party from its inception, and as far as I am concerned, these principles are as adequate for meeting the problems of this day as they were for solving the problems that confronted the Nation 100 years ago.

Our first concern as a political party must be to govern well, to meet new problems as they emerge in this rapidly changing age.

Our second concern should be to maintain a strong united party dedicated to the country's welfare.

Our third concern should be to interest more Americans, particularly young people, in those basic principles on which our Party was founded.

Let me say at this point that no political party can justify its existence unless it proves capable of solving new problems as they arise. Eighteenth century thinking is insufficient to cope with 20th century needs. As each case is new, we must think anew and act anew.

The Republican Party was established on principles that provide the framework for achieving the greatest good for the greatest number of people, the old as well as the young, the man who meets a payroll as well as the man who works for a wage. Our concern must be as much for the welfare of those who are physically and mentally unable to care for themselves as for those who captain our industries. And I contend that there is room within the framework of the Republican Party for men and women of every age, of every walk of life, who believe in the basic principles which have guided our party all through the years.

And it is my conviction that within the framework of these basic principles we can find a solution to the problems of this century. However, we must recognize these problems and proceed to meet them head-on with effective measures if we are to preserve the kind of America that we would like to leave to our posterity.

The big task facing the Republican Party today, as I see it, is twofold.

First, it is to work toward a condition of peace so that our people may not have to live under a cloud of atomic war. With peace in a practical world goes the necessity of strong defenses lest our desire for peace fails, and we are put to the use of arms for our security.

Second, it is to foster the kind of economic system that provides the greatest good for the greatest number.

In the field of foreign relations, we must recognize the fact that America cannot afford to go it alone. We must recognize the fact that alliances are as vital to our own security as they are to the freedom and security of other nations which subscribe to our way of living.

In the face of the ever-present threat of Communist enslavement, in the face of a constant danger of attack by nuclear weapons, isolationism is as impractical in the field of foreign relations as the horse and buggy are in today's industrial society. We must strive to live at peace with all nations, but to seek refuge in the belief that we can find security as an "island fortress" in this age of H-bombs and guided missiles is folly of the worst sort. We must go out to meet this dangerous expansion before it engulfs our own shores. That is the aim of the Eisenhower foreign policy. I believe that it offers the greatest security for America and, at the same time, provides the best approach to world peace.

We must support a strong national defense, so vital to the security and well-being of every American. It is true that almost two-thirds of the Federal budget now goes for defense purposes—but I say to you, in all earnestness, that so long as our freedom and security are threatened from without by those who would enslave all peoples, we cannot—we must not—weaken our defenses.

Equally as important as a strong defense is the fostering of a sound economy here at home.

In many parts of the world, even in non-Communist countries, the theory that government should be the source of all planning and all control has gained great headway. Yet, when we contrast the remarkable success of a free economic system in the United States with the comparative poverty and dissatisfaction in foreign nations, it is easy to see the superiority of our system of government. Liberty has succeeded in developing original thinking, original methods, and new ideas. It has succeeded in giving wide distribution of property and income to our people. It has brought about a steady rise in the standard of living enjoyed by all the people. We must conclude, therefore, that only the free can solve the problems of production.

During the past 4 years of the Eisenhower administration the country has enjoyed its greatest industrial expansion in history. The output of goods and services has set one record after another. Employment has reached an all-time high. Our people earn higher wages than ever before—they are better fed, better clothed, and better housed than ever before. The Nation's industrial capacity continues to expand at a healthy rate, creating new jobs for a rapidly growing population. According to the latest report from the Department of Labor, nearly 800,000 more people were employed in March of this year than in March a year ago.

I consider it imperative, therefore, that we maintain a climate that is favorable to economic growth and expansion. For, let us remember that it is only by maintaining a strong, healthy productive industrial system that we can hope to improve the living standard of all the people. This country has advanced to a favored position among the nations of the world because the individual has enjoyed the right to keep the proceeds of his own efforts. To destroy that incentive is to invite economic decadence.

At the same time, we must recognize the importance of sound fiscal policies. We must seek to curtail Government spending wherever it can be achieved without weakening our defenses or impairing essential public services vital to the well-being of the people.

Foreign spending for economic aid to others can be curtailed. Not only are those countries now on their financial feet but they have risen to new heights of economic soundness.

We must think not only in terms of operating under a balanced budget, we also must look to retirement of the national debt—and we must look to the earliest possible relief for the tax burden our people are bearing.

In our desire to effect economies, however, we must exercise caution. The meat-ax approach to budget cutting is neither wise nor practical. I am for reducing the budget, to be sure, but I do not favor postponing or eliminating those public-works projects which add to the Nation's wealth, which provided jobs for our people, and which are vital to the economic expansion of the country. Improved highways, for example, are a necessity. They cost a great deal of money, but those who call for great reductions in Federal spending would be the last to say that we should junk the new

Federal-highway program. On the contrary, this program should be accelerated as much as possible if our highway transportation system is to keep pace with the Nation's industrial growth. Likewise, conservation of our soil and water, for which a great deal of money is being spent, is too important to the Nation to neglect.

I cite these as examples of Federal programs that should not be eliminated or curtailed.

Living as we are, in a society that is highly industrialized, in which an overwhelming majority of our people must look to industrial employment for a livelihood, it becomes a responsibility of the people, through their government to care for those who are unable to care for themselves. It is a moral obligation of government to provide the minimum needs of the aged and the handicapped.

I believe the American people are convinced that with the tremendous productivity of our free country, we can prevent extreme hardship and poverty in the United States. I favor liberalizing the Social Security Act to permit all permanently disabled workers over 50 to receive benefits. How much better, it seems to me, to have these people qualify for disability pensions under social security than to compel them to depend on public relief, as so many are now required to do under the present rigid provisions of the social security law affecting disability benefits.

Another problem peculiar to our highly industrialized civilization is the decrease in job opportunities for those workers between the age of 40 and retirement. Many industries have shown a greater preference in recent years for younger workers, making it increasingly difficult for the older age worker to obtain new employment after he reaches the age of 40 or 45. This, perhaps, is not a problem that can or should be solved by legislation. However, it is imperative, I feel, that the older age group receive greater consideration in job opportunities if we are to prevent a needless waste in human resources and provide for this great body of citizens a feeling of reasonable security. We must recognize this as one of the human problems of the 20th century and seek its solution. The Government can and should take the lead in encouraging more job opportunities for the older age group on Government works and services, while private industry must be prevailed upon to recognize the growing seriousness of this problem and work toward its solution.

Still another problem we must recognize is that which faces small business in this age. Despite the high level of prosperity the country as a whole is enjoying, this segment of the business community is experiencing hardships.

The smaller business enterprises, employing only a few workers, are as vital to the Nation's economic well-being as the giant corporations employing thousands. They must be given encouragement to grow and prosper. There is no better way to assist small business, in my judgment, than to provide it with much-needed tax relief this year. It is my hope that general tax reductions for the individual can follow no later than next year. That is a goal on which we must set our sights.

I have tried to outline what I believe should be the role of the Republican Party now and in the future. Our big responsibility is to meet and solve human problems, to work toward a stable peace, and to maintain a strong economy here at home. And to achieve those aims, we must enlist the aid of every American who believes in the basic principles of human liberty and a free economy.

Investigation by Representative Porter, of Oregon, of Conditions in the Dominican Republic

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an effective and cogent editorial from the Medford, Oreg., Mail Tribune of June 4, 1957. This editorial, written by Eric Allen, managing editor of the Mail Tribune, pays tribute to Representative CHARLES O. PORTER, of Oregon, for his valiant efforts to ferret out the disturbing conditions in the Dominican Republic which may have resulted in the death by foul play of Mr. PORTER's constituent, 23-year-old Gerald Murphy, noted aviator.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PORTER AND TRUJILLO

The June issue of Coronet magazine has one of the most fascinating stories we've read in a long time.

It is written by Congressman CHARLES O. PORTER, who represents this district of Oregon, in collaboration with Geoffrey Bocca, an English free-lance writer. It tells the story—or at any rate, part of it— of "the benefactor, Generalissimo Dr. Rafael Leonidas Trujillo Molina, father of the new fatherland." Trujillo is the brutal dictator of the Dominican Republic.

The story, comprised of PORTER's experiences plus documented revelations of what the Carribean dictator has done to his little nation, is credible only because it is so obviously true on the basis of available evidence, and because his regime follows the bloody pattern of dictatorship which is far too familiar to this generation.

CHARLES PORTER, with whom the writer of this editorial went to high school, is a courageous, idealistic, forward-looking man, who is not the kind to run away from a fight. He may still have one on his hands for daring to assault Trujillo, who over the years has made a point to cultivate highly placed men in the United States.

But he is making progress, as a House committee has voted to begin an investigation into the stories of Trujillo's influence in this country, the murders he has caused to be committed here, and the unsavory reputation he has earned, and much of which has rubbed off on this country as a result of its friendly relations with him.

The 14-page article is too long and to detailed to describe in this space, but it is recommended reading for anyone who is interested in the integrity of the United States in its dealings with other freedom-loving nations.

PORTER became involved in this investigation when the son of a couple of his constituents in Eugene was reported dead. The story of this, and the many other startling facts which came to PORTER's attention when he started checking into the situation, gave him one of the biggest jobs in his few months as an Oregon Congressman.

We wish the Congressman well with his investigation, and hope that his outspoken criticism of the blatant and bloody dictatorship of the Dominican leader, will have some effect.

Trujillo is spending, and has spent, millions of dollars in his attempts to influence public opinion favorably over the years of his reign. Every newspaper office receives frequent mailings from his hirelings—including glossy magazines, press releases, and copies of "authorized" biographies of Trujillo.

To overcome this, PORTER and his coworkers will need support. We propose to do what we can to see he gets it.—E. A.

America's Promise to the Immigrant

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. MAGNUSON. Mr. President, the matter of American immigration quotas and policy is being discussed and debated in many places other than in our Department of State and in the halls of Congress today.

For example, I have learned of a winning speech made by Miss Lynnette Jaeger in the Pasco, Wash., Senior High School annual speech contest, in which this important matter is treated.

I ask unanimous consent that Miss Jaeger's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

AMERICA FOR MORE

(By Lynnette Jaeger, Pasco Senior High School, annual speech contest, May 24, 1957)

"Give me your tired, your poor, your huddled masses yearning to breathe free, the wretched refuse of your teeming shore. Send these, the homeless, tempest-tost to me, I lift my lamp beside the golden door."

Thus Liberty Enlightening the World welcomes thousands of immigrants in search of freedom's blessings. She may have welcomed your father or mother; or, perhaps, your grandparents as she did mine. You yourself in her majestic presence may have reverently thanked God for freedom's land.

This Nation, which the Statue of Liberty serves as a faithful receptionist, is undeniably the most wonderful country in the world. And she's ours—yours and mine—handed down to us by our forefathers who through their unfailing faith in God and man effected their most cherished ideal—a democracy striving to offer freedom and equality for all. Our noble forefathers were unselfish men of vision who realized the value of democracy; they conceived it as a treasure not only they, but their posterity and the entire world might one day enjoy.

During the past three centuries the world's population has increased almost five times from half a billion to almost 2½ billion, and is continuing to multiply at even greater rapidity. Yet our earth is not growing larger. With the increase of world population and the spread of communism's devastation the number of crowded and homeless peoples has also augmented. Thus, as a nation not so afflicted, we must unselfishly share our heritage with a greater number—

granting them the same opportunity for freedom of spirit and abundant living that most of us have not inherited as direct descendents from the men of 1776, but have also been granted.

Nearly everyone agrees that immigrants must be healthy, noncriminal, nonsubversive, and unlikely to become public charges because of economic insufficiency. Still, many qualified people are turned away from the United States annually because of our selfish quota system.

Numerous arguments are raised against increasing the immigration quota; two principal ones are: (1) More immigrants will lower our standard of living, and (2) they will seriously upset our population growth.

Need we really worry about a lowered standard of living? In the May 27, 1957, Newsweek, Ralph J. Watkins, Dun and Bradstreet research director, gives us this reassuring answer: "Population increase means not more mouths for the same pie, but a larger pie that will yield bigger slices for more people. People make markets; people are markets. As our population has grown, so has the business population grown." And the United States and Canadian unions support an international statement which includes this principal part: "We note that immigration with proper safeguards can add to the productive capacity of a nation and to improvements in wages and working conditions, particularly in countries with still undeveloped natural resources."

In consideration of the argument that more immigrants will upset our population growth, I quote William Petersen, an authority on immigration lecturing at the University of California: "A demographer could conscientiously state these facts: United States immigration at the present rate has no significant influence on the population growth. The economy could certainly support many times the present number of immigrants without strain. Immigration up to several times the present size would have the positive effect of reducing the disproportion in the American population structure." One example of this disproportion is: There is a surplus of almost a million marriageable women in the United States for whom there are no men.

In considering the immigration problem let us remember: As world leaders whatever we, as citizens of these United States, do, we are acting for all mankind. We have done much for the world through the Marshall plan, the Educational Exchange Act, the Refugee Relief Act, and others. Yet, we cannot and must not be content with our past good deeds and tend to become self-righteous while millions of the homeless still knock upon our door. We must set an example of world friendship and of hope for world peace by opening wider our portals to immigrants of high standards who earnestly seek the freedom and equality of our democracy.

When Guizot once asked James Russell Lowell, "How long will your republic last?" Lowell answered, "As long as the spirit of the fathers is in the hearts of the people."

Therefore I solemnly say as one of the people who above all else do love my American heritage: "Open wider the door. America for more."

Soil Conservation and Floods

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. JOHNSON of Texas. Mr. President, one of the best weekly newspaper editorial pages I have ever seen is that carried in the Panola Watchman, published in the Texas town of Carthage.

Recently the publisher of the Panola Watchman, Mr. Clemo Clements, wrote an editorial about soil conservation and its value during the spring floods in Texas. It is an outstanding editorial, and I request unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKE WATER WALK, NOT RUN

(By Clemo Clements)

The record rainfall of recent weeks and the accompanying floods that carried off valuable topsoil, destroyed property, and created havoc in general, brings into sharp focus the need for a more intensified flood-control and general water-conservation program throughout Texas.

It was encouraging to note that in areas in Texas where farmers, ranchers, and landowners had cooperated with the soil-conservation people, the damage to property and soil was less than elsewhere. Or, in many cases, the heavy rains, regardless of the volume, proved beneficial to landowners. We heard of no soil-conservation cooperator during the heavy rains to complain that we were getting too much of it. Generally they were asking for more because their ponds were slowing the rushing water down to a walk and storing water for future use. Terraces were capturing the water and holding it as it slowly penetrated deep into the previously parched soil.

Upstream water-retention structures proved during the recent heavy rains to be worth their weight in gold. These structures were designed to release excessive water downstream at a slow rate, thereby putting in practice the idea to make water walk, not run.

The soil-conservation people and their cooperators are on the right track and are doing a valuable piece of work for Texas, but we need more cooperators and a more intensified statewide program coordinated with our State river authorities and our Federal agencies.

We need a statewide blueprint and program coordinated with upstream water-retention structures with the large river reservoirs sponsored or planned by the State and Federal government.

Such a program will make water walk, not run.

Conferring of Honorary Degree of LL. D., Doctor of Laws, Upon Senator Smith of New Jersey

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. CASE of New Jersey. Mr. President, my senior colleague from New Jersey, Senator H. ALEXANDER SMITH, was the recipient of an honorary degree of LL. D., doctor of laws, from Rider College, Trenton, N. J., on June 9.

Few in our State have ever been more deserving of this honor. ALEX SMITH has earned the respect of his fellow citizens of New Jersey in more fields of distinction than most men—politics, international relations, law, teaching.

We who know him as a warm human being as well applaud the officials of Rider College for their fortunate selection and congratulate Senator SMITH on this latest honor.

It is particularly fitting for ALEX, an illustrious son of Princeton University, to receive this degree from Rider, a neighboring college in his own home county.

I ask unanimous consent that the citation from Rider College be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

BASIS OF AWARD

Honorary degree of doctor of laws, LL. D., to H. ALEXANDER SMITH, distinguished alumnus of Princeton University, he has long maintained constructive interest in the field of education and has worked tirelessly and effectively for the advancement of youth's welfare throughout the world.

As a leading member of the greatest deliberative body he has consistently upheld the dignity and prestige of the United States within the arena of international politics and statemanship.

His efforts in connection with the United Nations have been indicative of a sustained regard for the furtherance of cooperative action in the cause of world peace and security.

In adding his name to its list of honored citizens Rider College pays homage to one who has contributed immeasurably to the basic welfare of State and Nation.

Jury Trials in Civil Cases

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I have noticed in the American Bar Association Journal of June 1957 a very enlightening article written by David F. Maxwell, president of the American Bar Association. The article points out the insidious process which has gradually been eroding away the right to trial by jury in civil cases. The article deals mainly with civil cases, but, as we all know, it is much more important that we maintain trial by jury in criminal cases.

I feel it is most important that we all understand that what is happening in civil cases, as pointed out by President Maxwell in his article, is likely to occur in the criminal field, as can be vividly seen in proposed civil-rights legislation.

Therefore, I ask unanimous consent that the article written by Mr. Maxwell, and published on the president's page of the American Bar Association Journal of June 1957, be printed in the Appendix of the RECORD, in order that all the people, including all Members of Congress, may read what the learned president of the American Bar Association has to say on this extremely important subject. I wish to emphasize that Mr. Maxwell is not speaking from a southern point of view, for he resides in Philadelphia, Pa.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S PAGE

(By David F. Maxwell)

For some time I have been deeply concerned by the insidious process which has been gradually eroding our right to trial by jury in civil cases. The right to trial by jury is firmly imbedded in the American system of jurisprudence and is as old as the country itself. Reference to it is found in the Declaration of Independence, which deplores the abuses and usurpation by George III "depriving us in many cases of the benefits of trial by jury." Article VII of the Bill of Rights guarantees trial by jury "in suits at common law, where the value in controversy shall exceed $20."

Yet, during the past half century, bit by bit, there has been a whittling away of jury jurisdiction. Arbitration has replaced the jury trial in many areas, notably in the motion picture, building trades, and textile industries, and generally in the field of labor law.

Various administrative bodies and tribunals, both on a Federal and State level, are determining the rights of citizens in a manner affecting their everyday lives, without the benefit of juries. In Saskatchewan, Canada, such a board is vested with authority to award damages in automobile accident cases on the basis of liability without fault, and there are many authorities in this country advocating the adoption of a similar system here. The Compulsory Arbitration Act in Pennsylvania, adopted in 1952, provides that the trial court may, by appropriate rule, substitute arbitration for trial by jury when the amount in controversy is $1,000 or less, and the constitutionality of the act has been upheld by the supreme court of that State.

The extension of this plan to all civil cases is being seriously urged by no less eminent jurists than David W. Peck, presiding justice of the New York Supreme Court, appellate division, first department, and C. Campbell McLaurin, Chief Justice of the Supreme Court of Alberta, Canada, on the theory that this is the most effective way to attack clogged dockets.

Personally, I have never subscribed to this doctrine. To me, it is more important to preserve the fundamental right of trial by jury than it is to dispose of cases in a hurry. Furthermore, I doubt whether the jury trial is primarily responsible for court congestion; if so, how can you account for the delays in disposing of cases on appellate dockets in certain States?

So, it was encouraging to me to hear William J. Brennan, Jr., Associate Justice of the Supreme Court of the United States, in addressing the regional meeting in Denver last week, express a similar point of view. Justice Brennan advocated reorganization of the courts and the introduction of pretrial conferences as effective ways in which to relieve calendar congestion. With reference to the part the jury trial plays in the disposition of court calendars, he had this to say:

"Another nostrum is that, because jury trials take more time than trials before a judge without a jury, the easy answer to calendar congestion is to get rid of jury trials in automobile accident cases. * * *

"I think, at all events, this proposal to abolish jury trials in automobile accident cases also faces an almost insurmountable hurdle. The success of our British brothers in abolishing jury trials should not mislead us. American tradition has given the right to trail by jury a special place in public esteem that causes Americans generally to speak out in wrath at any suggestion to deprive them of it. Perhaps the emotion generated by proposals to modify or deny the right has its roots in the Jacksonian era of distrust of the legal profession and the insistence upon the people's control of the administration of justice. Perhaps it is a survival of the same sentiment which gave us the elective system of judges in most States and in some, as in my own, New Jersey, actual lay participation on the bench. One has only to remember it is still true in many States that, so highly is the jury function prized, judges are forbidden to comment on the evidence and even to instruct the jury except as the parties request instructions. The jury is a symbol to Americans that they are bosses of their Government. They pay the price, and willingly, of the imperfections, inefficiencies and, if you please, greater expense of jury trials because they put such store upon the jury system as a guaranty of the preservation of their liberties. The road of him who would take away jury trial in automobile accident cases is a long and rocky one."

As Justice Brennan so eloquently points out, trial by jury plays a much more important a part in our American scheme of things than simply determining the rights of litigants. When properly conducted, a jury trial does much to educate the public in the value of the privileges granted by the Bill of Rights, and I for one, hope that I shall not live to see the day when it is wholly abolished.

How Union Members View the Union Scandals

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 12, 1957

Mr. GOLDWATER, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report to management from the Wage Earner Forum, which is sponsored by the MacFadden Publications. The report indicates how union members view the union scandals, and the reaction of union members to what the investigations disclose.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HOW UNION MEMBERS VIEW THE UNION SCANDALS

Most union members across the country say they believe that the accusations of trickery and crooked dealings made in the current investigation of union scandals are based on facts.

And, they believe, there has been more scandal going on than has been revealed, not only in the unions under investigation but in others. Many unions, however, are believed to be honest. The Government investigation will be a good thing for unions, say most members, and especially helpful to union members themselves.

Opinions of wage earners who are not union members (representing about one-third of the total number of workers) generally parallel those of the union men.

The wage earners were asked this question:

"In connection with the Government's investigation of union scandals, accusations of trickery and crooked dealings have been made. Do you think these accusations are based on real facts?"

[Percent]

	All respondents	Union members	Nonunion workers
Yes	76.8	78.3	71.5
No	1.8	2.1	1.0
Don't know	21.4	19.6	27.5
Total	100.0	100.0	100.0

"Do you think there has been more scandal going on in the unions under investigation than has been revealed?"

[Percent]

	All respondents	Union members	Nonunion workers
Yes	72.9	72.6	74.3
No	3.5	4.4	
Don't know	23.6	23.0	25.7
Total	100.0	100.0	100.0

"Do you think similar conditions exist in other unions than those now under investigation?"

[Percent]

	All respondents	Union members	Nonunion workers
Yes	71.0	71.1	70.4

A SAMPLE OF THE COMMENTS

Maybe it will stop some of the crooks from stealing all the union funds.

I am a steward where I work and I am in favor of keeping union doings out in the open.

It will open the eyes of us suckers who pay dues on the checkoff system.

All local unions should be made to account for every dollar taken in as dues without fear or favor.

I think they should abolish the fifth amendment so men like Beck can't conceal their lies.

Being a union steward for many years myself, I feel that everything to do with unions should be aboveboard for the sake of the union and its members.

Unions are big business, let's run them as such, not by gangsters, goon squads and other riffraff.

I am a member of the teamsters. Everyone in our local hates Dave Beck and what he has done, but they seem afraid when it comes to doing something about it. Why? I don't know. The Government investigations may find the answer.

I think that a great deal of the blame for these scandals falls directly on the rank-and-file union members who fail to attend union meetings and who fail to take an active interest in union affairs. They leave the administration to a few and do not exercise their right to vote. I believe that for a union to serve its members best, it must be run by its members, not by its officers.

I believe the union members themselves will take more interest in union elections and meetings.

I think it takes a combination of crooked union and crooked management and even government. I think the investigations will close when it gets too close to government officials. All most union members want is a chance to earn a fair living and to bring up children in a good way.

Let's clear up crooked politicians and we will have honest unions.

There is not a government, business, or organization that you don't find good and bad in—even in churches—and a check of this is always good.

If it's a typical investigation all will be forgotten in a few short months.

The unethical practices of union officials are almost as old as the unions, and the housecleaning will be of a temporary nature.

For the little it costs us in dues, for the wonderful conditions we receive, I am satisfied. Anyway, there is scandal in all walks of life.

Of course there are those who would like to break the unions. But I believe it will tend to make them stronger. I am a teamster and we are much stronger in our ranks than before.

Disclosure of Stockholdings

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER,
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. MULTER. Mr. Speaker, I wish to direct the attention of our colleagues to the following editorial which appeared in the New York Herald Tribune of June 7, 1957:

DISCLOSURE OF STOCKHOLDINGS

A Senate banking subcommittee has been holding hearings for some time in connection with foreign holdings in American corporations. A great many of these holdings are concealed by titular ownership through foreign banks, and there is considerable worry that these foreign investments in United States companies, particularly those closely associated with materials needed for defense might come from behind the Iron Curtain and that managements might be installed which could hamstring production in case of war. Two other possibilities which have given rise to the investigation are that foreign corporations might secretly be buying up control of their competitors in this country, and that American citizens are hiding their ownership of stocks and bonds behind the screen of foreign banks or investment firms in order to avoid the payment of income taxes.

Thus, for reasons of security as well as collecting revenue, the Government in Washington is interested in finding out who owns the securities which are registered in the names of foreign banking institutions. And Mr. Keith Funston, the president of the New York Stock Exchange, has outlined in testimony before the Senate subcommittee measures which could be taken to determine the true ownership of these stocks and bonds. He has proposed that the Securities and Exchange Commission be empowered to bar the use of a proxy in the case of any block of stock if the necessary information as to actual ownership has not been disclosed. Thus the owner would have the choice of revealing his identity, or forfeiting his right to vote in a proxy contest.

Trying to beat the income tax is all too common in the United States. And acquiring control of competing firms is deemed logical in European countries where the cartel system has long been encouraged. But both practices are frowned upon by our Federal Government, and certainly nobody wants any concealed Communist interests represented on the boards which manage the affairs of our industrial corporations. Presumably Soviet dollars could not buy control of any of the corporate giants. But even the biggest factories are dependent on smaller plants for component parts. If a strike in a comparatively unimportant factory which makes automobile parts can close down all production on a Detroit assembly line, it is only too obvious what a few judicious investments by enemy interests could accomplish during an emergency. Mr. Funston's proposals deserve the most careful consideration as a means of safeguarding our defense production from alien infiltration.

The Oil Lift Hearings

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. O'MAHONEY. Mr. President, at a public hearing of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary, Mr. Donald P. McHugh, formerly a member of the staff of the Department of Justice, who acted as chief counsel during the hearings on the oil lift to Europe and allied questions, today made the opening statement of the staff to the subcommittee.

This presentation is not a committee report, but an analysis of evidence by the staff. The committee report will be made later after an executive session.

There has already been such a demand for this presentation that I ask unanimous consent that part I of Mr. McHugh's statement before the committee be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

INTRODUCTION AND BACKGROUND

Mr. Chairman, as previously stated by you, the purpose of this public hearing is to enable the staff of the Antitrust and Monopoly Subcommittee to review for the members of the subcommittee the salient features of the recent hearing involving the oil industry and to present the results of additional staff study. Based upon these hearings and supplemental study, the staff will suggest certain findings which we believe are appropriate and fully supported by the record.

The attention of this subcommittee was directed at antitrust problems in the oil industry immediately following the stoppage of the Suez Canal and the I. P. C. pipeline.

EFFORTS TO OBTAIN SPECIAL TREATMENT

Over the years the oil industry has been diligent in its efforts to obtain approval for plans which would shield it from the full impact of competition. Its efforts were not always successful, but a partial measure of its success is seen in the numerous grants of antitrust immunity obtained either pursuant to express statutory grant or through an informal approval procedure by the Attorney General. The oil industry has not lacked its vigorous and active champions in high positions in Government who frequently managed to make their views prevail that oil was inseparably linked with our national defense and with the foreign policy of the United States and thus entitled to preferential treatment. In particular, the oil industry has been successful in the State Department in shaping policies which redounded to its benefit. The farflung oil empire with its own foreign policy has been eminently successful in persuading State that its objectives were so identified with those of the United States as to justify frequent digressions from prevailing competitive requirements.

As early as 1928, the American Petroleum Institute (the principal oil industry trade association) devised a plan by which domestic oil producers and State oil conservation authorities would limit oil production in 1929 to the amount produced in 1928. The plan was prompted by the call of the Federal Oil Conservation Board to eliminate the great physical waste of our natural resources. The API proposed that the Board act as a Government agency to sponsor the program. After failing to obtain approval from the Attorney General, the plan was abandoned.

The American Petroleum Institute formulated a code of fair competition for the oil industry under the National Industrial Recovery Act. Unlike all other code authorities which were supervised by the National Recovery Administration, the API code was under the Petroleum Administration Board, a branch of the Department of the Interior. This code authority operated and controlled the entire industry through representatives of the private oil industry with antitrust immunity. Subsequent proceedings before the NRA Review Board disclosed that industry committees enforced code provisions by putting independent competition through a "trial" and enforcing industry committee orders by boycotting and blacklisting. In 2 major antitrust cases charging 28 oil companies and 56 officials with conspiracy to raise and fix tank car prices of gasoline, tried in Madison, Wis., in 1937, oil company defendants pleaded NRA immunity for certain pricing practices. The court rejected the contention. Subsequent convictions by a jury were upheld by the United States Supreme Court (310 U. S. 150 (1940)).

Between 1936 and 1940 an oil industry committee attempted to have the Federal Trade Commission adopt a trade practice conference to legalize many of the trade practices engaged in during the NRA. After intervention by the Department of Justice, the FTC refused its approval. Mr. Charles E. Arnott, the chairman of the committee sponsoring the conference, was described by Justice Douglas in his opinion in the Socony Vacuum case as being the ringleader of the price-fixing conspiracies.

GRANTS OF ANTITRUST IMMUNITY—BY LAW AND INFORMAL OPINION

In 1941 the President set up the Petroleum Administration for National Defense (later

the Petroleum Administration for War) under Ralph K. Davies, executive vice president of Standard Oil Company of California, to formulate and administer Government oil policy during the period of unlimited emergency. The industry formed the Petroleum Industry War Council with 96 members to guide the PAW on policy matters. In addition, 83 committees were formed to formulate cooperative plans called "directives and recommendations" to carry out the wartime objectives of the Government. They refused to function unless granted antitrust immunity. At first the immunity was granted by a loose policy arrangement between Hon. John Lord O'Brian, General Counsel for OPM (later War Production Board) and the Attorney General. Later such immunity was granted by certificates issued by the War Production Board under section 12 of the Small Business Mobilization Act, after prior consultation with the Department of Justice. During the war 81 certificates of immunity were granted to the petroleum industry, one over the protest of the Attorney General. Subsequent congressional inquiry disclosed that practically all members of the Petroleum Industry War Council were either directors or executive committee members of the American Petroleum Institute and that 36 of the members had been fined for antitrust violations.

After the termination of the wartime petroleum organization, the Secretary of the Interior caused the formation of the National Petroleum Council, in 1946, consisting of 85 oil company executives. At that time the Attorney General advised the Secretary that about half of the council members represented companies which had been prosecuted under the antitrust laws and 13 of the individual members had been convicted and fined for antitrust violation. The council was unwilling to act without antitrust immunity, and there existed no statutory authority for granting such immunity. Therefore, an informal arrangement through an exchange of letters was entered into between the Secretary of the Interior and the Attorney General which approved advisory activities carried out in certain prescribed ways. The council operates under this same program today. Efforts of the Department of Justice in 1951 and 1952 to require a Government chairman of the council were unsuccessful. This approval in effect insulates the council from antitrust prosecution. The subcommittee's attention was called to a meeting of the National Petroleum Council at which a major oil company president opposed the construction of an east coast pipeline and spoke openly of the need for maintaining the industry's price structure.

In 1948 the National Petroleum Council submitted a 20-point program under authority of the Anti-Inflation Act which provided for voluntary industrywide agreements for allocation of scarce materials and facilities. This plan was objected to by the Attorney General on the ground it would have eliminated all competition from the marketing branch of the petroleum industry. After requiring public hearings, the Attorney General obtained certain changes in the plan and then granted antitrust immunity. The plan operated for approximately a year until statutory authority expired. Numerous complaints were received concerning the discriminatory and monopolistic manner in which the plan operated.

But grants of antitrust immunity for oil industry operations continued where no statutory authority existed. A notable example was in the formation of the Iranian consortium. Through two informal opinions of the Attorney General, the authority for which was questionable, an immunity in fact was granted. Following the seizure of Anglo-Iranian Oil Co. properties in Iran, the Secretary of State was instructed to investigate the possibilities of one or more United States oil companies acting in cooperation with Anglo-Iranian to purchase and market Iranian oil. In September 1954 the final agreement between the Government of Iran and the consortium was made and, at the same time, the participating oil companies entered into 14 agreements. These agreements have never been made public as the Secretary of State did not believe it would be in the interests of the United States to divulge their contents. Anglo-Iranian acquired a 40 percent interest, five major American oil companies 40 percent, Dutch Shell 14 percent and French interests 6 percent. Nine independent American companies later acquired a 5 percent interest from the original American participants.

On January 21, 1954, at the request of the National Security Council, the Attorney General rendered an opinion which stated that the proposed plan of the American companies to join British and French interests in reentering Iran did not constitute a violation of American antitrust laws, nor create a violation of antitrust laws not already existing. In the second nonviolation opinion on September 15, 1954, the Attorney General pointed out that this opinion did not extend to any other agreement; did not extend to marketing, distribution, further manufacture or transportation of any petroleum products, and the United States reserved all its rights to continue to prosecute the so-called Oil Cartel case, Civil Action No. 8627.

The numerous statutory grants of antitrust immunity to the oil industry and the loose type of green light letter immunity through informal opinions of the Attorney General, whatever their national defense justification, have dangerous competitive implications, particularly in view of the record of antitrust law violations by oil companies.

A grand jury investigation of granting of the international oil industry instituted in the District of Columbia by the Department of Justice was discontinued in 1953 and, on April 21 of that year, a civil complaint was filed against Standard Oil of New Jersey, Socony Vacuum Oil Co., Inc. (now Socony Mobil Oil Co.), Standard Oil Company of California, the Texas Co., and Gulf Oil Corp., charging an unlawful combination and conspiracy to restrain interstate and foreign commerce of the United States in petroleum and petroleum products, to fix market prices of both foreign and domestic petroleum and products, and to monopolize trade and commerce in petroleum and products between the United States and foreign nations. This complaint charges a number of contracts, agreements, and understandings covering about 16 different types of restraints, beginning with the famous "as is" or Achnacarry agreement of 1928 and the "red line" agreement of the same year, providing for worldwide division of oil production and marketing.

Apart from pending antitrust litigation, a review of cases filed against oil companies under the antitrust and kindred laws discloses that of the 42 actions instituted since the passage of the Sherman Act in 1890, 19 of such cases involved oil companies who are members of MEEC. A tabulation of these cases is attached.

The trend in operation in the domestic petroleum industry from a free competitive status to a series of planned, cooperative or joint programs of a cartelized nature is alarming. The various grants of antitrust immunity facilitate this departure from traditional principles of free competition. The first real threat to competitive free enterprise in the American petroleum industry was hatched in Achnacarry castle in the summer of 1928 when Walter C. Teagle, president of Standard Oil of New Jersey, Sir John Cadman, head of Anglo-Persian Oil Co., and Sir Henri Deterding, managing director of Royal Dutch Shell, formulated the "as is" agreement. At about the same time, efforts were being exerted in the United States through the American Petroleum Institute to obtain agreements to hold production to the 1928 level so there would be no surplus production for export in competition with the cartel in the rest of the world. The watchful eye of the Attorney General prevented this arrangement from being adopted. For a period of time, the oil industry availed itself of devices to control prices and production of oil for export from the United States. Two export trade associations were formed under the Webb-Pomerene Act, known as the Standard Oil Export Co. and Export Petroleum Association, Inc. Under the direction of Jersey Standard, quotas and prices of most American refiners for petroleum products sold abroad were fixed, and the export market positions of such refiners were maintained on the basis of an agreed upon position in the world market. The Federal Trade Commission called attention to the fact that such arrangements were of doubtful legality and, as a result thereof, the Export Association was disbanded in June 1936.

The creation of the National Petroleum Council after the close of World War II furnished the industry another lever for imposing its views on government with the attendant competitive dangers resulting from cooperative activities. In 1951 the voluntary agreement relating to the supply of petroleum to friendly foreign nations had many cartelized aspects, especially those which were designed to substitute American petroleum and petroleum products for Iranian oil in carrying out the allocations of world markets between the American companies and their foreign partners. The Foreign Petroleum Supply Committee which administered the voluntary agreement was staffed by the same people who normally carry out what the Government charges are the cartel operations of the companies. The American oil companies with foreign interests were the members of the Foreign Petroleum Supply Committee. They consisted of the five principal major oil companies of the United States, together with their subsidiaries and jointly owned companies engaged in foreign business.

In the operation of the MEEC, we find the same companies and the same individuals forming and staffing the committee and entering into similar type arrangements which have been carried on in the past. Permitting oil companies in MEEC to participate in cooperative activity with antitrust immunity has grave dangers to future competition in the oil industry. It has great possibility for abuse and it provides companies having a history of anticompetitive behavior with a convenient forum for collusive activity.

The danger from joint action through MEEC operation is seen in other ways. While witnesses testifying before this Subcommittee asserted that MEEC and OPEC, its European counterpart, had no allocation duties as such, the net result of the operations was to entrust to the oil industry the responsibility for the cooperative arrangements by which oil was moved to particular customers. It was emphasized that allocation of oil was the sole responsibility of Government. The Oil Committe of OEEC made the initial decision that the oil shortage should be borne equitably by all member countries. This has been referred to as the equalization principle. In OEEC meetings it was decided how the hardship cases of individual countries should be provided for out of the "kitty" set up for this purpose. But implementing the allocation decisions was an industry job. In the minutes of

MEEC of December 3, 1956, Mr. Stewart Coleman, the chairman, was reported as saying that "it would be more effective to have detailed work in Europe handled by an industry group rather than by a governmental organization. He pointed out that this had been the practice during World War II and the Iranian crisis, and had been effective in both of these situations." The essential function of OPEG in Europe, working in conjunction with MEEC in America, was to carry out the allocation decisions of OEEC. Little or no Government control was exercised over this operation. Representatives of OPEG explained the very informal kind of arrangements worked out among member companies for shipping oil to the areas where needed. The general rule was to permit the companies doing business with particular countries and with particular customers to have the first opportunity for meeting their needs. The joint industry-Government program was administered in such a way as to cause a minimum disruption in the traditional patterns of doing business. Practically all OEEC and OPEG officials interviewed conceded there was little, if any, disruption in the existing patterns of distribution and, despite the emergency demands, there were no shifts in relative market position among the different companies. Insulated from the impact of competition, companies act so as to preserve the status quo of their market position. The scrupulous maintenance of market position must be viewed against the charges of world-wide division of markets pursuant to a cartel scheme of many years standing.

The OPEG procedure for determining shipments to countries in accordance with the hardship allocations was also by agreement within the industry. Apparently it was a question of which company had the available oil and tankers to satisfy particular situations. MEEC operations were coordinated with those of OPEG. American companies who were observers in OPEG were members of MEEC. There was evidence that the allocation of supplies within countries was arranged by the oil companies in the various proportions which represented their shares in the market.

In determining the distribution of supplies within a country, it was claimed that company activity was supervised by governments through national committees. This supervision was more fiction than fact. In Norway, for instance, the national committee consisted of no government personnel, but only of company representatives who decided by agreement among themselves upon the method of distributing available supplies. The major American oil companies who participated as observers in OPEG played a major role in all such decisions.

Mr. Stewart Coleman, chairman of MEEC, testified before the subcommittee that allocation decisions were made by OEEC, but that in carrying out such decisions the international supplying industry, as a whole, agreed among themselves as to the amount of oil to be shipped by given companies to particular customers.

Thus, the MEEC–OPEG operations provided a convenient mechanism by which any prearranged plans, dating back even to the "as is" agreement, could be perpetuated. The plan was apparently to charge OPEG with the duty of carrying out the allocation decisions and thus relieve MEEC and the American companies of that conduct which might involve market sharing. As noted in the minutes of MEEC for December 17, 1956:

"Discussion brought out that most of the work in carrying out the allocations program would probably be done through OPEG rather than through the Middle East Emergency Committee."

But it must be remembered that the major American companies were just as active participants in the OPEG operations as the three European members. Both member and observer companies in OPEG participated equally in the job of carrying out the allocation program. When the Government delegates its responsibilities to private industry it plays directly into the hands of the international oil industry, which has successfully imposed a cartel pattern for oil upon Europe and which has made notable advances in that direction in the United States. Noncompetitive patterns of distribution, once formalized in the guise of emergency operations with antitrust immunity, establish patterns for the future which are difficult, if not impossible, to ever dislodge. The dangerous tendency toward joint enterprises in the oil industry and the alarming record of cooperative action with antitrust immunity highlights the danger of cartelization in the United States. It should be sufficient warning that future emergency programs cannot be turned over to private industry if long-range competitive goals are to be observed, particularly in the oil industry where international policy considerations are so closely interwoven with industry operations. Apart from these antitrust dangers, the public interest is imperiled when private oil companies are entrusted with administering a program in which their pecuniary interests could conflict with the objectives sought by the Government. The failure of MEEC to obtain timely diversion of imports by member companies, which might be harmful to their long-range import position, highlights this danger. Responsibility for administering such emergency programs belongs exclusively to the Government.

A Further Opportunity for Physicians

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. MAGNUSON. Mr. President, a Seattle physician, Dr. Souren H. Tashian, has made a suggestion to members of his profession which deserves a place in the CONGRESSIONAL RECORD.

Writing in the June Bulletin of the King County Medical Society, Dr. Tashian recognizes the importance of the physician in present-day life, but points out there is more than his profession can do.

I ask unanimous consent that Dr. Tashian's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF OUR TIMES—THE THREAT OF WAR AND THE PHYSICIAN'S RESPONSIBILITY

(By Souren H. Tashian, M. D.)

Total war, from now on, will be catastrophic and worldwide, followed by epidemics and untold misery. President Eisenhower has said that the challenge of our time is the search for new ideas and techniques for world understanding while the United States still possesses, by the grace of God, the deterrent strength.

The physician is the protector and guardian of man's physical and mental health. His language is universal, and his function in life is the same whether he lives in a free country or a Communist one. Therefore it is our individual, collective, and universal responsibility to study the causes of war and its prevention as we would study cancer or the threat of a plague. There should be no room for apathy or despair. We must fight aggressively for world order and law while we stand guard on the ramparts in defense of our way of life.

The world is divided into two ideological camps. The battle is for the minds of the people throughout the world. The discovery and propagation of a better idea offers greater opportunity for success than armed conflicts or a temporary thermonuclear stalemate. We should develop and mobilize the spiritual qualities, the intellectual techniques of universal cooperation under a just, universal, enforcible law.

Let us give the spark for a chain reaction, so that 1 million physicians of the world could make this declaration of conscience:

"Today war is preventable, and it must be prevented. Our civilization must not be destroyed by total war. We would rather die than be slaves, but it is cowardly to die without fighting to survive. War is not the alternative to peace."

Physicians could use their influence to win the minds and hearts of people to reject the belligerent policies of dictators. The World Health Organization sends medical commandoes to drain swamps and help fight against epidemics and endemic diseases. We need also informed and trained doctors to clear and marshes of misunderstandings. The Fulbright Act has torn down misconceptions and enmities through student and teacher exchange. Why not physician visits? H. G. Wells once said, "Human history becomes more and more a race between education and catastrophe." The cultural exchange program is in the right direction helping to win the race.

Physicians should be ambassadors of good will for world law and order. This should be our dedicated responsibility and goal. We can arouse worldwide public opinion, but to be effective, we must study and know the facts. We should have in our medical schools and medical societies study groups on world affairs. We should give priority to forums and panel discussions to explore the possible means of prevention of thermonuclear suicide.

If our policy stays based on armed retaliation, our sovereign right in matters of life and death and the destiny of our children is surrendered to some distant trigger-happy dictator. We cannot afford the luxury of complacency, of drifting and waiting, hoping and praying that a voice from a burning bush might tell us how to cope with the unpredictable and unreliable governments. We must recapture our sovereign right. How? That is the challenge of our time. You may have a better idea.

The Growing Inflation Threat

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. CARLSON. Mr. President, in yesterday's Evening Star there appeared an article entitled "The Growing Inflation Threat" written by David Lawrence. In view of the economic pressures which are building up at an alarming rate, I ask unanimous consent that it be printed in the Appendix of the RECORD.

During the last year, inflation has reduced the purchasing power of the dol-

lar somewhere between 3 and 4 percent. This continued and alarming reduction of the purchasing power of the American dollar is not only a threat, but it is actually causing real hardship for millions of our citizens who are living on retirement and insurance benefits for which they provided during many years of hard work.

President Eisenhower has, on several occasions, warned the Nation against this danger; and the Federal Reserve Board and other agencies of the Federal Government are making every effort to keep the situation under control. I think it is the No. 1 problem facing our Nation at the present time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GROWING INFLATION THREAT—BUSINESSMEN URGED TO ATTACK PROBLEM INSTEAD OF CRITICIZING EISENHOWER

(By David Lawrence)

The biggest threat the American taxpayer faces isn't getting much attention nowadays from the businessmen of the Nation. Many of them are talking heatedly in criticism of the high budget of the Federal Government, and blaming the Eisenhower administration. They want tax reduction. But they are overlooking the main culprit—the steadily increasing inflation which can wipe out any benefits from tax reduction.

If inflation continues, the Federal budget will soon be $80 billion instead of $72 billion a year. Also, in the last 10 years State and city budgets have gone up faster even than the Federal budget. Whereas the 1948 budgets of all the cities and States throughout the Nation was $15.8 billion, these same totals went up to $36 billion by 1957. This is a bigger increase proportionately than the Federal budget experienced.

But in "constant dollars"—in terms of the purchasing power of today compared with 1940—the budgets of the States and cities increased from $8.9 billion to $14.2 billion. This is a rise of only $5.3 billion. From 1955 to 1958 the Federal budget went up from $64.6 billion to $71.8 billion—an increase in numerical dollars of $7.2 billion. Yet in "constant dollars" the Federal budget went up only from $30.1 billion to $30.9 billion—an increase of only $800 million.

One would think that instead of concentrating their fire on the Eisenhower administration, the business groups would be aiming their biggest guns at the very thing that is cutting down the rate of profits of corporations. One would think also that the argument made by the labor groups that profits themselves have gone up—which is true in numerical dollars—would be met with facts and figures showing that in "constant dollars" the rate of profit in relation to sales has not risen at all, but has gone down. And it is the purchasing power of those profit dollars which counts when it comes to buying plant and equipment to replace obsolete facilities.

This was the time of all times for the business groups of America to be firing away at the inflationary monster which is cheating the widows and orphans and, in fact, all persons with fixed incomes who every year are finding their purchasing power diminished.

It is surprising that so little is heard about the causes of inflation in America. For it is the concerted and organized power of big unionism which has forced upon the American economic system higher and higher costs. In turn, this has necessitated higher and higher prices.

One would think that the recent revelations by the Senate committee headed by Senator JOHN L. MCCLELLAN of Arkansas, would open the eyes of the Nation to what the organized power of a labor monopoly in virtually every big industry can do to the Nation's price structure. But it gets passing attention. As yet no committee of either house of Congress has come forth with any proposals to regulate these monopolies.

The main cause is being virtually ignored by the business groups that are attacking the Federal budget. It's the monopoly created by the so-called union shop—a misleading title really for the closed shop. For, while there isn't any logical objection to a shop being unionized to represent the majority of the employees, the damage is done when that same union is given the right by Federal law—the Taft-Hartley Act—to force every employed worker to join the same union under penalty of losing his job.

The idea that an employer must fire a man because he doesn't want to belong to a union is a scandal of which the American people have not been fully aware. It seems ironical that a Supreme Court decision rules that outside interests cannot own 23 percent of the stock of another big corporation—and there are many businessmen who feel that this is a sound principle of antitrust doctrine—yet at the same time a union can have 100 percent control of the workers in a plant and Federal law recognizes that kind of monopoly. The Supreme Court, moreover, has indicated by recent rulings that this may be valid.

To cure this monopoly, many States have adopted right to work laws to counteract the Taft-Hartley law. But these statutes are in danger because the Supreme Court has indicated that Congress can overrule the States at any time and take way their right to legislate at all on the subject. If inflation is to be cured, therefore, and labor monopolies are to be regulated in the future, a constitutional amendment is necessary which will guarantee every American citizen what the bill of rights really gives him—the right to join or not to join a union. If adopted there would be a different story to tell about the cost of living for the individual, and for the Federal, State and city governments in America.

The West Loses a Friend

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 12, 1957

Mr. MAGNUSON. Mr. President, the West lost a real friend in the passing of Frank Funkhouser, who died in Spokane May 8, 1957.

Many Members of the Senate undoubtedly remember Frank Funkhouser well for his activities as a former secretary to Senator C. C. Dill, of Washington. He will be remembered as well by many of my Democratic colleagues for his role as one of the leading Democrats of the Pacific Northwest.

I ask unanimous consent that a summary of Frank Funkhouser's career be printed in the Appendix of the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

FRANK FUNKHOUSER

Frank Funkhouser, of Spokane, Wash., died May 8, 1957, at the age of 73. He was an attorney and one of the Democratic and civic leaders of the Pacific Northwest for the past 40 years.

Mr. Funkhouser was born September 15, 1883, at Mauckport, Ind.; received a bachelor of science degree from Valparaiso University in 1906 and a bachelor of arts degree from Indiana University in 1910; taught school 4 years in Indiana, and served as superintendent of schools at Conconully, Wash., from 1910 to 1914. He served briefly in World War I and was in the army of occupation in Germany 6 months.

He was a Spokane county deputy prosecuting attorney from 1923, when he became a Spokane resident for the first time.

While serving as secretary to then Congressman Clarence C. Dill from 1915 to 1919, Mr. Funkhouser earned a law degree at Georgetown University. In 1933 he was named as counsel here for the Reconstruction Finance Corporation. He was named in 1933 as a local attorney for the Milwaukee Road. He served also as counsel for the Farm Credit Administration for a time.

From 1940 to 1946, Mr. Funkhouser was attorney in four States for the United States Alien Property Custodian. He served also on the city planning commission.

In 1936 he was 1 of 6 leading cattlemen of the Pacific Northwest to organize the junior livestock show. He became its first president and was president when he died. This organization holds annually a stock show at Spokane for the boys and girls of the four Northwest States at which awards are given for the best steer, hog, and sheep.

He was married January 1, 1945, to Catherine A. Ulrich, of Bellingham, who had been a member of the Washington State College faculty 15 years.

He was a member of Westminster Congregational Church, Elks, Moose, University Club, Early Birds Club, Veterans of Foreign Wars, and the Spokane County and State Bar Associations.

Aid to Poland

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 6, 1957

Mr. BOLAND. Mr. Speaker, it was very pleasing to me, as I know it must be to millions of Americans of Polish ancestry, to realize that the deeply religious people of Poland can now look forward to a pledge of economic aid from the United States to assist them in throwing off the oppressive mantle of Communist dictatorship from Moscow.

Every dollar of this aid is justified. The Polish people have a long history of anticommunism, but their country was overrun by the Soviets in World War II and since that time they have suffered untold hardships and misery under the oppressive heels of the Moscow Reds. Undaunted, these true Christians arose in revolt at Poznan a year ago and paved the way for a new element of freedom from Moscow with the establishment of the Gomulka government.

True, Wladyslaw Gomulka is a Communist, but he is not governing under Moscow's dictates. The Polish people have won a new freedom, and this United States aid will assist the rank and file Poles, inherently anticommunist in their Roman Catholic religion and their

country's traditions, to ever widen the gap between Warsaw and Moscow, rather than turning to the Soviets for complete economic dependence.

Under leave to extend my remarks, I would like to have the following editorial printed in the RECORD. It is from the Washington Post and Times Herald of yesterday, June 11, 1957:

A BRIDGE IN POLAND

After 3 months of delicate negotiations against a backdrop of considerable public misgiving, the United States finally has delivered on President Eisenhower's pledge of aid to Poland. The amount, $49 million, with $46 million yet to come, is much less than Poland sought. The assistance is a loan, and the interest rate is relatively high. The difficulties which the Polish delegation encountered in obtaining even this much help were hardly foreshadowed by the President's encouraging invitation in February.

Nonetheless, as Poland's Communist Party secretary, Wladyslaw Gomulka, told the factory workers of Poznan last week, the aid agreement may "pave the way to a diminishing of tensions" as well as afford some help to the faltering Polish economy. More important than the amount of the loan is the recognition by the United States that quiet encouragement for M. Gomulka is perhaps the best if not the only way to set Eastern Europe upon a course of hope after the despair of Hungary. Not to have helped Poland, as Vice President NIXON said at East Lansing, Mich., on Sunday, would be to say, in effect, that "there is no evolutionary road to independence for a people dominated by communism and that violent revolution is their only resort if they want to be free."

It is now almost a year since the workers at Poznan staged the bloody riots that led to the Gomulka declaration of limited independence from Moscow. Yesterday, at an international trade fair in Poznan, the Polish people were presenting a different sort of demonstration. In great crowds they pressed for admission to the United States exhibit in the fair to see the array of home appliances, fashions, fabrics, automobiles, and a model American home. Let us hope that these renewed contacts with the people of Poland and with their Government will ripen into a relationship of mutual confidence and respect that might some day become a bridge between East and West.

John Hanson, of Maryland

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, June 12, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "President for a Year," written by Kyle Smith, as it appears in the July issue of American Mercury magazine.

Also, it is requested that this article be followed by a speech on the subject of John Hanson, of Maryland, which I delivered on March 22, 1957, before the Maryland Society of New York.

There being no objection, the article and address were ordered to be printed in the RECORD, as follows:

PRESIDENT FOR A YEAR

(By Kyle Smith)

His likeness stands in Statuary Hall in our Nation's Capitol, yet few of the thousands of annual visitors give it more than a passing glance. He had a rendezvous with destiny in shaping America's future, yet most history books omit mention of his name.

Despite this neglect, those rare students of history who delve into the annals of the Continental Confederation period generally agree that, were it not for the stubborn idealism of this man, Wisconsin might now be a part of Massachusetts, New York could lay claim to Kentucky and part of Ohio, and Illinois, Michigan, and Indiana might be territorial possessions of Connecticut. In fact our entire westward expansion, step by giant step in the form of free and independent States, would have been jeopardized.

The name of the man the history books forgot is John Hanson.

Among his partisans are those who claim he should be officially recognized as our first President. It can be argued that if we were to reckon historical periods as does France, for instance, he would be ranked as the first President of our first Republic.

John Hanson was born at the family estate of Mulberry Grove, Charles County, Md., on April 3, 1721. His family history bears a touch of high romance due to the marriage of his great-great-grandfather, a humble London merchant, to the granddaughter of the Vasa line of Scandinavian kings. Their son, the first John Hanson of the line, was killed in the Battle of Lutzen during the Thirty Years' War while vainly attempting to shield his cousin, King Gustavus Adolphus. In recognition of his heroism his sons were later given grants of land in the colony of New Sweden in the New World.

He grew to manhood during the turbulent years of Maryland's history when she was being passed back and forth among British royal claimants like a shuttlecock in an imperial badminton game. He also had a first-hand chance to observe the conduct of the French and Indian Wars in which incompetent British military leaders were unable to stem defeat without the assistance of young George Washington and his colonial recruits. John Hanson was one of the country's leaders who read the signs of the times aright.

He served the State of Maryland continuously in public office from 1756—when he was elected to the Maryland Assembly—until his death in 1783.

Immediately after the news of Bunker Hill on June 15, 1775, he assumed leadership in organizing two companies of riflemen. All Marylanders, however, were by no means eager to risk their fortunes by plunging into war against Britain. The State was enjoying prosperity, had grown to fourth in population, and suffered no pressing grievances at the moment. But to John Hanson the road ahead was clearly defined. He demonstrated his firmness of purpose at a special meeting of the Maryland Provincial Convention held on the eve of the Revolution.

A resolution was under consideration which, if adopted, would put Maryland in the war forthwith. Opinions pro and con were heatedly aired. The moment was critical. There was even talk of a compromise.

Suddenly a tall, vigorous, middle-aged man rose to address the chair. His air of quiet authority drew the attention of every man in the chamber. It was John Hanson.

"These resolutions ought to be passed, and it is high time," was his terse comment.

He sat down, and, in a characteristic gesture, folded his arms. After a moment of dead silence someone made a motion that the resolutions be adopted without delay. This was done enthusiastically, unanimously. Maryland had entered the Revolutionary War.

Even at the beginning of the war, when the odds against the untired Continental Army seemed overwhelming, he had no doubt as to the outcome.

"We will win the war with George Washington in the field if we do our share at home," he wrote to a friend. "In the end we will establish an Inseparable Union, and ultimately it will become the greatest Nation in the world."

Concurrently with the progress of the war his own greatest battle, the western lands fight, was shaping up.

Love of the grand gesture by European monarchs, and cartography that was more fanciful than accurate, were factors that threatened to disrupt the new Nation while it was a-borning.

In 1609 James of England granted to Virginia a section of land "from Point Comfort 200 miles southward along the seacoast, and all the land throughout, from sea to sea, west and northwest."

In 1662 Charles II gave the State of Connecticut grants for a large part of what is now Ohio, Indiana, Illinois, and Michigan. Two years later he gave his brother James land holdings in Ohio and Kentucky. When James became king he gave this territory to the State of New York.

In 1691 William and Mary gave to Massachusetts what is now southern Michigan and most of Wisconsin.

Other States had lesser claims, and confusion was worse confounded by the superimposed claims of private land companies with loosely drawn charters.

In 1775 the colonies were largely governed by customs that had grown into laws. The organization that existed between them could hardly be called a Congress. In recognition of the need for unity and power in a more centralized government the Articles of Confederation were drafted in 1778 and submitted to the States. It took very nearly 4 years to bring about their ratification.

No provision had been made in the articles for the disposition of the western lands. It was taken for granted they would become the property of the States having the best claim to them. This was the familiar pattern of the times. This was the premise on which the delegates laid their plans.

All but John Hanson. In the free and independent union he envisioned for his country, such a procedure would be an anachronism.

Hastily summoning the Maryland delegation, he set forth his views and, as usual, got their support. They advanced a resolution which exploded in the convention with bombshell force. It read:

"That the United States in Congress assembled shall have the sole and exclusive power to ascertain and fix the western boundary of such States as claimed, to the Mississippi or South Sea (Gulf of Mexico), and lay out the land beyond the boundary so ascertained into separate and independent States from time to time, as the circumstances of the people may require."

This resolution was promptly buried. It received only one vote. In its place a proviso was added that no State be deprived of property for the benefit of the United States.

This was the signal for furious activity. States, anticipating great profits, set up land offices and prepared to sell off their possessions.

In the midst of the turmoil sat John Hanson with folded arms, adamant against any compromise. The backlands must become the property of the Nation as a whole. Any other course, he maintained, would be attended by "great mischiefs."

As he predicted, the "mischiefs" came about. The scramble for profits caused

strained relations between the States. Problems of administration began to pyramid. Tempers flared; claims and counterclaims flew.

Finally Virginia revealed an attitude of compromise. New York followed, and the stalemate was broken. Victory for the Maryland resolution was in sight. On March 1, 1781, ratification was complete. The Continental Congress was a thing of the past, and the Continental Confederation came into being.

Of this event Gilbert Grosvenor, president of the Geographic Society, wrote in the National Geographic magazine of February 1927:

"To the illustrious Marylanders, John Hanson particularly, belong the credit of suggesting and urging a policy that changed the whole map of the United States and the whole course of our national life.

"Ohio, Michigan, Wisconsin, and Minnesota are States in the Union today because of the practical sagacity of these men."

The first action of the Confederation was to elect John Hanson president, on November 5, 1781.

The first communication issuing from this country to bear the constitutionally authorized designation, "President of the United States in Congress Assembled" was a letter sent by Hanson to Louis XVI of France shortly after he took office.

The term "Do-nothing Congress" could hardly have been applied to this first legislative body. In addition to routine matters they accomplished the following:

Established the American consular service by exchange of consuls with France.

Inaugurated a penal system for the States.

Authorized the first United States census.

Granted a charter to the Bank of North America, the first bank in our history under national auspices.

Organized an Inspector's Department of the Army with Baron von Steuben in charge.

Adopted the great seal with its motto, "In God We Trust."

Floated its first international loan.

Endorsed ratification of a treaty between the United States and Holland.

Initiated the franking privilege for Congressmen, and authorized free postage for men in military service.

This strenuous term of office, following as it did upon his arduous war activities, proved to be too great a tax on John Hanson's health, and he became ill. He urged the Confederation to appoint a successor, but this they refused to do. After an absence of a few weeks he returned and served the remainder of his 1-year term.

Shortly after his retirement from office he was again stricken, this time fatally. He died November 22, 1783, at his home in Frederick County. He was buried at Oxon Hills, Md.

A fitting epitaph might be the words of Justice O. W. Holmes, who in referring to him in his speech on heroes and idealists, said:

"Men who never heard of him will be moving to the measure of his thought."

JOHN HANSON, OF MARYLAND

(Address by Senator JOHN MARSHALL BUTLER, Founders' Day dinner, the Maryland Society of New York, March 22, 1957)

Mr. Chairman, distinguished guests, ladies and gentlemen, before proceeding with my prepared remarks, may I take this opportunity to thank you, Mr. Chairman, in particular, and the membership of the Maryland Society of New York, generally, for the lovely treatment accorded my wife and me during our brief stay with you.

Your chairman was most gracious, leaving to me the choice of a subject upon which to speak, so long as it was not political.

Knowing of no people who take greater pleasure and pride in the life and deeds of our founders than we of the Free State of Maryland, I have selected as my subject John Hanson, of Mulberry Grove, one of two great men whose statues honor Maryland in Statuary Hall in the Capitol at Washington; the other being Charles Carroll, of Carrollton, a signer of the Declaration of Independence.

I have chosen to speak of John Hanson, who, as I will point out later, was referred to as "the President of the United States in Congress assembled" for two reasons. First, he was one of the alltime great men of America, and, second, his fame, in my opinion, has never equaled his magnificent contribution to the solid foundation of our State and Nation. John Hanson, of Mulberry Grove, was a descendant of John Hanson who was a second cousin to the King Augustavus Adolphus of Sweden, both of whom fell at Lützen in 1632. The Hanson, who fell at Lützen beside his king, had four sons who, after the death of their father, became the wards of Christiana, daughter of Augustavus Adolphus, who succeeded to the throne of Sweden. It is quite apparent that those four wards of the queen were not overly endowed with worldly possessions, as we find them 10 years later—when the oldest was but 25 and the youngest, 12—shipping off with John Printz, the newly appointed Governor of New Sweden, for adventure in the New World.

Four years earlier, the first Scandinavian colony in the New World had been established when, in the middle of March 1638, two small ships under the command of a Dutch captain named Peter Minuit and bearing immigrants from Sweden and Finland—the latter having been long a part of Sweden—made safe harbor in Delaware Bay, proceeded up the Delaware River to the Brandywine and there made port at what is now Wilmington.

This colony existed under Swedish rule for 18 years when by force of arms it came under Swedish rule and later under British rule until the day of independence. During this whole period New Sweden retained its Scandinavian characteristics and racial basis, and from it went stalwart men and women into the nearby settlements of Pennsylvania, New Jersey and Maryland,the four Hanson brothers being among those who moved over the Elk River trail into Maryland.

The youngest of the four, John Hanson, was the grandfather of John Hanson, of Mulberry Grove. He went first to Kent Island and then to St. Marys, the capital of the Calverts. He did not long stay in St. Marys, for as early as 1656 we find him in Charles County, the newly developing section of the State of Maryland, centering around Port Tobacco where Protestant settlers were clearing land and building homes.

Within a few years he was well established and was spoken of as Col. John Hanson. He had 7 children, the youngstest of whom was Samuel—who had 6 daughters and 4 sons—of whom the famous John Hanson of the Continental Congress was the fourth, born in 1715 at Mulberry Grove, the family estate overlooking Port Tobacco Creek in Charles County.

John Hanson of Mulberry Grove spent his early manhood in an atmosphere of revolution. The American revolution has many breeding grounds. Massachusetts was the first. Virginia, Pennsylvania, New York, and Maryland were others. When patriot met patriot brave and wise words were spoken. At no place were there more meetings of this character than in Maryland; at no place in Maryland than in the little group of homes centering on Port Tobacco Creek in the southern part of Charles County. Such men as the Stones, the Jenifers, Hansons, Craiks, Browns, Smallwoods, Howards, Briscoes, Thomases, Mitchells, and Contees lived there. The place was indeed the crossroads of the American colonies, for there were the ferry crossings of the Potomac used by men of affairs from both the North and the South. George Washington was a friend and neighbor of them all. Indeed so close and endearing was the relationship that it was to Dr. Craik and Dr. Brown that Martha Washington, the wife of the first President, turned in his last illness.

Living in this atmosphere, it was but natural that young Hanson took to politics. He was elected term after term to the Maryland House of Delegates. He was there when the share of the tax England sought to levy on the Colonies for the French and Indian War was debated. The stamp tax, the Boston Tea Party, and other issues in quick succession were to result in war. Revolution was brewing. In the midst of all of this John Hanson of Mulberry Grove took a remarkable step. He moved with his family to Frederick, Md.

This was in 1773 on the very eve of the Revolution, and he was then 58 years of age. Why the move was made remains a mystery. But the West was then beckoning and perhaps Hanson saw a better opportunity to serve his State at this western outpost. Charles County—he may well have reasoned—still had the Stones, the Jenifers, and others.

He remained a member of the house of delegates from Charles County until 1773 when, upon his removal to Frederick, he was elected a member to that body from his new county. He became immediately a man of great influence. He had much political experience; he was a man of mature years; he had many friends throughout the State. In addition, he was a man of considerable wealth. Overnight Frederick County had found a man who had no peer in the province, who was loved and respected by all, whom the State could give to the coming Union of States.

Events were moving fast. A meeting over which John Hanson presided at Frederick courthouse in June 1774, adopted a resolution declaring that the cause of the Massachusetts colony was the cause of all, pledging the cooperation of Frederick County and urging the State of Maryland to join the other Colonies to advance this common endeavor. Thereafter delegates, headed by Hanson, were sent to Annapolis to attend a general congress. This general congress, which later became known as the convention, sent delegates to a general congress of the Colonies to be held at Philadelphia.

The British moved out of Boston; Paul Revere made his famous ride; American patriots fell at Lexington and Concord. It was necessary, indeed imperative, that Frederick County have some form of government if it were to render effective and timely help to a new nation in the making. A committee of observation was formed, of which John Hanson was a member and the guiding spirit. Hanson had been tolerant of debate, patient of delay, but now was the time of action. He hurried back from Annapolis to Frederick County, raised two companies of troops to go to Boston. They were the first armed force ever to cross Mason and Dixon's Line to join up with the Green Mountain and the White Mountain boys in the cause of freedom under the banner of his young friend and neighbor of Charles County days, George Washington.

Hanson was a man of fertile mind. He did not overlook even the slightest detail. As the guiding spirit of the committee for observation, he established patrols of minutemen throughout western Maryland which

resulted in the exposure of the Dunmore conspiracy which, had it succeeded, would have brought the Indian tribes into the war against the Colonies. During these trying days John Hanson, between trips from Annapolis to Frederick, was building a gunlock factory and barracks at Frederick.

He never became so immersed in these subsidiary activities as to be out of touch with the debate then going on in the convention at Annapolis touching upon the question of how far Maryland would support the resolutions of the Continental Congress, it having earlier instructed her Delegates not to sponsor a final break with England until so specifically advised. Not until June 1776 were these instructions altered. John Hanson, upon that occasion, closed the debate with these words: "These resolution ought to be passed, and it is high time."

And pass they did, making it possible for Maryland's men in the General Congress of the Colonies to vote for independence.

The Congress, which on July 4, 1776, voted for independence, could not really be considered to be a Congress. Its Delegates had no authority but to debate and advise—each Colony retaining unto itself to act as it pleased, notwithstanding the action of the Congress. It was but a coalition of brave men with a common purpose. The need for a more perfect government was apparent to all; but such was not to be. At least, not for another 5 years, because John Hanson at that time took a stand on principle which he had to win if the peoples of the new Nation then in the making were to live in peace and harmony together.

Hanson's stand was in opposition to the land claims of Virginia, New York, Pennsylvania, and Connecticut. Their claims arose out of the undefined and, therefore, indefinite distance to which they believed their land extended westward.

To fully understand the war of politics which underlay the war of independence, one must make a brief review of the land claims which had grown up in Colonial America. For instance, when Peter Minuit landed at Wilmington, in 1638, he immediately negotiated with the Indians for the purchase of land. The deed of conveyance for the land described the northern, eastern, and southern boundaries of the land with some particularity, but the western boundary of the land conveyed was described as extending westward for an "undefined or indefinite distance." This same language had been used in many of the grants from the King and in others; and it, therefore, seemed that the States of Virginia, Pennsylvania, New York, and Connecticut had valid claims.

This immediately put John Hanson in a very difficult and embarrassing position. He was a close friend of Gen. George Washington, and was devoted to the cause of liberty, yet he was obliged, for the sake of principle, to lead the political opposition which seemed, at that time, to make union impossible. He was to hear it said many times that he was hindering the prosecution of the war for independence.

Twelve of the 13 Colonies had voted to ratify the Articles of Confederations. It was Maryland alone who stood out and refused to ratify. It was John Hanson who introduced the Maryland resolution as an amendment to the Articles of Confederation in this language:

"That the United States in Congress assembled shall have the sole and exclusive right and power to ascertain and fix the western boundary of such States as claimed to the Mississippi, or south sea, and lay out the land beyond the boundary so ascertained into separate and independent States from time to time as the number and circumstances of the people may require."

This resolution was buried and the other 12 colonies pressed their fight for the ratification of the Articles of Confederation which contained a clause that no State should be deprived of any territory for the benefit of the new Union.

As time passed, the pressure on Hanson grew, but he stood firm. He reasoned that in the end his plan to let the Nation grow by federalizing the western lands must prevail. Otherwise, he said those who objected to colonialism, while fighting it from abroad, would be imbedding it in the American system. The opponents of the Maryland resolution accused Hanson and the men of Maryland of blocking union and hindering the war effort. They likewise said that we were using our geographical location to block traffic between the North and the South which, of necessity, must flow through our State if the war were to be prosecuted with effect. Hanson countered by saying: "Suppose Virginia sold her western lands and thereby raised enough money so it would not be necessary for her people to pay taxes, would not Marylanders then desert Maryland and move to Virginia in order to avoid paying the taxes laid upon them by the colony of Maryland?" He also reasoned that if the frontier was to be owned by only a few of the several States of the new Union, would all of the States join together to fight to defend it? He further asked whether the land-rich colonies were ready to be taxed acre for acre with the others for the prosecution of the war. Otherwise, he urged, they should surrender their claim to such lands.

As the dispute wore on, the chance of compromise with England grew more remote; and the idea of perpetual union grew stronger in the minds of all Americans. Hanson's idea of a Nation which would grow in area and numbers, adding new States to the 13 along the seaboard as the population and situation warranted, was beginning to be understood by his fellows in the Continental Congress. The State of New York was first to give in and cede its western lands. Hanson's far-seeing plan for a great America had won approval. The Articles of Confederation were ratified, and a Nation had been born. Hanson had made a monumental contribution to his new country.

John Hanson was elected to the Continental Congress in December 1779. For him, the transition from the local to the national scene was not too sharp because, as I have pointed out, debate had been had in the Maryland Legislature of which Hanson was a leading member on most, if not all, of the issues then before the Congress. But it is not to be assumed that his duties were to be made easy. The western lands question had made Maryland's position difficult and trying. Hanson must do double duty. His State must do more than was asked of it in the prosecution of the war if its position on the lands issue was not to be misunderstood.

Hanson was more than 66 years of age—one of the oldest Members of the Congress. But 3 short years before, his son, Peter Hanson, a lieutenant of the Maryland line, had fallen mortally wounded at Fort Washington. Notwithstanding, the many handicaps under which he labored, his services were of such high order that he was reelected to the Congress for a second term in February 1781—taking his seat on February 22—a birthday then not celebrated and perhaps not even noticed.

On November 5, 1781, John Hanson was unanimously elected president of the Continental Congress. He was the first to ever be elected to that position for a definite and stated term and hence has many times been referred to as the first President of the United States—his title being "President of the United States in Congress Assembled."

While we of Maryland most willingly accept this most glorious appellation for our very distinguished and reverred forebear, substantial basis for the claim that he was the first President is not to be found in the history of our State or Nation. But, John Hanson was, nonetheless, one of the great men of his time, one of the great men of our history, one of the founders of our State and Nation. He was almost solely responsible for the fight which made the United States a country which, from the very beginning could live in peace and harmony with itself and his foresight and courage have never been surpassed by any Marylander from his day forward.

Thank you.

The People-to-People Foundation

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 12, 1957

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared regarding the outstanding work of the People-to-People Foundation, together with several exhibits I desire to have printed along with my statement.

There being no objection, the statement and exhibits were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

THE OUTSTANDING WORK OF THE PEOPLE-TO-PEOPLE FOUNDATION

I am pleased to report new evidence of the splendid accomplishments of the people-to-people program.

I had been pleased to discuss this subject, it will be recalled, on April 29, as reflected on page A3131 of the CONGRESSIONAL RECORD.

Later I had made reference to it on May 31, as indicated on pages A4210–A4212 of the RECORD.

FORTY-TWO OUTSTANDING LEADERS

Since then I have been in touch with many of the 42 committee chairmen—leading figures in all walks of life—who are spearheading two-way international communication in every known area of human activity.

I should like to mention now a few of their responses.

WHAT THE INSURANCE INDUSTRY IS DOING

Mr. Frederic W. Ecker, the distinguished president of the Metropolitan Life Insurance Co., reported that a letter and enclosures on the people-to-people program had been sent to 5,000 insurance companies throughout our country, and to certain organizations overseas.

Mr. Ecker wrote, in a letter of June 6 to me: "The response to my letter of March 4 has been most gratifying. We have heard, in the most enthusiastic terms, from a great many insurance companies all over the country. I feel sure that most of them have taken some positive action along the lines we have suggested in the leaflet, What We Can Do. Also, stories have appeared in the insurance press throughout this country and, in some cases, overseas telling about the people-to-people program and about the activities of the insurance committee."

VARIED PUBLIC RELATIONS COMMITTEE WORK

Mr. Edward L. Lipscomb, of the National Cotton Council of America, described the broad-gaged activity of the public relations committee, of which he is chairman. For example, a four-page leaflet created by his committee is being distributed through the cooperation of the transportation industries committee in no fewer than 1 million copies.

"Within the next few days," he writes, "50,000 companion posters" are being printed.

A helpful four-page bulletin entitled "People-to-People News," produced by the public relations committee, is being sent to the key individuals engaged in this effort throughout our land.

LETTER WRITING OVERSEAS

From the chairman of the letter writing committee, Mrs. Anna Lord Straus, came word that her group will be more than happy to receive requests for overseas correspondents—requests which may come in to various congressional offices—for overseas correspondents.

These requests from our constituents will be acted upon by arranging for the American letter writers to be put in touch with people of other countries.

GOOD WORD FROM EDUCATION COMMITTEE

From Miss Corma Mowrey, cochairman of the people-to-people education committee, came word: "We are grateful for your comments to the Senate."

And then the encouraging word that "This program has unlimited possibilities."

BOOK COMMITTEE REPORTS

From Mr. George Brett, chairman of the book committee of the People-to-People Foundation, came the good word, "When I say worthy cause, I feel that the PPP is just that. It does seem to me that the people of the United States could, through this magnificent idea of the President, effect a great deal of good will throughout the world." Various publishers, librarians, and other individuals in related fields are working with Mr. Brett.

MANY HOBBYISTS AT WORK

From Mr. Harry L. Lindquist, chairman of the hobbies committee, came a leaflet describing how American stamp collectors, coin collectors, people interested in antiques, models, prints and etchings, outdoor sports, photography, gardening, painting and sculpture, toolwork, printing, needle work, nature studies, ham radio, and many other fields, are beginning to take hold of the immense opportunities available to them to contact their opposite numbers abroad, through the PPP.

These, then, are but a few samples of how these outstanding American leaders are forging ahead in welding constructive links with people overseas.

LATEST FOUNDATION BROCHURE

I attach hereto two items which I believe will further illustrate this program. The first is the brochure which has just been printed by the foundation. I append to it the press release from Mr. Charles E. Wilson, as issued through the office of Mr. Ed Kirby at foundation headquarters, in room 603 of the Carnegie Hall Building, 881 Seventh Avenue, New York City.

The second is an illustration of what one of the committees can do, and is doing. It consists of the leaflet conveyed to me by Mr. Ecker, chairman of the insurance committee, to which I made reference at the outset.

MANY SENATORS INTERESTED

It is my intention at a later date to comment to the Senate on additional progress of the foundation, and I am asking one of the professional members of the Foreign Relations Committee staff as well, to extend further cooperation with this grand program. I know that my brother Senators on this committee and on other committees are proud, as I am proud, of this grassroots good-will effort.

STATEMENT FROM THE PEOPLE-TO-PEOPLE FOUNDATION, INC., ROOM 603, CARNEGIE HALL, 881 7TH AVENUE, NEW YORK, N. Y., MONDAY, JUNE 10, 1957

"People make the world go around, and it's high time people all over the world get to know each other—the sooner the better," said Charles E. Wilson, president of the People-to-People Foundation, Inc., in releasing an information brochure today, telling how it operates.

The "people-to-people" idea was conceived last fall when President Eisenhower appealed to a group of national leaders representing all phases of American social, civic, economic, and religious life to find not one method, but thousands of methods, by which people can gradually learn a little bit more about each other and thus create a friendlyier world environment in which governments may find solutions for peace.

The foundation was subsequently chartered as a privately operated and financed corporation, nonpartisan and nonsectarian, designed to assist those agencies with programs and people already at work in the international exchange field, and to stimulate additional two-way communication between the American people and their world neighbors.

"Our American people want to know more about the people and the world we live in. To bring this about, 42 communities have been established to arouse two-way communication in every known area of human activity; 1,000 volunteer workers are now engaged in developing programs which will invite reciprocal action and counterpart organizations in every country of the world," Mr. Wilson declared.

"The work of these 42 committee embraces practically every know field of human interest and human relations. We will start wherever people's interests begin, whether it be in biology or bird-watching, farming, 4–H Clubs, fine arts, education, religion, youth activities, music, or in 1 or more of the 62 hobbies being actively pursued

"Our job is to help establish personal connections between these people through their known interests. From such common denominators of interests will come people-to-people understanding about each other's ways of life, jobs, church, children, and hopes for the future," he said.

"The mass-communications industries are also with us," Mr. Wilson added. "We are receiving excellent support from the advertisers, the press, motion pictures, radio, and television. Each has its own way of transmitting ideas, and all are needed in this massive communications effort to make friends for America and to give other peoples the opportunity to be seen and heard and make friends with us," he said.

"We have enlisted the technique of our famous cartoonists as a unique means of conveying ideas, and we are inviting the cartoonists in other countries to bring us their messages, as well.

"Some 35 million foreign-born and first-generation Americans are writing over 200 million letters a year to their relatives and friends in their old countries.

"Additional hundreds of thousands of letters are being written by 'pen-pals' all over the world, arranged through schools, clubs, and churches.

"This year we have 37,000 foreign students in our midst, future prime ministers and national leaders. Hundreds of communities throughout the United States are enlarging their hospitality programs accordingly. Many cities have engaged in affiliations with other cities in Europe, Japan, and the Pacific region, exchanging teachers, pupils, officials, music, and art.

"Our Armed Forces are cooperating with steps to improve community relations in the foreign lands where they are still on duty patrolling the peace of the world.

"The 2 million Americans who are traveling abroad this year have been reminded that they have a face-to-face opportunity to make a friend or an enemy for the 160 million of us who stayed at home.

"We sincerely believe that people all over the world are ready as they never have been to respond to a people-to-people understanding. They are weary of war and rumors of war. And they want each other, as well as their governments, to know it. They know that never again can man resort to war as a means of settling disputes. Neither can they afford much longer the staggering debt of new armaments to build up a Frankenstein machine of defense which dare not be unleased, lest civilization be cremated. I am sure they feel as President Eisenhower felt when he told us, 'Every bomb we can manufacture, every plane, every ship, every gun in the long run has no purpose other than negative: To give us time to prevent the other fellow from starting a war, since they know we won't.'

"I am certain," said Mr. Wilson, "we will find people have more things which draw them together than those which drive them apart. Fear of the atom bomb is one thing which links all men; so is the love of their children. The only sure way to a peaceful as well as to a more pleasant world in which to live is through people-to-people understanding," Mr. Wilson concluded.

WHAT YOU SHOULD KNOW ABOUT THE PEOPLE-TO-PEOPLE PROGRAM—HOW IT OPERATES, WHAT YOU CAN DO

Officers: Dwight D. Eisenhower, honorary chairman; William J. Donovan, chairman; Albert C. Jacobs, vice chairman; Charles E. Wilson, president; George V. Denny, Jr., Richard R. Salzmann, vice presidents; William J. Vanden Heuvel, secretary; John L. Weinberg, treasurer.

Directors: Dr. Louis H. Bauer, Al Capp, William J. Donovan, Albert C. Jacobs, Judge Juvenal Marchisio, Mrs. William Barclay Parsons, Frank Stanton, Charles E. Wilson.

WHAT IS THE PEOPLE-TO-PEOPLE PROGRAM?

It is a program launched by President Eisenhower at a White House conference in September 1956. It is designed to promote contacts and activities among individuals around the world which will further international understanding and friendship. Private in character, the program is distinct from official Government activity. At the White House conference about 50 leaders in various aspects of our economic, social, and cultural life who had been appointed chairmen were asked to organize committees to develop not one, but thousands of methods of people-to-people contacts through every avenue of communication. The President and the Secretary of State, after underscoring the natural limitations of the efforts of governments to maintain peace and to deal with the hazards of the present armaments race, called upon the committee chairmen to help create a climate in which governments can work more effectively toward securing peace with justice and liberty for all.

WHAT ARE THE COMMITTEES ACTUALLY GOING TO DO?

Each committee is autonomous and voluntary and is expected to initiate its own program in its particular field. For example: the letter writing committee is working with those organizations experienced in or desirious of stimulating person-to-person correspondence between individual Americans and individuals abroad. A nationalities committee, working with some 35 million foreign-born and first generation Americans, is encouraging both letter writing and two-way travel to promote international friendship and understanding. The music, fine arts, cartoonists, books, and writers committees will promote the same objectives through both media and person-to-person exchanges. The advertising organizations, business organizations, business council for international understanding, the sports and

youth committees, the transportation agencies and travelers committees will encourage emphasis on these objectives in worldwide conferences and meetings. The women's groups committee is undertaking a study of community reactions and resources concerning the thousands of foreign visitors, both students and leaders, who come to this country each year. The committee on medicine and health plans interchange at medical meetings and exchange of medical information. These are simply indicative of the variety and scope of the activities now in operation or planned by the 41 committees whose membership now includes nearly 1,000 distinguished leaders. A list of the committee chairmen is on last page.

IS THE PEOPLE-TO-PEOPLE PROGRAM SOMETHING NEW?

No, it is not. People-to-people activities have been conducted by private organizations and also by Government for many years. The International Educational Exchange Service of our our State Department will handle the exchange of some 6,000 persons this year (1957) and anticipates that this total will reach 8,500 next year. The Institute of International Education, a private, nonprofit agency which administers exchange-of-persons programs involving approximately 5,000 students, teachers, and others annually, has been in operation since 1919. It serves both Government and private organizations. The National Education Association, through its 74 units, conducts international educational conferences, administers an Overseas Teacher Relief Fund, conducts teacher travel tours in more than 50 countries, participates in student exchange programs, publishers pamphlets, guides, manuals, teaching devices which go to all parts of the world, and entertains more than 600 foreign visitors each year. The American National Theater and Academy (ANTA), through the President's fund and in cooperation with the State Department and USIA, sends representative artistic groups and individuals abroad to reflect the cultural side of American life to peoples of other nations, and arranges the appearances of similar groups from abroad before American audiences. Of course, churches and other religious organizations all have, as an integral part of their own life, people-to-people contacts around the world.

HOW THE PROGRAM DEVELOPED

During the past 10 years the National Agricultural Extension Service has developed the National 4–H Club Foundation which has sponsored, organized and carried on the International Farm Youth Exchange (IFYE), under which outstanding 4–H young people from our country are sent to live for some months with farm families in other lands, which in turn send some of their young people to live in farm homes in this country. In 1956 62 young Americans spent 5 months in European and Near East homes under this plan, and 77 from South America, Asia, and Latin America lived with us about the same length of time. The Experiment in International Living, the American Friends Service Committee, Rotary International, and the American Association of University Women are but four of many private American organizations which have pioneered successfully for many years in people-to-people activities. The Institute of International Education census, included in their publication Open Doors, shows for 1956–57 that there are about 38,000 foreign students now in our colleges and universities. With the technicians, specialists, and leaders brought under the International Cooperation Administration and other Government programs, and the foreign students here in secondary schools, the total figure for foreigners in all these categories coming to the United States annually is approximately 60,000.

THE PRESIDENT'S CALL TO THE PEOPLE

When President Eisenhower announced his people-to-people program at a White House conference last September, he was putting an emphatic stamp of approval on these and similar activities. Moreover, for the first time in history, the head of a great State called on the people, as private citizens, "to get together * * * to work out not one method but thousand of methods by which people can gradually learn a little bit more of each other." This is essentially the purpose of the people-to-people program.

WHY THE PEOPLE-TO-PEOPLE FOUNDATION?

It became apparent at once that such a vast program as that called for by the President would require equally substantial financing. The Government, through its various agencies, was spending an estimated $40 million on people-to-people activities, not including the Voice of America. Private organizations, whose activities were almost wholly unrelated, were spending an estimated $20 million. The need was clear for a central agency to raise funds from private sources and to provide machinery for ready exchange of ideas, techniques and inspiration. On February 4, 1957, the People-to-People Foundation, Inc., was formally organized with the committee chairmen serving as trustees, eight of whom were elected to the board of directors.

WILL THE FOUNDATION RAISE ALL THE MONEY FOR THE PEOPLE-TO-PEOPLE PROGRAM?

No. Each committee is independent and autonomous and may work through and with many organizations and institutions. Most of these have long established loyalties and sources of revenue. The foundation will seek financial support for new and effective methods of expanding and strengthening people-to-people contacts around the world, and for the increase and expansion of activities based on the sound principles developed over the years by the pioneers in the field. The foundation will assiduously avoid competition with any established people-to-people enterprises, government or private.

ARE PEOPLE-TO-PEOPLE FOUNDATIONS IN OTHER COUNTRIES ANTICIPATED?

Definitely. The people-to-people program is a two-way program. The United States has a great deal to learn from other cultures and peoples. Mr. Charles E. Wilson, president of the foundation, in a recent speech stated:

"I can envision, in the not too distant future, groups of individuals representing our 41 committees going to the 4 major areas of the world: Europe, the Near East, the Far East, and Latin America—to learn from personal association with the people themselves something of the truth about the situations in these areas. We want to sit down and talk with our world neighbors, to listen to whatever they have to tell us, to attend their sports events, their dances, their schools and churches, and to meet with them on their farms and in their factories. * * *

"And when we have set our programs in motion, may we not expect counterpart organizations to be established in other countries where people share our vision of a peace made secure through people-to-people associations?"

WHAT ABOUT CONTACTS WITH PEOPLE BEHIND THE IRON CURTAIN?

The object of the program is to establish understanding and friendship with people wherever they may be. But we all recognize that difficult problems exist with respect to reaching those peoples now living in police states. President Eisenhower recognized this in his talk last September when he said:

"In short, what we must do is to widen every possible chink in the Iron Curtain and bring the family of Russia, or of any other country behind that Iron Curtain, that is laboring to better the lot of their children—as humans do the world over—closer into our circle, to show how we do it, and then to sit down between us to say, 'Now, how do we improve the lot of both of us?' "

WHAT CAN BE ACCOMPLISHED THROUGH A PEOPLE-TO-PEOPLE PROGRAM?

President Eisenhower put it this way:

"Every bomb we can manufacture, every plane, every ship, every gun, in the long run has no purpose other than negative: to give us time to prevent the other fellow from starting a war, since we know we won't.

"The billions we pour into that ought to be supported by a great American effort, a positive, constructive effort that leads directly toward what we all want: a true and lasting peace."

STATEMENT FROM INSURANCE COMMITTEE, PRESIDENT EISENHOWER'S PROGRAM FOR PEOPLE TO-PEOPLE PARTNERSHIP, 1 MADISON AVENUE, NEW YORK, N. Y., MARCH 7, 1957

Several thousand insurance chief executives were urged yesterday to integrate their company efforts with President Eisenhower's people-to-people program for better international relations.

In an appeal to the insurance executives, Frederick W. Ecker, president of the Metropolitan Life Insurance Co. and chairman of the Insurance Committee of the People-to-People Partnership Program, proposed a wide range of special activities which the insurance companies and their personnel could undertake toward development of better overseas relations. The proposed undertaking went to the officers of 4,225 accident and health, casualty, fire and life insurance companies, stock and mutual, throughout the country.

"The purpose of the program is to enlist the friendship-making and opinion-molding capacities of individual Americans in order that they and individuals in other countries may become mutually better acquainted," Mr. Ecker said. "The end in view is to help to build the road to an enduring peace. This is a job in international relations which can be done by all of us."

John A. Diemand, president of the Insurance Company of North America, is vice-chairman of the committee; Devereux C. Josephs, chairman, New York Life Insurance Co., is treasurer; and Chester L. Fisher, Jr., Metropolitan Life Insurance Co., is secretary.

The insurance company executives were urged continuously to reemphasize the statement by President Eisenhower, in launching this program, to the effect that "there is no problem before the American people—indeed, before the world—that so colors everything we do, as does the problem of preserving the peace and providing for our own security."

The President was also quoted as saying that "if our American ideology is eventually to win out in the great struggle being waged between the two opposing ways of life, it must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communication in foreign lands."

A long list of possible activities for the insurance offices was proposed, including:

Survey of company personnel for language talents and foreign acquaintances.

Use of company house organs for messages.

Promotion of personal correspondence, person to person, by company personnel, to foreign contacts.

Greetings abroad on significant occasions.

Mailing inserts in overseas correspondence.

Contact booklets for personnel, policyholders, and stockholders.

Personnel exchanges.

Encouragement of travel, including possibility of extra vacation time for purpose of making foreign insurance contacts.

Hospitality programs, to welcome foreign visitors in this country.

Establishment of American bookshelves in foreign insurance offices, libraries, schools, and hospitals.

Book and magazine distribution overseas.

Social contacts, including son or daughter exchange-visits.

Insurance press and insurance meeting interchanges. Routing of some foreign-trade publications through the company offices.

A Terrible Blunder by Columbia Broadcasting System

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the July National Republic. I join with the author of the editorial in expressing regret that this public service corporation impressed its will upon the viewing public when Khrushchev insulted the American people.

The editorial follows:

STALIN AWARD FOR CBS

If we gage correctly the indignant response of the American people, the Stalin award for distinguished public service to world communism should go this year to the Columbia Broadcasting System. To give the Kremlin gangsters free access to the Sunday night radio and television audience of the United States, as CBS did on June 2, is the brightest service freedom can render to the cancerous blight of godless materialism and human slavery.

Khrushchev undertook to tell America in honeyed words that only communism aims toward lasting peace. He ignored the threat made officially in Moscow only a few days earlier to melt the Arctic ice cap with a hydrogen bomb, and thus drown out all life on this planet below 90 feet of altitude.

Never has the Columbia Broadcasting System found opportunity to present the report of the Senate Internal Security Committee (May 21, 1956) listing more than 1,000 treaty violations by the Kremlin since 1918. Nor has CBS ever deemed it a matter of public interest that the Kremlin, under communism, has violated at least one solemn treaty with every nation in the world. Instead, the world propaganda offensive of June 2, 1957, as staged by CBS, sought to present communism as an active moral force in human affairs.

The public affairs department of CBS never has found time to quote to the American people the words of Senator JAMES O. EASTLAND, of Mississippi, in the foreword of his report on Kremlin treaty violations—Senate Document No. 125, 84th Congress, 2d session, May 21, 1956. In that report, Senator EASTLAND said:

"Communism is not an evil thing only because it has been controlled by evil men since it first rose to power in 1917. It is organically evil. * * * You must renounce bourgeois morality, you must become an evil man, before you can become a good Communist. You must be a liar, a cheat, and probably a spy, before you can represent a Communist nation in international diplomacy. You must have no more regard for honor when you sign an agreement on behalf of your country, than a forger does when he puts his name on a check."

Birds of a feather flock to the same microphone. CBS was at pains—and not a little expense, we imagine—to deliver the American people to radio Moscow.

Yet wisdom did guide the decision in one respect. Exercising what appears to us an almost decent respect for the opinions of mankind, Columbia Broadcasting System waited exactly 1 month after the death of Senator Joseph R. McCarthy, of Wisconsin, to deliver the United States television audience to the Kremlin.

Senator McCarthy died on May 2, 1957.

The Small Business Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee today ordered reported H. R. 7963, the Small Business Act.

Among other things, the bill would make the Small Business Administration a permanent agency.

In this connection, I am pleased to direct to the attention of our colleagues a letter written by John C. Davis, executive director of the National Small Business Men's Association, to the Honorable BRENT SPENCE, chairman of the Banking and Currency Committee.

Attached to Mr. Davis' letter of June 7, 1957, is a resolution adopted on May 20, 1957, by the membership of the National Small Business Men's Association at their annual meeting.

The letter and resolution are as follows:

NATIONAL SMALL BUSINESS
MEN'S ASSOCIATION,
Washington, D. C., June 7, 1957.

Hon. BRENT SPENCE,
Chairman, House Banking and Currency Committee, House Office Building, Washington, D. C.

DEAR MR. SPENCE: At the time of my appearance before your committee you asked me for our specific recommendation regarding the extension of the Small Business Administration Act, and I indicated to you that I was unable to speak on the question of the creation of SBA as a permanent agency because our membership had not spoken on this point.

At that time I also told you that our annual membership meeting was coming up May 19 through 21, at which time our position would be resolved.

I am very happy to enclose herewith the specific resolution passed by our members, attending the membership meeting celebrating our 20th anniversary, on the subject of SBA.

I want to personally express my appreciation to you and all of the members of your committee for the courtesy accorded us in appearing before you and stating our views, not only on this issue, but on small-business problems in general.

With all good wishes, I am,
Sincerely,

JOHN C. DAVIS,
Executive Director.

SMALL BUSINESS ADMINISTRATION—RESOLUTION ADOPTED MAY 20, 1957, AT THE 20TH NATIONAL MEMBERSHIP MEETING OF THE NATIONAL SMALL BUSINESS MEN'S ASSOCIATION, INC., HOTEL MAYFLOWER, WASHINGTON, D. C.

Whereas the life stream of small business is vital to the American economy; and

Whereas the climate of opportunity for the birth and prosperous development of small business has been adversely affected by the national policy relating to taxes, fiscal control, and Government spending; and

Whereas the economic and social effects of these national policies cannot be met effectively by individual initiative and enterprise: Now, therefore, be it

Resolved, That, in recognition of the effectiveness and achievements of the Small Business Administration, the association support perment status of Cabinet rank for the Small Business Administration and that its primary concern be protection of opportunity for the birth and prosperous development of small business.

Subterfuge on Civil Rights

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. MULTER. Mr. Speaker, we have before us the civil-rights legislation into which some of our colleagues are injecting the matter of right to trial by jury in contempt cases. The following editorial which appeared in the New York Herald Tribune of June 7, 1957, is an excellent reply to the foes of civil rights:

SUBTERFUGE ON CIVIL RIGHTS

The Constitution guarantees the right of every qualified citizen to vote in national elections. But it is a pretty generally accepted fact that a lot of Negroes in the South are by one discriminatory device or another deprived of that privilege. And since the right to vote is the most basic of all civil rights, it follows that the fundamental problem in this area is the enforcement of the Constitution.

Why, then, is there no effective substantiation of what the Constitution provides? The rub, of course, is that the Federal Government has no present course but to undertake criminal prosecution after the accusation, prove the substance, and all the while know that the procedure is utterly futile. By this time the discrimination has already taken place, the election has come and gone, and the supplicant—even if one could be found—still has no vote.

Obviously there has to be a strengthened procedure. Here the Eisenhower administration's legislative program proposes more direct action. The Attorney General would be empowered to institute a civil suit wherever good ground exists for believing that prospective voters are being discriminated against. Upon getting injunctive relief, any violation of the Federal court would be punishable by the judge's citation for contempt.

But the foes of civil rights interpose a tricky and emotional roadblock at this point. Instead of the court enforcing its order directly, as is long-established practice, the opponents want a guaranty that any person held in contempt for violating civil rights laws shall have a trial by jury. The private reasoning, of course, is that southern juries would be loath to convict. Yet a great

clamor is being raised about the Magna Carta and so on.

If there has to be a trial-by-jury safeguard against a court's enforcement powers, what is to be said about preventive relief in antitrust cases and similar civil remedies in everything from the Atomic Energy Act to the Securities and Exchange Commission? Nowhere is jury trial required to validate the authority of the courts.

This is a diversion, less direct than prolonged stalling and filibuster. But the objective is the same—to keep on depriving a minority of the right to vote. What is guaranteed by the Constitution ought to be enforced. The Eisenhower program is a modest beginning on civil rights. It must not be sidetracked by subterfuge.

The Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, June 12, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important speech made by one of my constituents, Miss Janet I. Pinner, senior employment consultant for selective placement of the New York State Employment Service, at the meeting of the President's Committee on Employment of the Physically Handicapped, at Washington, on May 23, 1957.

The President's Committee on the Employment of the Physically Handicapped, under the outstanding leadership of Maj. Gen. Melvin J. Maas, is contributing tremendously to the rehabilitation of the handicapped and for their integration into the normal processes of our industrial society.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PLACING THE HANDICAPPED—A CHALLENGE TO INGENUITY

(Remarks of Janet I. Pinner, senior employment consultant for selective placement, New York State Employment Service, at the meeting of the President's Committee on Employment of the Physically Handicapped, Washington, D. C., May 23, 1957)

In any labor market, placement of the handicapped requires more than a lucky break. Success is dependent upon the qualifications of the disabled worker, the training, experience, knowledge, and personality of the placement interviewer, plus the willingness of the employer to be convinced that the disabled individual can do his job. And last but not least, sufficient time for the selective placement interviewer to do an individualized placement job.

In regular placement work, you start with a job opening and seek the worker. In placement of the handicapped, it is just the opposite—you start with the disabled individual and seek the suitable job. When you begin to seek that elusive suitable job, you must have a clear mental picture of what the disabled person has to offer the employer. Often, the question arises, "How do you know what a handicapped person is capable of doing?" With the man who has worked since his disability and has proven he can work, there is no problem. But, what about the man who hasn't worked since incurring his disability? If he is one of the fortunate few that have received an evaluation or work tryout at a comprehensive rehabilitation center—again—you have reliable information. However, let's be realistic. We all know that there aren't enough comprehensive rehabilitation centers to meet the demand. What do we do then? What do we use as a substitute? Should we ask employers to try out the disabled worker in several jobs or should the worker be referred to one employer after another until a suitable job is found?

Should we place the responsibility on the disabled person's private physician? Is the average general practitioner sufficiently industrially oriented to really know what his patient can do both physically and emotionally?

How much responsibility can you place on the disabled worker himself? Can we tell what the man's emotional response to his illness is? Is he willing to live within his limitations? Is he fighting the world because he can't accept his disability? Does he really know what he is capable of doing?

Finding suitable jobs for the handicapped takes technical know-how and stick-to-itiveness. For a job to be suitable, many factors must be considered. Overemphasis should not be placed on the worker's physical ability to do the job. Equal weight must be given to the worker's skills, knowledges, abilities, aptitudes, traits, and interests. We must never forget that we are placing a man who can do the job—not because, but in spite of, his disability. We place workers, not handicapped workers.

In New York State, we no longer solicit jobs for the handicapped. It was our sad experience that following solicitation of this type, we were flooded with openings for which we had no qualified handicapped workers available. We know now that at the level of the placement worker our best approach to an employer is on an individual basis. If we know what the disabled worker can do, we can talk intelligently to the employer in terms of suitability of the job.

If you have someone who has something tangible to offer an employer, other than his disability, a placement is not too difficult. But what do you do with the worker who has very little to offer the employer? The so-called marginal worker or hard-core applicant. Many times he is not trainable, is illiterate, or has personality defects which are not treatable; he has little or nothing to offer an employer. How do you find a suitable job for him? Should time and effort be spent by employment people with this group when we know in advance the results will be negligible? Do you keep on trying ad infinitum to the detriment of other disabled persons who are never easily placeable? When do you stop trying to place these individuals? What do you use as criteria to make this decision?

Again, in seeking suitable jobs, it is not uncommon to find jobs which are ideal for severely disabled because they involve no walking, standing, and no work pressure. You know you have the ideal person for the job, but the employer informs you that the firm's policy is to keep these jobs for their own workers who become disabled—or for that ever-growing problem—the workers who have become old in his service. This may be reasonable from the employer's point of view and, from a broad social viewpoint, you may agree that this is the right thing to do. However, where does it leave you in your search for suitable jobs? As this becomes more widespread, what will its effect be on job placement of the handicapped?

Then, too, how do you meet the problem of the severely disabled who can perform the duties of only one job in a plant? If work for this job slows down or is not available, what can the employer do but lay the man off? Workers who can do several different jobs may be transferred around and utilized elsewhere, but how do you utilize a man when you don't have work he can do.

What do you do when a disabled worker does extremely well on the job at which he was placed but is not physically able to handle the next two jobs in the promotional scheme?

Let's suppose you find the right job you are seeking—are there any problems you may encounter with the employer's present staff? How ready are the coworkers and foreman to accept a disabled coworker? Can they be expected to add to their own duties in order to streamline a job for a severely disabled coworker? How willing is the foreman to make special adjustments, if they are needed? If the foreman has success with the disabled, does this mean he will then be asked by management to take an additional disabled person? How do you determine when he is staffed to his maximum with disabled? What additional training or orientation does the foreman have to do with the severely disabled? How much should he be encouraged to do? Are there any limits on what should be expected of the foreman?

Finally, how can we ever meet the problem of disabilities which do not fall in the average person's concept of the handicapped? Our experience has shown that most people will consider an orthopedically involved worker without too many questions being raised, but if we have a worker with similar qualifications who happens to have a disability such as epilepsy, cerebral palsy, and so forth (the so-called unglamorous disabilities), they are much more difficult to sell to an employer.

In addition, a great part of our community is subject to mental illnesses which require hospitalization. Discharges from mental hospitals are many times also discriminated against in their search for work. What can we do to educate the public to accept all the disabled and not have one group of the disabled treated as inferiors in the social scale?

The more experience we gain in the placement of the handicapped, the more we see how great the problem is. We realize that it cannot be solved by one agency or one organization but entails the cooperative efforts of all interested citizens, agencies and organizations of each local community, each State, and the backing of the entire Federal Government.

Washington, America's Most Scenic State

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. TOLLEFSON. Mr. Speaker, Mr. Paul B. Lowney, an extremely able photographer and publisher who owns the Photo Publishing Co. in Seattle, has just issued an enticing and colorful booklet entitled "Washington, America's Most Scenic State." The beautiful collection of photographs of the many scenic wonders of our State, which the booklet comprises, serves to prove, many times over, the aptness of its title.

I should like to recommend this booklet to all my colleagues, not only for the enjoyment of the photographs themselves but for their unquestionable value

in helping to settle the chronic summer dilemma which faces most men of family, namely, "Where shall we spend our vacation?"

Following is an article on Mr. Lowney's booklet by Mr. Jack Jarvis, well-known and popular writer for the Seattle Post-Intelligencer. Mr. Jarvis' article enthusiastically describes Mr. Lowney's superb photographic study of the State of Washington, and I recommend it to your attention:

FASCINATING FACTS AND FIGURES—BOOKLET DEPICTS WONDERS

(By Jack Jarvis)

About a year ago I got misty-eyed over our beautiful city and said in print:

"Seattle, I love you."

The occasion for this un-Jarvislike outburst was publication of a picture book, "Seattle, the Nation's Most Beautiful City."

Now the writer, editor, and publisher of the Seattle book, Paul B. Lowney, has gotten me all misty-eyed again and it's time to say:

"Washington State, I love you."

Yep, another book—"Washington, America's Most Scenic State."

It contains 40 pages (larger size pages than the Seattle book). Three thousand eight hundred words of copy and 76 photos, 3 of them in full color, the rest in duotone. It will sell for less than a dollar, complete with mailing envelope.

Lowney, who got a Paul Bunyan-Blue Ox Award from the Seattle Chamber of Commerce for his Seattle book, should get an Oak Leaf Cluster for his award for the Washington State book, it's that good.

"Originally, I titled the book 'This Is Washington.'" Paul told me, "but when I began going through hundreds of photos of the State, I quickly retitled it 'Washington, America's Most Scenic State,' and I'll stick by that claim.

"I anticipate criticism on omissions. It just couldn't be helped. There simply wasn't enough space in 40 pages to cover in detail a State like Washington. I had to reject many beautiful photos and pass up many small cities. But still the book is representative of the entire State."

Paul figures that the book might become known because of a break with tradition—Mount Rainier is not on the cover.

"I love Mount Rainier and I also love ice cream, but not as a steady diet," he said. "But I didn't flout tradition altogether. I sneaked a beauty of Rainier onto the back cover."

The front cover? The San Juan Islands and Mount Baker as seen from Mount Constitution.

Item: Of the 76 photos, 50 show water.

Item: The book on Seattle goes into its third large printing next month; less than a year after publication.

Prediction: "Washington, America's Most Scenic State" will be bought by the home folks as well as by tourists. It's the best book of its kind I've ever seen.

Insecticides Today and Tomorrow

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. METCALF. Mr. Speaker, on page A4076 of the CONGRESSIONAL RECORD, I called attention to my bill—H. R. 783—directing the Secretary of the Interior to begin continuing studies of the effects of chemical sprays upon fish and wildlife.

I called the attention of my colleagues to the fact that research into the effects of ever more efficient controls, more efficiently applied each year, upon fish and wildlife—and man—has not kept pace with development of these chemicals.

In my remarks, I included a letter announcing the withdrawal of one firm from the production, distribution, and research of the presently known agricultural insecticides. In that letter, the president of the firm said known insecticides "are at best palliative, and perhaps will prove dangerous and uneconomic in the long run."

This also is the vein that runs through the address by Dr. W. Coda Martin at the annual convention of the Natural Food Associates in Little Rock, Ark., 4 months ago.

It is Dr. Martin's theory that insecticides may be a greater threat to man than they are to bugs. Dr. Martin's address follows:

INSECTICIDES TODAY AND TOMORROW

(Address by W. Coda Martin, M. D., at the 1957 National N. F. A. Convention)

Last year at the annual convention of Natural Food Associates in Terre Haute, Ind., I gave a report on the health of the Nation. In this report, I will discuss the increase in degenerative diseases in the United States today and especially the problem of physical and mental deterioration of the young men of selective-service age—and what influence insecticides may have on the future increase of these diseases.

From World War I in 1918 to the Korean war in 1950, a period of 32 years, there was an increase of rejections from 21.3 percent to 52 percent. This is an increase of 30.7 percent, or approximately 1 percent per year. Even this marked increase of rejections is not a true picture of the health of the youth today as the physical standards for draftees in 1918 were very high, while in 1950 they were markedly lowered as the essential manpower could be obtained only by reducing the physical standards with respect to some defects and psychiatric conditions.

If this appalling speed of degeneration continues at the rate of 1 percent per year for our young people, then, within 25 years, and that is a short period of time, 75 percent of the youth of the Nation will be physically or mentally unfit for active military service. These figures are hard to believe, but they are statistical facts obtained from the selective service reports. In fact, the time element may be shorter than we think, because, at a certain point, the degeneration may increase by geometric progression. In other words, it begins to act like a snowball.

Only the statistics for young men are used for two reasons:

1. They are the only accurate statistics available for the state of deterioration of the health of the Nation.

2. Only those of reproductive age are biologically important for projecting the health of future generations. A nation must look to its youth for survival.

What is the most critical disease in this degenerative picture besides mental diseases and heart disease? The report of the American Cancer Society is well known to everyone. They say that 1 person out of 4 will develop cancer before they die—25 percent of the population. A grand total of 40 million people. Today, cancer is no longer a disease of the older people. It is becoming an ever-increasing health problem of young people. This increase in cancer is not confined to the United States. The WHO reports that cancer ranks as the second cause of death in most highly developed countries. Cancer is rapidly approaching the epidemic proportions of the Black Plague of the Middle Ages. This is in spite of all our technological and scientific knowledge in the year 1957.

What is the relationship of these harrowing mortality and morbidity figures and the subject of insecticides? I am well aware that the study of degenerative disease is a complex matter and that there are numerous known and unknown factors involved in their development in the human body. One major factor—malnutrition—has been discussed here on this program on many occasions. But this and many other factors are all long-range educational programs. Other factors will require long periods of basic research to establish their relationship to the cause of degenerative disease.

But there has been something new added to the long list of etiological factors of degenerative diseases. This new factor is man-made and under human control. Thus it can be eliminated by an order from the Department of Health, Education, and Welfare, and through the powers of the United States Public Health Service. These agencies were established to protect the health of the Nation and they are given power to invoke, in case of epidemics, emergency laws to control the epidemic and protect the health of the people. Man-made and man-applied substances can be immediately controlled if so desired.

Previously, we have thought of epidemics in the form of an invading organism carried by specific vectors or caused by lax sanitary conditions. Today, we are faced by a different form of epidemic—a slow, progressive, internal deterioration of the tissues and cells of the body. The old methods of detection and control are not applicable to the present situation.

For such a situation as we are faced with today regarding the degenerative diseases, there must be a new approach with open minds, and not biased by political or economic reasons. I particularly stress the latter because the insecticide chemicals are sold under the name of economic poisons.

What is this new and man-made, etiological factor that has been added to our already weakened and deteriorated bodies? About 1945, the chlorinated hydrocarbons (DDT and its derivatives) were added to the pesticide scene of agriculture. This triggered the synthetic chemical pesticide production which reached the figure of 42 million tons, total farm chemical sales in 1956. The sale price to the farmer reached $290 million in 1956 (Chemical Week, October 27, 1956).

By 1975, approximately 20 years from now, the chemical industry expects the sales of pesticides to reach an estimated $1 billion.

There is expected to be an increase of farm acreage from a 1950 level of 1.184 billion acres to an estimated 1.280 billion acres by 1970 or an increase of about 1 percent in the same period of time. The chemical industry expects a 284 percent increase in the use of chemical pesticides from 1954 to 1975 in spite of the fact that there will be an increase of less than 1 percent in farm acreage. In other words, this 284 percent increase in pesticides will have to be used on only 1 percent increase in land acreage. By that time, we will be knee high in chemicals on our farms.

I feel that we should stop for a minute before we plunge into this sea of chemicals and reappraise the present-day situation to determine if this marked increase in the use of pesticides on our farms is necessary or will it be an extra economic burden on the farmer, as well as an increased health hazard

for the public who must consume the farm produce as their only source of food supply. The question may be asked—Is the use of these economic poisons necessary for survival or is it slow national suicide? But first, let us review the chemical problem as it stands today—10 years after the introduction of the chlorinated hydrocarbon and organic phosphorus compounds. (Parathion group.) Have they produced the desired results in controlling insects? In spite of the annual use of 42 million tons of pesticides, at a cost to the farmer of $290 million per year, the annual crop loss to insects in the United States is still more than $3 billion according to Federal and State studies. This staggering loss occurs despite the best control methods available to the farmer today.

It is apparent then that crop loss to insects has not been controlled with these new insecticides. But what else has happened? One of the big problems with DDT as well as other chlorinated insecticides, is that, in this 10-year period, the insects have built up a resistance to them. Because of this, it has been necessary to use a more poisonous and toxic phosphorous-containing insecticide, known as Parathion. This pesticide has a similar chemical formula to the army's highly secret nerve gas. One drop on the skin, will kill a person in 30 seconds. Parathion compounds are only a partial answer to the insecticide problem, as certain insects are already becoming resistant to even these more highly toxic chemicals. Altogether there are more than 180 chemical pesticides being produced and used today on our agricultural farms.

I believe the following statement from a meeting of the Executive Board of the World Health Organization in June, 1956, will give us a clear and concise answer to this question of whether insects are being controlled:

"The conclusion was that the development of resistance of insect vectors to insecticides has become a serious public health problem. Thirty-two countries have reported insect resistance to DDT and other new insecticides. About 35 species of insects, including various types of malaria-bearing mosquitoes show immunity to DDT in some areas of Greece, Lebanon, Indonesia, Saudi Arabia, Panama, and Mississippi. Body lice, vectors of typhus, can no longer be controlled with DDT in Korea, and five other countries report that satisfactory control is becoming difficult. Fleas, responsible for plague, are manifesting resistance in certain parts of South America. But, worse still, a strain of mosquitoes that spread yellow fever has shown itself extremely resistant to DDT in Trinidad. The destruction of flies with DDT and other chemicals is no longer possible in almost all countries where these materials have been used in recent years. The new insecticides that have become available in the last 3 years are too few, too limited in efficiency and too toxic."

A. D. Hess, Logan Field Station of the United States Public Health Communicable Disease Center, Logan, Utah, (reported in Scope Weekly, June 20, 1956) has come to the same conclusion. He declared that the insect problem in the United States is mounting because of the increase of breeding potentials and because of the development of insecticide resistance. (Science News Letter, August 27, 1955.) Also, according to researchers at the University of California, they have discovered that the use of insecticides may kill off the beneficial insects and allow pests to come back in more devastating numbers.

Reports too numerous to mention, show that blanket spraying of insecticides from the air and on the ground destroys many beneficial insects and animals, such as bees, birds, fish, etc.

Walter P. Nickell, a naturalist of the Cranbrook Institute of Science (Birmingham, Mich., June 7, 1956) stated that not enough is known about the long range effects of DDT and other insecticides. They kill the beneficial insects, even the soil bacteria and, in general, upset the balance of nature. He further stated that the results are not very pleasant to contemplate. We may even find the use of DDT more destructive of human life than the hydrogen bomb.

Here we have a unanimous agreement, which is most unusual, that the use of these insecticides has not only failed to produce the desired results, but has placed us in a very precarious position of having developed stronger and more resistant insects and, at the same time, having destroyed many of nature's beneficial and protective insects, thus upsetting nature's balance and leaving us at the mercy of these newer and more dangerous insects.

What has happened to these millions of tons of chemical insecticides that are sprayed on our farmlands? Do they disintegrate and disappear—or are they accumulating in the soil? If so, when will they reach the saturation point? A study in 1955, by the Entomology Research Branch of USDA, Yakima, Wash., gives us a clue to where we can find most of these insecticides used on the farms during the past 10 years.

Examination of the soil revealed that 3½ years after treating the soil approximately 50 percent of the DDT, 14 percent of the B. H. C. and Lindane, 15 percent of the aldrin were found in the surface 6 inches of the soil. The results of this study showed that DDT has the most harmful and most persistent effects of the several insecticides added to the soil. Similar tests were made in Illinois, New Jersey, and Georgia, with equivalent results: Showing that the accumulation of these insecticides in the soil is national in scope. Also, the study showed that DDT applications from 24 pounds per acre and up were highly toxic to certain types of beans and delayed growth and affected the stand of rye in all the 5 years of the experiment. Their conclusion was that the persistence of DDT indicates that this insecticide might become a problem with continued use.

What is the chemical scientist's answer to this situation? A 284 percent increase in the use of these and more toxic insecticides in the next few years. Sounds very much like the talk of Tweedle Dum and Tweedle Dee.

The main point of this paper is to show what influence the extensive use of these highly toxic chemical insecticides has on the future health of the human being. In the final analysis, we are the recipients of these sprays, either by direct spraying, by inhalation, or by ingestion from contaminated food.

It is an accepted fact and confirmed by the United States Public Health Service that all foods purchased from the open market today carry a high residue of many of these insecticides, as they are sprayed approximately once a week during the growing season with one or more of these chemicals. In fact, the mass poisoning of the human race has been legalized by a congressional law. They have set up what is known as tolerance levels for each of the many chemical insecticide sprays. For instance, 7 parts per million of DDT is allowed on every article of food consumed. Each other insecticide has its own tolerance level. When the law was passed the tolerance level was estimated on the use of only one insecticide on each article of food. A recent report from the United States Public Health Service states that when two or more chemicals are on one item of food, which is the usual case today, the toxic effect is increased and therefore, they are considering a reappraisal of today's tolerance levels. Unfortunately, it takes several years to get congressional action to change a law that is on the statute books. In the meantime, the population will be subjected to this increased amount of toxic chemicals. These legal tolerance levels for insecticides on plants do not give a true picture of the amount of insecticides consumed on foods. Many foods contain higher amounts of these chemicals and cannot be adequately checked with the present facilities of the FDA. For instance, recent private analysis reveals that eggs contain 50 parts per million or more of DDT, cheese 150 parts per million, bread 100 parts per million, stewed dried fruits 69 parts per million; lard and butter may be as high as 2,000 parts per million.

Is there a human tolerance level of DDT and other insecticides? It is no secret that the tolerance levels of DDT on foods for human consumption should be zero.

A report from the Food and Drug Officials (Bulletin of the Association of Food and Drug officials of the United States, vol. XIV, No. 3, July 1950) states: "DDT is stored at a level 6–28 times the dietary intake. There is no floor of dietary concentration below which the storage of DDT does not occur."

Dr. A. J. Lehman of the Federal Food and Drug Administration (U. S. Government Printing Office, 1951) stated: "In my opinion, chlordane is one of the most toxic insecticides we have to deal with. I would hesitate to eat food that had any chlordane on it whatsoever."

In a more recent report from the United States Public Health Service, it was shown that volunteer prisoners were fed the equivalent of 200 times the usual amount of DDT found in our foods today and the body storage of DDT increased from what is today considered a normal level of 7–11 p. p. m to 234–340 p. p. m. in 18 months. The conclusion was, that as these men did not reveal any physical or chemical pathology at the end of 18 months, that the consumption of DDT was not a health hazard.

This short-range study of 18 months did not take into consideration the fact that today babies begin to ingest DDT from birth from the mother's milk and later from cow's milk and other foods. The baby will continue this intake three times a day for as long as he lives.

The fact is, that it has been shown in tests on small animals that it is not always the short-range large dose of insecticides but repeated small doses until toxic levels accumulate that is so dangerous. It is not likely that a person will get a lethal dose of chemicals from the food, but he does get repeated daily small amounts. What long-range influence does this have on human health? It has been demonstrated that DDT concentrations of 3–30 p. p. m. inhibit rat heart cytochrome oxidase and interferes with the process of phosphorylation (J. A. M. A., March 1951). Storage of a toxicant in the fat of parenchymal cells is essentially storage in the cell itself where such important enzymatic processes as oxidation, phosphorylation and cholesterol synthesis takes place. In simple terms these insecticide chemicals are stored in this fat tissue and do interfere with the normal oxygen supply to the cells of the body.

What influence does the interference of these important enzyme reactions have on our health? Health research today is focused on the cell. It is recognized that normal intracellular chemistry is the most important factor in a healthy body. Normal health is a delicate balance between various cellular stimulators and inhibitors. Anything that disturbs this balance will produce ill health and possibly some form of degenerative disease.

Dr. Henry Goldblatt (Cedars of Lebanon Hospital, Los Angeles, Calif., April 1953) found that by intermittently depriving a piece of rat's heart tissue in a test tube, of

oxygen, the cells were gradually transformed until they acquired all the microscopic features of malignant cells.

Other clinical and experimental tests have shown that any interference with the oxidation to the cells will cause them to die and thus produce pathology of the tissues or will interfere with the normal function of certain organs or glands of the body. This deterioration of the tissue cells results in degenenative diseases of various types as seen in people today—as well as the development of cancer.

It is well to remember that the danger to health is a delayed action and it is the repeated daily small insults to the enzyme system over a period of many years which constitutes a distinct health hazard. This fact has been confirmed by the research on the influence of tobacco on the production of cancer of the lung. They found the danger of cancer increased rapidly after smoking for 20 to 30 years.

Dr. Otto Warburg also stressed the fact that the transition from a normal cell to a cancer cell, when there is an interference of oxygen supply may be over a period of years.

We, of the age of 50 years or more, may survive and live out of 3 score and 10 years assigned to us by the Bible—or the life expectancy of 67 years according to our present-day vital statistics. But what of the child born today? What effect will this interference with the important oxidation enzyme system cause by insecticides from birth have on his future health and life expectancy?

We can no longer think of the long-range effects of these insecticides on only the present generation: but we must think of their influence on the health of the future generations.

We have much experimental evidence in animals to show that any interference with the oxidative enzyme system of the fetus during the early embryonic stage of development will cause structural changes in the tissue and organs of the body, as well as a marked increase in congenital deformities.

What does this mean to future generations? The results of extensive studies at the Harvard School of Public Health indicate that maternal diseases and other critical stresses occurring at certain stages during pregnancy are responsible for a majority of congenital anomalies—oxygen deficiency to the cells as produced by the insecticides is a nonspecific form of stress—also in 1947, it was shown by Ingalls that the lack of oxygen is a specific cause of congenital deformity. The congenital deformity of Mongolism occurs at the 8th week of embryonic development. We do not have such positive proof for the cause of mentally retarded children, but this condition is accepted as a form of congenital deformity of the brain tissue. A recent report from the Foundation for Retarded Children states that there is a mentally retarded child born every 15 minutes in the United States today. It has been recently discovered that the brain of a mentally sick person uses a lower than normal amount of oxygen. (Science News Letter, December 22, 1956.) Will the continued accumulation of the insecticides in the fatty tissue of mothers during pregnancy, which acts as an inhibitor to the oxygen supply to the cells, cause an increase in these congenital anomalies in the future? An opinion based on the above facts must come to this conclusion. The chance of a similar prediction can be made for congenital cancer which is already on the increase—as well as cancer in young people. This procedure is what Dr. Philip Norman and James Rorty called unfitting the unborn.

These statements may seem to exaggerate our present health problems but I can assure you that there is an ever-increasing amount of evidence to confirm this viewpoint.

But what does the future hold for us in the field of insecticides? As previously stated we can expect a 284-percent increase in the use of the present insecticides or their equivalent in the newer and more toxic substances in the next 10 to 20 years. There is no alternative—as the insects develop immunity to each insecticide, more toxic ones must be developed and utilized or the entire basis for the chemical approach to the insect problem will fail.

In the future we can expect the insecticide to be applied before the crop is even planted. A substance called thimet has been developed to coat the seeds so that it later enters the system of the plant when the seed begins to sprout. This is an organic phosphate chemical related to the army nerve gas—if an insect bites the plant he is killed. What about the animal or human that eats the plant?

Endothal is another chemical of the future which is now commercially available for use as a defoliant. This chemical, as well as lindane, has been shown to have mutagenic activity. This means that these chemicals interfere with normal cell division in the embryo, and thus cause mutations. If so, the genetic results for man and plants may well be unpleasant or even catastrophic, according to a report in a recent issue of the Journal of Heredity (Cytological and Genetical Effects of the Defoliant Endothal. J. Heredity, July–August 1956.) Thus, the future outlook for insecticides appears to be more hazardous than has been anticipated.

The physical and mental strength of our Nation is being lowered daily by the effects of these insecticides on our body metabolism, and there is reason to believe that the effects will be increased with their future use—unless something is done to control the use of these insecticides on our foods before the deterioration of the Nation's health reaches a point of no return, it may well be catastrophic. That time could be in the foreseeable future if the mass poisoning of the human population continues as outlined for the next 20 years.

So far in this report I have given only a negative critical analysis of the problem. This alone is not sufficient. Criticism should be constructive, and an alternative or better plan should be given.

The better plan, of course, is that recommended and applied by the members of the Natural Food Associates and other groups of farmers that are using similar methods to transform their land into living soil, and growing plants free of harmful chemicals. Such soil produces quality food with the highest nutritional value, which, in turn, improves the physical and mental status of the Nation.

In certain instances when sprays are required they should be noncumulative and, if possible, nontoxic repellents. It is said that this ideal is not economically feasible—but the members of NFA have shown this belief to be false. But this, we must understand and accept, good health for future generations of our children is priceless.

Senator Robert F. Wagner, Sr.

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on the 80th anniversary of the birth of the former Senator from New York and the father of our present mayor, the Honorable Robert F. Wagner:

SENATOR ROBERT F. WAGNER, SR., 1877–1953

"The story of Robert F. Wagner, Sr., will always be an inspiration to our neighbors everywhere in this world who look to America as the avenue of freedom, justice, and equal opportunity." (Hulan E. Jack, Manhattan Borough president.)

Tomorrow, June 8, marks the 80th anniversary of the birth of the late Robert F. Wagner, Sr.

A German immigrant, a product of East Side's public schools, a newsboy, bellhop, tutor, he was a graduate of City College in 1898 and of New York Law School in 1900. He was also an assemblyman, State senator, supreme court justice of New York, a member of the appellate division, and a United States Senator.

Father of the present mayor, Robert Ferdinand Wagner was born in Nastetten, Germany. His father, Reinhardt Wagner, was a cloth dyer, and his mother a teacher. The family emigrated to New York when he was 8 years old. His older brother, Gus, a chef, helped pay the fare to America and supported the family until Reinhardt Wagner got a job as a janitor of a tenement house on East 106th Street.

Robert grew up in this slum neighborhood, helping his parents by selling newspapers on a route that required his getting up every morning at 3. He once said: "My boyhood was a pretty rough passage and impelled me to work for the passage of every measure that I thought would ameliorate the conditions I saw."

With the help of his brother, Gus, Robert F. graduated from City College where he had received a Phi Beta Kappa key and where he had also distinguished himself as a star football quarterback. Following graduation he spent the summer teaching, and under the persistent prodding of his brother, and with borrowed money, Robert F. went to New York Law School graduating with a bachelor of law degree.

Champion of social-reform legislation, a great legislator in legislative techniques, whose record is without parallel in American history, Robert F. Wagner established the State scholarships law and advocated votes for women resulting in the passage of the women's suffrage resolution.

He fought for and secured the passage of the teachers equal-pay bill which saw that women received equal pay for equal work in the schools of the State. He also saw to it that no children under 14 years of age shall be employed; was instrumental in the creation of the Reconstruction Finance Corporation, the Relief and Constructive Act of 1932, the establishment of the Federal Employment Agency, the National Industrial Recovery Act, and the National Labor Relations Act. He also introduced the antilynching laws, the Wagner-Steagell Act of 1937; sponsored the direct primary law giving the people the right to nominate candidates for public office and the election of United States Senators by the people.

He championed eloquently and steadfastly the right of the Jewish people to a sovereign state in their ancestral homeland; sponsored the original Social Security Act; advocated unemployment insurance as early as 1911 and later saw the fulfillment of the first workmen's compensation law. To mention all his other legislative accomplishments would require pages.

Robert F. was married to Margaret Marie McTeague who died in 1902. They were the parents of two boys, Robert and Joseph. Joseph lived less than 7 weeks. The late Senator Wagner was a stocky figure, of medium height, with a firm mouth, strong chin, and blue eyes. He died on May 4, 1953.

Named in his honor are the Robert F. Wagner Place, located at Pearl and South

Streets, the Memorial Pavilion of the new 42d Street Beth David Hospital, at Tudor City Place, and the Robert F. Wagner Junior High School, at 220 East 76th Street.

He never sought fame, but fame came to him because of his inherent love and sympathy for the average man.

ABE E. EISENSTEIN.

What the Party Stood For

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. ABBITT. Mr. Speaker, we have under consideration the so-called civil-rights legislation. There has been much talk about the position of the two major parties on this matter. I am shocked to see a number of Democrats opposing the time-honored right of a trial by jury. From its inception the Democratic Party has stood for the protection of individual liberty. I realize that in recent years it is hard to know where the party has stood on certain issues.

There appeared in the Richmond News Leader on Monday, June 10, 1957, a very timely editorial entitled "What the Party Stood For." This is a most thought-provoking editorial and one I hope all who profess to be Democrats believing in the real principles of the Democratic Party will read and ponder upon.

The editorial is as follows:

WHAT THE PARTY STOOD FOR

Around the shop at Time magazine, when the reporters and editors want to slant a piece a particular way, which is 99 percent of the time, the custom is to drag in that conveniently faceless fellow, the unidentified source. Thus, in the magazine's current issue, "a Furcolo friend," "an Illinois leader," "a House liberal," and "an Illinois Democrat" are variously quoted on the terrible mistakes of the Democratic Party in Congress.

Behind the leadership of Senator LYNDON JOHNSON and Speaker SAM RAYBURN, it appears, the party is headed for suicide. In anguish and anger, liberal Democrats are watching Messrs. JOHNSON and RAYBURN advocate shortsighted economy. The House liberal groans helplessly at the destruction of traditional Democratic programs. Everything for which the Democratic Party has long stood, it says here, is going to the bowwows.

But it may be wondered if Time's despondent editors really are altogether clear on the things the Democratic Party has long stood for. The party developed, of course, out of Thomas Jefferson's following a century and a half ago. At that time the Jeffersonian Democrats (they were then known as Republicans, but no matter) were locked in a struggle with the Federalists on the one key issue that has continued to dominate American political controversy—the role of the Central Government as distinguished from the role of the States.

From its very beginnings, the Democratic Party asserted itself to be the party of States rights. It was the party, under Monroe, of minding our own business in the world. It was the party under Jackson, when he killed off the Bank of the United States, of a limited Federal authority. It was traditionally the party of free trade and low tariff.

What were some of the political principles for which the national Democratic Party stood, not so very long ago?

After the war, in the campaign of 1868, the Democratic Party was demanding payment of the public debt, and pledging itself to a tax level sufficient to meet no more than the necessities of Government, economically administered. This same platform asserted that voting was a matter to be regulated and controlled exclusively by the political power of each State respectively, and that any attempt by Congress, on any pretext whatever, to deprive any State of this right, or interfere with its exercise, is a flagrant usurpation of power, which can find no warrant in the Constitution.

In 1872 the National Democratic Party demanded a system of Federal taxation which shall not unnecessarily interfere with the industry of the people.

In 1876, the party stood for public economies, official retrenchments, and wise finance.

In 1880 the party pledged its renewed opposition to centralization and to that dangerous spirit of encroachment which tends to consolidate the powers of all the departments in one, and thus to create, whatever be the form of government, a real despotism.

In its long platform of 1884, the party renewed its demand for low taxes and governmental economy, again professed devotion to the reserved rights of States, and in the field of foreign affairs said this: "We favor an American continental policy based upon more intimate commercial and political relations with the 15 sister republics of North, Central, and South America, but entangling alliances with none."

The national Democratic Party in 1888 asserted that chief among its principles of party faith is devotion to a plan of Government regulated by a written constitution, strictly specifying every granted power and expressly reserving to the States or people the entire ungranted residue of power.

The platform of 1892 strongly assailed the tendency to centralize all power at the Federal capital [which] has become a menace to the reserved rights of the States that strikes at the very roots of our Government.

In 1896 the Democratic Party denounced the profligate waste of money wrung from the people by oppressive taxation, called for a reduction in the number of useless offices, and condemned arbitrary interference by Federal authorities in local affairs. "We especially object," said the national Democratic Party, "to Government by injunction as a new and highly dangerous form of oppression by which Federal judges, in contempt of the laws of the States and rights of citizens, become at once legislators, judges, and executioners; and we approve the bill passed at the last session of the United States Senate, and now pending in the House of Representatives, relative to contempts in Federal courts and providing for jury trials in certain cases of contempt."

In 1900 the national Democratic Party condemned government by injunction. In 1904, the party stood for strict economy, opposed unnecessary entanglement in Oriental and European affairs, and renewed its support of trial by jury in cases of indirect contempt. In 1908 the party stood firmly against the great and growing increase in the number of officeholders. In 1912 and 1916 whole sections of the platform were devoted to restatement of faith in States rights. In 1920, this was what the party stood for:

"We believe * * * that each State, being responsible for the intellectual and moral qualifications of its citizens and for the expenditure of the moneys collected by taxation for the support of its schools, shall use its sovereign right in all matters pertaining to education."

Again in 1928 the national Democratic Party demanded that the constitutional rights and powers of the States shall be preserved in their full vigor and virtue.

And in 1932 to come right to the start of the New Deal era, the national Democratic Party, asserting that its platform would be a covenant to be faithfully kept, stood for an immediate and drastic reduction of governmental expenditures, maintenance of the national credit by a Federal budget annually balanced, and no interference in the internal affairs of other nations.

Now, it is perfectly true that through the years, the national Democratic Party fostered many social and political reforms as the party of the workingman. It is true, also, that in the past several campaigns, an expression of faith in the Constitution and in States rights unaccountably has disappeared from Democratic platforms.

But at a time when the House is taking up a civil rights bill, and vast foreign spending lies ahead, it is useful to look back upon some of the original principles of the Democratic Party. These are the things the party stood for; and when the party stood by them the South stood by the party.

Another Protest Against Benson's Antifarmer Farm Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, I agree with my constituent, Mr. Hawly Wagner, of Fisher, Minn., when he wrote me "I just do not know what Benson is thinking with." When he says, further, "I don't suppose there is anything to be done," I am afraid, under this administration, he might be right. But I, for one, am going to fight every step of the way for a sound farm program and go on registering protest after protest after protest against the Benson antifarmer farm program.

Under unanimous consent I include in the RECORD another in a long series of protests from family farmers who live with the Benson antifarmer farm program and who, apparently, Mr. Benson is trying to eliminate from the American economy:

FISHER, MINN., *May 6, 1957.*

Honorable Congresswoman KNUTSON:

About 2 weeks ago Secretary of Agriculture Benson set our wheat price for next year at $1.78 per bushel, country average. I just do not know what Benson is thinking with. With the exception of fertilizer all costs of raising our crops have gone up, and he cuts the price we are to receive. I do not mind a cut in acres of wheat, but give us a fair price, and 75 cents on a dollar is not fair. I don't suppose there is anything to be done, but every letter is a protest any way.

Sincerely yours,

HARVEY C. WAGNER.

Appendix

Address by Maj. Gen. P. D. Ginder Before the Illinois Department, ROA, Chicago, Ill., May 25, 1957

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. BOYLE. Mr. Speaker, recently in Chicago, through the good offices of Col. Frank W. Chesrow, president of the Illinois Reserve Officers Association, I had the opportunity to address the delegates at a ceremony honoring Maj. Gen. P. D. Ginder, Assistant Chief of Staff of the Department of the Army. The guest of honor's address, on that occasion, was outstanding, and I am happy to include his speech under unanimous consent to extend my remarks in the Appendix of the RECORD.

The address follows:

ADDRESS BY MAJ. GEN. P. D. GINDER BEFORE THE ILLINOIS DEPARTMENT, ROA, CHICAGO, ILL., MAY 25, 1957

Colonel Chesrow, distinguished guests, fellow members of the ROA, I am deeply appreciative of the recognition which you have accorded me. I accept this honor in the name of those thousands of anonymous, loyal, energetic reservists without whose support the forward strides of recent years could not have been made.

In World War II and Korea, I have seen the magnificent citizen soldiers of this Nation in action and there are none finer. Gen. Maxwell D. Taylor, Army Chief of Staff, has said that in the nuclear age our reserve component forces will determine our ability to react quickly and to wage war over the long pull. From the Army standpoint, we now have a firmer requirement for highly trained Ready Reserve forces than we have ever had in our history. With your faith and your support, I am confident that even greater progress can be made in the future than in the past. I thank you again.

I would like now to briefly discuss with you the evolution of the Army's Reserve components.

All of you are aware of the historic role of the Reserve components and know that in every war we have ever fought it has been the citizen soldier, sailor, and airman who have far outnumbered the regular forces. In past wars we were fortunate in being protected by natural barriers from surprise attack by land or sea. Then again the combat readiness of our gallant allies gave us the chance to mobilize and train Reserve forces before committing them to combat.

Today we are confronted with a new set of conditions. The technological advances of the last two decades have made it possible for our potential enemies to apply great force in a minimum amount of time against much of the free world. Since we are the most powerful nation in the world spiritually, economically, and materially, we are the prime target for destruction by the proponents of communism whose announced aim is the domination of the earth. To be weak under such circumstances is to invite attack.

Our strength is the bulwark of freedom and the protector of all free men. We have a global responsibility that demands that we maintain adequate military forces, a sound economy for the support of a strong industrial complex, vigorous research and development programs, and a well educated, healthy, prosperous people. To be the leader and to stay out in front demands a certain amount of sacrifice on the part of all citizens who enjoy freedom and its benefits.

You who are assembled here and millions like you across America have not only served in combat but are now paying in taxes for the strength necessary to maintain a minimum national defense posture. It is the youth of the Nation who must also be made to understand that they are also obliged to give of their time and energy for national defense. Some would like to take the chance of being drafted. But I regret to say that security cannot be based on chance—that would be too great a risk in the new era of guided missiles with atomic warheads.

It is this new technology which forces us into an evolution in the active services as well as the Reserve components. Old ideas and concepts are being discarded daily. New evaluations are being made of force structures, weapons systems, training systems, and means for survival. The mushroom cloud over Hiroshima has left its mark on military thinking, and those who resist progress are as dangerous to the cause of freedom as are our enemies.

Now you might ask, "What is the nature of the evolution in the Army's Reserve components?" Permit me to hastily present for your consideration some of the factors which require change from the systems and concepts of the past.

As all of you know, the Army is being reorganized under the pentomic concept. Under this concept all of the major combat forces are undergoing a reorganization which will result in a better capability to utilize the tremendously powerful new weapons systems developed in recent years. New combat support systems are being developed to conform to new strategic and tactical concepts for these new forces. At this point in time, mobility of the mind is as essential as mobility on land, sea, or in the air.

Now the Ready Reserve mission as set forth in the Armed Forces Reserve Act of 1952 is to provide trained units and individuals for use in time of war or national emergency to meet requirements in excess of those of the Regular components.

If our Reserve component forces are to have the capability to carry out their mission, these forces must be organized, trained, and equipped in the same manner as the active forces. We simple cannot afford to put forces in the field in war that cannot be called upon to perform equally as well as the active forces. Neither can we entrust the protection of our production base and centers of manpower to forces that lack the capability to meet the attacker on equal terms. These facts are so obvious that they perhaps need not be said. But the magnitude of the evolution that is taking place in all of the services and its eventual impact on the Ready Reserve will have far-reaching effects that all of us must face calmly and intelligently.

In brief, we must first reorganize the Ready Reserve force structure to conform to new structures being evolved. Second, we must introduce the new weapons systems and tactical concepts into the reorganized units. Third, we must retain the officers and men of the units in the use of the new weapons systems as a part of the armed services team. Quality in men and materiel must come first; quantity, second.

No one expects these measures to be accomplished overnight. The full implementation of this process will take years to accomplish. Nevertheless, we cannot go at this in a leisurely fashion. There is a sense of urgency in the matter which leaves no time for complacency.

Much planning has been done on how best to accomplish this evolution from the conventional systems of World War II and Korea to the atomic systems of the future. We do not have all of the answers now and probably never will have for the simple reason that each year brings new developments that alter the planning factors. What we plan now for 1960 may be entirely different from what we do when 1960 comes around.

One factor that complicates planning for the future is that neither we nor anyone else has ever fought an atomic war. Planning factors are really "best guesstimates." You need only read the newspapers to know that there are divergent opinions among the services as to the nature of future war. These are honest opinions of patriotic men who want America to have the best possible defense at least cost. Out of this melting pot of ideas will one day be distilled a clearer statement of the future structures and roles of the services. A firm estimate of the size, structure, and role of the Ready Reserve will come out at the same time.

This evolution of the Ready Reserve I have been talking about is not going to be an easy thing to accomplish under the best of circumstances. There may be an insufficent quantity of the new weapons to simultaneously equip the Regular and Ready Reserve forces. There will be the problem of retraining the officers and noncommissioned officers in new concepts of how to fight, how to use the new weapons, and how to survive.

Again I want to emphasize that we need quality. We cannot afford to expend resources available to us on measures which may fail to produce military proficiency for the atomic age. We must direct our efforts toward the production of units with a degree of training readiness in peacetime that will permit their immediate use in combat on D–day or shortly thereafter.

The past has shown that the citizen soldiers of this Nation can adapt themselves to and absorb new ideas faster than those of any other nation. Properly led, trained, and equipped, our Ready Reserves are the best in the world. At the present time, the Ready Reserve is stronger in all respects than it has ever been. We have the right to be proud of progress being made. Nonetheless, the best minds of this Nation will be required to find means to effect an orderly transition from what we now have to what will be needed in the future.

Many people are severely afraid that another global war is just around the corner. Wars do not just happen—the only thing that could make war inevitable is the mental conviction of the leaders of nations in conflict that it is inevitable. Our job is to

deter war—maintain the peace. If, however, we should some day find ourselves mobilizing for war, I would want to go into combat with every weapon in our arsenal and on our drawing boards. And I believe that the trained officers and men of our Ready Reserve would prove to be the finest guided missiles we have and would lead to victory for our side. Men, not items of military hardware, are paramount in war.

In closing, let me emphasize that the armed services value and respect the advice of the ROA and similar associations dedicated to the maintenance of a strong national defense. Without your able support and assistance, many of the progressive steps taken by the Armed Forces would have failed to gain public acceptance. I salute you as comrades in arms and dedicated Americans. Thank you.

Give Them a Brighter Future

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Honorable W. Freeland Kendrick was an outstanding mayor of the city of Philadelphia. He was the founder of the Shriners' Hospitals for Crippled Children and on Sunday, June 9, 1957, at the National Shrine Hospital Day program at Philadelphia, Pa., George E. Stringfellow delivered a most interesting address. I ask unanimous consent that it be printed in the Appendix of the RECORD, together with a short biography of Mr. Stringfellow.

There being no objection, the address and biography were ordered to be printed in the RECORD, as follows:

GIVE THEM A BRIGHTER FUTURE

(Address by George E. Stringfellow, imperial chief rabban, A. A. O. N. M. S., member of the board of trustees and secretary, wills, bequests, and gifts committee, of the Shriners Hospitals for Crippled Children, at the National Shrine Hospital Day program, Philadelphia, Pa., June 9, 1957)

Mr. Chairman, distinguished guests, fellow nobles, and Mrs. W. Freeland kendrick, honorary chairman of the Philadelphia unit of the National Shrine Hospital Day program, a wise philosopher many years ago penned these inspiring words which I think are appropriate for this occasion when we honor the memory of Noble W. Freeland Kendrick, whose fertile brain gave birth to the idea of the Shriners Hospitals for Crippled Children:

"He has achieved much who has lived well, laughed often, and loved much; who has gained the respect of intelligent men and the love of little children, who has filled his niche and accomplished his task, whether by an improved poppy, a perfect poem, or a rescued soul, who has never lacked appreciation of earth's beauty or failed to express it, who has always looked for the best in others and given the best he had, whose life is an inspiration and whose memory is a benediction."

Such was Noble W. Freeland Kendrick, whose memory commands a devotion rooted deeply in human gratitude of his beneficiaries. Noble Kendrick is represented here today by the presence of his widow, one of the most gracious and one of the most lovable persons anyone could ever hope to meet. She was of immense help to him and through him she made a great contribution to our way of life. It's a pleasure and a privilege to acknowledge her presence.

I am delighted to take part in this observance and I bring to you the greetings of Imperial Sir Dr. Gerald D. Crary, imperial potentate; the Imperial Divan, which I in part have the honor to represent; Dr. Galloway Calhoun, president and chairman of the board of trustees of these hospitals; and finally, Imperial Sir Harold Lloyd, chairman of the wills, bequests, and gifts committee.

Our fraternity started 87 years ago with 13 members and 1 temple. Today we have over 800,000 members and 166 temples. As the organization's membership and influence grew, it became apparent that to maintain its spiritual life, the shrine had to become something more than a playground for masons.

In 1911, Imperial Sir Fred Hines, imperial potentate, inspired the thinkers and planners of our fraternity to find a project to justify the shrine's spiritual existence. One of the first proposals was to establish a tuberculosis sanitarium for shriners' children. While this was deemed impractical, it led to the inspired idea of the shriners' hospitals for crippled children.

The shriners' hospitals as we know them had their beginning 37 years ago when Mayor W. Freeland Kendrick, imperial potentate, resolved to find a way to give crippled children of all races and of all creeds a chance to become useful citizens. He outlined his plan to shriners and other public-spirited citizens who enthusiastically supported him.

The cornerstone of the first shriners' hospital was laid in Shreveport, La., 35 years ago. Today, we have 13 hospitals in the United States, 2 in Canada, 1 in Mexico, and 1 in Hawaii. The physical property of our hospitals is worth more than $20 million. These hospitals were built and are operated by shriners. Funds to support these temples of mercy are provided by shriners and through endowments made possible by wills, bequests, and gifts from charity-minded persons.

The underlying purpose of our hospitals is to transform crippled children into normal boys and girls. They are open to children of all races, all creeds, and all colors. Here are the basic requirements for admission:

1. The child must be under 14 years of age.
2. There must be some hope that treatment will be of benefit, and
3. The parents or guardians must be unable financially to provide for the treatment and hospitalization.

Since the opening of our first hospital 35 years ago, we have rehabilitated close to 300,000 crippled children. In the words of Dr. Galloway Calhoun, "No man stands so straight as when he stoops to help a crippled child."

The hardest battles are fought and the most glorious victories are won, not in wars between men but in wars of men against hardship and handicap, against disease and death.

The members of the Shrine of North America have fought against these things, hidden and unhidden, for many years. Especially those things which cripple little children, twist their limbs and bodies out of shape, strike them down in many ways and hang over them like swords of doom. The love for little children has turned the members of the Shrine into ministers of healing and happiness. The Red Fez takes its place with the Red Cross and the red seals as an emblem of mercy and loving kindness.

Basically, the Shrine's objective is to:

1. Promote truth, justice and good fellowship; and
2. Support the Shriners Hospitals for Crippled Children.

Since its inception, the Shrine has been a humanizing force. It has succeeded in keeping alive the spirit of youth. It adds years to our lives and life to our living.

We Shriners know that pleasure is something one can take out of or put into life, but happiness is something one must share. That is the lesson Shriners learned early in the history of our fraternity. We realize that we do not have a moral right to play until we have helped others who are less fortunate. We have our parades, our ceremonials and our pageants. We are a fun-loving organization. However, our greatest enjoyment comes from the knowledge that we are today giving a brighter tomorrow to thousands of crippled children and thus enriching our own souls.

GEORGE E. STRINGFELLOW

George E. Stringfellow, born in Reva, Va., son of James and Elizabeth F. (Bowers) Stringfellow. Married Carrie M. Fearnow.

He is senior vice president of Thomas A. Edison Industries of the McGraw Edison Co.; was a daily business associate of Thomas Alva Edison for many years.

He is director of Mine Safety Appliances Co., Pittsburgh, Pa.; member of the board of directors of the American Mining Congress, Washington, D. C.; the American Institute of Mining and Metallurgical Engineers, New York City; member of the board of directors of Indiana Technical College, Fort Wayne, Ind.; and member of the board of governors, American Foundation of Religion and Psychiatry, New York City.

He is honorary member of the New Jersey Medical Society; was awarded the certificate of service by the Rotary Club of Orange, N. J.; was cited as the outstanding citizen of the Oranges and Maplewood; was cited by the Brotherhood Committee of Christians and Jews for bringing about a better understanding among the three religious sects.

Received an honorary degree of doctor of fine arts from Ithaca College; honorary degree of doctor of laws from South Jersey Law School; honorary degree of doctor of laws from Upsala College; honorary degree of doctor of humanities from Indiana Technical College; a citation of merit from the New Jersey Association of Business Schools; the 1953 Gustav Lucie Brotherhood award; the citizen award for outstanding achievement in industrial statesmanship from the New Jersey Society of Professional Engineers.

He is past president of the New Jersey Taxpayers Association; founder and first president of the New Jersey division of the American Cancer Society, and recipient of the American Cancer Society award. Served two terms as president of the Kiwanis Club of New York City; served two terms as president of the Chamber of Commerce and Civics of the Oranges and Maplewood; former chairman of the finance committee of the Republican Party of New Jersey; member of the Imperial Divan of the Shrine of North America and member of the board of trustees of the Shriners Hospitals for Crippled Children.

The Problem of International Control Over Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. JOHNSON of Texas. Mr. President, the eminent and distinguished

commentator Walter Lippmann raises this morning some of the fundamental issues involved in the problem of international control over nuclear weapons.

With his usual incisive logic, Mr. Lippmann highlights some of the confusion that is attendant upon current policies. He also goes to the heart of the question—the responsibility the nuclear powers have to the rest of the world.

I ask unanimous consent that his column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of June 13, 1957]

TODAY AND TOMORROW

(By Walter Lippmann)

THE TESTS AND OUR POSITION

The administration is no doubt well aware that on the issue of the testing of nuclear weapons, it must not only make the right decisions. It must also justify them to the opinion of mankind. For the air belongs to all mankind, and the fallout from the American, the British, and the Russian nuclear explosions does not fall exclusively on American, British, and Russian territory. We are confronted with Khrushchev's proposal to put an end to all explosions, and, whatever we may think of the sincerity or the wisdom of the proposal, it is one that we must discuss fully and frankly.

In his television interview a week ago Sunday, Khrushchev had some things to say which provide a good opening for the discussion. He had been asked by Mr. Schorr, of the Columbia Broadcasting System, why the Soviet Government has not given notice of, or even announced afterward, the last five tests conducted in the Soviet Union. Khrushchev's answer was in substance: If your country were big enough, as is Russian territory, for you to explode these tests in the United States, you would not warn of these tests beforehand. This does not happen to be strictly true in that we do announce the tests inside American territory. But what is important about the statement is not this minor inaccuracy. It is the possible implication that the territory of Russia is so big that nuclear explosions could take place within it and remain unknown.

To be quite fair, Khrushchev did not say explicitly that explosions in Russia, if they were not too big, could take place undetected. But he came near enough to saying it to warrant our asking him about it.

For this is precisely the point which troubles people in this country who would otherwise be glad to see an agreement to suspend the tests. They believe that it is in fact quite possible to set off an explosion in Siberia which would not be detected.

Beyond this there lies the question of whether, supposing that technical arrangements could be agreed to for detecting explosions, it would be wise to abolish further testing. On this there is a wide difference of opinion within the administration and the armed services. There are those who believe that if there were no more tests here or in Russia or anywhere else, we would be ending the race securely in the lead. There are others who believe that if the tests are discontinued at this point, the development of the new weapons, which is now underway, will be thrown into confusion.

As a result of these differences of opinion, we are not speaking to the world as clearly as we should. At one time we seem to be saying that we would halt the tests if reliable methods could be agreed upon for enforcing the agreement. At other times, for example in the President's press conference last week, our position seems to be that we will not suspend testing unless we can be very sure that nuclear weapons will not be used at all in a future war. As that is something we can never be sure of—given the fact that the weapons already exist—this is very near to being a rejection of the idea that tests should be suspended or even limited.

Is this a tenable position for the United States? By a tenable position I mean one which we can continue to stand on, what with the mounting anxiety all over the world, what with the Soviet proposal to suspend all tests. I do not think we can stand there, and that we must take the position that we are prepared at least to limit, if not to suspend, further testing, subject to reasonable guaranties that the agreement will be observed.

For despite all the dispute among the scientists about the effects of the fallout, it is impossible to deny that a continuation of the tests—with three or more powers setting off the explosions—may do great harm to many people. If only the people of the three nuclear powers were liable to the harm, the decision could be made coldbloodedly that this is a price that must be paid for security. But when all the other nations are liable to the same harm, we have no right, without their consent, to impose the risk upon them.

The Soil Bank

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 13, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Herald Tribune of today, entitled "Soil Bank Reprieved," and an editorial published today in the New York Times, entitled "How Not To Cut the Budget."

On the question of the soil bank, those who live in the large cities must decide how to rationalize farm production without piling up huge surpluses, which place a double tax on the consumer in the large cities, in the form of prices and taxes. I am in favor of giving what seems like a very constructive plan a chance to work, especially as it is coupled with getting away from high fixed farm price supports, which I believe victimize the city consumer and deceive the farmer. I hope very much that the conferees on the part of the Senate will stand fast in conference on the action of the Senate and see to it that we get the full benefit of this effort, at long last, toward a constructive farm policy.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 13, 1957]

SOIL BANK REPRIEVED

The Senate has acted with commendable wisdom in saving the administration's soil bank program, which is designed to rid this country of its wasteful and expensive crop surpluses. The heart of the program is the acreage reserve, which provides for withdrawing land from the growing of wheat, cotton, corn, rice, tobacco, and peanuts, the so-called basic crops. But last month the House decided that payments to farmers for doing so should end after this year. This meant that the acreage reserve plan would have been in effect for only a year and a half, scarcely long enough to do much good.

Now the bill will have to go back to the House. But the chances are that in its final form it will retain the soil bank in its integral shape, which includes, besides the acreage reserve, a long-range conservation program.

There has been criticism of the soil bank, and, as usual, the farmer's interest has been obscured or forgotten in the contest for political advantage. Of course the soil bank costs money. Of course there are bound to be some abuses of it by a small number of unscrupulous farmers and landowners. But the point is that it provides the best foundation for a reasonable farm policy, the best hope for stabilizing agricultural production of the United States while protecting both farmer and consumer.

Secretary of Agriculture Benson was quite right when he characterized the House's action as false economy. Without the soil bank there would be no end to increasing price supports and other unproductive subsidies on which the farmer would become dependent for a large percentage of his income. As for the consumer, his taxes and the prices he paid for food would rise at the same time. Piles of surplus crops would continue to mount. Certainly the House must not torpedo the soil bank a second time.

[From the New York Times of June 13, 1957]

HOW NOT TO CUT A BUDGET

Administration forces in the Senate, with the stalwart assistance of a handful of Members of the opposition who refused to go along with the majority leaders, have won a victory of no inconsiderable importance in the field of farm policy.

The soil-bank plan, as originally passed, called for payments up to $750 million annually under the acreage reserve (emergency) phase of the program and $450 million annually under the conservation reserve (long-term) part of the program. Acreage reserve payments are payments made to farmers who agreed to remove from production acreage devoted to such surplus crops as wheat, corn, cotton, peanuts, rice, and tobacco. Payments under the conservation reserve phase of the program are payments to farmers signing agreements to retire surplus cropland to such soil-conserving uses as trees or grass. In both cases it was contemplated that the arrangement should remain in force for the 4 years beginning with 1956, or through 1959. However, under the conservation reserve, or long-term, phase of the program, though the period for entering into such agreements was to expire in 1959, the agreements themselves could extend much further into the future.

Last month the House, carried away by a sudden urge to cut back the administration's $71.8 billion budget, applied the meat ax to the soil-bank program. It voted to knock out the acreage reserve feature completely after this year and to reduce the ceiling on aggregate annual payments under the conservation phase to $250 million. The Senate, in this week's commendable job of restoration, voted to authorize the acreage reserve payments through 1958 and raised the ceiling on conservation-reserve payments from $250 million to $350 million.

It is true the Senate action is not automatically binding upon the House and that the difference between the two versions will have to be ironed out in conference. But we think that the Senate ideas will in the main prevail. We say this because the House Representatives at the conference will not be in a position to defend their own version very strongly. For they will be encumbered by the embarrassing fact that in refus-

ing to authorize the funds for the continuation of the acreage-allotment plan through 1958 they were slashing the budget for 1957–58, though such payments would not make their appearance budgetwise until 1958–59.

Welfare Fund Bills

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the New York Times of June 5, entitled "Welfare Fund Bills."

This excellent editorial refers to measures before the Committee on Labor and Public Welfare and its Labor Subcommittee, which would require the registration and reporting of union welfare and pension benefit plans. It undertakes a comparison of S. 1145 with S. 1122, introduced respectively by myself and Senator DOUGLAS, and urges prompt enactment of S. 1145 properly amended to encompass the recommendations made recently before the Labor Subcommittee by Secretary of Labor James P. Mitchell. I might add that S. 1145, thus amended, has been reintroduced by myself as S. 2175.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELFARE FUND BILLS

Secretary Mitchell's proposals for Federal legislation dealing with labor welfare and pension funds throws the whole weight of the Eisenhower administration behind drastic full disclosure. Involved, directly or indirectly, are the well-being of 75 million people and an annual intake of $7 billion, of which $2 billion is labor's contribution. The administration's position is now much tougher than it has been in the past.

Two measures now before Congress are in point: the Ives bill (S. 1145), which the administration backed last year, and the Douglas bill (S. 1122). The Ives bill gives the Secretary of Labor wide discretion in deciding what information is to be required and the degree of public disclosure, with power to exempt "classes or types" of funds. It also provides penalties for failures in compliance. The Douglas bill, however, stakes out in great detail the ground to be covered in registration and reporting, requires records to be publicly available, gives the SEC investigating power and prescribes penalties not only for violations but also stronger ones for the actual misuse of funds. But it exempts from registration all plans covering fewer than 25 persons and those with fewer than 100 from annual reporting.

Secretary Mitchell's proposals are made as amendments to the Ives bill. They would eliminate the Secretary of Labor's discretionary power as to exemptions now given in the bill and would make mandatory public disclosure. They would also give the Secretary authority to investigate and to impose penalties—much as in the Douglas bill. The Secretary would be required to draw up a schedule of the information to be furnished by the funds, certified by audits of public accountants.

The Ives bill, so amended, should be promptly passed. It would then include the strong features of the Douglas bill and exclude the weaker ones, especially the exemption of smaller funds and SEC administration. Also it would follow sound principles of Federal-State jurisdiction—leaving to the States the power to set up and enforce operating standards and giving to them essential, and nationwide, information of great help in performing that task.

The Girard Case

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Austin (Tex.) Statesman for June 6, 1957.

The editorial is an extremely clear exposition of the issues in the William S. Girard case, a case of high importance to every American now serving his country in uniform in a foreign land.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAVE WE THROWN A UNITED STATES SOLDIER TO THE WOLVES?

Government authorities would have been in better case had they surrendered immediately Army Sp3c. William S. Girard to a Japanese court to face manslaughter charges in the death of a Japanese woman rather than waiting until an anti-American, mob-like hysteria had broken out in Japan and then deciding to turn the youth over to the tender mercies of a Japanese court surrounded by inflamed public opinion.

This is another of the occasional inept actions which have followed official decision. This youngster is in the land of a former enemy doing his duty as an American soldier, and as a guard at a range had specific general and special orders to keep trespassers off the field. Presumably he was on post. If so he would have violated orders if he had left it to attempt at first hand to get trespassers off the field.

These trespassers, called in Army vernacular "scavengers" because they rushed in between firings to pick up empty shells for their metal value as junk, insisted on breaking field regulations and so the habit had been to fire empty shells from a grenade discharge mechanism on the soldier's rifle in the general direction to try to get them away. In the case of young Girard, the shell inadvertently killed a woman.

Federal authorities now have put themselves in the attitude of appearing to sacrifice young Girard to incendiary Japanese opinion in order to mollify that opinion, a thing which soldiers and the parents of soldiers and the friends of soldiers as well as American public opinion will not quickly be inclined to forget.

State Secretary Dulles and Defense Secretary Wilson, neither of them identified with the military, conveniently ruled that Girard was not acting under orders at the time. This has the appearance of being an expedient device for turning young Girard over to the Japanese, about whom there is reason to doubt now that they will be able to give Girard a fair trial. The value of an American soldier apparently is less important than appeasing a Japanese mob.

Harry Karns Writes About the Shrinking World

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HOSMER. Mr. Speaker, Mr. Harry Karns is one of our country's serious students of the world today and the position of the United States within it. Combined with an articulate expressiveness in both speech and written word his knowledge serves to help his fellows to greater understanding of the basic factors affecting our lives. Recently there appeared under his byline in the Long Beach Independent-Press Telegram newspaper a particularly penetrating analysis of why Americans must be intimately concerned with events in seemingly far away parts of the world. The piece was illustrated by a map of Europe, 12 years after the close of World War II, showing how the U. S. S. R. dominates the scene with satellite nations clustered like a shield around its western borders. Adopting the theme that intercontinental bombers and missiles have made every man everybody's neighbor, including southern Californians and Russians, Mr. Karns wrote:

CALIFORNIANS, THIS IS YOUR MAP

(By Harry Karns)

Take a look at the map on this page. The places portrayed here are practically in your backyard.

There was a time when these areas were foreign to the United States in almost every respect. They were distant in terms of both time and space. We could isolate ourselves from their affairs—and their imbroglios—with few, if any, ill effects.

But today this is as much your map as is the map of southern California.

The speed of modern aircraft has made every man everybody's neighbor, for better or for worse.

Last January 16, 3 B–52 Stratofortresses took off from Castle Air Force Base at Merced. Forty-five hours and 19 minutes later, they circled in over the San Bernardino Mountains and swooped to a landing at March Air Force Base.

In the interim, these intercontinental carriers of H-bombs had flown around the globe nonstop.

Irrevocably, you became your foreign brother's neighbor, if not his keeper, when these mighty jets set their wheels down on home soil at the end of that historic flight.

For our defense strategists are not deluded. They know that the world's airlanes are two-way routes and that, indeed, the Russians possess a counterpart of the B–52 which makes our side of the world just as accessible to them as their side is to us.

In the case of almost any nation except Russia, this closeness would present no serious problems. But the map's artist illustrates vividly why proximity to Russia is dangerous.

During World War II and thereafter, before the free world detected her broad scheme, Russia had stabbed in the back and staked down a string of states from Estonia to the Mediterranean Sea. Their subjugation was effected by flagrant assault or the less violent but quite as deadly method of political subversion.

Having just defeated a truculent and ambitious Germany, the nations of the West now found themselves threatened by a truculent and ambitious Russia, which so short a time before had been their ally. The satellites served Russia as a shield behind which to foment unrest throughout the world. Armed and trained by Russia and backed up by the vast Russian armies, they posed an ominous threat to the peace and freedom of Western Europe.

Owing to the shrinkage of the earth in the air age and the interwoven economic ties among modern nations, the fate of the Western Hemisphere was inextricably bound up with that of Western Europe and other areas adjacent to Russia or Russian-dominated territory. Any spot in the world at swords points with communism became our defense frontier.

The perfection of nuclear weapons and globe-circling aircraft has brought that frontier to within a bomb throw.

That throw could be frighteningly accurate. Last year, the Gyroscope Co. announced it had developed an electronic control system enabling B-52 crews to ferret out and strike "any target in the world in any weather."

Presumably the Russians are working on their own devices for locating and striking targets under difficult conditions.

And so this is your cozy world as of spring 1957.

What effect has it upon your smaller world of daily contact? How does your home area, southern California, fit into the picture?

As a major defense center, southern California provides jobs for thousands in the aircraft, electronics, and shipyard industries and in the myriad industries and businesses which serve, supply, and supplement them. It is the setting for vital Navy bases, Marine and Army camps, Air Force bases, and weapons experimentation ranges.

Again, there is a direct relationship between the map above and a map showing southern California's protective ring of 16 Nike guided missile batteries. This ring, running from the Santa Monica Mountains to Point Fermin, includes batteries at Los Alamitos, White Point, Point Vicente, Lakewood, Hyperion, Saddle Peak, Playa del Rey, Redondo Beach, Sepulveda, Oat Mountain, Los Pinetos, Magic Mountain, Whittier Narrows, Mount Gleason, Brea, and Mount Disappointment.

These form our last line of defense in the event the enemy should decide to try to extend another chain from the central stake and bring the United States of America into her collection of satellites.

But this line of missile bases in southern California is not separate from the line dividing the free from the slave worlds in Europe and Asia, as shown in the map. Rather, it is an extension of that line.

We are no longer a drowsy, quiet countryside in an obscure corner of the world. That day is gone forever, and our heartbeat is one with that of friend or enemy, wherever he may be.

Protect FBI Files

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. McCULLOCH. Mr. Speaker, on Tuesday, June 4, 1957, my senior Republican colleague on the Committee on the Judiciary of the House yielded to me for some comments on the Jencks decision by the United States Supreme Court.

In view of those comments and my tentative feelings about such decision, I wish to call the attention of the House to an editorial, which appeared in the Washington News under date of June 11, 1957.

The editorial follows:

PROTECT FBI FILES

The time is short, the issue vital, and therefore, it seems to us, Congress should move quickly to find out just how the United States Supreme Court's decision in the Jencks case must be applied, or overruled by a new law.

This is the case in which the high court appears to have ruled that under certain circumstances the Government's confidential FBI files shall be opened to persons charged with crime and to the public generally. The alternative apparently is for the Government to drop its prosecutions.

Protection of the confidential files of Government intelligence agencies is, in our view, basic.

Reports of confusion among Federal district attorneys about the effect of the decision are numerous.

Associate Justice Tom Clark of the Supreme Court said that the intelligence agencies of the Government might as well close up shop if the Court's decision stands. He said it would permit criminals to rummage through confidential information as well as vital national secrets.

The trial judge in the case, Ewing Thomason of El Paso, has said the ruling is the "greatest comfort to guilty defendants in many a year. * * * I am in agreement with Justice Tom Clark."

The Justice Department is making a major study of the effects of the decision. But Congress should start its own inquiry with immediate hearings.

Congress should not await the Justice Department's findings.

Congress makes the laws.

In this case, it seems to us, it better make a law quick, or find convincing evidence that the Supreme Court's ruling is not as dangerous as Justice Clark says it is.

Further Awards for Rev. John M. Positano, O. S. A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. LANE. Mr. Speaker, for the past 14 years, the Reverend John Michael Positano, O. S. A., national honorary chaplain of the Italian American Veterans of the United States, Inc., has entertained our servicemen and women in hospitals, camps, and other military installations.

During World War II, in the Fourth Naval District, he organized, with the permission of the late Cardinal Dougherty, archbishop of Philadelphia, his famous Father John's Musical Troupe, a cross section of professional song and dance men, amateurs, policemen, firemen, cabdrivers, boy scouts, high-school students, anyone who was willing to work with him in his free time and on a voluntary basis.

Father John emcees his shows and performs personally on his clarinet and is called the priest who plays his prayers, and referred to as the one who brings musical medicine to military patients.

In an operation of mercy, he has made approximately 750 visits to the sick, and so forth, bringing them a musical gift.

A former member of the musicians' union known as Jack Foster, he now carries a gold card giving him lifetime honorary membership in the federation, an honor shared by few people, such as former President Truman.

Having the talent, after his ordination by Cardinal Spellman in 1942, he used it and organized that of others as he personally says to do his share in the war efforts.

He styles his work, which is beyond his normal duties as a pastor's assistant, active in youth activities, scouting, and so forth, a means to boost the morale of the Armed Forces and to spread good will toward those of different races, colors and creeds.

He not only organized, rehearsed, and directed talent—all in his so-called free time off-duty days, but made most of the contacts—phoning, pick up, transportation of the troupe, and so forth.

Besides the field of entertainment, Father John cooperated tirelessly with bond and stamp drives, blessing banners on the street corners, treating military personnel from the parish on furlough, celebrating military masses for their physical and moral welfare, and so forth. He assisted at military funerals, made contact with Gold Star mothers, sent over 18,000 spiritual folders to boys and contacted them by letter, helping to rehabilitate them after leaving separation centers.

He lectured at universities to civic groups, and so forth, who in turn supplied hostess groups, ward parties, and so forth, for the service personnel.

Awarded twice by the Fourth Naval District, he also was cited by the Army, the Marine Corps, USO, American Legion, Catholic War Veterans, National Jewish Welfare Board, Red Cross, Salvation Army, the Italian Government, and most recently by the national department of the Italian American War Veterans of the U. S. Inc., for the work he did with his group of entertainers, in bringing new hope and happiness to thousands of hospitalized veterans—for devoting his time to youth and Scout activities to combat juvenile delinquency, and currently for lending his talents to help the Hungarian refugees.

One of his greatest thrills, as he says, was to appear on the TV show We the People for Truman's Committee on Religion and Welfare of the Armed Forces, to appeal to the communities to take up where USO left off after it became financially pinched.

His latest appearance was at the Chelsea Naval Hospital, Chelsea, Mass., on June 6, where he gave the shut-ins there a dose of his musical medicine.

On June 7, he publicly honored not only his present troupe of 35 entertainers, but the memory of all people engaged in similar work, at a dinner in

Lawrence, Mass., and made the following statement:

We still have a big job to do, entertaining and maintaining the morale of the men and women in the Armed Forces. It takes warm words to win a cold war. This means not merely giving money, it means giving one's time, talent, one's self, the spiritual uplift needed by those away from home. America, my friends, has always been a land that has honored its dead, let us never become a land that has forgotten its wounded.

THE WHITE HOUSE,
Washington, April 19, 1957.

Rev. JOHN M. POSITANO, O. S. A.,
National Honorary Chaplain, Italian-American World War Veterans of the United States, Inc., Holy Rosary Church, Lawrence, Mass.

DEAR FATHER POSITANO: The President was glad to be reminded of the many volunteer services performed by our citizens on behalf of the armed forces. The various measures of "comfort, joy, and relaxation" which they provide are much appreciated and certainly add to the morale of the recipients—and of the donors.

Please give the President's greetings to the members of your troupe when you honor them at dinner in Philadelphia on May 6th.

And best wishes to yourself.

Sincerely,

FREDERIC FOX,
Special Assistant in the White House Office.

THE WHITE HOUSE,
Washington.

Rev. JOHN MICHAEL POSITANO, O. S. A.,
National Honorary Chaplain, Italian-American World War Veterans of the United States, Inc., Holy Rosary Church, Lawrence, Mass.

DEAR FATHER POSITANO: The President asked me to thank you both for your nice letter and for letting him see your scrapbook of items telling of the fine work you and your troupe have done entertaining people in veterans' hospitals during the last 14 years. I know he adds his own personal thanks to the appreciation of the individuals who have enjoyed your performances.

Certainly you must find great satisfaction and reward in your efforts to bring pleasure to so many deserving soldiers and veterans.

With best wishes.

Sincerely,

ANN C. WHITMAN,
Personal Secretary to the President.

P. S.—I am returning your scrapbook to you, since I know it has great value for you.

ITALIAN-AMERICAN WORLD WAR VETERANS OF THE UNITED STATES, INC.

This is to certify that Rev. Father John M. Positano, national honorary chaplain, has served our organization faithfully and honorably as a spiritual adviser, a veteran, and a musician. By playing his prayers through the reed of his clarinet, he has brought many back to the sacraments. His guiding principles and devotion to God, he has shown some the way to the top in their profession. He has worked tirelessly, with his troupe of entertainers, in bringing new hope and happiness to thousands of hospitalized veterans. He unselfishly devoted his time to youth work and scouting activities to combat juvenile delinquency. Most recently, he has lent his talents to the Hungarian Relief Committee. With great personal sacrifice Father Positano continues to extend a hand to all men in need regardless of race, color, or creed. In recognition thereof, and for his exemplary devotion to the causes of our great organization, I proudly and humbly sign my name to this most deserving commendation.

FRANK A. CINELLA,
National Commander.
ANTHONY P. CIOFFI,
National Adjutant.

A Postal Employee's Wife Explains Her Nagging

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mrs. SULLIVAN. Mr. Speaker, a few days ago I inserted in the Appendix of the RECORD a letter which I had received from a postal worker discussing the difficulties he and his family were having in maintaining a minimum standard of living on his present salary scale. I felt he spoke for many postal workers and presented a good case; hence I thought his letter would be interesting to other Members of Congress as well.

I recently received another unusual letter on the same subject, this one from the wife of a postal employee. She confesses that she aggravates her harassed husband by nagging him over money matters, and adds:

Can anyone keep from nagging when you do not have enough money to feed and clothe your family properly?

One of the things which impresses me very much about this housewife's letter is her report on the great amount of home work which is part of a postal clerk's job. I have heard this many times from postal employees who must put in endless hours of unpaid overtime at home working on postal schemes. I think it is a point well made.

As one of those, Mr. Speaker, who has gone on record in favor of the postal pay increase now under consideration, I feel it would be helpful to those Members of the House who may not have made up their minds on this legislation to read this letter, as follows:

ST. LOUIS, MO., *June 1, 1957.*

Mrs. JOHN B. SULLIVAN,
Members of Congress, Third District, Missouri, House Office Building, Washington, D. C.

DEAR CONGRESSWOMAN: I am a housewife, the wife of a postal employee and mother of two children. My husband's salary is $4,410 per year. The actual takehome pay is $145.54 every 2 weeks. This is what we have to live on. The only items that are taken out of my husband's pay are taxes, retirement and life insurance on himself. There is no possible way to save any for a rainy day, in fact we have to do without things that we really need.

I was on a strict budget a few years back, but the price of everything has increased so much that is is impossible for me to be on any type of budget, as I do not have enough money to go around. I buy just the items we need to exist and if there are a few pennies left over, they go for items like ice cream and soda for the children.

My family has not had a vacation since my husband began working in the Postal Service. During the first few years he was working as an extra or substitute in the Postal Service and did not accumulate or earn any annual leave and was required to work when he was needed. He thought when he became regular he could spend some time with us and perhaps all of us could take a much-needed vacation, but his thoughts were wrong. The fact is when he became regular the prices of everything kept increasing and his wages remained practically the same, therefore what budget I am working on surely will not allow for any vacation for any of us.

My two children are going to grade school and believe me it costs something to send them to school. I do not know how we will manage to send them through high school and perhaps to college on my husband's salary. At the present time I buy the material and make practically all of my clothing, also the children's and part of my husband's clothing.

I have asked my husband many times to resign from the postal service and to return to his previous trade, which pays much more than his salary in the postal service. I am sure he would not have any trouble bringing himself up to date in his previous trade. My husband has equal to 12 years in the postal service. He says he likes this work and has too many years in the postal service to resign now and also he thinks the postal salary and service will get back to normal in the near future.

I know I aggravate him a lot by nagging, but can anyone keep from nagging when you do not have enough money to feed and clothe your family properly? I also know this is not my husband's fault, but the fault of the Government, that is the reason I am writing you and hoping you can get something done about it. I am sure all of you in Congress are somewhat familiar with these problems. I have seen the B. L. S. figures and almost anytime you hear the news or read a newspaper, you see or hear that the cost of living has reached an alltime high. I do not need to see or hear this, all I have to do is go to buy food or any other article that is a necessity to life to find out this information.

I have relatives and friends who are working in outside industry and in some cases they are making three times as much as my husband. Even the ones without a trade of any sort are keeping up with the cost of living.

I am not trying to keep up with the Joneses. All I am asking is for my husband to be paid a salary that will provide my family with a decent living.

I have heard some people say that anyone can be a postal clerk, that it is no trade of any sort. If this is true, then why does my husband have to study so much on his own time to keep up with his work? All of the postal clerks I know have to do the same thing. They just get through with one scheme and have to start on another. This is the life that a postal clerk's family has to live.

I ask you, what would you do if your children asked for a new pair of shoes or food that is so high that you cannot afford to buy it, due to the measly salary that the Government pays a postal employee?

I am sure you do not need any itemized accounts of actual expenditures to prove the above statements.

Sincerely.

Farley Casts a Prediction

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I would like to insert the following cheerful political forecast made by the Honorable James A. Farley as reported by Bob Considine in the New York Journal-American on May 31, 1957:

FARLEY CASTS A PREDICTION

(By Bob Considine)

James A. Farley, 69 this week, feels there will be a Democrat in the White House before he's 72.

The big, robust and respected chairman of the board of Coca-Cola Export Co., one of the more astute professionals in the history of United States politics, hedges only slightly in this birthday prediction.

The men in the running for the 1960 nomination must win any interim elections by a good, stout margin to be successful against a Republican banner carrier who may be personally chosen and endorsed by Dwight D. Eisenhower. Here's Jim:

"I would say that if Bob Meyner, the Governor of New Jersey, wins decisively next year in his try for reelection, he'll be hard to overlook in 1960. So will Senator SYMINGTON, Senator KENNEDY, and LYNDON JOHNSON. And don't count out Governor Harriman or JOHN MCCORMACK."

Tacitly, Farley appeared to have eliminated Adlai Stevenson and Estes Kefauver. Or perhaps they were included in his sweeping "and others."

"Our chances are better than good to gain seats in the Senate and House next year," Big Jim said, "because in the case of the Senate most of the races next year will be conducted in normally Democratic States, and in the case of the House we won in 1956 despite the Eisenhower landslide. So it should be easier to win in 1958.

STILL FULL OF BOUNCE

"The swing is Democratic through the country. People want a change, just as they wanted a change and got it in 1952. We just happen to have more good young Senators and Governors than the other fellows."

The old Haverstraw, N. Y., first baseman who put F. D. R. in the White House and broke with him over the third-term issue, is full of bounce these days despite two recent operations on his right eye.

He removed his glasses, as we sat in his memento-filled Madison Avenue office, held a hand over his left eye and tested the orb whose retina was detached when struck with a flying placard at the Chicago convention last year.

"I can see you O. K.," he said, looking across his desk. "The trouble is that you're farther away than the good eye tells me you are. But thank God I've had an 80-percent recovery after the second operation." The talk returned the scene to his mind. "I was standing there with Bob Wagner, Abe Stark, and a couple others, in a blizzard of flying cards and falling paper, as I've done a thousand times before, when I saw the darn thing coming at me. I ducked, but so did it—in some wind current, I guess—a direct hit."

Jim's cheerful about that and things in general.

"I've lived as an adult through the greatest half century in the history of mankind," he said, with enthusiasm. "I saw the Wrights fly their plane up the Hudson the year I came to New York—1906. I saw the first Pan-Am Clipper land at Pearl Harbor after a flight from California. If somebody had told me 50 years ago that I'd sit in New York and watch a football game being played in San Francisco I'd have said he was crazy."

PEOPLE BASICALLY STRONG

He is not one to pine for the old days. "The Nation's getting along fine, I think," Jim said. "If we have any troubles right now, we'll work them out. We always come through. The people are basically strong and right. We all gripe about taxes and criticize those who must levy them. But we're living a lot better than we did 25 years ago, and with atomic energy and all we'll be living that much better 25 years from now."

I asked Jim to name the 10 greatest men he had met. Without hesitation he answered, "Not necessarily in the order named, I'd say they were Popes Pius XI and XII, Al Smith, F. D. R., MacArthur, Eisenhower, Herbert Hoover, Churchill, Harry Truman, and De Valera."

His day? "I'm at work at 8:30 and stay until 6:30 or 7," Jim said. "I manage to get to the Biltmore Turkish baths three times a week. A good steam, a rub and a cold shower constitutes the kind of forced relaxation a man needs."

Then he paused imperceptibly and the room of many memories and affectionately inscribed photographs of the mighty was very still.

"Besides," he said, thinking of his busy life, "since Bess passed on it helps to kill the hours."

Atom Tests

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. YARBOROUGH. Mr. President, Texas has in Robert W. Akers, of the Beaumont Enterprise, one of the ablest and most cogent editorial writers in the Nation.

I ask unanimous consent to have a portion of Mr. Akers' editorial for June 8, 1957, printed in the Appendix of the RECORD.

Mr. Akers, in these four short paragraphs, characteristically goes straight to the heart of an important matter: the playing of partisan politics by this administration in regard to the testing of nuclear weapons.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S LIKE THIS

(By Robert W. Akers)

Poor old Adlai Stevenson.

Less than a year ago he was condemned as "dangerous" because he suggested an end to atom tests. Now everybody's getting in the act, including President Eisenhower, the man who defeated him.

What editorial outbursts against his thought. What outrage among American Legion convention delegates who heard him make his suggestion in Los Angeles. What viewing with alarm on the part of Republican speakers in the 1956 presidential race.

It was the first week of last September, a scant 9 months ago, when Adlai appeared before the war veterans at their national gathering. For the rest of the vote drive, right up to the November 6 election, Democratic Candidate Stevenson was dogged with reprimands, charges, and accusations because he proposed halting A-bomb and H-bomb experiments.

I remember writing a column at the time in which I pointed out that Mr. Eisenhower himself had, as President, suggested atomic tests be discontinued as a step toward disarmament.

But this was too good an opportunity to be booted away by the Republican high command. The fact that there was a fundamental agreement between the two candidates on the issue was conveniently ignored and dat ol' debbil Adlai took the rap for destruction of America's defense. Even the President followed the tactical course of overlooking his previously stated views on the A-bomb question.

Felix E. Wormser Leaves Government Service

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HOSMER. Mr. Speaker, Assistant Secretary of the Interior for Mineral Resources Felix E. Wormser leaves Government service on the 15th of this month. At a great personal and financial sacrifice to himself he accepted the assistant secretaryship in 1953, agreeing to serve for 1 year. The difficulties and challenges of the post kept Secretary Wormser at it for over 4 years.

There are probably few responsibilities in Government more important and more deserving of attention from men of courage, knowledge and decision than those dealing with the Nation's basic minerals supply problems. Secretary Wormser brought all these qualities and more to the execution of his duties. Particularly, he brought to them a deep understanding of the American political and economic system: both its benefits and its workings. As a consequence the welfare of our Nation and its people have been enhanced by the personal sacrifices Secretary Wormser has made over these years of devoted, patriotic service to our country.

There were often points of difference between Secretary Wormser and members of the Congress of the United States on matters affecting our minerals programs. But these points always were those on which patriotic men might differ honestly according to their own beliefs as to what is in the highest and best interests of our country. I am sure that there is not one amongst us in the Congress of the United States who does not feel an abiding respect and affection for Secretary Wormser, nor who does not most sincerely wish him well on his return to private life. Probably our individual feelings were summed up by President Eisenhower on June 4 when he wrote as follows in accepting Secretary Wormser's resignation:

DEAR FELIX: I deeply regret that the time is so near when you must leave Government service. However, I understand the personal reasons that led to your decision, and I must accept your resignation as Assistant Secre-

tary of the Interior, effective June 15 as you requested.

You can well be proud of the important public service you have rendered during the past 4 years. The mineral resources of the United States constitute a significant part of our national wealth. Their conservation and development merit at all times the close attention of experienced Government officials to insure that the strength they provide will be of maximum benefit for present and future generations. As Assistant Secretary for Mineral Resources, you have made a large contribution to the formulation of administration policies in this regard, and tangible evidence of your highly effective work will be available to the American people as they continue to benefit from these resources in the decades ahead.

My thanks go to you for your numerous accomplishments and for your willingness to remain at your post long beyond the period originally specified. I wish you continued success and happiness in the future.

With warm regard.

Sincerely,

DWIGHT D. EISENHOWER.

Address by W. Paul Stillman Before the Advertising Club, Newark, N. J., June 4, 1957

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. AUCHINCLOSS. Mr. Speaker, I appreciate this opportunity to insert in the CONGRESSIONAL RECORD a speech made by an old friend and constituent of mine, W. Paul Stillman, before the Advertising Club in the city of Newark, N. J., on June 4, when he received the Outstanding Citizen Award for 1956.

Mr. Stillman's address was on the subject of taxation, and his observations carried a particular message to the citizens of New Jersey. New Jersey is one of the very few States in the Union which does not have a sales tax or an income tax, and during these days of high cost in the operations of government there is a constant demand for the creation of new sources of revenue to meet State government operations. Like citizens everywhere, our New Jersey taxpayers do not want any new taxes—they want economy in government.

I am particularly impressed by the sensible, straightforward, and understandable advice which Mr. Stillman gives in the following sentences:

No matter how badly we may think we need a public service, it must never be purchased at the price of impairing the productive capacity of the community. There are things we cannot afford, and these things we must not attempt to acquire. A simple rule, but an often neglected one.

This advice may well apply to the problems we face in the Federal Government, and I may add that self-denial makes for strength of character, which is a trait the citizens of our country heartily admire. And again when he says in his closing remarks:

And when we think of taxes, let us remember that they must fit our environment, be tailored to our capacities, be adequate to our services, and equitable among our citizens.

We can all heed such advice with profit, and I am very proud to know Mr. Stillman as my friend who contributes sound reasoning and sensible advice in a simple straightforward way to his fellow citizens.

His speech follows:

Because the city of Newark is of such importance to the State, and because its future is so entwined with the future of the State, I would like to comment briefly upon a problem that is at the moment acute, and of paramount importance to both. No matter how worthy either a public or private project may be, its fulfillment will almost certainly depend upon finance. On the public side, this raises the thorny problem of taxation. On the one hand are the taxpayers, who must maintain their standards of living and protect the productivity of the bases from which taxes must be raised. On the other, are the service establishments, often represented by dedicated men and women who agree with former Justice Holmes when he said, "I like to pay taxes. With them I buy civilization." Each of us agrees with both points of view, but each of us has different responsibilities to fulfill; and it is, therefore, methods rather than objectives, that create the great dilemmas of public finance.

Our major difficulty is this: Basically speaking, the choice of methods is comparatively limited. By whatever names we may call them, or in spite of whatever refinements we may introduce into them, there are only four bases from which a State can raise substantial revenues—sales, income, property, and excises—and every State has a major base or bases that classifies it as a certain type of State. Whatever this major base may be, it tends to become a balancing item to meet increased expenditures. As service demands increase, the pressure on the major base increases; and taxpayers seek relief in some other base that will redistribute portions of the burden.

In spite of the heaviest property tax in the country, New Jersey has for many years resisted a shift to other forms of taxation. This resistance has been deep and genuine. It has been reflected in the platforms of both parties for 20 years. It has received full and continuous endorsement at the polls. Both governors and legislators have, on the whole, either respected, or learned to respect, this mandate. It is true that New Jersey is the only industrial State that has maintained this tax pattern. Indeed, only two other States—Nebraska and Texas—have neither income nor sales taxes. On the face of it, New Jersey appears in a somewhat irregular position, and there are those who continue to urge that we should get in step with modern tax practices.

After many years of association with this problem, there are three overall conclusions that seem plain to me:

First, New Jersey is one of the greatest industrial and residential areas in the world. It is, I believe, our destiny to intensify this development. In an environment such as this, perhaps, a property tax base makes more sense than in an agricultural community where income is so closely associated with property.

Second, New Jersey is a small State in area, with great urban concentrations at both ends; great recreational facilities in every part; and great highway corridors that link it with the North, South, and West. Perhaps a broad use of excises and even selected sales, best reaches the tax liabilities of those who use our services.

Third, New Jersey is a State which develops on business competition. Taxes are an important element in competitive costs. We are generally regarded, tax-wise, as a favorable State for business. We must maintain that advantage—and let us never forget this.

I am not unaware of the imperfections of our tax structure. The fifth report of the Commission on State Tax Policy to which I subscribed, set these forth in considerable detail; and the sixth report emphasized a "century of inequities" in our property tax. These imperfections, I wish to see corrected; and I have been pleased with the progress made in this direction over the past 5 years. To some it has seemed slow and insufficient; but to me it has been steady, thoughtful, and fundamental.

More progress has been made toward putting our property tax in order, than in all the preceding years of our statehood.

Our grant-in-aid programs have been generously increased, both toward the improvement of our services and the restraint of our property base.

Our competitive position has been maintained, and will, I am confident, be strengthened, by further improvements in our property tax that are now so much before us all.

There is, however, the other side of this problem—increasing expenditures at all levels of Government. It is the intensity and magnitude of these pressures that so often throw tax structures out of balance. But I have a few thoughts on this, also. The place to restrain large and untimely expenditure programs is at the taxing level. Once a major tax is adopted, its yield is the only limit to its use; and it will carry other bases along with it. Tax dollars raised at the local level are harder to raise and better spent than any other dollar in the tax economy. No matter how badly we may think we need a public service, it must never be purchased at the price of impairing the productive capacity of the community. There are things we cannot afford, and these things we must not attempt to acquire. A simple rule, but an often neglected one.

Both our State and our city are faced with the old, old problem: How to maintain adequate services for their citizens and still maintain the competitive advantages that make such maintenance possible. New Jersey has, within our life span, been a well-governed State. Our city has made great strides in the past few years. We are proud of what has been done, and look, with confidence, toward further improvements. We are a conservative State. We are not given to violent and erratic changes nor to untried experiments. New Jersey is a good place to work and a good place to live. Let us dedicate ourselves to keeping it this way; and when we think of taxes, let us remember that they must fit our environment, be tailored to our capacities, be adequate to our services, and equitable among our citizens.

One Less Handout

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following, which appeared in the New York State Taxpayer of April 1957:

BEAT THIS BUDGET ITEM BACK

Federal budget, page 441, contains this item for airline subsidies: "Appropriated 1957, $16,200,000. Estimate in 1958, $51,810,000." That is an increase in this giveaway

of taxpayers' money of $35,610,000 or 220 percent more for 1958 than for 1957.

Now hear this: Continental Airlines, Inc., has asked Uncle Sam to stop giving it $1 million annually in the form of subsidies. The company said it wanted to operate on a nonsubsidized basis, the Wall Street Journal reports. Many other airlines are operating without subsidies which is the American way of doing business. A few, however, continue to operate in the Pan-American way—with handouts of taxpayers' money.

Address by James G. Patton, President, National Farmers Union, at the United Nations Rally, Huron, S. Dak., June 4, 1957

EXTENSION OF REMARKS
OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. McGOVERN. Mr. Speaker, one of the clearest and most effective voices in America today is that of Mr. James G. Patton, president of the National Farmers Union. A courageous fighter for an abundant agriculture, Mr. Patton is equally devoted to the cause of world peace. Believing that food is an effective tool in the building of a peaceful world, he has played a major role in significant efforts such as that of the International Federation of Agricultural Producers.

He recently addressed a United Nations rally in my State which was attended by representatives of the International Federation of Agricultural Producers from 17 countries. Mr. Patton's excellent address is reproduced below in full:

ADDRESS BY JAMES G. PATTON, PRESIDENT, NATIONAL FARMERS UNION, AT THE UNITED NATIONS RALLY, HURON, S. DAK., JUNE 4, 1957

We have a historic opportunity tonight to discuss the United Nations and express our confidence in the community of nations solving their momentous problems. With us at the IFPA conference at Purdue University were 59 representatives of 17 countries. Most of this group is with us today.

Our guests have just concluded the 10th anniversary meeting of the International Federation of Agricultural Producers, the association of farm organizations throughout the free world. For 10 days at Purdue University, in Indiana, they discussed as delegates and observers the common problems and common aspirations of farmers around the world.

Their presence here is more than a visit to a country which many of them had not seen before. It is a symbol of the international understanding among men of good will which has been the hope of peace-loving mankind since the beginning of civilization. These distinguished guests represent the ideals, as well as the sinews, of our modern-day attempts to live together in democratic understanding.

They represent those who till the soil for a living, those who produce the food and fiber to sustain life on this planet.

To the extent that food is a common denominator among people of the world because everyone needs food, the presence of these guests signifies the extent to which we are winning the battle to bring nations closer together.

We meet at a time when the President of the United States has instructed his disarmament chief to return to talks with the Russians about the mutual advantages of laying down weapons. I do not know—and I doubt that anyone knows—whether we can accomplish this with the Russians, or they with us. But I most sincerely hope that our President will be successful in stopping this horrendous armament race which is taking substance from the world's populations and increasing the threat of a conflagration which might destroy us all this time.

Surely there are millions who agree that this folly must be stopped. Surely there is some way to stop right now the pollution of our life-giving air with death-dealing radioactive particles. Surely the genius which devised the atomic bomb, then went on to build the bigger hydrogen bomb, can be harnessed for devising some way to make their use—and even their testing—unnecessary.

It has been encouraging to note the impact made recently on our thinking about the atomic bomb race by the great Albert Schweitzer, the Nobel Peace Prize winner and humanitarian who has been called the first citizen of the world.

Dr. Schweitzer's "declaration of conscience" about the dangers to ourselves and posterity from radioactivity and the urgency of stopping our mad race with each other may be the voice necessary to make statesmen pause and consider their folly. The voice of this revered man, coming from a wilderness hospital where no cause but humanity has been served, can yet be a tremendous force of conscience on those who have been too busy to hear conscience.

As Dr. Schweitzer put it, "the end of further experiments with atom bombs would be like the early sunrays of hope which suffering humanity is longing for."

"We are committing a folly in thoughtlessness," he says. "We must muster the insight, the seriousness and the courage to leave folly and to face reality."

The specter of the atom bomb race is only the most gigantic of many reminders that we are today interdependent with other nations. In the blush of "prosperity," some in the United States choose to ignore this basic fact; but it will not be ignored by the push of civilization and the laws of nature.

We cannot long remain a citadel of a rapidly expanding economy with a rising standard of living and an increasing agricultural productivity, if two-thirds of our neighbors continue to lack for the food, the clothing, and the basic individual freedoms which make a decent life possible.

No responsible individual nor organization in our Nation can ignore the implications which their domestic programs and purposes have for this world challenge. The scientific developments the past 20 years have blasted for all time any reality of isolationism, for in this the second half of the 20th century we live in a world geared to communication, rapid transportation, and interchange. The increasing intertwining of these relationships and responsibilities, cannot be turned back like a clock, even if we so wished.

Faced with these realities, we inevitably will direct more and more of our time and attention to the problems and concerns outside our Nation, to those of the world community.

We know now that we must hold fast to certain fundamental and basic concepts (1) That a vast majority of the people of the world are motivated by good; (2) that a peaceful world cannot be achieved through a pattern of unilateral and bilateral arrangements—it must be approached through the community approach of the United Nations; (3) that the present destructive capacity of individual nations makes peace and survival synonymous; (4) that the nongovernmental organizations and groups of people, both at home and abroad, have a responsibility for giving form and substance to the attitudes of people—unburdened by the handicaps of formal diplomatic governmental and diplomatic protocol.

These premises spell out for us much of our founding faith—the ultimate good in the people, the essentiality of family and community, our peaceful purposes as tillers of the soil, and the importance of the loud, clear voice of citizenship in shaping the destiny of things to come.

Against these fundamental premises that meet at our very roots, let me review for a brief moment some of the practical difficulties which have broken our stride toward a peaceful world.

Our almost single-sighted emphasis on the military drive for security through military strength has caused misapprehension and misunderstanding abroad. You will remember that the Truman doctrine spelling out the import of the point 4 program spoke of the need to maintain and strengthen our defenses to give us time to pitch into the bigger job of raising the levels of living and the undergirding of individual freedoms abroad.

When Secretary Dulles threatens massive retaliation and speaks of three times on the brink of war, we not only are misunderstood abroad—we are betraying the great cause of international cooperation and good will.

Small wonder that a recent opinion poll in Calcutta showed that 38 percent of the Indians interviewed said that America was the Nation most likely to start world war III, while only 2 percent selected the Soviet Union, 1 percent Communist China, and the rest didn't know.

This seems incredible until we read that another survey in India showed that 86 percent of all the newspaper references to the United States in a single month were wire service reports from America of statements and analyses by American officials and Members of Congress on military matters—our newest atomic submarine our farflung airbases, our latest jets, our program of guided missiles. Thus millions of Indians had come to think of us as a militaristic nation.

I sincerely hope that our friends from India who are with us on this occasion will get no such impression.

Certainly we must provide for our national security. We yield to no one in our desire to maintain an adequate defense.

Only a few days ago, I received a letter of thanks from President Dwight D. Eisenhower for supporting the mutual-security program. Here, in part, is what he said:

"In this recognition of the importance of strengthening the saving shield of freedom, you and your associates in the National Farmers Union give voice to America's determination to stand firmly against the menace of international communism."

Defense and national security, as we all recognize, are essential components in our foreign policy. At the same time, however, let us also look to the other broad considerations that we cannot ignore as we accept the responsibility of leadership among the free nations.

THE COLD WAR

For all the range of the administration's "cool to lukewarm" relations with the Soviet world, let us not lose sight of the fact that we are continuously engaged in a cold war. The dimensions of this cold war are based on the fact that one-sixth of mankind live in nations which might be called advanced economically and socially, while five-sixth of the world's population live in retarded and economically underdeveloped nations.

We face the danger that the Soviet world, having undertaken to assist the underdeveloped countries, both bilaterally and through the United Nations, may make such causes taboo in the Western World.

Today, in a world shrinking in time and space, we must be responsive to the needs of the developing nations and the preservation of liberty in the minds of men throughout the free world.

We must not be put in the position of defending an indefensible "status quo" either with respect to our part in assisting the developing nations or in the work of the United Nations.

Part of this dilemma may be seen in our "selective or handmaiden" use of the United Nations. We tend to take the expedient route, looking at the short term view rather than basing our actions on the long pull. When it suits our purposes, for example, we move through the United Nations. When our individual short-term aims are more easily served through unilateral action, that is the avenue we pursue.

It would have created a far better feeling of international understanding, during the oil shortage in Western Europe, caused by the Suez and pipeline blockage in the Middle East, if we had sent oil through the avenues provided by the United Nations, instead of the unilateral, private avenues.

AREAS OF CRITICAL ADJUSTMENT

Other conditions which have made progress difficult on this highway to peace, are the critical adjustments and vast upheavals in vast portions of the world. Lord John Boyd Orr in his recent book, The White Man's Dilemma, puts it this way:

"The western powers are faced with the rising waves of revolt in Asia, Africa, and Latin America against poverty. They can try to resist it by force or keep it off by the offer of technical assistance and trifling loans with political strings attached to them, which will break on the first strain. In that case they will ultimately be destroyed or submerged.

"On the other hand, either with or without cooperation of the U. S. S. R., they could recognize the inevitable and use their overwhelming industrial superiority to create a new world of plenty.

"In so doing they would gain a new power and prestige by assuming leadership in the march of the human family to the new age of peace and prosperity and the common brotherhood of man, which modern science has made the only alternative to the decline and the fall of the western civilization."

Night after night, the voice of Moscow radio holds out the dreams of social revolution, supporting colonial struggles for independence, backing the nonwhite majority of the human race against all discrimination by the white minority, offering the use of their science and technology for rapid economic development. This goes on while we equivocate, apparently uncertain ourselves whether the stakes are big enough, whether our resources are great enough, and are up to our necks in status quo thinking which conceives of the world as it was at the turn of the century.

This is the challenge of our day—the use of our social as well as scientific skills, our good will, our belief in the brotherhood of man. And, armed with these and the machinery by which we put our attitudes into action, we are challenged to make the most far-reaching decisions we as a nation have ever made. In fact, it is a renewal of the decisions such as we made in launching the Marshall plan or point 4 assistance.

Without following through these momentous positive decisions our mantel of world leadership becomes shabby and tattered. Now, more than ever before, it is imperative that our attitude toward the underdeveloped areas of the world be farsighted, just, and generous.

MAXIMUM UTILIZATION OF THE UNITED NATIONS AND ITS AGENCIES

A direct alternative to the selective use of the United Nations of which I have spoken is the planned utilization of that body in every instance in which the community of nations is affected.

This means a more direct and open approach to such critical nation-to-nation problems as are posed by the Arab-Israel dilemma in the Middle East or by the revolting Soviet satellite nations of Eastern Europe. It means persistent and all-out effort to bring atomic weapons under international control, and to convert this scientific development into peaceful usage.

It means a continuing vote of confidence in the work and purpose of the specialized agencies of the United Nations—with the ready acceptance of our financial commitment to them. Specifically, it means a basic reappraisal of the values inherent in the Food and Agriculture Organization, the only official avenue through which the nations of the world may jointly attack the problems of food and fiber production and balance.

The specialized agencies such as FAO were not created idly. They should be used. They are action agencies—ready, available, needing to be used.

Members of the International Federation of Agricultural Producers have a unique opportunity to help get these agencies used. We know the force for good which is unleashed when food is distributed amidst hunger, when grass is made to grow where soil was barren, when water runs over parched soil, when rural communities have a crop saved from disease.

All these things can be done through the machinery of the United Nations and its agencies if we will but do them.

We should also end the equivocating use that we have far too often made of the United Nations itself for settlement of disputes. We can no longer hold the torch of leadership, if we do not at the same time accept the limitations placed upon that leadership in the body of nations seeking the same goals and dreams we hold most sacred.

PROGRAMS FOR EQUALITY OF ECONOMIC OPPORTUNITY AMONG NATIONS

Without the blood and muscle of programs which hold forth the means by which nations can become truly equal, the dream of the United Nations will fade under the impact of poverty, disease, and privation.

Specific implementations to this end have received our enthusiastic and wholehearted support. The Special United Nations Fund for Economic Development is one which would make constructive use of our stockpile of food and fiber in the world's areas of need.

All the so-called surplus United States food and fiber production would amount to but a drop in the bucket if the democratic nations should agree to use food to finance the progressive elimination of illiteracy in underdeveloped areas by establishing nationwide systems of free public schools for every child. The SUNFED proposal for a United Nations development agency is superior to anything we might do on a bilateral or unilateral basis, without the inevitable stigma of a giving and receiving nation involved.

We have also urged creation of an international food and raw material reserve. The objectives of the international food and raw material reserve are:

1. To prevent extreme price fluctuation in the international commodity markets,

2. To prevent famine and starvation,

3. To help absorb temporary market surpluses of farm products and other raw materials, and

4. To build economic—and social—development programs in cooperation with appropriate international agencies.

Another phase of this surge to bring equal economic development to the developing nations of the world has to do with the availability of development capital.

While the Soviet Union, through its processes of dictatorship, can accumulate and apply such capital for foreign investment and development as it deems to be of national interest, we democratic nations have rising standards of living which soak up an increasing amount of risk capital in internal development, shortening the supply for foreign investment.

We would not choose to slow up this process which brings an increasingly fuller life to our people, and we are keenly aware of the fact that much needs be done in this country in the eradication of poverty and privation. Yet, unless we budget our capital capability and make possible capital investment abroad we will surely one day find our citadel of economic well-being undermined by the ebbing tides of privation around us. To that end I propose (1) the setting aside of 1 percent of our gross national product each year in capital funds which can be budgeted for United States investment abroad; (2) that these funds be made available, as accumulated, on 50-year loans to developing nations.

Capital funds thus made available through our democratic processes to areas of economic need, would stimulate the flow of private capital as the economies of recipient nations emerge as increasingly better risks.

Also, we are wholeheartedly in support of technical assistance abroad, and we feel that more of it should be done through the United Nations and its agencies.

Technical assistance is the whole range of methods by which we, both as a nation and as a responsible member of the community of nations, come to the aid of developing nations with scientific, economic, political, educational know-how.

Technical assistance has no parallel in history as a stimulant to economic development.

The United States is the dynamic center of the world economy. The trade and tariff concessions we grant to countries in the course of their development and their ensuing growth in world purchasing power as a result of this realistic trade policy will transform itself directly and indirectly into greater international demand for United States exports, including agricultural exports.

There is, however, a larger meaning in this liberalization of our world-trade policy which is even more important. That is that the rising standard of living throughout the world is geared to the degree to which the products of these countries may flow into export channels. Faced with unfavorable balance, year upon year, the developing nations face an almost insurmountable task of lifting themselves by their own bootstraps.

One of the most productive means by which international understanding is accomplished is through programs of exchange of persons. We recommend the continuance and expansion of these programs.

This is one area in which the bilateral activities are softened by the tendency of person-to-person relationships to seek out means of understanding and good will. Both programs under the United Nations agencies and the United States programs under ICA should be greatly expanded.

And this brings us back to honor reflected on us tonight by the presence of so many distinguished leaders from so many nations of the world.

To get acquainted with a man is to understand him better. To get acquainted with a group of people is to understand all of them better. To get acquainted with a nation is to understand it better in the community of nations.

And understanding is necessary before we can build together, prosper together, live in peace together, and raise our standards of living together.

Let us try to lead in the creation of a truly free world with political maturity, with economic intelligence and with consideration for fellow men wherever they are lcated and whatever their race, religion, color, custom, or habit.

Let us exercise leadership with social humility as we point with just pride to our productive powers. Let us stimulate the free flow of labor, of talent, of knowledge, and of ideas.

Let us build together, for we are friends.

The Labyrinth of the Federal Budget: A Guide for the Uninitiated

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HOSMER. Mr. Speaker, one Robert E. Lee, a Yankee not to be confused with a certain other bearer of the name, slaves mightily bringing the ponderous events of the Nation's Capital to the public via the medium of the newspapers. From sumptuous offices in the Washington bureau of the Ridder newspapers, he recently issued his pundit's guide to the mysteries of the budget in handy question-and-answer form. It appeared in the Long Beach Press-Telegram newspaper in words and figures as follows:

HERE'S GUIDED TOUR THROUGH LABYRINTH OF FEDERAL BUDGET

(By Robert E. Lee)

WASHINGTON.—The following is offered as a simplified guide to the complexities of the Federal budget for the fiscal year starting July 1:

Question. Let's see now, President Eisenhower is asking Congress for $71.8 billion to run the Government in the next fiscal year—right?

Answer. Wrong. He's asking $73.3 billion, but not for spending as such and not for fiscal 1958 alone. Congress is now debating his authority to commit Federal funds, not the money he'll spend next year.

Question. Well, what about the $71.8 billion everybody's talking about?

Answer. That's Ike's estimate of the amount his administration will spend, out of the total of what he's asked Congress to authorize and what previous Congresses have authorized for fiscal 1958.

Question. Huh?

Answer. Roughly one-third of the dollars to be spent next year have already been authorized in previous years. Congress now must authorize additional obligations.

Question. Enough of that gobbledygook—the thing Americans are interested in is how much we're going to cut the budget.

Answer. Which budget? The 73.3 billion appropriations budget? The 71.8 billion spending budget? Or the consolidated cash budget which most economists consider the only real indicator of * * *

Question. Never mind which budget. What I want to know is this: Aren't the Congressmen cutting something at a rate which will add up to a total reduction of about $5 billion?

Answer. On the face of it, yes—if they really cut spending and not just authorizations, and if they don't turn around later and give Ike more money in supplemental appropriation bills.

Question. Aren't appropriation bills what they're cutting now?

Answer. They are, but they're just the regular appropriation bills. Later there'll be supplementals. In fact, there already are a couple in the works.

Question. What's a supplemental bill?

Answer. The same as a deficiency bill, only different. Deficiency appropriation bills have been outlawed since 1905 but we still have them almost every year, along with supplementals. When the administration finds as the fiscal year goes along that Congress didn't give it enough in a regular appropriation bill, the administration comes back for more.

Question. Does this happen often?

Answer. Well, in 1953 Congress cut Ike's budget (appropriations budget, that is) for fiscal 1954 by 4.6 billion. But in calendar year 1954 (before the fiscal year ended) it gave him back some 2.2 billion by appropriating that much more. By the way, don't confuse the 4.6 billion cut Congress made in Ike's budget for 1954 with the 14 billion cut in Truman's budget.

Question. Oh, of course not.

Answer. That was the first time two Presidents ever sent Congress two different budgets for the same fiscal year.

Question. Stick to the subject, please. We're talking about butting cederal fudg—I mean, supplementing the deficiencies, or something like that.

Answer. O. K. After that big cut in 1953 for 1954, partially restored a year later, before the fiscal year ended, Congress whacked 2.6 billion off the fiscal 1955 budget. The cut of course was made in 1954, but in 1955 the boys relented and gave Ike back a billion of it. They did the same thing next year, restoring half a 2.1 billion cut through supplemental and deficiency appropriations.

Question. Wasn't there only a small cut last year?

Answer. Depends on how you define "small." Congress held out a quarter of a billion or so on Ike but the figure would have been a lot bigger if they hadn't forced on him about three-quarters of a billion he didn't want for the Air Force.

Question. Didn't want it? He must wish he had it this year. What did he do with it?

Answer. Charley Wilson said he'd put it in the bank. Maybe it's still there. But the interesting thing about that cut last calendar year. The President a few weeks ago asked Congress for more than twice that amount in deficiencies and supplementals before the end of this fiscal year. In other words, he'll probably end up on the plus side for 1957.

Question. If it's so important to reduce expenditures why do they sometimes give the President more than he wants?

Answer. The importance depends on where the reductions are made. Take the pork barrel bill.

Question. You mean the annual appropriations for rivers and harbors?

Answer. That's the baby. Congress usually gives the President more than he asks because each Member has a pet project in his own district. The farm bloc has been doing the same thing to Ike in past years, voting him more funds for agriculture than he's sought.

Question. How about that big wrangle about post office funds for next year?

Answer. Well, the President has already asked Congress for a supplemental appropriation to make up the anticipated deficiency. Congress cut his postal request by 58 million and now he's asking 149.5 million to make it up.

Question. Looks like he's going to make a profit off the post office.

Answer. Don't be silly. Nobody ever makes a profit. It's just that the postal service is going to cost more than Ike figured it would when he asked for the money they wouldn't give him.

Question. I see. The administration always waits to see what will happen, then comes right back for more.

Answer. Don't jump to conclusions. Sometimes it works the other way. Ike cut down his own requests for foreign aid and the farm soil-bank funds before Congress even had a crack at them.

Question. Who gets credit for those cuts—Congress or the administration?

Answer. Everybody takes credit for everything, whether it goes up or down.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the 26th annual commencement exercises of Long Island University held at the Brooklyn Academy of Music on June 7, 1957, and on which occasion General Farley was the recipient of an honorary degree of doctor of laws. I am also inserting an editorial which appeared in the New York Mirror of Saturday, June 8, 1957.

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE BOARD, THE COCA-COLA EXPORT CORP.

This is one occasion when everyone present has a solid right to be interested chiefly in the affairs of himself, his family, and friends. To be graduated from an institution of higher learning is not a unique experience, but it is unforgettable. I shall not, therefore, trespass on your patience, or interrupt your natural emotions. But having had a ringside seat for a substantial period in the American scene, a few observations may be in order.

To begin with, none of you can indulge any nonsense about being a "lost generation," a group of youngsters inheriting a terrible burden because of the mistakes of your ancestors. Being an ancestor myself, I can state for the record that we made plenty of mistakes. But, everything considered, we did pretty well and you are inheriting the results. For one thing, all of you have a college eduction—which is more than most of my contemporaries had. It is true that you have struggled to get it, but the struggle has been a great deal less hard for you than it was for your fathers or your grandfathers. Again, all of you who want jobs have them or can get them without too much difficulty. Those of you who want more specialized schooling can have that, too, if you wish. Taking all elements into consideration, I really cannot think of any time or place in history in which young people had as good a break as they have here and now.

I know, of course, that a good many modern novels describe Americans and American youth as frustrated and mixed up,

sometimes delinquent and occasionally degenerate. Quite a flock of books have been written along that line. I can't take them too seriously. Perhaps it is proper to keep before everyone's attention that even in countries as fortunate as ours there are problem areas and problem groups. But these are the exceptions, not the rule; most of you, happily, have not been written up. Happy young people, like happy nations, do not have spectacular history; at all events, they usually do not make headlines. The time for that will come when you begin to turn in a good score, as I am sure you will.

Now what kind of a score do you want to turn in? This is a question which interests you at once because you are just starting your own careers. It also interests me because I have spent a good part of my life in politics. Politics is the profession, or perhaps the art, of bringing enough people together to agree on common policies and common courses of action and on measures and men so that communities as small as towns and as great as the United States can manage their affairs by the expressed consent of freemen. To any worthwhile politicians the opinions of thinking, trained men and women are of top importance. Since all of you here now belong to that group, as this university is certifying, your thinking and your desires are important, not only to you but to all of us. For that reason, I ask you to be careful in what you do think; when you do reach conclusions to make full use of the results. In saying this, I am not being abstract at all: men trained in politics as a rule cannot stop with abstractions. For example, if all of you here today felt strongly about certain things and all of you were prepared to do a little work to make sure that men pledged to the policies you want are elected, you yourselves could go far in compelling adoption of those policies by, let us say, the State of New York. Indeed the combined political influence of the group in this hall, if it were energetically exercised, might easily settle the result of a moderately close election of the State of New York. With that start, you could go far toward making your opinions a national force in the United States.

This is becaue men in politics know very well that they cannot put new ideas into effect merely because they think them up. The ideas they can make effective are those which have been worked out and thought out elsewhere, frequently in colleges and universities. Getting that done is their business, as you will find when you become influential in political life in your own time.

So the ideas you hold now are quite likely to become realities 10 years or so from now. Ideas which become political realities are loaded with high voltage; you have to be careful with them, for they may affect the lives of a great many people. All of you are part of the political fabric of the American democracy, and your influence will steadily grow as the years go by. Consequently, you have to use your minds not only for yourselves but in the general interest as well.

I said that the preceding generations have left you pretty well off, and so they did. That does not mean that they have not left you a healthy set of formidable problems. Some of them are worth mentioning here. How you solve them will probably determine whether your children in their turn will get a still better break than you have.

A visiting French educator has just made a profound observation. He said that the difference between our times and most preceding times is that the world from now on largely depends on our will. He meant that men working together now can do more to make the kind of world they want than ever before in history. Of course he is right about that. In earlier times men struggled against elementary nature to have enough food and shelter to kep them alive. They had little to do it with except their native muscles and skills and the power of draft animals. Now men already multiply their capacity a thousand fold with modern machinery. In your lifetime atomic energy will be harnessed, multiplying the capacity of every individual to an infinitely greater extent. This ability to command resources means that your generation can produce and distribute as much of the material things as they really need; it can even come within hailing distance of producing as much and as many things as everyone really wants—if they know what they want. The problem for all of you is not so much the old problem—can I live—but the new and greater problem—what kind of life do I want to live? This is a choice that many of the older of us never really had. You will find that this problem is very much tied in with your idea of the kind of country and the kind of world you hope to see. That is why, sooner or later, you will be in politics at some level, just as I have been.

You will find that young men and women move out and, let us hope, move up in three phases. They begin, as you have, in the circle of their family and immediate friends. You have done that successfully or you would not be here today taking academic degrees. The next step is to move into a wider circle, represented by your job or occupation or your profession. You are about to step into that larger world at once, either by taking jobs or by starting some professional training. You will be adding to your family and close friends a group of people who know you as lawyers or as chemists, as businessmen or as teachers, as office workers or in plants. This occupation world can extend very widely. Most creditable lives stop with this and I have no criticism of them. Doing your own job capably and well in any useful work helps the people around you and helps the United States.

But if you are really successful in this second world—the world of your occupation—you will find almost certainly opportunity to branch out into the greater world—the world of public affairs. This may not be public office; it might be merely a representative group like a trade union committee, a chamber of commerce assignment, or a public-affairs task in the community where you live. A good job of that kind well done immediately brings demands in still wider fields. These may be political; the party of your choice or the government of the city or State where you work may want your help. A democratic government, like ours, is always looking for men and women and especially younger men and women to shoulder the load of the endless technical jobs that have to be done. It looks, naturally, for the people who have been of use in their own fields of work. As soon as this happens, and it is likely to happen to all of you if you want it, you are on your way. Incidentally, you are taking your community and your country on your way, too, and this becomes important.

It is probable that changes in this Long Island community and in the State of New York and probably in the United States and the entire world will be greater in your lifetime even than they have in mine. That is saying a good deal because in my own lifetime there have been plenty of changes. You will have to make these changes useful and fruitful. Let me give you a couple of examples.

By the time you are 45—that is, in middle life—the United States will have 60 or 70 million more people in it than it does now and several millions will be in this greater New York area. Roughly speaking, there will be one continuous great city extending from Babylon on Long Island and New Haven in Connecticut as far south as Washington, D. C. But that means that the city of New York and the city of Newark and the city of Bridgeport, to take only three, although they lie in three States will be part of one big combination with common problems. They will need one transportation system, probably one health system. They will be tangled together in a dozen ways. You are quite likely to live in Connecticut, work in New York and use your professional or business ability in New Jersey, all in the same day. Obviously, we are going to have political and governmental changes that recognize that fact.

Internationally the same process is going on. When I was your age a trip to Europe was a major event in life—so great and so expensive that most of us could not dream of doing it without years of saving in preparation. Now you can cross the Atlantic in a single day, and within a few years you will be able to have breakfast in London and lunch in New York. In my business career I have to think of almost every country on the face of the globe, all at once, because the company I work for sells its product in them, and buys as well. No one human being has made this one world: it made itself, with airplanes, radio, and television. A world which lives as close together with itself as that either finds a common denominator or it blows itself up. The world to which you are coming is quite able to do either. So, internationally, as well as locally, you have to be expecting the great development of international institutions. As an old political hand, I can tell you it will not be easy. It is hard enough to get the United States together on anything although we have one language, one common ideal, and one form of thought. When you have to think of Frenchmen and Arabs, Israeli and British, South Americans and Japanese, all at the same time you will see that you have your work cut out for you. This is not mere starry-eyed internationalism—few people have accused me of that. It is idealism if you like but it is also business and politics. The present disturbance in Cuba, for instance, could be a factor in the increase of the price of sugar. The company for which I work buys a great deal of sugar so that a political crisis in Cuba and in other sugar-producing countries immediately affects our own affairs. This is true in all kinds of situations all over the world.

The mission of America—which is also your mission—has been to make it clear that freemen working together offer a better base for solving the problems now coming up than any other line of action. We may not be able to explain very well how we do it but there is no question that we can do it and have done it. If you were to draw a circle 15 miles in radius around your university you would find in it every kind of race, religion, occupation, and economic conflict. There are the same differences which in Europe and in the Near East, in Asia, and in Africa, have regularly led to revolutions, wars, and disorder of all kinds. Yet here there is peace and there is order. Men have better jobs and better pay than in most places. They lead their own lives without being pushed around by dictators. So we know that the thing can be done, that there can be freedom, and there can be peace, and there can be prosperity without indulging in Communist theories or in Nazi dictatorships. Long Island, for instance, can watch the expansion of the New York City area without being afraid that it will lose its liberty and setting up frontier guards and local armies. Americans think the rest of the world could arrange to get the same result under good leadership and free institutions. Finding those leaders and making such institutions really is the main issue in the cold war which is going on today between us and the Soviet Union.

It is also why, I think, the cold war will eventually be won by America, because American ideas offer the greatest measure of freedom along with the greatest measure of ordinary human kindliness.

These are some of the questions which you will encounter whether you like them or not. With the education and training you have already had and with the experience you are about to receive a fair proportion of you in time will be moving out of the world of your occupation into the world of great affairs.

An old philosopher once said that as a man thinketh, so is he. I should like to add that, as a nation thinks, so that nation lives. You will find as you grow older that your minds often turn back to the men and women who have taught you and notably to those who have given you mental and spiritual leadership. Many of these men and women are here today. They are not, as a rule, the richest or the most prominent by ordinary standards. They are quiet men and women who have taken the vocation of trying to think through, understand, and explain the problems of their particular fields of learning, and through them to understand the larger problems of human life. Do not leave them behind merely because you leave school. You think you are done with studying. In fact you will find yourself wanting and seeking teachers and thinkers all the rest of your lives. There are always two kinds of quite different power in a country like ours—the power of men of affairs who guide the present and the power of men of thought and spirit who guide the future. Those of us who are Catholics have known this for many centuries. My own life has lain in affairs. I am glad of that—it was my job. But it is fitting on this occasion for me to pay tribute to the quiet, patient men and women who as scholars and teachers point the way for all of us toward the next stage of the world's work.

In giving the younger of you my good wishes for the next generation I offer you teachers my grateful recognition for the service you have rendered to my own. God speed you all.

[From the New York Mirror of June 8, 1957]

A TIME OF DARING

James A. Farley, bless him, one of the statesmen of our time and one of its finest gentlemen, gave the commencement address at Long Island University yesterday. In the course of his remarks, he said:

"Taking all elements into consideration, I really cannot think of any time or place in history in which young people had as good a break as they have here and now."

Isn't that a wonderful and, at the same time, realistic, sort of optimism?

Our young people today are not members of a "lost generation."

They are a part of the "most historic" history since the world began.

Men, young and old, kid themselves with the wish, "Oh, if I could only have lived in the 'good old days'—when knighthood was in flower, when the Pilgrims came to America, when the Founding Fathers rocked the world and marked the end of colonialism, the dying gasps of which we see today, nearly 200 years later; or when there were cowboys and 'Injuns'; or in the Gay 90's or the Mad 20's."

What nostalgia. Of course, there were satisfactions for good men and women in those days, as in all days since the race lifted itself out of the slime and turned its face toward God.

But this, now, today, in our lives, is the time of growth and change beyond belief.

The atom, harnessed but not generally at useful work, will multiply the strength of man to physical heights previously unvisioned.

The world has shrunk surprisingly since the Wright Brothers and the great Santos-Dumont first lifted man from the sod in heavier-than-air craft. It will compress incredibly during the lives of Mr. Farley's listeners.

No spots on earth will be farther apart in point of time than one ranch was from another in the Old West.

The new sciences—or, more accurately, the projection of basic scientific principles through the barriers of new frontiers—will bring forth challenges to man's physical powers and to his moral fiber.

With the scope which his careers have imparted to him—careers in both politics and business, of which he is proud and has reasons to be—Mr. Farley painted a panorama of the present and near future which seemed to us to be inspiring and practicable at the same time.

These are no years of decadence and effete lethargy.

This is a time of daring, in which the endowments of mankind will lift the race to a new plateau of physical and spiritual achievement.

June is a month of many fine commencement addresses.

We hope all of them will be as soundly foresighted as the one delivered by Mr. Farley, a practical visionary, before the 26th graduating class at Long Island University.

A Bill to Amend Title XI of the Merchant Marine Act of 1936

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. TOLLEFSON. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a brief statement on the purpose of legislation which I introduced today.

The purpose of this legislation is to further clarify the authority of the Maritime Administration to insure mortgages on eligible ships under title XI of the Merchant Marine Act of 1936. Approval of this bill will enable the Maritime Administration to insure a ship mortgage, where the mortgage, instead of being executed at the time the vessel is completed, is executed some time later and the proceeds therefrom are used to finance the building of additional ships.

Adoption of this bill will make it possible for shipowners with heavy replacement obligations to fulfill these obligations at a minimum cost to both the Government and the operators by allowing owners to take advantage of the economies of long-range and sound financial planning. With the deferred mortgage commitment the shipowner can avoid present high interest rates by using funds in his capital reserve fund to pay in full for new ships, and then when interest rates become lower he could mortgage the existing wholly owned ship to provide funds for the building of additional new vessels.

There is substantial opinion indicating that Congress intended this policy of deferred mortgage commitments but this legislation will lay at rest any questions potential lenders might have concerning this application of the mortgage insurance provisions of title XI of the Merchant Marine Act.

Address Delivered by President Eisenhower at the Republican National Conference Held in Washington, D. C., at the Sheraton-Park Hotel, on June 7, 1957

EXTENSION OF REMARKS

OF

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. GRIFFIN. Mr. Speaker, there follows the text of an address delivered by President Eisenhower at the Republican National Conference held in Washington, D. C., at the Sheraton-Park Hotel, on June 7, 1957:

Mr. Chairman and fellow Republicans, just a few hours ago I stepped ashore from an American warship—one of the mightiest that this world knows: the aircraft carrier *Saratoga*.

During my 2 days aboard that vessel, living with her men and officers, I was impressed anew by the skill, patriotism, and selfless devotion of Americans serving in our Armed Forces. Their dedication to duty reminded me again of that wonderful observation by Gen. Robert E. Lee. He said: "We cannot do more than our duty; we would not wish to do less."

As I talked with these young men, I couldn't help feeling as though I were talking with all Americans—about their homes, their ambitions, and their problems. And, believe me, every American family can feel proud and secure in the knowledge that these young men—our Nation's best—are being equipped with and supported by the finest weapons in the world. I know that the American people will continue to see to it that the defense budget is adequate to provide every fighting man the best our scientists, our workers, and our industry can produce.

Now, you who are in this room today, as key officers of the Republican Party, also have a duty that vitally affects your country's well-being. That duty, which you are daily performing, is to help make representative government work in this country.

Representative government can succeed only where there are healthy, responsible political parties. These parties must have at the center and core of their being the same dedication to the service of our Nation as inspires the men of our uniformed services.

This sense of patriotism is felt by both of America's great parties—in this matter let no one anywhere in the world think that Americans are divided.

But one thing more is necessary: A political party must stand for something—policies that it believes will advance the best interests of the entire Nation. It must stand for principles and programs that the sovereign voters of the country can clearly see and identify and judge.

What do we as Republicans stand for?

Why have we joined together in a national organization? And why do hundreds and thousands of Republicans work side by side—often without recognition or reward—in tasks assigned by this organization to which we all belong?

We do this because we have been drawn together by a set of common beliefs and principles respecting government and its relationships to other governments, to our own economy, and to each citizen.

These beliefs are plainly stated in the agreed declarations of faith and determination which are the Republican national plat-

form of 1956. As we read and reread that platform—a practice which I commend to all of you—it becomes very clear that the modern Republican Party stands 100 percent for the basic principles of Republicanism that have been its guide since the days of its founding.

We believe in integrity in government—not government by crony.

We believe that whatever can be done by private effort should be done by private effort rather than by government—and not the other way round.

We believe that, if a job must be done by government, it should whenever possible be done by State or local government rather than by the Federal Government—and not the other way round. We oppose unnecessary centralization of power.

We believe in a sound dollar—not a rubber dollar.

We believe that a government should operate on a balanced budget and not go into debt except in emergencies—we reject deficit spending as a fiscal policy for America.

We believe that we should work to reduce taxes—not raise them; as we also seek to reduce our huge national debt.

We believe in vigorous and impartial enforcement of the laws.

We believe that private business is a healthy force which is the foundation of our prosperity, and should be respected and encouraged—not bullied and abused. And the fact that the period since the reintroduction of this attitude into government has also been the period of the greatest sustained growth in jobs, production, and incomes of modern peacetime is not, may I say, a mere congenial coincidence.

We believe that government can and should discharge its constitutional duty to promote the general well-being of its citizens—and can do so without excessive centralization.

We believe that to preserve our own freedom we must concern ourselves with the security of other free nations constantly exposed to the threat of domination by international communism. Nothing today can present more danger to us than a return to the folly of isolationism.

We believe in the preeminence of the individual citizen and his rights—with the government his servant, not his master or his keeper.

It is principles like these, then, that not only draw us together, but also set us apart from the easy-spending, paternalistic, business-baiting inflationists who were so influential in the years before 1953.

But, while our principles have remained unchanged for a hundred years, the problems to which those principles must be applied have changed rapidly.

Fortunately, one of the most all-pervading principles of our party—and one most important to us today—is the willingness to adapt our basic convictions imaginatively to current problems.

We recall those ringing words spoken by Lincoln at a time of great tension and change: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew."

It comes to this: It is the problems that change; the principles do not.

Let us look at several examples.

AGRICULTURE

The principle: Because of the unique exposure of the farmer to economic forces over which he has no control, and the dependency of the Nation upon our agricultural economy, the Federal Government must concern itself in practical ways to assist in assuring a sound farm economy and income.

One application of this principle a hundred years ago: A Federal Homestead Act providing free quarter sections of land to settlers.

The application today: A new set of Federal actions, such as sensible price supports, the soil bank, and stepped-up Federal research and development of markets.

It is the problem that has changed; the principle has not.

EDUCATION

The principle: Education is vital to free government and is a local matter; the Federal Government should do only what has to be done toward provision of adequate education that State and local governments cannot do and which will never allow the Federal Government to be a controlling factor.

One application a hundred years ago: The Land Grant Act sponsored by Congressman Justin Smith Morrill, one of the organizers of the Republican Party of Vermont. That Federal act made possible the growth of higher education in many places where it otherwise would have had great difficulty.

The application today: Emergency Federal help to assist the States to knock out a schoolroom deficit resulting from the national—not local—disasters of depression and war.

It is the problem that has changed; the principle has not.

MUTUAL AID

The principle: concern for the fate of other nations, and the conviction that our prosperity at home is aided by two-way trade with flourishing free economies abroad.

The application in President McKinley's time: Here are his own words of 1902: "The period of exclusiveness is past. * * * Reciprocity treaties are in harmony with the spirit of the times. * * * Isolation is no longer possible or desirable."

The application today: Not merely encouraging the maximum flow of mutually profitable trade, but also employing programs of mutual aid. Why? Because around the globe new nations have sprung up which must make industrial progress if they are to continue to live in freedom. Because godless dictatorship is bent on seeking their destruction—and ours. And because we know that as they prosper, we not only prosper but enjoy greater assurance of world stability and peace.

It is the problem that has changed; the principle has not.

OVERSEAS INFORMATION ACTIVITY

The principle: We have a responsibility to explain our motives and actions to the people of the world.

The application, at the dawn of our history as a country, is in the eloquent words of our Declaration of Independence. "Let facts be submitted to a candid world," it said, "* * * out of a decent respect to the opinions of mankind."

The application now must recognize that almost every action we take has an impact on the interests of other countries. At the same time, unfriendly powers use every device of communication to misrepresent our actions and purposes. So the modern application of the old principle requires us to maintain a first-rate overseas Information Agency.

It is the problem that has changed; the principle has not.

DEFENSE

The principle: The Federal Government must provide for the common defense, using those methods that are most effective and economical.

The application a century ago: Almost exclusive dependence on State militias, with tiny and inexpensive Federal forces.

The application today is changed because the nature of defense requires military forces of great size armed with costly equipment. To lessen the cost, we participate in a system of mutual military aid with friendly nations. This costs far less than if we tried to provide the same amount of effective defense by direct accumulation of military might at home.

But the principle remains the same: The most effective defense for the least cost.

Now, although we are agreed on our underlying principles, when we try to apply them to a fast-changing and highly complex world, it is not surprising that we develop among ourselves real disagreements, some of them sharp.

But let us not talk and act as though our disagreements concerned our basic principles. I believe they do not. I believe they concern the application of the principles to new facts, through specific measures and proposals.

Let's look squarely at this question of internal disagreement within the party. Let's not react to it as though something unheard-of and catastrophic had suddenly appeared for the first time in the history of political parties.

You know, some of us Republicans have a talent for magnifying and advertising our differences. Our opponents then seize on these statements to throw up a smoke screen to conceal their own deep division. Should we help them play that game?

The true fact is that it is our opponents who are hopelessly split. In their case the split is not mainly one of methods, but is one of basic philosophy and principle. They combine long enough to seek election—but when they are sent to Washington they tend to cancel each other out at the expense of actions.

And so, if our opponents say we suffer from splinters, let us remind them that a splinter in a party's political structure is one thing; but a political house divided against itself is quite another.

The real question for the Republican Party is: accepting the existence of some disagreement as normal, how do you then go on as a party to take the decisive and unified action that a party must take if it is to survive and play its proper part in representative government?

The answer seems obvious: by carrying out loyally the pledges and promises of the party platform.

Let us remember that the platform itself is not the product of one mind or of one group of minds. It is a consensus of party thinking.

We argue and debate and hold hearings, at which everyone is welcome to express himself.

Then we do our best to iron out our differences, through compromises, concessions, and the application of good will and restraint on all sides.

As a result of just such a process, the Republican platform of 1956 was drawn up. It was unanimously adopted by the national convention. It was then overwhelmingly endorsed by the country's voters—by a margin of almost 10 million votes.

On the pledges of this platform, your administration was returned for another 4 years.

Now, there may be some cynics who think that a platform is just a list of platitudes to lure the naive voter—a sort of facade behind which candidates sneak into power and then do as they please.

I am not one of those. Anyone who talks like that about party platforms is, in effect, saying that the whole principle of representative government is a pretense and a sham.

So far as I am concerned, the Republican platform of 1956 is a solemn commitment to the people of this Nation. It was accepted as such by them and endorsed by them—and I am going to use every power at my disposal to see to it that their hopes and expectations are honored.

The first step in carrying out a party platform is its translation into legislative proposals. I do not know how this may have been done in the past, but in this administration there have been each year earnest consultations between the executive branch

and our leaders of the legislative branch to devise a program giving legislative effect to the platform.

This is the administration's legislative program. And so far as the budget is concerned—that budget represents the cost of conscientiously fulfilling those pledges—nothing more and nothing less. Our need for economy must be balanced against the things that need to be done.

We must not forget that to be truly conservative today is to be alert to the dangers of loose spending and of tampering with our Nation's fiscal integrity. It involves also providing those things which would keep this country healthy, strong, growing, and secure.

My fellow Republicans, we all want to see victory in 1958 and 1960. And we can have victory in 1958 and 1960.

To bring this about, one thing is necessary. That one things is to subordinate our differences on specific methods or measures, and to unite as a party to forward those basic principles which the country has so overwhelmingly endorsed at the polls.

Although we may have disagreed on some of the platform pledges before they were adopted, we did adopt them unanimously, and we did commit ourselves and our party to them before the public.

It follows that there must be general support within our party, either for the administration's specific measures to carry out these pledges, or else for some other measure that equally carries out these pledges. Otherwise the entire concept of party responsibility, and indeed of representative government, collapses.

Republican leaders, whether in Congress, in the executive branch, in the party organization, have a special responsibility for carrying out these pledges. None of us can afford to allow his personal preference as to detail to blind him to the need of loyally supporting our party's platform.

Suppose, during the huddle of the team in a football game, an argument develops on what the next play should be. The halfback wants an end run. However, the play finally called is a plunge through the line by the fullback. He gets through and has only one tackler between him and the goal. The dissenting halfback is in a position to block out the tackler. Does he say, "I disagreed with this play; therefore, I won't throw this block"? Of course not. He does his part, and the team goes on to score.

In the infinitely more important business of producing good government and good legislation, surely it is not too much to expect the same degree of selflessness in a joint cause.

We've got a good team. Let's look like one.

Now, I have talked of our principles, of how we use them to meet changing problems, and of how we must deal with the inevitable disagreements that develop. Let me make just one point more.

If we are true to our principles and pledges, and if we rise above these detailed disagreements, there is every reason for the most buoyant and enthusiastic confidence in the success of the Republican Party, not only in 1958 and 1960, but in the years beyond.

As we work out our troubles, let us never for a moment forget our tremendous assets.

Let's look and talk like winners.

Let's not forget that only a few months ago a Republican administration was returned by a majority of almost 10 million votes—which majority included millions of independents and Democrats attracted by our platform.

Let's not forget that, in the meantime, business has continued to grow and flourish, wages and employment have continued strong, and steady progress has been made toward easing of world tensions and toward the hope of some start on disarmament.

Let's not forget that thousands of young people have caught the excitement of our forward-looking program, and have cast in their lot with us. This is particularly heartening for the long-range future of the party—a great gain that we must maintain and enlarge.

We believe that our principles and our program truly reflect the aspirations of the overwhelming majority of Americans. There are those who rationalize a narrower point of view by saying they would rather be right than win. If such were the issue, all of us would agree. But this is not the issue. The Republican Party will be right and it will win. It will do so because its central core of conviction is what America believes and wants today.

If we unite behind those principles and programs that the American people have so emphatically endorsed—my friends, we just can't lose.

The key to victory is unity.

As for myself, I welcome every person who believes in the principles our platform expresses.

The great main stream of our cause is broad enough to include the oldest and finest of our conservative traditions, along with the most up-to-date application of those traditions to the age of automation and the atom.

Certainly none of us will be guilty of the supreme suicidal folly of forfeiting victory for vital principles, in order to indulge too long our differences as to the tactics to use.

Consider the alternative.

Suppose we go down to defeat because of these tactical differences. Will the administration that follows be more to the liking of any Republican?

Who wants to go back on the New Deal-Fair Deal toboggan of loose spending, centralization, punishment of business, and fiscal irresponsibility?

Of this there is no danger if we close ranks now.

Lincoln said, in one of his most powerful statements: "We succeed only by concert. It is not 'Can any of us imagine better' but 'Can we all do better'."

Certainly, each of us thinks he can imagine better than the platform on which the party has agreed. But that is not the question. The time is here for doing.

My fellow Republicans: I believe in the Republican Party, with all my heart. I believe in its capacity, in positions of political leadership, to serve our country today more effectively than can any other. I accepted nomination for this office, and again renomination, because I believed this, and because I believed in Republican principles of good government. I still believe those things. Every act of this administration, of all my principal associates and myself, stands witness to this fact.

Above all, I sincerely believe, as I said at last summer's convention, that the Republican Party can be the party of the future. It can and should be an instrument through which the American people, by the grace of God, carry our country forward to new heights of well-being, justice, and harmony.

Enslaved Lithuania

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. DAGUE. Mr. Speaker, it was 16 years ago, today, that the Communists launched their ruthless enslavement of the Baltic States and subjected Lithuania in particular to a most brutal program of annihilation.

In this wave of terror and the persecution of a proud people some 60,000 Lithuanians were deported to Siberia or sent to other slave-labor camps throughout Russia. And during this wave of brutality the one thing that stood out so strikingly was the fact that Russia had guaranteed the freedom of the Baltic countries and by this terroristic act revealed herself as incapable of keeping her solemn commitments.

Our hearts go out to these brave people and especially to those survivors of Soviet brutality who have found sanctuary in this country. We are joined with them in mourning the loss of their loved ones; and, unless our dedication to freedom for all men is to prove meaningless, we must work for the restoration of Lithuania as a free and sovereign nation.

Fort Lauderdale Daily News Awarded First Place in NEA Better Newspaper Contest for General Excellence

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I am asking that the following news report concerning the awards made in San Francisco, Calif., be printed in the RECORD. One of Florida's outstanding newspapers, and indeed one of the country's outstanding newspapers, the Fort Lauderdale Daily News, whose editor is Mr. Jack W. Gore, has been accorded outstanding recognition by the National Editorial Association by being awarded first place in the NEA Better Newspaper Contest for general excellence. I am also glad to be able to claim that another newspaper in our district, the Hollywood Sun-Tattler, whose editor is Mr. G. W. McCall, has also won recognition.

The news report follows:

SAN FRANCISCO, June 8.—One of the coveted honors of American journalism was bestowed on the Fort Lauderdale Daily and Sunday News here tonight when the National Editorial Association awarded the paper first prize for general excellence.

The award was the highest honor accorded in the NEA Better Newspaper Contests which drew 1,911 entries from 47 States and Hawaii.

Editor Jack W. Gore accepted the general excellence plaque, presented by Editor and Publisher magazine, as the 72d annual NEA convention closed with an awards banquet at the Sheraton-Palace Hotel.

It was the second time the News won the top excellence award, repeating the victory scored in 1955. Because top winners are ineligible to compete the following year, the News was not considered in the 1956 judging.

Also voted by the 12-man panel of judges was a third-place honor accorded the News' managing editor, Fred Pettijohn, for his column, Across the News Desk.

A third NEA recognition came in the presentation of an honorable mention certificate to the News staff reporter, Frank Hogan, for a feature article.

The winners were selected by judges who examined the largest field of entries ever submitted for the NEA Better Newspaper Contests.

"As a whole, all entries were excellent, and the screening task difficult because of the high caliber of competition," Leon Barnes and Earl W. Causey, cochairmen of the committee of judges, remarked.

"The Fort Lauderdale Daily News won out in judging for top honors through more emphasis on local news and local editorials," the committee reported.

"Like others in the final judging, the paper has an overall excellence. Its front page makes good use of photographs and indicates great care in arrangement and makeup and demonstrates cooperation between the news and mechanical departments.

"Use of local signed columns provides excellent background material to aid its readers in interpreting the news and editorials.

"The editorial page represents a good balance of local and national columns," the judges observed.

The panel noted also that writers of columns on a variety of topics showed "originality of style, presentation, interesting content, distinctive headings, and generally good typography.

DRAMATIC EFFECT

"Across the News Desk by Fred Pettijohn, achieves a high sense of the dramatic based on simple observations or happenings in the news and is a tribute to the author's skill in telling a story with brevity and with impact," the judges commented.

In addition to the three honors voted the News, Broward County reaped another pair of NEA citations as the Hollywood Sun-Tattler gained third place among weeklies in typographical excellence and a third place for its classified advertising section.

SIXTH YEAR

This was the sixth consecutive year the News has won major awards in NEA judging. In 1952, the paper won first prize for the rededication of basic American principles. The following year, it was awarded first prize for general excellence in typography and second place in general excellence. The second place in general excellence was repeated in 1954 and followed by the first-place general excellence honor in 1955. Last year, a second place for best feature story was awarded in recognition of an article written by Staff Reporter Anne Fries.

Dr. Winthrop Adams

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE WHITE HOUSE,
Washington, June 10, 1957.

Dr. WINTHROP ADAMS,
Manager, Veterans' Administration Hospital, Bedford, Mass.

DEAR DR. ADAMS: Through the Honorable EDITH NOURSE ROGERS, the President learned of your retirement as manager of the Bedford Veterans' Administration Hospital and the many tributes paid to your splendid years of service there.

In your pioneer work with mentally ill patients, you have strengthened the lives of thousands and been an example to hospital managers across the land. Your volunteer training programs and community employment projects have opened up effective new areas in the treatment of mental sickness.

It is a privilege to send you the best wishes of the President.

Sincerely,

FREDERIC FOX,
Special Assistant in the White House Office.

Fiscal Policy and Small Business

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include, as of possible interest to Members of the House generally, a statement presented on June 7, 1957, to the Subcommittee on Fiscal Policy of the Joint Economic Committee by Mr. George J. Burger, vice president of the National Federation of Independent Business:

FISCAL POLICY IMPLICATIONS OF THE ECONOMIC OUTLOOK AND BUDGET DEVELOPMENTS

I am George J. Burger, vice president, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our head office is located at Burlingame, Calif., with division offices in Chicago, Cincinnati, and New York City, and the legislative office here in Washington, D. C.

We are the largest organization of independent business and professional people in the country from the standpoint of directly supporting individual members. There are about 100,000 voting members on our rolls. The number is growing daily. We are unique because our members themselves determine our position on every issue by their direct vote through mandate ballots. It's safe to say we have our fingers on their pulse.

I've talked with our members, read about their needs and problems in their letters, checked closely on their thinking through the result of their thousands of votes—they have many problems, but underlying all is the single basic problem of trying to make the current individual sales income dollar do the job of a future two, which they must do if they hope to survive the inflation that's threatening greater devastation to our country than 1 billion hurricanes of the type that recently scourged the Midwest.

Our members have asked tax reductions. Current rates, perhaps the highest in our Nation's history, are grinding them down. The Senate and House Small Business Committees have told you this. The executive branch knows it, judging by recommendations by the President's Special Cabinet Committee on Small Business and by studies of the Small Business Administration. Both of your parties recognized it in their platform programs last summer.

Some may say "Well, the dollar is devalued all across the board * * * for small business as well as for big corporations, labor, farmers, and Government. All are receiving more dollars of less value." But this isn't so. Competition has reduced the number of dollars today flowing into independents. They're not riding the wave. They're not staying even.

And no one can see anything but further inflation ahead. A bad situation could easily become worse.

A leading financial daily newspaper a few days ago reported a consensus of opinion among 70 economists, bankers, industrialists and Government people that the biggest worry facing our country is inflation.

Reports by Bureau of Labor Statistics do not ease these fears. They show a three-tenths of 1 percent increase during April in the cost of living. This brings the index to a new record high for the eighth straight month.

What's behind this? Well, a leading national columnist wrote in her May 14 column: "Spiral in steel again: The price of steel will be raised sharply in July. It will be the 11th annual price increase in steel since World War II and it could be the biggest for the entire period. The price rise will be felt at once throughout the Nation. It will add millions to the Federal Budget because the Defense Department is a huge buyer of steel. It will help push the cost of living higher in many open and hidden ways."

Dr. Frank Kidner, economics professor at University of California said recently: "It seems to me that behavior of prices and wage rates will continue substantially on the upward drift."

A leading financial daily reported: "Rubber workers pick Goodyear as the target for wage boost drive." It discloses that union and management have agreed to no public disclosure of union demands and company proposals, no progress reports, until either a settlement is reached or negotiations break off. The prisoners in the dock—consumers and independent businesses—aren't allowed even to hear their trial.

What's behind this inflation that's driving up Government costs? For one thing, the wage and price policies of unions and large management, by which both are digging their own graves, and digging graves for the rest of us.

Mr. Chairman, this leads me to a situation which I believe it is a responsibility of your committee to solve.

Some sense of order and the general public good must be brought into the field of union and management wage and price policies. We're not antilabor nor antibig business, and we're not interested in promoting Government controls. We should prefer the needed corrections in outlook to come about by labor and management themselves. But I do personally believe that if this does not come about this way, then some superior authority must be brought to bear, and my contention as to the problem of inflation today is substantiated by a statement of former President Truman who said: "Some appeal has been made to leaders of key industries voluntarily to curb a growing appetite for higher profits. So far the response has been feeble and discouraging. If industry continues to be unresponsive, it may well be in for some Government pressure to do what it ought to have the good sense to do voluntarily. I know that labor leaders are giving serious thought to their role in this situation." My contention is further substantiated by the statement of Senator CAPEHART on the floor of the Senate under date of May 27, 1957, where he said: "It is general inflation which is breaking our back and will continue to break our back. My best judgment is that we in Congress ought to be paying some attention to the question of general inflation." Housing Chief Albert M. Cole has also recognized the serious danger prevalent in the trend today when he stated under date of May 27, 1957: "If present trends should get out of hand and lead us to runaway inflation, we may be living in tents because we won't be able to afford houses."

During the steel strike last summer I was privileged to confer with Dr. Arthur Burns, then economic adviser to the President and Chairman of the Special Cabinet Committee on Small Business. I told him that in my

opinion the public interest was at stake and that in view of the situation existing I thought the Administration should act by investigating the matter impartially and (1) if it found the demands of labor just, tell the companies to "pay the advance," but (2) if it found profits wouldn't justify the increase, then tell the unions "No soap."

The doctor asked if I thought the administration should take such a position. I said I wasn't concerned who was in the White House—Mr. Eisenhower, Mr. Truman, Mr. Roosevelt, or someone else, but that somewhere along the line someone had to do something, or someday all of us will end up in the poor house.

For this reason I think your committee should give serious thought to the possibility of setting up a Federal Board of Arbitrators available to consider the equities involved, including the public welfare, when labor and management reach an impasse. In case of matters reaching the strike state this Board could be empowered to investigate and bind both parties to its decision for or against the price-wage increases. In other cases, it could be empowered to investigate all the facts and announce them clearly to the public, spelling out the anticipated effects in the clearest possible language.

This would not be any violation of the antitrust laws, nor would it be the creation of another Government agency, nor would there be any standing committees. But such action would be instituted by law if and when the actions of major industries operating in interstate commerce at both the management and labor level again show evidence of fueling the fires of inflation.

I submit we are in a financial crisis. It has nothing to do with partisan politics, being something that's been building for the past quarter of a century. But if we don't meet it flatly now, we're evading our responsibility not only to ourselves but to generations to come.

Finally, Mr. Chairman, I am neither an economist nor a lawyer. But I have spent better than half a century close to the grassroots in small business, and I have a fair knowledge of the operation of some of our bigger industries. I think I'm in a position to know the score.

And it is my hope and trust, for the future good of our Nation, that my remarks will be considered, and that they will help your committee make constructive recommendations. I do think that if such action is taken by your committee that Government would find it possible to grant the badly needed tax relief to independent business. If we accompany this by a definite program for vigorous antitrust enforcement to clear the path to freer, fairer opportunities for all, then I do believe we will be well on our way to a genuinely healthy economy.

On behalf of our members, I want to thank you for the privilege of appearing before your committee today. It has been a pleasure to be here, just as it was a pleasure to be before the committee when it was chairmanned by the late and great Senator Robert Taft, in 1947.

Anniversary of Communist Deportation of Lithuanians to Slave Labor Camps

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. MARTIN. Mr. Speaker, during a period of 1 week, beginning June 14, 1941, thousands of liberty-loving Lithuanians were uprooted from their homes by Russian troops and secret police and deported to Siberia and other Arctic territory to work in Communist slave-labor camps.

The exact number of people from this helpless little nation to be the victims of this ruthless and horrible treatment is probably undetermined, but the best estimate is that more than 34,000 were seized and spirited away during a period of only 7 days.

This is one of the blackest pages in the long, dark history of Communist terrorism. It points out in bold relief the total disregard for human liberty and human dignity of Communist dictatorship.

On the anniversary of this sordid event, it is well to remind ourselves of these unfortunate Lithuanians and the thousands of other long-suffering victims of Communist ruthlessness behind the Iron Curtain. This wholesale herding of human beings into slavery occurred in 1941. But if anyone has been lulled into the mistaken belief that the Communist leopard has changed its spots, we have only to look at what happened in Hungary as recently as last year.

This establishes the indisputable fact that communism follows a consistent pattern of crushing all resistance to its aims by ruthless and merciless force wherever it feels strong enough to do so.

This ought to be—and I hope will be—conclusive evidence to our own people and the people of the free world that as long as the Communist menace lives in the world, our only chance for survival in freedom is our strength.

FPC: To Promote Profits or Protect Pocketbooks?

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I would like to insert in the RECORD a column written by Drew Pearson which appeared in the Washington Post on June 12, 1957. It draws attention to a fact which many people have apparently forgotten. That is the fact that most of the independent offices which draw their powers from Congress are charged with protecting the interests of the individual citizen in his dealings with monopoly utilities and giant corporations. Complaints of abuses by the utilities and giant businesses caused Congress to set up boards and commissions to regulate the industries for the protection of the individual citizen. Members of these boards and commissions have a tremendous obligation to represent, speak out for, and protect the individual citizen. Deviations from that fundamental principal should be cause for alarm on the part of the people and Members of Congress who are the source of authority for the boards and commissions.

The column follows:

UTILITY MEN HOSTS TO KUYKENDALL

(By Drew Pearson)

A lot of people have forgotten why commissions were established in Washington. They were established to act as impartial judges between business and the public, to protect the public against unreasonable rates by big business, false advertising, and monopoly by business.

They were not set up to promote the profits of business, but to protect the pocketbooks of consumers.

Today many commissioners seem to believe their job is just the reverse. They seem to think that commissioners were appointed to promote profits of a dozen big companies, not protect the pocketbooks of 160 million people.

Take, for instance, the case of Jerome Kuykendall, Chairman of the Federal Power Commission, who is charged with protecting the public from paying too high rates for electric power and natural gas.

This week he's up for a hearing on whether he should be confirmed by the Senate for another term. Mr. Eisenhower has reappointed him. The natural-gas lobby and the big electric power companies are strong for him. And most Senators are either too blase, too lazy, or too afraid of the big power companies to vote against him.

However, here is the way Chairman Kuykendall, supposedly neutral Chairman of the FPC, has been protecting the profits of big corporations, not the pocketbooks of little consumers.

COCKTAILS, FREE TRIPS

1. He made a grand tour of the Southwest, expenses paid by the Texas Mid-Continent Oil & Gas Association. This is unprecented. Commissioners are supposed to keep aloof from both sides.

Accompanying Chairman Kuykendall on this trip were Seaborn Digby, another Eisenhower-appointed Commissioner, and Nelson Lee Smith, a Republican holdover. Commissioner Dale Doty, a Democratic appointee, and Claude Draper, a GOP Commissioner of the old school, declined to go.

FPC Commissioner Willard Gatchell had ear trouble and couldn't fly. So the gas company hosts took the trouble and expense of supplying him with special auto transportation.

2. Chairman Kuykendall attended a cocktail party given in his honor by Mr. and Mrs. Stanley M. Morley, of the law firm of Wheat, May, and Shannon, which represents the West Coast Transmission Co., then applying for a certificate from the FPC.

3. He attended two dinners given by Ed Falck, astute lobbyist for Niagara Mohawk Power, Consolidated Edison, Delaware Power and Light, and a dozen others.

4. He went out to Chicago to attend the National Association of Railroad and Utility Executives dinner. The Government paid his expenses. In the past, FPC Commissioners kept strictly aloof from these partisan meetings. Using the taxpayers' money to attend was unheard of.

HELLS CANYON ACTION

5. Kuykendall waited 2 days after Congress adjourned in 1955 to announce a decision to turn much-sought Hells Canyon over to the Idaho Power Co. Some Senators, including KEFAUVER of Tennessee, claim Kuykendall deliberately deceived Congress when he implied shortly before Congress adjourned that no action had been taken on Hells Canyon. They say it had been taken earlier, but held until after Congress adjourned.

6. Senators also claim that Kuykendall was wrong when he told the Joint Atomic Energy Committee that FPC attorneys had

not reviewed the Dixon-Yates contract. Later his general counsel, Willard Gatchell, let slip the fact that it had come before the Commission's attorneys. Real fact was that two FPC attorneys, Lambert McAllister and Howard Wahrenbrock, had vigorously condemned the contract.

7. Kuykendall has now admitted holding secret meetings with three natural-gas lobbyists to draft a gas bill. No representative of the public was present.

Mrs. Agnes E. Meyer

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ABBITT. Mr. Speaker, on May 29, Mrs. Agnes E. Meyer, wife of Eugene Meyer, board chairman of the Washington Post, addressed the Arlington County Teachers Association. I understand that Mrs. Meyer lives in the District of Columbia.

Mrs. Meyer delivered quite a tirade against the Commonwealth of Virginia, its officials and people. She attempts to foist upon the people of Virginia her own views of sociological problems and political philosophy the same as the Supreme Court of the United States has attempted to do. It reminds us of the carpetbagger days after the War Between the States ended. Now that the Supreme Court has delivered its infamous Black-Monday decision of May 17, 1954, it is fair to assume that Mrs. Meyer thinks our people are now ripe for conquest. I am sure the people of the Commonwealth of Virginia understand their problems as well as outsiders and will be able to meet them and work them out in the future as they have in the past.

One can but assume that Mrs. Meyer is an ardent disciple of that Swedish Socialist Gunnar Myrdal who has so bitterly attacked the American form of government and cast aspersions upon our Constitution and whose name blackens the pages of the reports of the Un-American Activities Committee of the House of Representatives. His philosophy was cited by the Supreme Court of the United States as authority for tearing down our way of life and throwing precedent out of the window in its decision in 1954 outlawing the equal but separate doctrine which has been the law of the land for generations.

On Wednesday, June 12, 1957, there was an editorial in the Richmond News Leader entitled "Mrs. Meyer on Our Liberties." Mr. John J. Kilpatrick, editor of the Richmond News Leader, is an outstanding philosopher, student, and statesman who has made a real study of the rights of the people and the State under our republican form of government. He has rendered valuable service beyond the call of duty in explaining to the people the precarious situation we are faced with and the necessity of maintaining our way of life by stopping the usurpation of authority by the Federal judiciary. This editorial dissects Mrs. Meyer's address and points out the flaws, inconsistencies, and misconceptions with which it is replete.

Under leave to extend my remarks, I include the editorial which is as follows:

MRS. MEYER ON OUR LIBERTIES

Very nearly the whole of our editorial page today is given over to the text of an address recently delivered by Mrs. Agnes E. Meyer before Arlington County schoolteachers. It is a remarkable speech, not alone for what it reveals of Mrs. Meyer's superficial knowledge of government, nor yet for what it tells us of the ruthless force that drives this woman, the wife of the board chairman of the powerful Washington Post. Here is the stony face of statism, the shrill voice of the demagog inciting hatred of the rich with their swimming pools and hunting fields, as opposed to those persons whose children attend school in classrooms that look like cattle yards. Her speech will infuriate many readers. We urge you, read it.

Mrs. Meyers exhibits her ignorance of the very structure of American government when she charges Governor Stanley with shouting loudly for States rights versus Federal interference, while refusing to recognize equally valid county rights against State interference." Actually, of course, counties and cities are the children of the State in which they are located; their local powers come to them from the State. And while certain county rights and powers are protected by the State constitution, this same constitution may be amended by the people of the State. The States receive none of their powers from the Federal Government; on the contrary, the Government of the United States has no powers not delegated to it by the Constitution, which is to say, by the States.

Neither is Mrs. Meyer impressive when she asserts that without the Supreme Court's opinion in the school cases, "our Republic [would have] sacrificed its self-respect and the respect of all the nations that look to us for leadership toward a new global civilization based upon democratic principles." Is it is be imagined that India, for example, with its caste system and its untouchables, really is pulled toward the western orbit by the school decision? Is it to be seriously contended that so nebulous an effect upon a new global civilization should be placed ahead of the stability of constitutional law?

But the portion of Mrs. Meyer's address which deserves most careful reading is her prophecy of what will happen if Southern localities should decide not to integrate their public schools, but to close them. "Just let your power-drunk Virginia officials try this experiment," cries Mrs. Meyer. The result would be to accelerate a ground-swell of indignation against "wealthy people" and their private schools. The result would be "Federal legislation to the effect that every American child must attend public schools during the elementary and secondary grades." We Americans, she says, "are not going to allow this country of ours to be split, either on economic or color lines, because the selfish and thoughtless rich and a few bigoted Southern demagogues think they can escape their responsibility toward the free education of American children."

That despotic expression, mind you, comes from a woman who has the blandness to say at another point that "all truly democratic Americans insist on States' rights." It comes from a woman with the gall to speak in her concluding paragraph of "the weak protection given to our liberties • • • against the inroads of Government."

Could the people of the South escape what they sincerely regard as the evil of race-mixing by exercising their freedom and their liberty to establish their own private schools? Not in Mrs. Meyer's book. And the ominous thing is that a Supreme Court which no longer follows either the flag or the election returns, has a way of following the Washington Post.

What's Made America Great

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. MATTHEWS. Mr. Speaker, several years ago I had the privilege of welcoming a very intelligent and charming young girl to Washington who had won acclaim as the champion speller of north Florida. I refer to Miss Beverly Ann Wood, a high-school student from Fernandina Beach, Fla. We were all very much impressed with this outstanding young lady and I predicted at the time that further things would be heard from her. I now proudly report that she was recently a winner of the annual oratorical contest sponsored by the Fernandina Beach Kiwanis Club. I now have a copy of the fine speech which Miss Wood used in winning the contest and it is my pleasure to submit it for the CONGRESSIONAL RECORD so that it may reach a wider audience which it deserves.

The speech follows:

WHAT'S MADE AMERICA GREAT

(By Beverly Ann Wood)

"A nation's greatness resides not in her material resources, but in her will, faith, intelligence, and moral forces." These are the words of J. M. Hoppin.

Our forefathers had the will to settle this new country. Across the wide expanses of the largely uncharted Atlantic back in the 17th century, there came to the rugged shores of America a people bound together by ties considered too weak for independence. These people had no common nationality, no common religion, no common purpose, and, in fact, no preparation for the life that was to await them. But in the heart of each of them there was the desire to live—whether on the barren shores or in a savage-infested wilderness, to live their days in pursuit of what each man considered most important to him as an individual.

Moreover, as the decades passed into centuries, America came to represent in the eyes of the world at large, and in the eyes of her own people, something distinctive in the long human struggle. She came to symbolize certain ideas, certain values, and a certain way of life. Ever since our ancestors embarked upon the great experiment in popular rule, our country has been a source of both hope and fear among the nations of the earth.

We people gathered here tonight possess a glorious heritage. Although many nations have contributed much to human advancement and many nationalities may rightly sing of their achievements, the story of the rise of the United States of America, within a few generations, to a position of unsurpassed power in the world in one of the truly epics of history. This growth in power was brought about by the will to succeed.

Faith has contributed to America's greatness. Our Nation has always been distinguished for its youthful ideas and its faith. It was faith that brought the pilgrim fathers to the beautiful but stern coast of New England—faith in their religion, faith in their

own ability to establish a free society in a wilderness thousands of miles from civilization. It was faith—not fear—that drove our people westward into the wild northwest country, then across the plains, the Rockies, and the Sierras to the Pacific coast.

It was the same faith that caused men to build railroads, factories, business establishments, and cities within the framework of an untried form of government.

Nothing was accomplished through fear or frustration or bitterness. All accomplishments came from sympathetic understanding, love, faith, vision, and good will. All worthwhile accomplishments will always come from the same guiding spirit—the Faith of our Fathers. Consider three great Americans as typical of this spirit:

George Washington's sublime hopefulness under defeat, his strong will, marvelous insight in character, and abiding faith in God, made him the leader of the Nation.

Abraham Lincoln's desire for unity and justice for all can be cited as ideals and principles from which we of the 20th century have profited. He was a man whose decisions were generally accepted and respected. He was wise, gentle, and firm.

Another great leader, Robert E. Lee, admired alike by friends and foes for his integrity, his devotion to duty, his gentleness, and his high sense of honor, contributed much to America's greatness.

The great events of history have resulted in permanent progress under the guidance of such great leaders as these. They have furnished the decisions, the courage, and the sacrifice which have given us freedom, growth, and security.

As citizens of this great America, we must understand and recognize the great challenge and the responsibility for intelligent leadership which confronts each one of us.

What makes our Nation great? Not our material resources, great though they be, but our ideals. If ever we should lose our sense of the worth of the human individual, our love for justice and freedom, our reverence for God and His laws the national structure we have built on such strong foundations would surely crumble.

America remains today a marvelous rich and beautiful land, a land capable of sustaining a great civilization for ages to come, but a land that must look backward to its rich heritage, as well as forward to even greater accomplishments on newer and far different frontiers.

Hon. Spruille Braden on Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, on June 3 it was the privilege of the House Committee on Foreign Affairs to have had as its principal witness the Honorable Spruille Braden, former Ambassador and Assistant Secretary of State. Under leave to extend my remarks I am inserting excerpts from Mr. Braden's statement in the belief that his testimony deserves the consideration of the Congress as we consider again the so-called foreign aid bill.

It is interesting, Mr. Speaker, that Mr. Braden spent much of his boyhood and school life in Canada, Mexico, and Chile. After graduating in mining engineering at Yale, he was associated with his father in the exploration and development of large copper and mineral properties in South America. While in that hemisphere he organized a Chilean company which undertook the electrification of the Chilean state railroads. It was a $20 milliion project and subsequently it was paid off in full without loss to any bondholders.

Mr. Braden has also been very active in successful business organizations in this country and abroad. His work was primarily in South America where he engaged in the development of South American oil properties and generally in the export and import trade.

In 1933 President Roosevelt appointed him as a delegate to the Seventh International Conference of American States. In 1935 with rank of Ambassador he was chairman of the United States delegation in the Chaco Peace Conference and, after more than 3 years of hard work, settled the boundary work between Bolivia and Paraguay.

He has the proud distinction of having negotiated and filed a peace treaty which has lasted for almost 19 years. Later he served as Ambassador to Colombia for more than 3 years and also as Ambassador to Cuba and to Argentina. From 1945 to June of 1947 he was Assistant Secretary of State in charge of American Republic Affairs.

Recently he has been engaged as a consultant on foreign operations by a number of import concerns whose assets approximate $3 billion. He is also President of the Pan American Society of the United States and a trustee and member of the executive and committees of the Dry Dock Savings Bank.

Mr. Speaker, at this point I will insert a part of Mr. Braden's remarkable statement:

The State Department and collateral or associated bodies have been inflated bureaucratically, especially since World War II, with consequent waste and extravagance. In the field, not infrequently, this has irritated the people where our diplomatic missions are located and injured our relations generally.

Foreign or mutual aid, by reason of its mushroom growth during the last 16, and especially the last 10 years, has become so vast and complex a subject as to require hundreds if not thousands of pages to cover it at all adequately. Therefore, to be brief and in order that you gentlemen may more readily question me on those aspects of the matter which most interest you, I shall limit my statement today to a few of the general propositions in which I believe, and which I respectfully submit as a chopping block for discussion and for your questions.

For a more detailed exposition of some of my views, I should like to present for the record, and as an integral part of my testimony, copy of an address which I delivered in Boston in April 1956 before the New England Export Club.

Throughout my life, in business and diplomacy, socially and otherwise, I have been connected intimately with the less developed areas of this hemisphere. As Ambassador and Assistant Secretary of State, I had to do directly with foreign aid from its very beginnings. Thereafter I have watched its development closely. My whole life and experience, I believe, qualify me to testify on this subject.

My statement [1] for this committee follows:

1. I prefer largely to direct my observations to this hemisphere, as the part of the world with which I am most familiar.

2. Similarly, I prefer to limit myself, insofar as possible, to the economic rather than the military aspects of foreign aid.

3. I do, however, object to the granting of any aid—economic or military—to Communist regimes such as in Yugoslavia or Poland. (So-called national communism is just as dangerous, evil and anti-American as the international variety.)

4. I am only slightly less worried by grants or loans of any kind being made to socialist, or so-called neutralist governments.

5. I believe George Washington, in his Farewell Address, made the finest statement ever put forth as to what should be United States foreign policy. Therefore, as a layman, I should like to see a really convincing and detailed analysis of why modern transportation, communications, and science so profoundly alter Washington's warnings against entangling alliances. I should like to know if Eugene W. Castle, in his book, the Great Giveaway, is not right when he says: "Many nations could support their own military establishments if they had to do so and if the United States did not lavish military aid upon them." I should like to know how far our foreign military aid is being extended beyond reasonable lengths as a means to bring about more and quicker promotions and a more rapid turnover of materiel by our own forces. I should like to know if we have not wastefully over-armed many smaller countries, who are incapable of any real self-defense and whose peoples cannot handle modern equipment. I should like to know whether purely military aid has been used as a fiscal maneuver to release the recipient country's other funds to economic undertakings. I should like to know if historians are accurate when they say that the end of Rome started when she began subsidizing the outlying tribes and nations of Europe, and depending upon non-Roman mercenaries for her defense.

6. Even as a civilian I know that we can no more buy reliable allies than we can buy friends. Peoples can only be led to war because of a dedicated idealism or evident self-interest. I also know that if we keep the United States so strong as possible spiritually, militarily, economically, and every other way, other nations will wish to emulate and support us.

Surely the British and other allies will or will not defend themselves irrespective of any aid they may receive from the United States of America. The real deterrent to Soviet aggression does not lie in military handouts, but in the hope of friends and the fear of foes that we will assist the former if they are attacked.

Finally, I know that our military aid to some dictators has not endeared us to their peoples.

7. As evidenced by my recommendations to this committee and to the Appropriations Committee of the House when I was Assistant Secretary of State, I am not opposed to all foreign aid. I favor its employment on an annually decreasing scale, except for certain rare and very special situations. It should be used only as an incentive to the recipient nations to help themselves. Government to government grants and loans should be restricted to those areas where government is provenly competent, such as sanitation and health, education, government administration, and occasionally, public works or agriculture. I would give precedence to this hemisphere.

[1] I have not considered the constitutionality of our foreign aid legislation.

8. The people of the United States are the most emotional, sentimental, and generous of any, bar none. The tragic living conditions of the majority of mankind—which appear far more distressing to us with our relatively higher standards of living than they do to those who endure them—often impel us to adopt measures which will not improve the lot of the recipients of our aid, but which if continued too long, will impoverish us. Perhaps, it is this thought, coupled with the fact that so much remains to be done for our own people here at home, which now begins to stir our taxpayers.

9. How does our foreign aid affect the recipient nations? The Hon. Pedro Beltran, distinguished Peruvian statesman and former Ambassador in Washington, not long ago answered this question:

"If a nation relies on handouts to live, its future is doomed. As time goes on, it finds it harder and harder to get on its feet and forge its own future. * * * It ends by making no effort to develop its own resources or be self-supporting. As long as such a state of affairs prevails, such a country will never come of age, but will continue to be dependent on others, without prospects for the future.

"It should be realized that private capital can achieve what no public treasury can do. When confidence has been established, the amount of private capital that may flow into a country is practically unlimited. Private investors will compete with one another and seek out the opportunities * * *, but government money cannot do this, since risk venture is beyond its province. Private capital will flow * * * if the investor feels that he can operate in a free economy."

10. Our accomplishments in respect to foreign aid in this hemisphere often leave us little about which to be proud. It is pertinent to observe that:

(a) It was not the United States, as has been alleged, which primarily helped the Guatemalans to rid themselves of Communist control.

(b) So soon as the Communists had been driven out, our own Government proceeded officially and senselessly to confirm Communist calumnies against the United States.

(c) Since then we have been and are still wasting millions of dollars in grants to Guatemala. With a little judgment by the United States Government, these grants could be entirely eliminated and replaced many times over by private investments, which would be far more beneficial to everyone concerned.

(d) United States financing of Marxists in Bolivia is inexcusable.

(e) By giving substantial foreign aid to Peron, we supported an enemy, a collaborator first with the Nazis and then the Communists and alined ourselves against the decent and democratic elements of Argentina. Our role vis-a-vis Rojas Pinilla in Columbia, and some other dictators, has been no better.

11. No grants or loans—and here I include the Export-Import Bank, the International Bank and the International Fund—should be made to any country whose government by confiscation, expropriation or other unfair tactics and discrimination has directly or indirectly injured the investments of our citizens or even those of other foreign interests.

Nor should our taxpayers' dollars be paid to nations: (1) who do not need them, and many of whom are themselves wealthy; or (2) who turn around and give grants to other countries.

For these and other reasons, I am against the recently proposed international development loan fund, i. e., a United States Government so-called revolving credit beginning at $500 million and rising to $750 million per year. This fund apparently would not supplant direct grants of economic aid or the technical assistance program.

Under this scheme, the United States would be committed for the indefinite future, to the operation of a new bureaucracy dedicated to the principle that our citizens' money should be loaned abroad on easy terms, come what may, in "greater financial risks than those acceptable to existing institutions."

It would be folly to entrust such huge funds and power to bureaucrats, who are much freer than private banks and corporations from governmental controls and supervision, not to mention the vigilance of their stockholders. Too often, government officials, in handling the taxpayers' money, do not realize that they should act scrupulously as trustees.

It would be wrong in principle to use public moneys in risk loans or ventures, such as apparently are contemplated for this new International Development Loan Fund. In fact, the first criterion specified for it is that financing cannot be obtained from other sources. Because repayment terms would be less rigid and could be made in local currencies as well as dollars, and interest could be waived or suspended, these loans would tend to drive out not only sound private investors, but also financing by the Export-Import Bank. Thus, in the end there might be no increase or even a diminution in the new capital available for a particular country. Those suggesting the creation of this Development Loan Fund forget that it is not lack of capital, but the unfavorable investment climate in a given country, which is the real deterrent to increased private investment.

12. A serious study should be made of the inflation caused both in the United States of America and the recipient countries by our foreign aid programs.

13. I should like to present for the record, and as an integral part of my testimony, copy of an editorial which I wrote for the Saturday Evening Post, issue of August 11, 1956. From this, the committee will observe that I am opposed to SUNFED (Special United Nations Fund for Economic Development).

14. I should like to present for the record, and as an integral part of my testimony, my radio address on the Manion Forum, January 27, 1957. While it easily can be read within 10 to 15 minutes, I respectfully call the following excerpts to the committee's attention:

"The Soviets and communism never will be defeated by United States giveaway programs. On the contrary, our giveaway programs are founded on the Communist doctrine that the productive workers shall support the incompetent and the loafers. Both Lenin and Stalin violently opposed all development by private enterprise and investment. They said that the backward nationalities could be communized only through prolonged aid from the advanced countries, aid such as Washington is now disbursing. Due to ignorance of Communist policy and the basic Soviet plan, our government has been and still is subsidizing the U. S. S. R.'s long-range campaign against the United States.

* * * * *

"Who are the advocates of foreign aid? They are (1) misguided idealists or sentimentalists, who seem to believe friendship can be bought through government-to-government grants and loans;

(2) Some business and labor leaders, whose industries, thanks to this program, may sell their wares to or through the International Cooperation Administration in Washington; and (3) above all, the thousands of bureaucrats whose soft jobs and lush expense accounts depend on the continuance of foreign aid.

* * * * *

"The groups in favor of giveaway foreign aid cleverly confuse, misinform and mislead high Government officials, Members of Congress and many civic leaders, who haven't enough time really to track down how foreign aid is misspent. It is impossible to track down how billions are spent by going around the world in 80 days. We can't even keep track of how many millions, much less billions, are spent at home.

"The plain truth is that the United States is going broke, committing suicide, by uselessly giving away billions of dollars to the rest of the world.

"The direct debt of the United States is about $280 billion.

"This vast sum is almost twice the combined debts of all other principal nations. Of this huge amount, between 100 and 120 billion dollars have been given away or loaned to foreign governments.

"About 3 billion of our gifts have been used by foreign governments to reduce their national debts. This 3 billion has been added to our own national debt. It has done us no good of any kind.

* * * * *

"By June 30, 1957, the total of United States grants and credits of dubious value given in foreign aid since 1946 will be $60 billion.

"I grasp what $60 billion realy means when I add the assessed valuation of all real and other property in the 17 biggest cities of this country, to arrive at a grand total of just over $60 billion: New York, Chicago, Philadelphia, Los Angeles, Detroit, Baltimore, Cleveland, St. Louis, Washington, San Francisco, Boston, Houston, Pittsburgh, Milwaukee, New Orleans, Buffalo, and Dallas.

"We would be appalled by the mere suggestion that these 17 biggest cities, if it were possible, be shipped overseas as gifts to foreign nations. Yet, in effect, that is what we have done.

"But as it is, the dollar loss and the consequent drain on us taxpayers isn't as serious as the harm done to the morals and morale of other countries and of ourselves.

"Certainly over $60 billion should bring us spectacular results in the way of great respect and friendship, and security from Soviet aggression. Instead, it is evident that never did so many people give away so much for so little.

"Some of the recipients of our aid have turned 'neutralist' or begun playing with the Communists. Other recipients are critical of the United States. For example, the French Prime Minister said: 'The Americans managed to create something very near to hatred * * * by the way they gave their aid'."

If after 10 years and the expenditure of an amount equivalent to the value of our 17 biggest cities, we have gained neither security nor friends, how can we possibly justify that $60 billion? When this year on February 4, I put this question to Mr. John B. Hollister, the head of ICA, he replied, "I don't know. I don't know the answer."

To conclude, I respectfully urge that the foreign aid program rapidly be reduced to the most modest dimensions, at most a few million dollars per year to be spent in the manner I have set forth, and in due course replaced entirely by private investment and enterprise.

Resolution in Support of the Hoover Report

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. HESS. Mr Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION IN SUPPORT OF THE HOOVER REPORT

Whereas the Western Hills Optimist Club, of Cincinnati, Ohio, believes it to be the civic duty of all citizens and organizations like this to take an active interest in the conduct of government and to make known their views on matters of government to responsible officials so their representative government may more truly represent them; and

Whereas having heard the reports of the bipartisan second Commission on Organization of the executive branch (the Hoover Commission reports) discussed, we do feel that these reports offer a blueprint for reducing the cost of our Federal Government without impairing its necessary functions and services and strengthening the basic structure of our way of life and preserving its benefits for future generations; and

Whereas with bipartisan support, action has already been taken on some of the recommendations of the commission by the administration and the Congress, but many of the important recommendations still await action: Now, therefore, be it

Resolved, That the Western Hills Optimist Club commends the administration and the Congress for the action already taken on the Hoover report; and be it

Resolved, That we urge them to continue and accelerate, on a bipartisan basis, attention to the recommendations still awaiting action; and be it further

Resolved, That copies of this resolution be sent to the President of the United States; United States Senators BRICKER and LAUSCHE, Congressman HESS, the Citizens Committee for the Hoover Report (777 14th Street NW., Washington, D. C.), and members of the press serving this area; and be it further

Resolved, That Congressman HESS be requested to call the attention of his colleagues in Congress to this resolution by inserting it in the CONGRESSIONAL RECORD, and that editors of the press in this area be asked to call it to the attention of our fellow citizens through the pages of their newspapers.

Passed this 10th day of June 1957, at Cincinnati, Ohio.

ROBERT R. KELTNER,
President.
JACK W. BOWEN,
Secretary.

A Lasting Pioneer Spirit Brings Arcade to Its 150th Birthday

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. OSTERTAG. Mr. Speaker, the village of Arcade in my district in western New York expects to celebrate its 150th birthday early next month. Into its weeklong celebration, from July 7 to 13, will be packed a tremendous amount of history and hope. Arcade today is America in miniature, treasuring its past, cultivating its present, and confident of its future. With other western New Yorkers, I am proud to salute it and to wish it many sesquicentennials to come.

Under leave to extend my remarks, I include in the RECORD an article about Arcade from the Buffalo Evening News of June 8, 1957, entitled "A Lasting Pioneer Spirit Brings Arcade to Its 150th Birthday":

(By Harold Alsworth)

Back in 1807 a restless New Englander named Silas Meech set the stage for Arcade's sesquicentennial celebration this summer. Historians say the sturdy young pioneer from the East was the first white man to acquire a home site in the forested Cattaraugus Creek valley near what is now Arcade Center.

Late in 1807 came Capt. Abraham Jackson, former member of the Vermont Legislature. He purchased 2,000 acres of wilderness from the Holland Land Co. at a price which today would hardly pay for a few vacant lots in Arcade village. Land sold for $2 to $3 an acre. A token downpayment was acceptable.

Captain Jackson, one of a number of Revolutionary War veterans settling Arcade, built a log tavern at Arcade Center and began selling plots of forest land to the steady stream of migrants arriving in oxcarts and on horseback. "Jackson's Settlement" soon became a flourishing log-cabin community.

Farther down the Cattaraugus at a point near its confluence with Clear Creek, Deacon Walter Hinckley, in 1810, built a log cabin and got Arcade village off to a long and flourishing career. Deacon Hinckley started the first school in 1811. He helped organize the Congregational Church in 1813. Hinckley's Station became a rival of Jackson's Settlement in importance.

Arcade didn't get its permanent name until long after the founding, however. On the Holland Land Co. maps it was the town of China. Residents disliked the Oriental designation.

Around 1828, the present name with its connotation of pastoral simplicity was adopted unofficially. In 1866 the Post Office Department finally changed China to Arcade in the postal guide.

The sesquicentennial celebration July 7 to 13 will pay tribute to the faith and courage of the pioneers who laid the foundations for one of western New York's most attractive communities.

Modern Arcadians will honor the settlers who traded their axes for muskets, and fought the British at Black Rock in the War of 1812. Arcade's casualty list was relatively high. Capt. Amasa Kilbourn was killed in battle and his body was buried in an unmarked grave.

Silas Meech, who married 17-year-old Sylvia Parker after building his log cabin in 1808, was wounded at Black Rock. Jacob Jackson, a son of Captain Abraham, was wounded and captured by the British. His family mourned him for dead. His return 2 years later touched off a jubilant celebration.

Arcade developed rapidly after the war. Large areas of cleared land under cultivation provided raw materials for grain and grist mills built along the banks of the creeks. Mill dams and mill races provided waterpower.

Silas Parker, father of Sylvia Parker Meech, was elected the first supervisor at the first town meeting April 5, 1818, in Jackson's tavern.

The town board voted a $10 bounty for wolf scalps and 12½ cents for crow's heads if not shot on Sunday.

Path masters, fence viewers, and pound keepers were appointed. Earmarks for wandering livestock were registered with the town clerk.

Canal talk was in the air around 1825 but Arcade never saw a tow path. The proposed Olean-to-Batavia Canal which would have crossed the township died while still in the realm of speculation.

Agriculture early took a dominant place in the economy. After forests were cleared, sleek herds of cattle roamed the valley and hillside pastures. In the post-Civil War years, cheese making was a million-dollar industry.

Historian Harry R. Douglas, who has written an exhaustive account of Arcade's 150 years, reports this situation economically in 1855:

Seven sawmills, a chair factory, sash and blind works, woolen mill, several grist mills and blacksmith shops, four asheries (where wood ashes were produced for potash used in fertilizers and soap making), a coach and wagon works and a leather shop.

A paper mill was opened in 1859 and an iron foundry in 1865. Later, a marble factory flourished. Toward the end of the century there were mowing machine, coffin, and bedspring factories. A cigar factory turned out two well-known stogies, the Big Chief and the Pride of Arcade.

Stage lines to Buffalo, Olean, and Batavia gave way to the railroads. The first passenger train on the Pennsylvania pulled into the Arcade station October 25, 1871, to the cheers of the populace.

The Arcade & Attica brought its first train to Arcade in May 1881. The short-lived Buffalo & Susquehanna gave Arcade a third rail connection in 1906. The B. & S., last to come, was the first to go, giving up the ghost in November 1916.

The A. & A., surviving hard times and bankruptcy, finally was purchased by farmers and businessmen. It continues to provide vital freight service. Its northern terminus recently was fixed at North Java, following ICC permission to abandon the remaining 13 miles between North Java and Attica.

The Pennsylvania's once prosperous passenger service has been supplanted by autos and buses.

Fires and floods almost delivered knockout blows to the village at the turn of the century. Thirty-five business places were wiped out in the conflagration of December 14, 1898.

Three and a half years later, on the night of July 6, a Texas-type cloudburst turned Clear and Cattaraugus Creeks into raging torrents.

Rescuers reached several families before their houses were swept away but Miss Minnie Loper drowned when her house collapsed in the rushing waters.

A new business section gradually rose out of the ruins. Flood-damaged houses and bridges were replaced.

The spirit of resurgence in the face of trouble has long been one of Arcade's marks of distinction. The early years of the present century saw new industries spring up as others faded and died.

Prosperous cheese factories gave way to the new powdered-milk plant, now owned by the Borden Co. The world's largest milk evaporator is in this plant.

The O'Dell & Eddy Co. started its long career in manufacture of wooden shoe lasts and tenpins.

The old knitting mill went out but the K. R. Wilson Foundry came into being as a manufacturer of auto tools. Lee Drennan's Sylvania plant was acquired by Motorola, Inc., which has just completed a $1 million expansion. The Aronson Machine Co. and the Pant-Ease Infant Wear Co. are two other lively industries. Arcadians boast that the number on payrolls of village industries now exceeds the total population because many workers commute from nearby towns.

Politically, Arcade has been Republican with a vigorous Democratic minority. Prior to the Civil War, abolitionist sentiment ran strong. The old Liberty Party held State rallies there in 1840 and 1844. An emancipation dinner was served to 2,000 in 1844.

Some Republicans say Arcade has as much claim to being the birthplace of the Republican Party as has Angelica in Allegany County.

Col. Charles O. Shepard was a fiery abolitionist and the underground railway for the transfer of escaped slaves to Canada, main-

tained a secret station in the village. Colonel Shepard's son, also Col. Charles O., became the first United States consul to Toyko in 1860.

More than 250 Arcade men joined the Army in response to President Lincoln's calls for troops during the Civil War. World War I and World War II saw hundreds more young men in service.

One of the sources of history is Arcade's oldest living native-born son, Grant Hodge. At 92, Mr. Hodge is still busy at an office job and eager to supply local color of the past from his keen memory.

The village has had many sons and daughters who became famous in public life, business, and the professions. Two who rose to high places while retaining their local residences were the late Federal Judge John Knight, and the late George Hogue, who was State commissioner of agriculture.

The sesquicentennial will open July 7 with historical services in the churches. In the evening the sesquicentennial queen will be crowned and a pageant of 250 will present the first showing of the pageant "Progress With a Past." Six action-packed days will follow.

Carl W. Gertis is general chairman and Robert Waters is directing the program committee.

All That, and Freedom Too

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. UDALL. Mr. Speaker, Jones Osborn, of Yuma, Ariz., is editor and publisher of one of the outstanding daily newspapers in my State. His daily Editor's Notebook column is full of down-to-earth, commonsense observations. I am presenting today one of Mr. Osborn's columns which, I think, demonstrates special insight into the problems of modern government:

THE EDITOR'S NOTEBOOK
(By Jones Osborn)

It is fashionable, these days, to talk about the period from January 1 through April 26.

Nearly 4 months.

That is the period during which all the money from all wages, salaries, rents, interest and dividends received by the American people was gobbled up by Government.

Newspaper columnists are supposed to deplore it, to view it with alarm, to denounce it, to wring their ink-stained hands about it.

And many of them do.

They point out that the Federal Government alone would spend money at the rate of $136,619 per minute, during fiscal 1958.

Well, I can't work up much of a frenzy over such figures, stated by themselves and without interpretation.

April 26 is long past.

From now until the end of 1957, all the wages, salaries, rents, interests, and dividends we receive belong to us. We're free to spend them as we please. We've paid our obligation to Federal, State, county, city, and other local governments.

I don't mean to say that I like high taxes. I don't. For that matter, I don't even know anyone who likes high taxes.

Nor do I mean to say that there is no waste, no unnecessary spending, proposed in the new budget. I think our Congressmen are going to cut a billion or so out of it, without seriously impairing national defense and welfare.

I do think that, when talking about taxes, we must in fairness keep in mind what we we are buying with those taxes.

We are buying a first-rate local and State school system. Public education has never been more available or better financed.

We are buying local police and fire protection; we are providing a minimum income for our older citizens; we are building roads to travel on and parks to relax in; we are caring for veterans injured in service, and their widows and orphans; we are caring for the poor; we are helping the unemployed; we are trying to administer equal justice to all our citizens.

And, most importantly, we are spending valuable dollars not alone to maintain a costly but necessary fighting machine for our national defense, but we are simultaneously working on scores of spots around the globe to head off the insidious growth of a philosophy that, if permitted to grow much further, might very well mean the end of life as we are enjoying it.

For all that, and freedom, too, I honestly feed our tax dollars (within a billion or two) are being well spent indeed, the United States Chamber of Commerce notwithstanding.

Iowa Chapter of Blue Star Mothers of America Protests Decision To Deliver Soldier for Trial in Japanese Court

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. GROSS. Mr. Speaker, letters and resolutions continue to reach my office, protesting the decision to turn over Army Sp3c. William S. Girard for trial in a Japanese court for an alleged act which occurred while he was on duty.

Waterloo, Iowa, Chapter No. 2, Blue Star Mothers of America, adopted the following resolution at a meeting on June 7:

RESOLUTION OF THE BLUE STAR MOTHERS OF AMERICA, INC., CHAPTER NO. 2, WATERLOO, IOWA

Whereas we believe that this American serviceman was performing the duties assigned to him, which was, to guard a given area against any and all interlopers; and

Whereas we believe our Government has made a grave error in judgment in entering into this agreement with the Japanese Government; and

Whereas we also believe this decision to be discriminatory and that it denies to William S. Girard the right of every American to be given a fair trial under American laws, in American courts and by Americans, a right and privilege that thousands of American servicemen and women have fought and died to protect and preserve; and

Whereas we firmly believe that, should our Government find that diplomatic appeasements or agreements are necessary, that they should not be made or entered into at the expense of sacrificing any individual American's rights, privileges or welfare; and

Whereas we also firmly believe that the United States Government's first obligation of responsibility must be to protect the servicemen and women that we send to a foreign country to serve our Nation, and not to the citizenry of the country to which they are sent: Therefore be it

Resolved, That the members of Waterloo, Iowa, Chapter No. 2, Blue Star Mothers of America, Inc., mothers of sons and daughters who served in World War II and the Korean conflict, go on record as strongly opposing and objecting to the decision of our United States Government to allow American GI William S. Girard to be tried in the Japanese civilian courts rather than by an Army court-martial, and be it also

Resolved, That all members of Waterloo, Iowa, Chapter No. 2, Blue Star Mothers of America, Inc., be urged to write to their Congressmen and Senators asking them to exert every effort and use their influence, as our elected representatives, to have this agreement nullified, in favor of a more acceptable and just means of disposing of the case of William S. Girard, American serviceman versus the citizenry of Japan.

MRS. H. O. HAUSER,
President.
MRS. CLIFFORD LAURITSON,
Parliamentarian and Resolutions Chairman.

Beware of Psychiatrists

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. BURDICK. Mr. Speaker, one way to destroy any people is to destroy their health. The destruction of the mind is less obvious and not an open act of murder, but the millions who have had their minds destroyed by this sly Fascist and communistic scheme of controlling the people are as dead as they ever will be.

Listen to what Dictator Georgi Malenkov said when he succeeded Stalin:

There will be no more lobotomies while I am dictator of Russia.

Now let us see what a lobotomy is. First, the patient is strapped to an operating table. The straps must be tight and very strong. Then electrodes are clamped to the temples of the person about to be lobotomized. Next, three jolts of electricity are shot through the patient's brains—enough to start violent convulsions, which give way to an anaesthetic coma. Now the doctor takes his leucotomes—pick-like instruments—and inserts them under the patient's eyelids. With a hammer he then drives them through the eye sockets of the skull and into the forepart of the brain. Finally, with a few deft sweeping motions back and forth, the doctor severs the prefrontal lobes of the brain from the rest of it. Hitler used this method on millions of his subjects and Stalin had over 10 million slaves or prisoners operated upon and turned into mere beasts of burden.

It takes only 5 minutes to perform this operation and the subject does not know what has been done to him. He loses his animation as a living object and becomes a zombie. His productive organs wither up and he is incapable of resistance.

This same practice is used here in the United States on persons said to be mentally ill, and it is estimated that 100,000 persons in the United States have been subjected to this operation upon the advice of some psychiatrist. This is mur-

der per se, although the patient may be hopelessly incurable. It is another way of putting the patients to death under the advice of skilled psychiatrists. In the United States today a large percentage of the psychiatrists are foreigners, most of them educated in Russia. The percentage runs as high as 80.

What does this mean? Does it mean that the Russian finesse of human destruction is introduced in America to further weaken our people so that there will be less resistance to communism? It means nothing short of that.

My next Extension of Remarks will include the speech of Beria, who addressed a group of American students at Lenin University in Russia. Here are two statements of the many he made at that meeting:

You must labor until we have dominion over the minds and bodies of every important person in our nation. You must achieve such disrepute for the state of insanity and such authority over its pronouncement that no one statesman so labeled could ever again be given credence by the people. You must work until suicide arising from mental imbalance is common and calls forth no general investigation or remark.

With the institutions for the insane you have in your country prisons which can hold a million persons and can hold them without civil rights or any hope of freedom. And upon these people can be practiced shock and surgery so that never again will they draw a sane breath. You must make these treatments common and accepted. You must sweep aside any treatment or any group of persons seeking to treaty by effective means.

There you have the Communist assault on the minds of men. Is this the practice this country is going to follow in mental health cases? It would seem that some of these methods are already being used here, judging from some of the cases which have recently been brought to my attention.

Illinois Labor Suggests Review of Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SHEEHAN. Mr. Speaker, at the 74th annual convention of the Illinois State Federation of Labor a foreign policy section of the executive board report was unanimously adopted by the delegates in October 1956 and this policy was reprinted in the Weekly News Letter of June 8, 1957.

The Illinois State Federation of Labor is to be congratulated on taking a realistic view of our foreign policy and their views are most worthy of note as contained in the following article:

FOREIGN POLICY

There is a language the Communists understand, and that stems from strength, firmness, and determination. Any of the virtues of dealing with people and nations, which are considered ethical and entered into with a spirit of give and take, are simply evidences of weakness and stupidity to the Communists. Recognition of these diplomatic facts of life, and using them, can mean the difference between a peaceful world, and a jittery, war-conscious world.

Citizens from free nations all over the world have visited our offices. These visitors have been under the auspices of the United States Government. We have enjoyed meeting them and exchanging information. Their reaction to the United States itself, its economy, its standard of living, and its freedoms, is good to see. Most admit they did not fully believe what they had heard and read about America. We hope their countrymen will believe them when these visitors describe and explain what they have witnessed. This kind of foreign relations and policy certainly is helpful to better understanding. Our Government's reciprocity has been very limited, and perhaps a number of labor teams should be sent from this country on good-will tours.

We are disturbed, however, by the frank answers to our questions about the attitudes and reactions of their countrymen toward Americans. The United States and its motives are distrusted. Hatred, contempt, and jealousy are felt by many peoples whose nations we have helped since 1945. We suspect the emotions of the people may have been abetted by their leaders on occasion—leaders who have used our bounty to bolster their governments.

We happen to believe in the brotherhood of man. We are practical enough, however, to know that we cannot force our way of life on other nations. Communists do, but we recognize that other nations and people have concepts which differ. Theories of government are meaningless to masses of people who are hungry, in rags, and with little shelter. Native intellectuals, gone Communist, promise land, full bellies, and clothing to their illiterate countrymen. These are promises that will not be kept. Therefore, our own foreign aid, if it is to continue, must be of more direct help to the people themselves.

We are happy to see a tightening-up process in the foreign air programs. We are still for assistance to friendly nations and to backward peoples. We are against forcing bounty upon them or attempting to buy friendship. We are against gifts or loans to corrupt oppressive or dictatorial governments. In short, a reevaluation of the whole foreign spending program is in order by both parties. The war ended in 1945. Korea may be a separate problem.

More attention should be paid to this Western Hemisphere as a whole, and our neighbors in Central and South America in particular. The Monroe Doctrine of the 1820's is still sound. The fundamental concept of that doctrine has become quite simple. It is contrary to the interest of the United States that any foreign nation shall establish settlements or colonies in any part of the Americas; or that they should exercise preponderant influence in Latin America.

Another distressing circumstance is giving away the constitutional rights of our servicemen on foreign soil. Servicemen, charged with crime against foreign peoples, should be tried promptly and, if guilty, punished. But they should be tried according to American ideals of justice, and if guilty punished accordingly. We would hope and pray that all of our servicemen would be a shining example wherever they were stationed. However, we know that some individuals are going to get into serious trouble and bring disrepute upon their group and propaganda against America. Others will get into minor scrapes of no consequence as we see it, but they still could be severely punished under certain foreign laws.

If our troops are needed to garrison and protect these foreign peoples, then the least our boys should expect is that their own Government will not desert them. It should not throw them on the mercy of civil courts governed by laws, customs, and procedures completely at variance with our civil courts' constitutional background and safeguards. This destruction of, and giving away of, an American boy's rights, because he is serving his country in uniform, is outrageous, and should be revoked immediately.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SAYLOR. Mr. Speaker, long before I ever considered running for the office of Representatives to the United States Congress, I was interested in the Territories of our country, and especially the Territories of Alaska and Hawaii. Little did I dream that when I came to Congress I would be a member of the Committee of the House of Representatives that would handle the affairs of these great territories. I sought membership on the House Committee on Interior and Insular Affairs because it handles all matters concerning mines and mining, this being one of the principal industries in my congressional district.

But one of the most fascinating parts of the work of this great committee are the problems of Alaska, and I have taken a keen interest in this Territory, her people, her vast land areas, her unlimited resources and the desire of a vast majority of Alaskans to have their home become a State in the United States, another star in the field of blue of the Stars and Stripes.

Therefore when the House Interior and Insular Affairs Committee on May 28 considered and acted favorably to report the Alaskan statehood bill to the House of Representatives, I was indeed pleased. The committee voted overwhelmingly in support of statehood—24 in favor of the bill with 6 members opposed to statehood.

One of the items that was most impressive in this vote was the almost solid support of the legislation by the Republican members of the committee. While statehood is not a political issue, and while statehood will only be achieved by bipartisan support, the Republican members supported this bill to a greater degree than did the Democrats.

There are 13 Republican members on the House Interior and Insular Affairs Committee and 11 members, or 85 percent, voted in favor of statehood, while only 13 of the 17 Democratic members, or 76 percent, of the committee voted for statehood. I am proud of the manner in which the Republican members of the committee supported the President in his endorsement of this long overdue legislation.

There can be no doubt about the position of President Eisenhower or his administration because he has stated in his budget message of 1957, and many times to the press, that he favors immediate statehood for Alaska. The administration's position was later affirmed by the statement of the Secretary of the Interior in his testimony before the House committee.

The area limitations for the conducting of defense activities, as proposed in the Department of the Interior's amendment to create special national defense withdrawal areas in the northwestern region of Alaska, have been included in the bill passed by the committee. The legislation as it now stands, in my opinion, is in accord with the wishes of the great majority of the people of Alaska. This opinion is strengthened by a news item in the Anchorage Daily Times of May 28 which indicates that the Governor of Alaska, native-born Michael A. Stepovich, has expressed his accord with the actions of the Congress thus far on this bill. The Governor is quoted as saying:

It's really encouraging that Congress is moving right along on the bill. As Alaskans, we are grateful.

I vigorously urge the support of this statehood legislation by everyone so that it will successfully pass and become law, thus fulfilling a long wished-for objective on the part of the citizens of Alaska and the United States.

Minneapolis: A Gateway and a Playground

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. HUMPHREY. Mr. President, with summer officially just around the corner, most Americans are thinking about vacations.

Certainly I am looking forward to the end of the session and the opportunity to return to my home in Minnesota.

Vacation-bound Americans everywhere I know will be very interested in the fine article which appears in the current issue of Greater Minneapolis, entitled "Minneapolis: A Gateway and a Playground." The article is such a fine discussion of the infinite variety of recreational resources to be found by entering the Minneapolis gateway, that I feel it ought to have a wider audience. Therefore, Mr. President, I ask unanimous consent that the article entitled "Minneapolis: A Gateway and a Playground" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINNEAPOLIS: A GATEWAY AND A PLAYGROUND

Base of operations for the two and a quarter million tourists who make Minnesota their vacationland each year, Minneapolis manages to catch the attention of the northbound tourist who is intent on getting settled at his lakeside retreat. Once in the City of Lakes, the family feels comfortably near enough to its goal and finds Minneapolis attractions worth seeing. Few cities that border vacationland areas are successful in stopping the tourist traffic for a look-see.

The reason for this interest in urban life by pleasure-bent vacationers are many but strong in appeal is that Minneapolis is in itself a lakeside retreat. With 31 miles of shoreline and 15,000 acres of water, the City of Lakes captures the interest of landlocked people unused to seeing sparkling waters, boats, canoes, and water skis as standard equipment for active city residents. Then, too, the proximity of the more primitive areas to the city that is the gateway to Minnesota's incomparable vacationland keeps the vacation spirit ever in the consciousness of Minneapolis businessmen who are always ready to talk of fish and things while they strain to keep their minds concentrated on making a living.

To be more specific in describing the Minneapolis appeal, it becomes necessary to recite a few statistics. Twenty-two lakes and lagoons within the city offer unlimited opportunities for outdoor fun. Fishing, sailboating, canoeing, swimming, and water skiing are only minutes away from the office and home.

Minneapolitans luxuriate in the knowledge that 147 city parks are available for a picnic or outing. Eleven private and five municipal golf courses are being maintained at top efficiency. Fourteen swimming beaches, 45 baseball diamonds, 137 softball diamonds, and 186 concrete and clay tennis courts are situated in what appear to be almost manufactured settings. Nature's design is all-apparent, however, the visitors gawk at the number of homes that claim boulevard and lake district addresses.

Minneapolis services the traveler on his way to and from the north country and becomes a "Place To Go" once the vacationer has settled. The Aquatennial brings its annual abundance of professional entertainment and offers the tourist family events such as parades that rival the Mardi Gras and New York welcomings, highly competitive, grueling canoe races, queen crowning, and all-inclusive summertime sports contests. Great numbers of our out-of-State friends welcome the sights and sounds of the city after an extended period of "roughing it" in the wooded lake country. Tanned and brimming over with enthusiasm they descend on the city for the Aqua Follies, to take in a new movie or summer stock play. This year, they'll get a look at our new metropolitan baseball stadium. The historical-cultural offerings presented by the Minneapolis Institute of Arts, Swedish Institute of America, and the University of Minnesota are musts for many. Dining establishments that jealously guard their coveted awards, provide the perfect setting for the family away from home.

The ever-increasing travel industry is a prime economic advantage for Minnesota. The growth of this industry has been phenomenal and the worth of this business totals over $285 million. It has been a long time developing, too. Even before statehood, it was drawing visitors from the South, who would come up the Mississippi by boat with their entire entourage of household servants to escape the torrid summer heat of their home States. There were resorts along the north shore before a road had been cut through that wilderness, and guests were brought from Duluth by boat. Past and present, Minnesota has been known for its hospitality, generosity, and friendliness. A Minnesotan is a good listener, too.

What are the topics of conversation around the dinner table of the vacationer? Usually, the talk is of accomplishment. A vacationer is first of all, a human being who likes to feel that his money is well spent. A "good deal" means that satisfaction has been achieved. Hard work and physical output sometimes contribute considerably to a feeling of accomplishment. No wonder then that vacationers like to talk of such things as canoe trips. These are rugged affairs where the individual is called upon to exercise self-reliance and ingenuity. Just plain exercise is called for, too. A canoe trip into the wilds—the land of the voyageur is an experience not easily forgotten. Around every point and into every quiet bay there is some wonder of nature awaiting the tourist's camera. It may be a moose pulling up the roots of the water lily, a great black bear tearing up a rotten log for his favorite snack of honey, or a large flock of wild ducks startled off the water by the canoe's approach. Here, also, you may see the blue heron, the bald eagle, herds of deer or that ever-present little woods-clown, the porcupine. Fishing is superb in the wilderness. The thousands of lakes and rivers teem with walleyes, northern pike, bass, lake trout and pan fish. The waters are clear and cold, and the fish are the big, fighting kind.

Or the hearty traveler may be more of a viewer. Don't be surprised if you hear him expounding the beauty of such "common" sights as the St. Croix Valley, the North Shore or a State park. Houseboat tours are gaining in popularity, and floating homes are unique in vacation adventure. Trailway tours are never-to-be-forgotten experiences. The tourist gets off the beaten path and may wind up on a familiar boulevard. Canoes are necessary for this conversation piece. And when you hear the enthusiastic talk of the tasks that have been completed by the vacationers remember that very few areas can provide a challenge that is equal to the overall wants of large numbers of people.

Communist Brainwashing for Americans

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. BURDICK. Mr. Speaker, to apprise the people of this country just what the Communist practice was and probably still is in regard to the treatment of so-called mentally sick persons, I have decided to reprint the entire speech made by Communist Beria to a class of American students at Lenin University.

This is the same Beria who was at the head of the police system in Russia, and who caused the execution of millions of Russians, and who finally was himself executed by the Malenkov dictatorship:

AN ADDRESS BY BERIA

American students at the Lenin University, I welcome your attendance at these classes on psychopolitics.

Psychopolitics is an important if less known division of geopolitics. It is less known because it must necessarily deal with highly educated personnel, the very top strata of mental healing.

By psychopolitics our chief goals are effectively carried forward. To produce a maximum of chaos in the culture of the enemy is our first most important step. Our fruits are grown in chaos, distrust, economic depression, and scientific turmoil. At last a weary populace can seek peace only in our

offered Communist state, at last only communism can resolve the problems of the masses.

A psychopolitician must work hard to produce the maximum chaos in the fields of mental healing. He must recruit and use all the agencies and facilities of mental healing. He must labor to increase the personnel and facilities of mental healing until at last the entire field of mental science is entirely dominated by Communist principles and desires.

To achieve these goals the psychopolitician must crush every homegrown variety of mental healing in America. Actual teachings of Freud, James, Eddy, and others amongst your misguided peoples must be swept away. They must be discredited, defamed, arrested, stamped upon even by their own government until there is no credit in them and only Communist-oriented healing remains. You must work until every teacher of psychology unknowingly or knowingly teaches only Communist doctrine under the guise of "psychology." You must labor until every doctor and psychiatrist is either a psychopolitician or an unwitting assistant to our aims.

You must labor until we have dominion over the minds and bodies of every important person in your nation. You must achieve such disrepute for the state of insanity and such authority over its pronouncement that not one statesman so labeled could again be given credence by his people. You must work until suicide arising from mental imbalance is common and calls forth no general investigation or remark.

With the institutions for the insane you have in your country prisons which can hold a million persons and can hold them without civil rights or any hope of fredeom. And upon these people can be practiced shock and surgery so that never again will they draw a sane breath. You must make these treatments common and accepted. And you must sweep aside any treatment or any group of persons seeking to treat by effective means.

You must dominate as respected men the fields of psychiatry and psychology. You must dominate the hospitals and universities. You must carry forward the myth that only a European doctor is competent in the field of insanity and thus excuse amongst you the high incidence of foreign birth and training. If and when we seize Vienna, you shall then have a common ground of meeting and can come and take your instructions as worshippers of Freud along with other psychiatrists.

Psychopolitics is a solemn charge. With it you can erase our enemies as insects. You can cripple the efficiency of leaders by striking insanity into their families through the use of drugs. You can wipe them away with testimony as to their insanity. By our technologies you can even bring about insanity itself when they seem too restive.

You can change their loyalties by psychopolitics. Given a short time with a psychopolitician you can alter forever the loyalty of a soldier in our hands or a statesman or a leader in his own country, or you can destroy his mind.

However, you labor under certain dangers. It may happen that remedies for our "treatments" may be discovered. It may occur that a public hue and cry may arise against "mental healing." It may thus occur that all mental healing might be placed in the hands of ministers and be taken out of the hands of our psychopogists and psychiatrists. But the capitalistic thirst for control, capitalistic inhumanity, and a general public terror of insanity can be brought to guard against these things. But should they occur, should independent researchers actually discover means to undo psychopolitical procedures, you must not rest, you must not eat or sleep, you must not stint one tiniest bit of available money to compaign against it, discredit it, strike it down and render it void. For by an effective means all our actions and researches could be undone.

In a capitalistic state you are aided on all sides by the corruption of the philosophy of man and the times. You will discover that everything will aid you in your campaign to seize, control, and use all "mental healing" to spread our doctrine and rid us of our enemies within their own borders.

Use the courts, use the judges, use the constitution of the country, use its medical societies and its laws to further our ends. Do not stint in your labor in this direction. And when you have succeeded you will discover that you can now effect your own legislation at will and you can, by careful organization of healing societies, by constant campaign about the terrors of society, by a pretense as to your effectiveness make your capitalist himself, by his own appropriations, finance a large portion of the quiet conquest of the nation.

By psychopolitics create chaos. Leave a nation leaderless. Kill our enemies and bring to earth, through communism, the greatest peace man has ever known. Thank you.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ARENDS. Mr. Speaker, I have often said there is no quick, easy solution for the farm problem. No legislation can, in and of itself, bring about a complete and practical solution. It is a problem with many ramifications, complexities and contingencies.

One of the most concise articles I have seen on this subject is that written by Orin W. Hertz, Farm Adviser for Vermilion County, Ill. It is indeed a thought-provoking article, and I am inserting it in the RECORD. He raises a basic question that must be resolved. Shall it be more and more controls, or shall it be greater freedom?

The article follows:

FARM FARE

(By Orin W. Hertz, Vermilion County farm adviser)

Last month I wrote a column for the Vermilion County Farm Bureau Booster that struck an understanding chord with a number of people. If they felt that way about it, it is entitled to wider circulation. Here it is.

What a mess the whole agricultural situation is in. For more than 24 years we have been trying to legislate agricultural prosperity. Partisan politics have not been the major factor as I see it.

We have tried more controls and less controls. We have had high price support, low price support, and in-between price support. We have had tight acreage control (wheat, cotton and tobacco) and very loose acreage control (corn). We have produced much more than domestic markets can absorb and must depend on some export business, yet we have priced ourselves out of the world markets.

We, as farmers, want our products protected by tariffs from foreign competition yet we want to sell abroad and not have those foreign countries erect barriers to keep our products out of their country. We have used soil conservation funds to increase production that can't be sold to other than CCC.

We have reduced corn acreage and then grown a competing crop, such as some form of sorghum, to reduce the market for corn that we do raise. We have used conservation funds to build lakes and ponds and then let surface water wash them full of soil.

We have CCC bin capacity in Vermilion County for 7,193,074 bushels of grain and still (as this is written) not enough space to take over the corn that is under seal and purchase agreement. We have too much corn, wheat, soybeans, and oats, yet in order to farm economically we must do the best job of fertilizing that we can in order to increase the size of our crop.

If all of the above doesn't add up to a mess I'm not capable of recognizing one. If I were smart enough to write the formula to get us out of the mess, I'd probably have a lot bigger and more remunerative job that I now have.

It seems to me that we—you—have about two choices. One is more and more controls—tighter and tighter—with no one allowed to go broke and at the same time little possibility to get ahead.

The other is a gradual return to a free competitive market with greater individual freedom of choice. Under this program some people will go busted while others will get ahead. The first is the road to socialism. The second is the system that built America to what it is today—the envy of the world—the goal of emigrants from foreign lands—the land of the free and the home of the brave. You have the choice.

Trade With the Reds Never Has Worked Out

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. GROSS. Mr. Speaker, I call to the attention of my colleagues the following editorial which appeared in the July 10 issue of the Mason City, Iowa, Globe-Gazette:

Trade-hungry Britain has broken its agreement on doing business with Red China.

The consequences could be serious, some unquestionably bad, some possibly—just possibly—good.

Most immediate results is a further strain on British-American relations. England has in effect told us to go fly our own kite.

Along with this goes a further rift in the North Atlantic organization, for it was NATO, with England agreeing, that clamped embargoes on trade with Red China in 1951 after the United Nations had branded the Peiping regime a Korean war aggressor.

Certainly the newly increased trade is going to ease things for Red China.

Britain offers an excuse that Red China has been able to buy through the back door of Russia all the things Britain proposes to sell her now anyway.

But that back door operation is expensive for Red China. Direct buying, without long railroad hauls, will be far cheaper.

And such goods as machine tools, electric motors, rubber, motor vehicles, tractors, locomotives, and scientific instruments—which the British no longer consider strategic—surely will help build up a regime which is still our avowed enemy, an enemy that has

warred on us and threatens more war on Formosa.

The argument on the other side is thin, but nevertheless there.

This holds that America cannot forever prohibit such allies as Britain and Japan from trading with Red China.

It holds that giving our allies opportunity to do business with the Reds will strengthen the allies economically, too.

It also contends that it will reduce Red China's dependence on the Kremlin and thus encourage her to stand independently from the Soviet Union.

It is a mightly nice little dilemma, in the midst of which Washington has been able to mutter only a small disappointment so far.

Perhaps, as some who call themselves even more realistic than the British advise:

"Let them go ahead and try to do business with the Reds. The sooner they get disillusioned the better."

A Violation of Good Faith

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. OSTERTAG. Mr. Speaker, while we properly concern ourselves here with the protection of civil rights, let us not mindlessly vote away not only the civil rights but the treaty rights of the Seneca Nation of American Indians. More than 160 years ago, the Senecas were guaranteed by treaty the right to their lands in Western New York State. Today, there is a bill before this Congress which, if approved, will virtually wipe out their reservation for a so-called flood control project. I am referring to the proposed $100 million dam on the Allegheny River at Kinzua, Pa.

Individuals and organizations throughout this country are shocked at this project which would violate a treaty signed in the administration of George Washington. Competent engineers have said that it will not provide the measure of flood control claimed for it, and that there are other and better solutions to the flood control problem on the Allegheny River. In brief, this is a project which is justified neither economically nor morally. I hope it will be reconsidered before an irrevocable and inexcusable mistake is made.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD some of the communications and resolutions which have reached me in opposition to this project:

KINZUA DAM RESOLUTION—ACT NO. 34, BY SUPERVISOR KILBURN

Whereas the proposed Kinzua Dam will damage and lay waste to many acres of the most historical and beautiful part of our county directly and indirectly and serve no beneficial purposes to those of us on the Indian Reservation or in the county or State;

Whereas it would be of no benefit in alleviating the hazard of floods for the city of Salamanca or any other Cattaraugus community;

Whereas if constructed it is doubtful, in the minds of many, that it will serve the purpose for which it was intended;

Whereas considered from all angles it will be a severe blow to our county and State and just about destroy forever the cherished land and homes of the Seneca Nation, thereby reducing the Indian Treaty to an unhonored scrap of paper, and our Government is bound to be criticized by our foreign enemies as much as it will be by all fair-minded Americans who believe in justice for all: Now, therefore, be it

Resolved, That the board of supervisors of this county of Cattaraugus go on record as being bitterly opposed to the construction of the Kinzua Dam. That in its stead we recommend a series of smaller dams or Allegany tributaries or dredge the river, which would serve the purpose and not be so costly, which will serve the same purpose and not mar the beauty of our county or disturb the peaceful residents of our Allegany Valley; further

Resolved, That before action is taken on this project that we recommend a public hearing, with all interested factions attending—the board of supervisors, representatives of the Seneca Nation, and that we ask the governor of our State, Averell Harriman, to attend, and that the clerk of the board be instructed to forward copies of this act to Congressman Daniel Reed; Senator Ives; Governor Harriman; Senator Lausche, of Ohio; Senator Clark, of Pennsylvania; president of the Seneca Nation; President Dwight Eisenhower.

STATE OF NEW YORK,
County of Cattaraugus, ss:

I, C. W. Baker, clerk of the board of supervisors of Cattaraugus County, do hereby certify that the above is a true and correct copy of a resolution passed by the above board, ayes 29, nays 10, when meeting in regular session on February 7, 1957.

C. W. BAKER,
Clerk, Board of Supervisors, Cattaraugus County.

NEW YORK STATE ARCHEOLOGICAL ASSOCIATION,
April 17, 1957.

At the annual meeting of the New York State Archeological Association held at Rochester, N. Y., on April 6, our attention was called to an item on page 598 of the 1958 fiscal budget request whereby the United States Corps of Army Engineers asks for an appropriation of $1,000,000 to start construction of the Kinzua Dam in conjunction with the Allegheny Reservoir Project, involving an ultimate expenditure of $100,000,000. It is evident that if the Corps of Engineers are allowed to commence this project several consequences are inevitable:

1. It will cost the taxpayers a vast sum,

2. Erecting the proposed dam will entail acquiring flowage rights to 9,000 acres of the lands of the Seneca Nation in New York State and displace 600 Indian persons now living between Salamanca, N. Y., and the Pennsylvania State line.

3. It will abridge the treaty between the United States and the tribes of Indians called the Six Nations, November 11, 1794, which is our oldest active treaty with the Indians.

4. It will disturb the Senecas in the peaceful enjoyment of their lands and break up a community.

5. And the Senecas who have never violated this agreement are to a man opposed either to sale or displacement.

In view of these considerations, the New York State Archeological Association passed the following resolutions:

1. That the New York State Archeological Association express its concern at the initial budget item which will lead to a much larger ultimate expenditure of taxpayers' funds.

2. That it express its protest at the appropriation of funds for the Kinzua Dam which would inundate a large portion of the remaining bottom lands on the Allegany Reservation of the Seneca Nation in New York State.

3. That it express concern over setting aside the ancient covenant given by the United States in the Pickering Treaty which has greatly disturbed the Seneca Nation who regard this action as a breach of faith.

4. And that we are deeply disturbed that this action would expose the United States to criticism from abroad for dealing arbitrarily and in faithless fashion with our oldest minority group.

5. Therefore be it

Resolved, That the New York State Archeological Association express its protest to the chairman of the House Appropriations Committee, interested Representatives, to the New York Senators, and ask them to delete this item from the budget.

WILLIAM A. RITCHIE,
President.

PENNSYLVANIA FEDERATION OF SPORTSMEN'S CLUBS—KINZUA DAM RESOLUTION

Whereas the corps of Army Engineers have recommended the erection of a dam on the Allegheny River near Kinzua in Warren County and an appropriation for $1 million for initial construction cost is presently listed in the President's budget; and

Whereas the total cost of the dam will be more than $100 million; and

Whereas other adequate flood prevention measures costing considerably less have not been studied by competent engineers; and

Whereas the said dam will destroy valuable recreational facilities; and

Whereas it will be necessary to break a treaty with the Senaca Indians if the said dam is erected: Now, therefore, be it

Resolved, That the PFSC oppose the erection of the proposed dam on the Allegheny River at Kinzua in Warren County until:

1. A complete survey and appraisal of all alternative methods to prevent floods is completed.

2. It is determined that the proposed dam is economically justified, and

3. A public hearing is held before a congressional committee.

Now, therefore, be it

Resolved, That all Pennsylvania Congressmen and officials of the National Wildlife Federation be notified of our opposition to the $1 million appropriation or any other appropriation for this dam.

HARRISBURG, PA., *March 29, 1957.*

A STATEMENT IN SUPPORT OF THE SENECA NATION, JANUARY 24, 1957

The Association on American Indian Affairs (in New York), the Indian Rights Association (in Philadelphia), the Friends Committee on National Legislation (in Washington), and the Indian Committees of the New York and Philadelphia Annual Meetings of Friends are united in their opposition to the erection of the so-called Kinzua Dam.

This dam is contemplated in the design and planning of the so-called Allegheny River Resorvoir project of the Corps of Engineers, United States Army.

Construction of the dam would subject to flooding nearly all of the Cornplanter Reservation in Pennsylvania and a considerable part (about 9,000 acres) of the Allegany Reservation in New York State. It would mean the removal and destruction of the homes of about 250 families (approximately 1,000 individuals) of the Seneca Nation residing on the Allegany Reservation. Not only would the homes be removed and destroyed but also the community, which has great significance for the Allegany Senecas, would be broken up.

The removal and destruction of these Seneca homes would be in direct violation of the treaty of 1794 which states:

"Now, the United States acknowledge all the land within the aforementioned boundaries, to be the property of the Seneca Nation;

and the United States will never claim the same nor disturb the Seneca Nation, nor any of the six nations, or of their Indian friends residing thereon and united with them, in the free use and enjoyment thereof; but it shall remain theirs until they choose to sell the same to the people of the United States who have the right to purchase."

The Seneca Nation, by official action of their council, has gone on record in opposition to the project. The Nation, the Association on American Indian Affairs and the Indian Rights Association separately petitioned the Governor of New York State to help prevent the destruction of Seneca homes and the violation of Seneca treaty rights; and on January 14 Governor Harriman appealed to the Army engineers on behalf of New York State's Indian citizens. Governor Harriman asked the engineers to "take a new look" at the area "to determine whether other flood control measures might solve the problem without forcing the Indians to leave their homes."

Through their officers the Nation also requests the assistance of friendly organizations and individuals to help protect their homes.

This Allegany Reservation is the homeland of these Seneca Indians. It has many intangible values for them. There is no known area of comparable land available to which they could be moved that would give them the tax-free land status which they now enjoy and which would enable them to preserve their vital community interests.

Seneca occupation of this land rests upon aboriginal rights and antedates the colony of New York as well as the organization of the United States.

We are united in urging Congress to support the treaty made with these Indians in 1794 which set up this reservation "for the free use and enjoyment * * * to remain theirs until they choose to sell it" and to refuse to give the authority for the destruction of these Indian homes. In his budget message, President Eisenhower asked Congress to appropriate $1 million this year to complete plans for the dam and begin construction.

We urge other organizations and individuals to use their influence to have Congress refuse to appropriate the $1 million required for the construction of the Kinzua Dam, which would effect a direct violation of our Nation's treaty with the Seneca Nation.

PHILADELPHIA YEARLY MEETING OF THE,
RELIGIOUS SOCIETY OF FRIENDS,
Philadephia, Pa., April 19, 1957.

Hon. HAROLD C. OSTERTAG,
Appropriations Committee,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: The distressing plight which threatens the Seneca Indians of the Allegany Reservation in New York because of the proposed construction of a high dam near Kinzua, Pa., was brought to the attention of Philadelphia Yearly Meeting of the Religious Society of Friends (Quakers) during its sessions recently concluded.

This letter is addressed to you at the direction of the yearly meeting, which has worked continuously among the Seneca Indians of the Allegany Reservation since the latter part of the 18th century.

We were told that according to the best estimates the proposed dam will subject to flooding more than 9,000 acres of the Allegany Reservation and will destroy about 250 homes of 1,000 Seneca Indians. Not only are their homes precious to these Indian people, but possibly even more important is their community and their tribal organization and existence, which would also be broken up.

The occupation of their reservation is based upon a treaty made with the Federal Government in 1794. In this treaty it was promised that "the United States will never claim the same nor disturb the Seneca Nation * * * in the free use and enjoyment thereof; but it shall remain theirs untill they choose to sell the same to the people of the United States who have the right to purchase."

Our support of the Seneca Nation is based upon the sanctity of treaties and the needs of the Seneca Indians. However, questions as to whether the proposed high dam is the best method of securing the results desired have been seriously raised by competent engineers ,and it seems to us important that further studies be made to determine the most practical flood-control methods.

Every effort should be made to achieve the needed flood control and the conservation of the soils and water of the Allegheny watershed with the least possible disturbance of the life and homes of the Seneca Indians.

Now, as always, it is vitally important that we as a Nation shall abide by our treaties and promises regardless of our power to break them. We urge that Congress not make an appropriation to finance a project aimed at breaking, by unilateral action, a treaty which was made with the Seneca Nation 163 years ago, and which has been kept in good faith by both the Seneca Nation and the United States up to this time.

On behalf of Philadelphia Yearly Meeting.
CHARLES J. DARLINGTON,
Clerk.

MAY 20, 1957.

To the Congress of the United States and the Subcommittee on Public Works Appropriations of the United States Senate and the House of Representatives:

The National Fellowship of Indian Workers, a nondenominational organizations composed of missionaries, Government workers, and other friends of the Indian, view with grave concern the plight of the Seneca Nation now residing on the Cornplanter Reservation in Pennsylvania and the Allegany Reservation in New York State, since the building of the proposed Kinzua Dam would obviously result in the abrogation of the recognized Pickering Treaty of 1794.

Unless permission for such abrogation is secured through free and open choice of the majority of Seneca residents involved on these two Indian reservations, the National Fellowship of Indian Workers strongly urges the United States Government to recognize the moral issues involved in breaking a treaty with these Indians, and pursue other means of a sound nature to obtain the desired flood control, such means having been proposed by recognized authorities in such work.

DAVID W. OWL,
President, National Fellowship of Indian Workers.

The Eastern Regional Fellowship of Indian Workers, because of our deep concern over this threat to those in our own area, concur in the resolution opposing the building of the Kinzua Dam as adopted by the officers of the National Fellowship of Indian Workers, and wish to go on record as making such a statement the sentiments of our conference.

DOROTHY CROUSE,
President, Eastern Regional Fellowship of Indian Workers.

CONSERVATION FORUM
OF NEW YORK STATE,
January 16, 1957.

The following resolution was unanimously adopted:

"Whereas construction of the proposed high dam in the Allegheny River at Kinzua, Pa., by the United States Government would abrogate the Pickering Treaty of 1794 which guaranteed to the Seneca Indians a perpetual right to dwell undisturbed in their reservation; and

Whereas the proposed large lake to be created would alternately flood and recede, thus destroying the beauty of the valley; and

Whereas the cost of the high dam is expected to greatly exceed the cost of a system of small flood-control dams on the tributaries; and

Whereas flood control, the stated purpose of the high dam, can be accomplished by smaller dams as has been shown in the Muskingum Watershed Conservancy District in Ohio: Be it

Resolved, That the Conservation Forum of New York State opposes construction of the proposed high dam in the Allegheny River at Kinzua and urges instead that a system of dams be constructed in the tributaries after the pattern of the Muskingum district in Ohio.

COUNCIL OF CHURCH WOMEN OF
ROCHESTER AND VICINITY, INC.,
Rochester, N. Y., February 19, 1957.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR MR. OSTERTAG: At a meeting of our executive committee of the council on Friday, February 15, I was instructed to write you in reference to a matter of grave concern to our churchwomen.

It has come to our attention that a plan has been made for the building of a 210-foot dam in the Allegany Valley which will necessitate acquiring lands and homes of the Seneca Indians on the Allegany Reservation. The details of this plan were presented to us.

The Pickering Treaty, made in 1784 with the Seneca Indians and the United States, guaranteed this land to the Indians "forever."

Some engineers also feel that there are better ways of flood control for Pittsburgh, such as small dams at the headwaters of the rivers.

It would seem that the matter of other methods should be fully studied before this expensive dam is erected and another slice of Indian Territory appropriated. This nibbling away at the Indian lands by powerful interests is a matter which must constantly be considered and prevented. We feel the rights of American Indians must have protection at all costs.

Sincerely yours,
Mrs. IRVING L. WALKER,
Executive Secretary.

ROCHESTER, N. Y.
February 21, 1957.

Hon. HAROLD C. OSTERTAG: On behalf of my group I am writing to you in strong protest against the proposed Kinzua Dam, which would flood 10,000 acres of the land remaining in the Allegany Reservation in upper New York State. We feel that you, as a Representative from this area and a member of the House Committee on Appropriations should be particularly interested in the very strong reasons why this dam should not be built. I shall not enumerate them, but call them to your attention.

We beg you to consider the plight of the Seneca Indians of the reservation and their historic right to this land. Also, we feel the proposed dam would not adequately serve the purpose for which it is intended.

Very truly yours,
Mrs. EDWIN B. LEFFERTS,
Social Education and Action Committee, Central Missionary Guild, Central Presbyterian Church.

Schedule of Grassroots Conferences in Third Ohio District

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SCHENCK. Mr. Speaker, it is my great privilege and honor to represent the people of the Third District of Ohio here in the Congress of the United States. I am humbly grateful for this opportunity to be of service, and it is my constant aim to serve my constituents in the very best way possible. As their Representative in Congress it has been my constant policy to keep in close contact with the people of the third district so that I may know how they feel about the many important issues facing us here in Congress.

Our third district is the largest congressional district in Ohio and one of the largest in the United States. Its great importance, however, is not dependent on size alone, but rather on the outstanding contributions of its fine citizens to the general welfare of our Nation. Not only is it the birthplace and cradle of aviation, but many of its other products and inventions are serving people throughout the world. Our people are highly skilled in many ways, and we have a district in which scientific projects, manufacturing, and agriculture are developed to an unusually high degree. As the Representative of this great district, I have considered it my duty not only to be well informed of the opinions of my constituents, but also to be of the greatest possible service to persons having problems dealing with agencies or departments of our Federal Government.

Six years ago I initiated the idea of holding grassroots conferences throughout our district, and I have continued this practice each year during the time Congress is in adjournment. I also have a full-time congressional service office at the United States post office building, in Dayton, where I can meet with people personally at any time that my official duties permit me to return to the district.

During the time I am in Washington, attending to legislative and official duties, a competent secretary is in charge of my district service office to assist callers and to help them with requests for aid in dealing with the Federal Government so that I can be of every proper assistance to them.

In these ways I have sincerely tried to keep well informed as to the personal opinions of my constituents, and I have also tried continuously and sincerely to be of every proper service to them.

Members of Congress are constantly called upon to give careful and earnest consideration to legislation dealing with many complex national and international problems. These day-to-day decisions often affect the lives and living of every citizen in our Nation. Consequently, these personal and private conferences help me to serve all of the people in my district in a much more effective manner.

This year during our official congressional recess, I am again taking time to hold these "grassroots conferences" throughout our district at convenient public buildings. I deeply appreciate the fine cooperation of the many officials who have made these meeting places available to me as an aid in rendering this public service.

This is the schedule I have arranged:

Dayton Post Office, room 314, August 19 and 20, 9 a. m. to 4 p. m.

Miamisburg City Building, August 21, 4 p. m. to 8 p. m.

Germantown City Building, August 22, 4 p. m. to 8 p. m.

Brookville City Building, August 23, 4 p. m. to 8 p. m.

Phillipsburg School, August 24, 4 p. m. to 8 p. m.

Hamilton Courthouse, August 26, 9 a. m. to 4 p. m.

Middletown American Legion, August 28, 9 a. m. to 4 p. m.

Oxford Municipal Building, August 29, 4 p. m. to 8 p. m.

Fairfield City Building, August 30, 4 p. m. to 8 p. m.

Each year an increasing number of our folks have visited with me at these conferences, and the attendance has been most encouraging. It is sometimes surprising to see how much can really be accomplished when a citizen and his Congressman can sit down face to face and talk over problems of mutual concern.

Special appointments are not necessary for these conferences, and I sincerely urge individuals or groups to meet with me on the date and at the place most convenient to them. The knowledge obtained through these grassroot conferences will help me to render better service—both legislative and personal—to all of the people of our important third district here in the Congress of the United States.

Farm Policy Revision in Order

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ARENDS. Mr. Speaker, I wish to call your attention to an editorial, entitled "Farm Policy Revision in Order," which appeared in the Daily Pantagraph, of Bloomington, Ill., last Monday.

It represents four specific points with respect to the farm problem that certainly merit consideration. As the editorial so well points out, we have not yet realistically approached the farm surplus problem. We have made a beginning, but we have not come directly to grips with the root of the problem.

I join with the Daily Pantagraph in urging early review of this whole problem that we may enact remedial legislation.

The editorial follows:

FARM POLICY REVISION IN ORDER

More and more people are coming to the conclusion that farm legislation has not come to grips with the real agricultural problem, which is production in excess of use. Programs enacted to date have been administered in such a way that they simply have shifted production. They have not taken into full account the tremendous increase in output per acre.

The idea behind the soil-bank plan is sound. That is to take land out of production and hold it in a high state of fertility until such time as it is needed.

In line with this purpose we propose four steps in an attack upon the farm problem of overproduction.

1. That Congress and the administration call a halt immediately on all projects to reclaim new agricultural land. Millions upon millions of dollars are being spent now to put new acres under cultivation.

2. That Congress authorize the Department of Agriculture to shift its major emphasis on research from greater yields to expanded uses and thus greater consumption of farm crops. This would shake the Extension Service to its foundations, but something must be done to put the energy and the know-how of science on the right track to remove rather than increase surpluses.

3. That Congress and the Department of Agriculture give careful thought to a shift in the soil-bank plan to permit taking entire farms out of production, rather than the poorer acres of many farms as at present. These farms could be leased, possibly on a bid basis, and kept in condition for use when the need for more food develops. Then they would be released to the owners.

If this looks like an impossible task in maintenance and administration, one must understand that the present plan does not operate itself. McLean County alone has a crew of 96 men engaged in measuring the corn acreage at this season.

We do not pretend to have a complete plan worked out. There may be sound reasons why it would not work. But we believe it merits serious study.

4. That, as the farm reserve plan becomes effective, supports be gradually reduced to leave agriculture in a free market.

The existing farm program continues to stimulate production. It has been kept far too long. It adds to the surplus at a time when excessive supply is the root of the problem.

It's late enough for Congress to get down to realities and correct the errors in this program that seeks for agriculture an equality with industry and other pursuits. Agriculture and the country will be much better served if Congress will do so.

Stop Nuclear Tests—The Views of an Austrian Guest of the United States

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following comment which recently appeared in the Elmira (N. Y.) Star-Gazette of June 4, 1957. The author is a young Austrian newspaper-

man visting the United States for a few months, who is a guest member of the Star-Gazette staff.

I believe his views on nuclear testing and the Communist strategy are particularly interesting coming from one who grew up under both the Nazis and the Communists in Austria during and after World War II. A further fact of interest is brought out when one considers that this reporter's homeland would unquestionably be overrun and perhaps literally obliterated in the event of another general war in Europe.

The above-mentioned follows:

AUSTRIAN BELIEVES NUCLEAR TEST MAY ACTUALLY BE "MUST"

(By Roman Schliesser)

I hate wars and really believe that this world would not survive a world war III. And when I say this, remember I am speaking as a man from a country defeated in the horror of World War II.

I would like to see the world's leaders render harmless every atomic or hydrogen bomb on earth. And I would like to cry out for all to hear that we should stop the testing of nuclear weapons. Let's disarm the world's armies.

And yet I can't do it.

I would like to join the 2,000 American scientists in their appeal for international agreement to stop the testing of nuclear devices. And yet I can't do it.

I can't do it because I fear this appeal to stop international nuclear testing could be a mistake—a deadly mistake.

As a neutralized country, Austria has only a small army of 53,000 men. We are not allowed to have any kind of atomic weapons. Growing up during the terror of World War II, and living in a defeated country after the war, I once thought it would be best for Austria to be a real neutral country with no army at all.

I changed my mind. I saw how necessary even a small army could be when the Hungarian revolution broke out. I think there is a need for armies as long as there are powers you can't trust. And I don't think you can trust the Communists. Never.

The Hungarian revolution demonstrated to me that the Soviets will go to any extreme, even to that of killing the workers they claim they are trying to help.

The Soviets for years have asked for a prohibition of nuclear weapons. They do it with their usual propaganda; the voices of men of straw, and the voices of politically inexperienced scientists. They ask for the same ban on nuclear testing that the 2,000 American scientists request.

Ironically, they also have been making nuclear tests for years. For years western scientists have registered Soviet atomic explosions in Siberia. Who can say that the Soviets would really stop their production of atomic and hydrogen bombs? Who could take the responsibility for such a demand? Who could guarantee it?

While asking for a halt to nuclear testing, the Soviets have been maintaining at the same time that they have better, stronger bombs than the United States. If they are so concerned about humanity, why can't they be the first to stop nuclear production?

I don't trust the Communists. And that, for me, and many Austrians, is the reason why it's hard to agree with the 2,000 scientists and their appeal. Even as much as I'd like to agree, I can't.

It isn't only nuclear testing we should fight. It's war itself that we have to fight with all our strength. In that sense, I think the fear generated by atomic weapons can be the best weapon against a future war.

Nikita Khrushchev told American TV viewers Sunday, with a friendly smile, that he thinks your grandchildren will live under socialism. In another word, this means communism.

He also said another war would be a great calamity for mankind, but the Communists would win such a war. He asked for a stop to nuclear testing and said, regarding disarmament, that Russia was prepared to limit itself to "some small step so that a small step might lead to something bigger."

Such doubletalk. Comrade Khrushchev didn't explain if this means a bigger cut in troops, or raises the possibility of increasing the size of the Soviet army on every occasion.

He also spoke about free competition between the Communist system and the American system. But he said nothing about the possibility of people behind the Iron Curtain getting a chance to take part in this competition, even to choosing the American way if they want.

There is a very fitting word for this situation. And I have learned it in your country. The word is "phony."

I think the Communists are phony. They are as phony as Khrushchev's proclamations on TV and as phony as the Communist demand for a halt in the testing of nuclear bombs.

No one has to tell me how horrible a new war would be with the use of atomic and hydrogen bombs. It's horrible enough for me to remember how individuals get killed in wars as we have known them.

I have a high regard for human life, yet I cannot join the chorus of voices asking for a stop to nuclear testing. I can't, because I know that you could not trust Soviet promises to stop their own testing.

I believe as long as the West is strong enough to fight the Communists there will be no Soviet attack.

The Teacher: An Appreciation

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. AVERY. Mr. Speaker, the following is an editorial which appeared in the Topeka State Journal, Topeka, Kans., entitled "The Teacher: An Appreciation."

I feel that it is not necessary for me to enlarge upon the comments made in this excellent editorial. It contains much food for thought and I highly recommend it to all Members of Congress:

THE TEACHER: AN APPRECIATION

William Osler, the great physician and teacher, was a Canadian who spread his influence abroad through the University of Pennsylvania and Johns Hopkins to Oxford. He was a man wise in the homely virtues and foibles of everyday men and women, a man at home with anyone. Perhaps that is one reason why he became such a great teacher.

In a speech he made at Baltimore, at the height of his fame and just as he was leaving to teach at Oxford, Dr. Osler said (this was 1905):

"The teacher's life should have three periods—study until 25, investigation until 40, profession until 60, at which age I would have him retired on a double allowance."

This particular speech of Osler's was sadly misinterpreted and even distorted by much of the press of that time, so that many people got the notion Osler believed people were pretty useless after the peak of middle age.

But this impression was not true at all. By profession Dr. Osler simply meant what a lawyer or doctor means when he says practice. He meant that after 40 a teacher was really ready to practice his or her art—and be it said here that Dr. Osler was definitely the kind of man who believes that teaching is an art, not a method.

This leads on to saying that the gift of the good teacher cannot be taught to him or to her. The teacher has it or doesn't have it. We all remember the teacher who without every trying to do so, could fascinate the most googly-eyed classroom just by turning on the delightful and irresistible stream of his thought. The great teacher is perhaps first of all a great learner, whose own hunger and thirst for knowledge—more than that, for understanding—are insatiable. He is thought to be a bit eccentric, perhaps, an impression he may humorously cultivate to underscore his belief in the uniqueness of the individual. To him the sixth and most important sense is the sense of humor. He has only two real hates: sham and unction. Thus his contagion spreads, and the rest is remembrance in a thousand and one impressionable minds.

We thought of these things upon reading about the second annual tea for retired and retiring Topeka schoolteachers. How wonderful they are. How self-effacing and sacrificial and devoted they have been. And one of them, speaking for the rest, said "there is work for us all to do" to help our community socially and professionally.

You see how it is. The teacher's habits of life, of helping others before self, are not easily broken. And reading same, we wondered whether the part of Dr. Osler's prescription that the public really couldn't swallow might not have been the part about retiring our loyal teachers on a double allowance. The public probably never will digest that one, as even the back-row pupil suspects, but is it too much to hope that one day our teachers may be paid more than the drivers—meaning no offense—of the town beer trucks?

Can We Afford This Breach of Faith?

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. OSTERTAG. Mr. Speaker, there is soon to come before this House a project which, in my judgment, is far too costly for this Government to approve. Its cost in terms of benefits received is questionable. Its cost in terms of the sacrifice of moral values is inestimable.

I refer to the projected Kinzua Dam on the upper Allegheny River.

This was to be a relatively modest project when it was first contemplated. It was to be part of a great network of dams in the Allegheny and Monongahela valleys to protect against floods. But by 1948 it had grown to a $66 million project. By 1956 it had become a $97 million project. Now it is envisioned as a $101 million project, and by the time

it is completed, if we are so unwise as to approve the pending legislation, it will undoubtedly be upward of a $150 million project. What we shall be voting on is a $1 million item in the Public Works Appropriation bill, but what we are committing ourselves to spend is $100 to $150 million.

There is no showing whatever that the benefits will be comparable to this fantastic cost. On the contrary, there is every reason to defer this project until it is more carefully examined.

It is economically desirable to do this. There are several alternative proposals which appear to deserve further study. And it is certainly morally desirable to do so. For this project, if built, will destroy an Indian reservation which was granted to the Seneca Nation of Indians by solemn treaty under the administration of George Washington. The treaty guaranteed the Senecas the use of their lands in perpetuity. They have abided by the treaty in good faith for 163 years. I hope it will not remain for this Congress and this generation to reduce it to a scrap of paper.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD some communications from veterans, churchmen, laymen, sportsmen, clubwomen, and from the Indians, setting forth their views on this matter.

The communications follow:

LARCHMONT, N. Y., *June 12, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.:

The New York Committe on Indian Affairs of the Society of Friends urges that no money be appropriated for the construction of the Allegheny Reservoir project which would dishonor the treaty of 1794 and cause grave injustice and hardships to the Seneca Indians without achieving the flood control desired.

GLADYS SCHWANTES,
Secretary.

RESOLUTION RELATIVE TO THE PROPOSED KINZUA DAM, UNANIMOUSLY ADOPTED FEBRUARY 12, 1957, BY FEDERATED SPORTSMEN'S CLUBS OF CATTARAUGUS COUNTY, N. Y., INC.

Whereas the United States Army Corps of Engineers, the agency responsible for flood control in the Allegheny River valley, proposes to construct near the hamlet of Kinzua, in Pennsylvania, a $125 million dam, thereby impounding a lake extending into New York State as far as Salamanca, and comprising several thousand acres of good agricultural land, and a portion of the Seneca Indian Reservation; and

Whereas the proposed dam and lake are intended to leasen, or prevent, flood damage to th Allegeny River watershed south of Kinzua; to assure a constant flow of water during the dry periods of the year, required by industries; and to provide such recreational facilities as camping, boating, hunting, and fishing, all of which would be possible in the portion of the lake located in Pennsylvania; and

Whereas the proposed Kinzua Lake will doubtless prove to be extremely beneficial to the lower Allegeny area, it can only be injurious, even disastrous, to the area north of the State line. No provisions are made for flood protection in this area. Several thousand acres of good agricultural land will be destroyed. A large portion of the Seneca Indian Reservation will be appropriated—against the wishes of the residents—which means that the United States will at last have broken a treaty. A great number of cemeteries, both on and off the Indian Reservation will have to be relocated. A large portion of the Allegheny State Park will be flooded. These lands will be flooded only during periods of high water. Recession of the flood waters will leave a swamp filled with mud, sewage, industrial waste, vermin, and disease-breeding germs; land unfit for use by wildlife, fish, or human beings; and

Whereas in the opinion of sportsmen, conservationists, residents, and competent civilian engineers, more satisfactory results would be obtained by substituting for the Kinzua Dam, a series of smaller dams on the feeder streams of the Allegheny River. Literally thousands of these dams, each a recreation area in itself, could be constructed for less than the cost of the proposed Kinzua Dam. Floods would be effectively controlled in the New York as well as the Pennsylvania section of the Allegheny River. Flood-control moneys could also be used to dredge and remove from the river bottom, several centuries accumulation of silt and debris, thus deepening the channel and permitting freer flow of water: Therefore be it

Resolved, That the Federated Sportsmen's Clubs of Cattaraugus County, Inc., as representatives of the sportsmen and conservationists of this county, respectfully petition the United States Corps of Engineers to carefully consider the possibilities of a multidam project, which will be of benefit to both Pennsylvania and New York States; that will give proper consideration to the conservation aspect, and will surely meet with the approval of all residents, both Indian and white, before taking definite action; and be it further

Resolved, That, as this federation has joined with the State conservation council in its fight against the Panther Dam in the past, and will again if necessary, the council be petitioned to add its power and influence in the fight against the Kinzua Dam; and be it further

Resolved, That copies of this resolution (if adopted by the Federated Sportsmen's Clubs of Cattaraugus County) be sent to the following: United States Army Corps of Engineers, Senators Ives and Javits, Governor Harriman, Senator PIERCE, Assemblyman Noonan, President Cornelius Seneca of the Seneca Nation of Indians, Chairman Rowland of the Board of Supervisors of Cattaraugus County, and Robert D. Thompson, president of the New York State Conservation Council.

THE AMERICAN LEGION,
DEPARTMENT OF NEW YORK,
CATTARAUGUS COUNTY COMMITTEE,
February 20, 1957.

Mr. CORNELIUS SENECA,
President, Seneca Indian Nation,
Gowanda, N. Y.

DEAR SIR: At a regular meeting of the Cattaraugus County American Legion held at Ellicottville, N. Y., on February 13, 1957, a motion was regularly adopted opposing the building of the Kinzua Dam on the Allegheny River.

Discussion of the motion brought out the fact that the building of the dam would cause the United States Government to abrogate the Pickering Treaty with the Seneca Nation and that it would deprive many Indian veterans of their lands and homes. We believe both of these actions would be wrong.

We urge that you oppose any appropriation of money for the building of the dam.

Very truly yours,
THEODORE J. PIE,
County Commander, Olean, N. Y.

THOMAS V. BRESNAN,
AMVETS POLICE POST, NO. 17,
AMERICAN VETERANS OF WORLD WAR II,
Buffalo, N. Y., March 14, 1957.

Mr. CORNELIUS V. SENECA,
Seneca Nation of Indians,
Gowanda, N. Y.

The Thomas V. Bresnan Police Post AMVETS No. 17 go on record opposing the construction of the Kinzua Dam for the following reasons: It is a direct violation of treaty rights of the Seneca Nation Indians, construction of such dam is impractical and unnecessary expense to the people of New York State, it will cause undue hardship to the Nation of Seneca Indians and displace these people unjustly.

Sincerely yours,
JAMES T. FRANCIS,
Public Relations Officer.

INDIAN LEAGUE OF THE AMERICAS,
New York, N. Y., March 9, 1957.

Indian League of the Americas is an organization of American Indians of various tribes who reside in New York City and nearby towns, and our non-Indian friends who are in sympathy with us and interested in our culture and welfare.

We wish to add our voice to the protests, and request that the Allegheny Reservoir project (Kinzua Dam) be reconsidered. Many of us attended a public meeting here in New York City on February 26, 1957, where we heard an address by Dr. Charles Russell, vice president of the Association on Indian Affairs, and a statement by Mr. O'Neill, the attorney for the Seneca Tribe. We were also advised that Governor Harriman had requested that the reservoir project be reconsidered.

The matter was discussed at the monthly meeting of the Indian League this evening and, after making a long-distance telephone call to the leaders of the Seneca Tribe, who expressed their gratitude for our support, our members were unanimous in their wishes to make this protest. Full page of their signatures is attached to this letter.

The building of the dam would deprive the Seneca Indians (about 1,000 souls) of their ancient homeland and would scrap their treaty with the United States. This treaty bears the signature of President George Washington.

We earnestly request that the project be reconsidered and abandoned.

Respectfully,
ARTHUR JUNALUSKA,
President.

RESOLUTION ADOPTED BY THE PROGRAM BOARD OF THE COUNCIL OF CHURCHES OF BUFFALO AND ERIE COUNTY, APRIL 10, 1957, RE RESPECTING OF INDIAN LANDS

Whereas there are Government proposals for the building of the Kinzua Dam which make necessary the flooding of Indian lands which have long been protected by a treaty of the United States Government with the Indians; and

Whereas there have been continuing alienations of Indian lands all across the Nation; and

Whereas Indians view their lands as a sacred heritage from the Great Spirit;

The program board of the Council of Churches of Buffalo and Erie County asks that the Government stand by its treaty word respecting the protection of Indian lands and that full exploration of alternate methods of flood control be sought.

KIWANIS CLUB OF SILVER CREEK,
Silver Creek, N. Y., April 24, 1957.

Resolved, That we, the members of the Silver Creek Kiwanis Club, of Silver Creek, N. Y., both collectively and individually, are

decidedly against the proposed construction of the Kinzua Dam, to be erected at the Allegany Reservation, Allegany, N. Y. The proposed construction is under the sponsorship and authority of the United States Army Engineer Corps; be it further

Resolved, That we the members of the Silver Creek Kiwanis Club are of the firm conviction that the proposed dam construction, will render considerable harm, both financial and moral, to our fellow American citizens, the members of the Seneca Nation; be it further

Resolved, That the United States Army Engineer Corps and other United States Government agencies concerned give this matter further study and elect to use an alternate plan; be it further

Noted, That the proposed construction is a direct violation of the treaty made between the United States Government and the Seneca Nation of Indians.

We, the members of the Silver Creek Kiwanis Club, sincerely and strongly urge you to do everything in your power to defeat the present legislation concerning the Kinzua Dam project.

Very truly yours,

ROBERT S. SUTEHALL,
Secretary.

RESOLUTION OF THE IZAAK WALTON LEAGUE OF AMERICA, INC.

Whereas the Allegheny River in northwestern Pennsylvania and southwestern New York offers abundant recreational facilities to the citizens of both States, and the United States Army Corps of Engineers proposes to construct a flood control dam costing $100 million at Kinzua in Warren County, Pa., on the said river, but little study has been given to alternative and considerably less costly methods of preventing floods in the concerned area, and the Congress of the United States is considering the initial appropriation for construction of the said dam, and the said dam would destroy recreational area, forests, and wildlife, and the said dam would be erected on land owned by the Seneca Indians under treaty with the United States, so that building of the dam could result in breaking of the Seneca Indian Treaty: Therefore be it

Resolved by the Izaak Walton League of America, Inc., in 35th annual convention assembled this 6th day of April 1957, in Washington, D. C., That we respectfully request the Congress of the United States to hold in abeyance any appropriation for initiating construction of the said dam until all practical methods for preventing flooding from the Allegheny River in the concerned area have been studied thoroughly; and be it further

Resolved, That an effort be made to secure congressional hearings for presenting all pertinent information; and be it further

Resolved, That the national president of the Izaak Walton League of America, Inc., appoint, within 30 days after the close of this convention, a committee to take all practical steps necessary to implement this resolution and to bring it to the attention of all persons and groups important to affirmative action upon its provisions, said committee to report at the 1958 national convention of the Izaak Walton League of America, Inc., or before, as required.

WOMEN'S HUMAN RELATIONS
COUNCIL OF ROCHESTER,
Rochester, N. Y., June 7, 1957.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN OSTERTAG: The Women's Human Relations Council of Rochester has already expressed to you its interest in the American Indians, and the protection of their rights. You have done so much to preserve and maintain these rights, that you have received our expressions of appreciation before now. We would like to add to those former occasions, this newest evidence of your alert and just action in regard to your speech concerning the proposed Kinzua Dam. We are convinced that the dam is not the best possible method of flood control, and that it is wrong to flood those ancestral acres guaranteed by this Government to the Senecas.

Sincerely,

MRS. LESTER J. BERLOVE,
Chairman.

OLEAN, N. Y., *February 23, 1957.*

President CORNELIUS SENECA,
Senaca Indian Nation.

DEAR MR. PRESIDENT OF THE SENECAS: The Committee on American Indians of the Olean D. A. R. (which is the third largest in the State) wishes you to know that we have protested to many in authority in the State and to the Army engineers, and asked for their assistance in changing the plan to many small dams and dredging of the Allegany River in place of the erection of the Kinzua Dam which as you know well, means flooding of about 9,000 acres of your land, and the relocating of about 1,000 Indians against their wishes. Thus the treaty of 1794 with the nation of which you are president and signed by President George Washington would be broken.

We appreciate the fight you are making and hope you win, and hope to help you.

Very truly yours,

FLORENCE A. BRADLEY,
Chairman.
MRS. E. H. KEENEY,
LOIS M. PALMQUIST
Regent.
MERTIE KENYON,
MRS. J. C. LLOYD.

INDIAN TRUTH

The Indian Rights Association has united with many other groups and individuals in supporting the Seneca Nation of Indians in its opposition to the Kinzua Dam on the Allegheny River above Warren, Pa. This 181-foot dam proposed by the Army engineers would subject to flooding nearly all of the reservation given to Cornplanter and his heirs by the State of Pennsylvania in 1791, and a considerable part (over 9,000 acres) of the Allegany Reservation in New York State.

It would require the removal of the homes of about 250 families (approximately 1,000 individuals) of the Seneca Nation living on the Allegany Reservation. Not only would the homes be removed and destroyed but also the community would be broken up.

The community has great significance not only for those now living on the reservation but also for hundreds of their relatives who live elsewhere and return to the homeland at more or less regular intervals for the social and spiritual strength they derive from the community.

We believe the people of the United States would resent Congress making an appropriation which would finance a project aimed, by unilateral action, to break a treaty made with the Seneca Nation 163 years ago.

Inaugural Address by Hon. Michael A. Stepovich, Governor of Alaska

---

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. Miller of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the address delivered by the Honorable Michael A. Stepovich on June 8, 1957, at Juneau, Alaska, when he was inaugurated as the first native-born Alaskan to hold the high office of Governor.

Mr. Speaker, I commend to my colleagues the inaugural speech made by the Governor of Alaska, Michael A. Stepovich, on June 8, 1957:

My Alaska friends and my friends of Alaska, it is with a deep sense of humility that I speak to you today as your 15th Governor of the Territory of Alaska. With God's help, I hope to do a job that will be worthy of your trust and that together we can work toward the fulfillment of our dreams, statehood for Alaska.

It is particularly appropriate as I take this oath of office today to talk to you about statehood.

First, let me say that a primary goal and objective of my administration will be to point toward statehood and to meet our goal with Alaska ready politically and economically to tackle the responsibilities of a State.

The time has come for Alaska to become a State. I say this realizing that there are a number of Alaskans sincere in their beliefs, who feel that our territory is not ready for statehood or cannot afford it, or would somehow find statehood a disadvantage. To them I say, respectfully, that the majority has spoken again and again. The majority of Alaskans want statehood and they want it without further delay. It is time for Alaskans to close ranks on this issue and turn their united efforts toward obtaining that for which the overwhelming majority has spoken * * * statehood * * * and demonstrating to the Nation and to the world that we are worthy of it.

We Alaskans, in our quest for self-government, must have help and I can report to you accurately that statehood has the wholehearted backing of the Republican national administration. It is increasingly evident that never before has the Alaska statehood movement had such friends and allies in Washington. I can say to you that our two finest friends are President Dwight D. Eisenhower and Secretary of the Interior Fred A. Seaton. I know this because I was in Washington recently and conferred with these great leaders. They are 100 percent with us and for us.

The Republican Party is fighting for statehood for all of Alaska. President Eisenhower's proposal for statehood for the entire Territory, under terms of the bill now pending in Congress, is the freshest, most realistic, and practical approach yet to be made to our desirable goal.

But statehood for Alaska is not a partisan political issue and I would be less than frank with you if I did not take time here to pay tribute to the many individuals in the Democratic Party, including our able Delegate to Congress, and the Alaska Tennessee plan delegation.

Recently Secretary Seaton had something to say on this subject. He said, "As for myself, I haven't the slightest concern as to which political party gets the credit for Alaskan or Hawaiian statehood. Simple justice demands that each be admitted to the Union."

The Secretary goes on to say, "Republicans or Democrats, the people of these Territories are Americans and I know of nothing in the Constitution which gives preference to one political party or the other."

In Alaska, too, I am sure that we have much more to do than to determine by idle contention who deserves the credit for something which has not happened yet. The important thing is that "we deliver the goods." The people of Alaska will then be able to judge where the credit should lie if that is important.

Let me again report to you that the Republican Party, of which I am proud to be a member, is working in every way it can to bring statehood to Alaska. It is my sincere belief and ardent hope that statehood will be accomplished under this Republican administration so friendly to our cause.

Let it be made clear here that the statehood measures now making good progress in Congress confer State status on every square foot of territory in Alaska under provisions of the administration's amendments to both House and Senate bills. This is the solution devised by the President and Secretary Seaton for statehood which would keep in harmony with the national defense interest of all Americans. That is why the present bill is proving more acceptable to more Congressmen than any previous statehood bill.

It was the President's desire to include in the statehood bill a provision that certain areas of Alaska could be withdrawn becaus of Alaska's strategic and geographic location in the national-defense program of our country. Only that area north of the Porcupine and Yukon Rivers and west of 160° longitude would be subject to withdrawals. Similar provisions apply to approximately one-half of the 48 States, including all of the Western States.

It should be pointed out very clearly also that Alaskan communities within any of these national defense withdrawals would continue to be governed by our State, borough or our city governments.

Furthermore, these national defense withdrawals could be established only in the best interests of all people coming under the jurisdiction of the American flag.

I can find no quarrel for this provision in the statehood bill. Especially when we realize it comes from a man who is considered one of the greatest military leaders of our time, and when we realize that Alaska is one of the very vital and strategic areas of the world.

I intend to continue a policy of vigorously supporting and fighting for statehood for all of Alaska.

There is nothing that would please me more than for me to be the last appointed Governor of the Territory of Alaska.

Are we ready for statehood? It is my belief that we are now prepared to meet the economic, political, and human responsibilities which will be ours when we are finally admitted into the Union of States.

Preparation for statehood involves many factors. I believe the main factor is the human factor. People make a country strong. People make a government efficient and an economy prosperous. We have wonderful people in Alaska. Aside from statehood, and perhaps wrapped up in it, my administration will seek to accomplish other goals.

In order to keep Alaska attractive to the people here now—we must look for new means and methods of expanding our existing economy. We must expand our basic industries such as mining, fishing, timber, our tourist industry and all our other basic enterprises.

But we must look for something new. It is my opinion that in order to bring more people to Alaska, to make more and more Alaskan citizens, we must always be on the alert to invite new industries and new enterprises. We need more citizens here and we have the room for them.

Alaskans have always welcomed new citizens. Now we must do more than merely make them welcome, we must find new places in our economy for them.

Our economy must not only invite new citizens, but it must make them feel welcome. We canot invite them with one hand and then slip them a discouraging high tax bill with the other.

It is my belief, and those of you who know me, are well aware of my position on taxation, it is my belief that our present tax structure has passed the point of being reasonable. This is true from a new industry incentive standpoint and from the standpoint of the average Alaskan citizen. And it also applied to what the experts like to call the small-business man.

Taxes and revenues today are probably the most controversial programs in any level of government, be it city, State, and Territory, or Federal.

We all know that without taxes, governments cannot exist. Each of us is responsible for some part of our government.

We must also recognize, however, that too much of anything is not good. If our taxes exceed our reasonable abilities to pay them, we lose our incentive. If our government becomes too large and bulky it defeats the very purpose it was intended for.

A tax structure that discourages new investment is not good. A tax structure that is concentrated on certain individuals or industries or business enterprises is not good. And, most certainly, neither is a tax structure good that discriminates against an Alaskan for the location of his home, whether it be in Barrow, Nome, Fairbanks, Anchorage, Ketchikan, or Juneau or any of the hundreds of other Alaskan communities.

Bearing in mind that we must all assume certain responsibilities to finance our government, keeping in mind that the basic costs of government are continually rising, it is my sincere belief that a tax structure designed along equitable lines is possible. And it is this type of recommendation that I hope to be able to present to our next legislature.

In effect, excessive taxes stifle individual enterprise. Excessive government also becomes a burden of restrictions, regulations and loss of many big and little freedoms that by American principles belong to each of us.

Therefore, it is my intention to conduct a comprehensive review of our Territorial tax structure in relation to our expenditures for Territorial government. Upon the completion of this review I will look forward to submitting to our legislature a program of tax equalization based on a sound but economical government operation. I know we all want a full dollar's worth of decent government for every dollar of tax paid.

In connection with this, I believe that many of you share my belief that certain phases of our Government have become inadequate, overloaded and out of balance with the real need of Alaska. In some respects this condition might be referred to as growing pains.

We know that our Territorial agencies and departments are growing and in many cases it pains us to foot the bill for them.

Some of these conditions of poor balance in our Territorial government can be remedied by a sound and practical approach. The basis for this approach, it seems to me, is a full appreciation of the taxpayer's dollar. Does our Government, from top to bottom, give the taxpayer his money's worth?

You might say this will be the basic point for our study of government and tax structure; dollar value for tax dollar paid.

As for the development of our resources, we know that mining in Alaska at the present time is at a low ebb. We must continuously try to revive mining and expand to the fields of iron, copper, zinc, tin, platinum, mercury, uranium, oil, gas and other minerals. They will be of great importance to our economy and also to our Nation and the world.

In the field of agriculture, we should continue developing this element of our economy as it provides basic necessities for human life and, if developed, it would certainly reduce to some extent the cost of living in Alaska.

And we know that our great forests of southeast Alaska are now being put to use in the processing of pulp and other timber byproducts and I can foresee a tremendous future in the wood-products field.

We Alaskans are confident that as a State we can manage and control our fisheries and continue to work for expansion of this industry which has been one of the mainstays of our Alaska economy.

A policy of utmost concern to us in Alaska is the national administration's policy toward the vast public lands of our Territory. I think it is a well-known fact that the release of public lands in the Territory has moved along at an unprecedented rate under the administration of President Eisenhower. There has been released from the public domain a tremendous amount of land for individual use. I refer mainly to public lands on which Alaskans have been able to establish homesteads, home sites and cabin sites. Never before in the history of the Department of Interior has there been such a policy of opening up this vast territory for settlement.

And there are those reserves which when released will open up new fields for the full development of the population centers of Alaska. Such are the Gubik gas fields to the north. An area of vast potential riches which can do much toward the growth of interior Alaska. Secretary Seaton is well aware of the potential and plans for that area, which will mean so much to the growth and stability of the rail belt and interior Alaska.

I see nothing in Secretary Seaton's policies that would lead me to believe this liberal land program will be changed. After many years, Alaskans are now able to select from a greater area of potential homestead or homesite acreage. We are now able to secure patents to these settlement lands with less redtape, less Government supervision and less restriction than ever before in history.

This land policy, I believe, is one more big point of evidence that the national administration, and in particular Secretary Seaton, is Alaska-conscious and is with us 100 percent of the way.

Another subject to which your administration will give study and constantly work for is the development of the highway and roads of our land.

Alaska's growth can only progress as quickly as its farflung communities can be joined together by a greater network of roads and highways. For we know that roads and highways bring people who develop our land.

I have touched on only a few of the fields of responsibility of the Governor's office. I shall always strive to find solutions which are helpful to Alaskans.

Let us for a moment discuss our government in Alaska. We know that the political affairs of our Nation are built on the solid foundation of the two-party system. We in Alaska are proud of our bipartisan support of statehood and we see clear evidence of that same bipartisan support in the Congress of the United States.

Our Territorial Legislature in which I have had the privilege to serve serval times, is another example of the finest political system—the American two-party system.

I believe in this system of government and pledge to you to work at all times to the best of my ability in cooperation with your elected officials, regardless of what political party they represent.

I anticipate a close-working relationship with our elected Delegate to Congress and expect to give him my full cooperation. I have no reason to believe that I will not receive his.

It is my intention that from the very beginning of this administration, the Governor's office will stand ready to serve you, each of you and all of you, in any way possible. There will be many times, I am sure, when your problems will not have a fast and easy solution. We will not know the answers all the time. But we will seek the best possible solution and give our sincere efforts to each problem as it arises.

We will not cater to special groups, either political, economic, religious, or sectional. We will do our utmost to conduct this high office on the same principle of fair play that is still the most vital part of our constitutional form of government.

Very simply, and in other words, I would like all Alaskans to feel free to call on the Governor's office when confronted with problems concerning our Territorial government. I want each of you to know that you will always be made welcome here, not only when you have a problem, because, after all, the Governor's office belongs not to me or any other one person, it belongs to all of us.

And it is my plan to visit many of our major cities, and as many smaller communities of Alaska as I can in the near future. I want to see for myself and to discuss with you in your particular locales your problems and ideas.

In closing, I should like to point out that although I was born in interior Alaska and spent most of my life there, I am very much aware of the strengths, the beauty and the problems of all Alaska. It is only fitting that only through the unity of thought will our problems be overcome and our great goals achieved. Alaskans need to meet together, think together, and work together more than they have in the past.

Finally, I should like to pay tribute today to all of those pioneer Alaskan men and women who, under God, have done so much to make it possible for us to be here today with the fervent prayer that all of us will live to be pioneers in the great State of Alaska.

Encroachment on the Constitutional Rights of American Servicemen

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. OSTERTAG. Mr. Speaker, there is a growing sense of alarm over the effect of our status-of-forces treaties and the executive agreements that have been made in conformance with them. The men who have worn and are now wearing our country's uniform are appalled to find that rights guaranteed to them in the Constitution have been given away under the status-of-forces treaties and executive agreements. The Girard case is a prime example of it, but there have been hundreds of other such cases, in which members of our uniformed services were tried and jailed in foreign countries, in violation of constitutional rights which they were sent overseas allegedly to protect.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD copies of correspondence I have recently received from the American Legion and Veterans of Foreign Wars with respect to this matter:

AMERICAN LEGION,
DEPARTMENT OF NEW YORK,
GENESEE COUNTY COMMITTEE,
June 6, 1957.

Whereas newspaper accounts indicate that the Government of the United States has authorized a trial in Japanese courts for Spec. William C. Girard; and

Whereas reports indicate that Specialist Girard will be tried for the accidental shooting of a Japanese citizen; and

Whereas the report also indicates that Specialist Girard was on active duty with the United States forces in Japan at the time of the alleged incident; and

Whereas this incident does not appear to conform to the provisions of a status of forces agreement between the Government of the United States and the Government of Japan; and

Whereas the trial of an American serviceman for offenses committed while on active duty has historically been the right of the United States Armed Forces: Now be it

Resolved by the Genesee County Committee, American Legion, in annual convention at LeRoy, N. Y., on June 5, 1957, That the action of the Department of Defense in releasing Specialist Girard for trial by the Japanese Government be strongly protested; and be it further

Resolved, That this group indicate its protest to appropriate officials including the Secretary of Defense, Senators from New York State and the Representative from this congressional district; and be it further

Resolved, That this group request said Congressman and Senators to seek corrective legislation to prevent a recurrence of this situation.

Very truly yours,
JUDSON N. FRENCH,
Commander.

JUNE 5, 1957.

Congressman HAROLD C. OSTERTAG,
Washington, D. C.:

VFW, Monroe County Council, 34 posts, protest transferring duty status serviceman to Japanese civil court.

ANTHONY M. FERRARESE,
County Commander, VFW.

JUNE 12, 1957.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.:

Decision by our Government to permit serviceman Girard to be tried by Japanese court without jury emphasizes growing danger of authorizing judicial punishment without benefit of jury. Urge you to support principle of trial by jury when issue comes up in the House tomorow.

DANIEL S. BRADY,
Commander, Department of New York, Veterans of Foreign Wars of the United States.

The Oil Lift Hearings

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, June 13, 1957

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD part II of the presentation which was made yesterday to the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary by Mr. Donald P. McHugh, counsel for the subcommittee, in the conduct of the oil investigation.

It was impossible for me to place the whole statement in the RECORD yesterday, because of the limitation that is imposed upon the length of any insertion in the Appendix of the RECORD. So the first part was presented yesterday, and I now offer the second part. It is well worth studious examination by any person who is interested in the facts with respect to the manner in which oil production, transportation, and sale is being carried out by American companies. Anyone interested in the program of the oil lift and how it was carried on and the manner in which MEEC was established will find this statement by Mr. McHugh most interesting.

I might say Mr. McHugh was for years a member of the staff of the Antitrust Division of the Department of Justice. He is a competent and able lawyer. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PART II

CURRENT OIL PROBLEMS INVOLVING ANTITRUST IMMUNITY

The history of the West African Replenishment Plan (WARP) demonstrates the dangers of authorizing cooperative arrangements in the oil industry with antitrust immunity; and the manner in which noncompetitive behavior, once approved, has a habit of continuing beyond the emergency for which it was authorized. The subcommittee's attention was called to this plan through a document subpenaed from Socony which stated that information covering inventories and supplies scheduled under this plan were furnished to MEEC. Mr. Jennings, of Socony, was asked about these WARP arrangements and he described the plan "as a temporary pooling of * * * bulk terminal facilities" and stated that "the thing is pretty nearly finished up." When asked whether the program had been submitted to the Government for approval, Mr. Jennings replied that he did not think so; that it was transitional and not important. Documentation concerning WARP was subsequently furnished by Socony to the subcommittee. It develops that WARP was the outgrowth of a plan established in 1942 under the directives of the Petroleum Administrator for War to economize on the shipment of petroleum products to West Africa by allocating tanker tonnage and pooling supplies. It was approved by the Office of Petroleum Coordination for War. Membership in what was then called the West African Supply and Distribution Committee consisted of: Asiatic Petroleum Corp., a subsidiary of Dutch Shell Corp., the Atlantic Refining Co., British Petroleum, Socony Vacuum Oil Co., and the Texas Co. It operated under antitrust immunity.

In October 1945, the Deputy Petroleum Administrator advised that the committee be dissolved because of the availability of tankers. On December 31, 1945, it was ordered dissolved and its antitrust immunity revoked.

However, the organization was maintained intact and on November 2, 1945, these same firms and Petrocongo joined in a memorandum concerning the joint shipment of petroleum to West Africa. Bulk shipments of all products to any terminal in West Africa fell within the plan. The detailed provisions under which the plan operated were set forth in the West African Replenishment Plan Manual, dated June 3, 1948. According to information submitted by Socony, it is in effect today. Thus, upon the termination of the Government-approved plan, a private arrangement to continue the same operations was substituted. This program calls for shipment of petroleum products by member companies in turn and the supplying of other firms from such shipment through jointly owned storage companies. Agreement on product specification and reporting of requirements and stocks are included in the plan. Formulas for price fixing, including agreed-upon method of determining essential costs, are provided for.

It is not our purpose to determine whether operation of the west African replenishment plan constitutes a violation of the antitrust laws. But it is manifest that such a plan provides for joint action among competitors in a manner inconsistent with principles of active competition. The Government decided the plan had outlived its wartime usefulness and revoked its immunity, but nevertheless, the industry elected to continue the plan in a different form. The oil companies were loath to abandon a plan which obviously shielded them from the impact of competition. It illustrates how grants of antitrust immunity can be abused by perpetuating noncompetitive business conduct.

The public policy of the United States respecting the maintenance of free competition was stated by Congress in the Sherman Antitrust Act. Authority to set aside this policy should come only from the Congress. When the Attorney General exercises this authority in his own discretion, there is obviously great opportunity for abuse. Under the circumstances, it is felt that Congress should undertake a comprehensive study of all grants of antitrust immunity by the Attorney General in the form of informal opinions or so-called green light letters, for the purpose of determining whether immunities from the antitrust laws should be granted only through expreased legislative authorization. Pending such a study it is suggested that the Attorney General should not grant antitrust immunity in any form where joint action by oil companies is involved.

Two current situations confront the Nation in which cooperative oil industry activity is contemplated and in which a waiver of the antitrust laws may again be sought. In each case the public policy involved is too vital to be left to the discretion of the Attorney General. The first concerns the President's recommendation to the Director of the Office of Defense Mobilization that some type of voluntary agreement with American importing oil companies be worked out for the purpose of limiting imports which threaten to impair our national security. The economic issues in this restriction of import problem will be treated separately by Mr. Banner. It is not clear how such voluntary plan would work, but it seems probable that any such voluntary scheme would raise very grave problems under the antitrust laws. For such voluntary scheme to be effective, each company must have assurances of all other companies that there would be compliance with Government-set goals. Since companies are asked voluntarily to agree, they may well demand antitrust immunity. Of course, the President has power under the Trade Agreements Act to compel restriction of imports without the necessity of an antitrust waiver. However, he apparently does not see fit to exercise the authority entrusted to him by law. It appears that the President, in continuing to seek a voluntary agreement, is inviting the importing oil companies which constitute only a portion of the industry to determine the policy of the United States Government. If the Government is again to abdicate its responsibilities in favor of the private oil industry, any waiver of the antitrust laws which might be needed should come only from the Congress which has the sole authority for determining when vital public policy should be waived.

Meetings are presently being held and negotiations are proceeding for the construction of a jointly owned and operated pipeline to run from Iraq through Turkey to the Mediterranean. This proposed venture will involve 5 American and 3 foreign oil companies operating in the Middle East and will greatly increase pipeline capacity in that area. As in the case of the Iranian consortium, such a plan is fraught with antitrust dangers. It is contemplated that this pipeline will carry approximately 1,200,000 barrels a day. Ultimately the pipeline will carry Kuwait oil and probably oil from Saudi Arabia. Such an operation, carrying almost half of the total Middle East production, is certain to have considerable impact upon the price of such oil. Participating companies will undoubtedly find it necessary to discuss price and production in connection with the development plans.

The need for constructing a pipeline in such a way as to insure deliveries from the Middle East and minimize the dangers of Communist global designs raises the most serious problems of American national interests and, in fact, of the entire free world. Consideration is being given to separate treaties among the countries involved, with the hope that any future conflict over its operation will be submitted for settlement to an international tribunal. This proposed pipeline graphically illustrates the influence and effect of oil company operations upon the peace and security of the world. It is to be regretted that necessary exploratory talks have been left entirely in the hands of the private oil companies without the guidance and official responsibility of the United States. It would also seem incumbent upon the State Department and other Government agencies having a direct interest in the problem to keep the Congress fully advised of the developments and to outline the possible alternative courses of action.

Again it seems the policy of this Government is to delegate vital responsibilities to the private oil companies. It is to be expected that any plan worked out by them will naturally give first attention to their own private interests. The time for the United States to act is now. After details of the plan are formulated, great pressures will mount from oil company sources to approve plans already worked out by the industry, even if this requires a grant of immunity by the Attorney General. If the vital interest of the United States must be preserved by some type of joint American participation in the construction of such a pipeline, the Government should take the initiative in deciding the form this should take. While information concerning the status of negotiation is undoubtedly furnished the State Department, it would seem that a project of utmost importance to the national well-being of the United States should be worked out through the Government and under specific authorization from the Congress.

Existing grants of antitrust immunity should be terminated as quickly as possible. The European oil crisis has now ended. Mr. Rosenman will suggest a recommendation for withdrawal by the Attorney General of antitrust immunity for MEEC. He will suggest a method for preventing future plans of action, but leaving intact other functions of the voluntary agreement. In this way, operational activities to meet future comments to our western allies and to otherwise further the petroleum policy of the United States would be placed where they belong—with the Government.

CONTROL OVER TRANSPORTATION—PIPELINES

The MEEC operation has been represented as essentially a transportation problem. It was the shortage of tankers following Suez which required a redistribution of ocean-going tanker facilities to move existing oil supplies to consuming areas. Under the program the companies sought to rearrange tanker shipments so as to minimize cross-hauling of crude and to effect the greatest savings of tanker space. The three principal schedules under which MEEC companies operated were directed at the necessary rerouting of tankers.

Schedule 4 which provided for the rearrangement of pipeline shipments of oil in the United States focused the subcommittee's attention upon one of the most significant competitive problems in the entire petroleum industry, that is, the extent of the ownership and control of domestic pipelines by major integrated companies and the resulting consequence to competition. The subcommittee's immediate interest in the charge of pipeline monopolization stemmed from the claim by some witnesses that our pipeline transportation system was inadequate, that productive capacity in Texas and Oklahoma was not being utilized to produce more oil to move to the gulf coast because of lack of pipeline facilities, and that as a direct result, the effort to aid our European allies through the oil-lift program was seriously impaired.

Mr. H. Graham Morison, former Assistant Attorney General in charge of the Antitrust Division, testified on behalf of the West Coast Pipeline Co. and described the problems an independent company encountered in attempting to build a pipeline to the west coast. Mr. Banner will discuss the details of this issue. Mr. Morison described his client's efforts as a fight to break the stranglehold of monopoly which now pervades every phase of the oil industry. He stated that in no aspect of the industry has the monopoly of the few been so all inclusive as in the case of the crude-oil pipelines of the Nation which are all but 100 percent owned or controlled by the major oil companies. Mr. Morison stated there were no significant independent crude pipelines.

Control over the transportation of oil has made independent producers of crude in the United States completely dependent upon the major oil companies with their gathering-line facilities and trunklines for the transportation of oil to refineries or shipping points.

As of December 31, 1955, approximately 85 pipeline companies moving crude oil or petroleum products reported to ICC as common carriers. According to ICC records, 82 of these pipelines are owned by one or more oil companies, either singly or jointly. According to available information, only one of these companies is not owned in part by an oil company.

In addition to the recently announced Four Corners Pipeline to be constructed by Standard of California, Shell, Gulf, Richfield, Superior, and Continental, joint ownership of pipelines by oil companies abound.

Although oil pipelines are common carriers at law, they are operated as private carriers for the benefit of the oil companies owning the lines and prevent independent producers from enjoying a competitive market in which to sell their crude oil. In order to obtain transportation of crude from the well, the producer is required to sell the oil to the oil company which owns the pipeline. This denies or restricts the producer's right to use the common-carrier facilities of the pipeline.

Mr. Morison claimed that if the oil companies can control pipelines and fix the prices of transportation that the independents must pay, and if they can restrict the right of independent producers to ship through pipelines, they have the power of life and death over independent competitors. He concluded that in his judgment this power over any enterprise should not reside in private hands.

This control of crude oil pipelines makes it possible for the major integrated companies to discriminate against independent producers of crude oil and to deprive them of a market for their oil. It makes it possible for the majors to discriminate against independent refiners by depriving them of access to sources of supply. By restricting independent producers from access to markets and independent refiners from free access to supplies of crude, the control of pipelines by the integrated oil companies

ables the major to stifle its would-be competitors, and to perpetuate its hold upon all phases of the oil industry, from production to sale to the ultimate consumer. Mr. J. M. Vaughey, a producer of oil and gas, stated that the independent producer has no control over the price at which he sells and he likewise has little control over the amount of oil he sells. He cannot withhold his production. Witnesses noted that there were two limitations upon the productive capability of the independent producer. The first is by State regulation fixing allowables. The second is the unwillingness of the pipeline company or purchaser of crude oil to take the oil produced by the independent producer. While the principal crude oil pipelines purport to operate as common carriers open to all producers on equal terms, this is apparently more fiction than fact.

The charges made before the subcommittee of discrimination by pipeline companies against independents were primarily of three types: (1) Refusal of pipeline companies to extend gathering lines and to connect wells, resulting in great amounts of shut-in productability; (2) prorationing practiced by pipeline companies; (3) various indirect forms of price discrimination.

It was claimed that major integrated companies have denied pipeline connections to independents as part of their plan to dominate and control the market. As noted the independent producer is in the position where his principal competitors, in effect, have sole control over his markets. Mr. Lester Clark, as an independent producer and on behalf of four Texas associations representing the independents, testified that today there are more than 8,000 wells unconnected in Texas alone. He also claimed there were about 4,000 in Oklahoma, and 1,000 in New Mexico. Mr. Paul Schultz, president of the Oklahoma Independent Petroleum Association, stated that in 1956 his company drilled three wells. Gulf connected two wells but refused to connect the third, stating they were not taking any more oil. He could not get a pipeline connection and was required to truck the oil at a cost of 25 cents a barrel.

Mr. W. A. Delaney, of Ada, Okla., an independent producer of oil and gas, stated that any failure of productive capacity during the oil lift program was, in his opinion, due to lack of transportation facilities. Mr. Delaney also emphasized that a group of independents cannot get together and build an oil pipeline since they lack terminal markets. These terminal markets or refineries are controlled by the major oil companies. Mr. Delaney stated that last December he talked to a pipeline company about connecting a well a distance of about a mile and three quarters. The company refused, explaining it could not justify the cost of constructing a pipeline to a well with an allowable of 25 barrels per day. He was told that it was the policy of this pipeline company to lay 1 mile of line for each 100 barrels of allowable production. Mr. Delaney testified that previous to the case filed by the State of Oklahoma against Gulf, pipeline companies simply did not issue pipeline connection orders for wells if they were any distance at all from the gathering system. In order for a producer to sell oil from these unconnected wells, it was necessary for him to have the oil trucked by a company designated by the pipeline company, and the amount charged for trucking would be deducted from the check he received from the pipeline company. He had no control over the selection of a trucking company.

Pipeline prorationing was described as another effective way to discriminate against the independent producer. Connection of a well to a pipeline, in itself, does not guarantee access to the market. As owners of the pipeline facilities, the majors exercise the right to prorate the use of the pipeline capacity. Mr. Clark referred to several instances of prorationing prior to Suez. He defined prorationing as the practice of taking only a percentage of the allowable production of a field. He stated that for many months the pipeline company in the Sharon Ridge field of west central Texas would take only about 50 percent of the oil produced by certain marginal wells. He also charged prorationing up in the Panhandle area. According to his charge, prorationing was practiced for a time all over Texas.

Mr. Delaney also claimed that a form of price discrimination existed in that the pipeline companies were able to impose a two-price system. In effect, he charged that one price existed for producers who had direct connections with pipelines, whereas other companies that were unconnected were required to sustain an additional 25 cents a barrel trucking charge which, in fact, reduced the price at which they sold their oil.

It was charged that discrimination against the independent by integrated oil companies through ownership of pipelines resulted largely from the international operations of the major oil companies. Since the majors possess vast resources of low-cost Middle East and South American oil, they are able to rely on imports to supply their refineries. Thus, they can substitute imports from their own foreign operations for domestically produced oil to meet their needs. It is claimed this defeats the purpose of State ratable-take laws. The decision of major oil companies to lay additional pipe or to connect up independent wells is obviously not decided solely upon the cost of such an operation or the need of serving the domestic industry. Once commitments have been made, obligations are assumed. When the overall profit position of the company dictates reliance upon low-cost foreign oil, the majors can withhold domestic pipeline connections. Thus, major oil companies are able to drastically affect the development of the domestic petroleum industry. In electing to increase their dependence upon imports, these companies have the power to endanger the national defense of the United States. And while the record reveals enormous profits on foreign operations, witnesses testified that gasoline produced from Middle East or Venezuelan crude sells for identically the same price as gasoline refined from Texas, Oklahoma, or Wyoming crude.

In view of the charges of discrimination, and in view of the power possessed by major integrated companies through ownership of pipelines, it is recommended that the Department of Justice initiate an immediate investigation of possible violation of the antitrust laws along the following lines:

A. Monopolization of common carrier pipeline transportation, including extent of interest in trucking companies.

B. Use of controlled pipelines to deny independent producers a competitive market for crude oil.

C. Use of controlled pipelines to restrict sources of oil to independent refiners.

D. Crude oil price discrimination against producers.

E. Pipeline proration.

Despite the ownership or control of over 90 percent of United States pipeline capacity by the majors, the Department of Justice prosecuted no antitrust cases over the years aimed at pipeline ownership and its abuses.

There are difficulties in framing actionable theories under the Sherman Act based on oil company ownership of pipelines, and greater difficulty in sustaining the burden of proof necessary to meet the severe tests of illegality under that act. Actual restraint of trade or monopolization must be shown. However, the recent opinion of the Supreme Court in *United States* v. *E. I. du Pont de Nemours and General Motors Corporation* has opened new vistas of antitrust enforcement.

Prior to the recent General Electric-Du Pont decision there was little disposition to use the section 7 route to attack stock ownership acquired many years ago. This decision now makes perfectly clear that section 7 applies to stock acquisition of many years standing if the result is a reasonable probability of substantial lessening of competition or tendency to monopoly in any line of commerce. The Supreme Court in 1957 found that a 23 percent stock interest acquired by Du Pont in General Motors in 1917-1919 gave it a preferred position in access to the paint and fabric automobile business to General Motors. It would seem that much more potential danger to competition exists in the case of 100 percent ownership or control by major oil companies over pipelines where such control has been used to deny independent producers access to markets. This control also may create a reasonable probability that competition among refineries may be substantially lessened by denying them access to crude. It is strongly urged that the Department of Justice, in reviewing new enforcement possibilities under this recent decision, begin with an examination of the ownership and control by major oil companies over pipelines.

The Texas Railroad Commission has held hearings and now has under study charges of discrimination by the major oil companies. But it has no power to attack the basic monopoly problem and no authority to compel divestiture if that is the only relief which will cure the ill. Action by the Federal Government is necessary, and the first approach should be strict enforcement of the existing antitrust laws.

Highway Eyewash

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of June 12, 1957:

HIGHWAY EYEWASH

A pat argument used by Members of Congress opposed to billboard controls is that only esthetes—or, as one Senator so nobly puts it, "ass-thetes"—are concerned about turning the new 41,000 miles of Federal highway into a garish jungle of billboards and neon-lit hot dog eateries. Yet among the chief opponents of unregulated billboards are highway engineers—hardly known as an arty-arty group—who rightly point to certain safety hazards posed by confusing signs on a speedway. We further suspect that many motorists whose closest approach to the fine arts is watching a wrestling match will take loud offense if he sees more soapflake placards than sunsets on his first vacation tour on the new highways.

Yet the sensible billboard bill proposed by Senator NEUBERGER and GORE is presently buried in the Senate Public Works Committee. This bill would provide an additional three-fourths of 1 percent in Federal highway funds to States agreeing to meet certain roadside standards. Participation is optional, hence it is hard to see how any objections based on States' rights can be raised. The most vigorous opposition to this moderate measure comes from the groups who stand to profit by plastering the new highways with their advertising.

Additives in Food

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. MILLER of Nebraska. Mr. Speaker, one of the most significant changes in the past two decades in the American way of life has been that of the scientific improvement in the dynamic and rapidly growing business of food technology.

Science has been dealing in research which has opened up new frontiers. Science has helped to create new industries, new and better jobs, and more and better things for a growing America.

The American standard of living has been greatly benefitted because of the new things research has been able to accomplish. There will always be unexplored horizons waiting for someone to unlock the mysterious door to future projects. The field of chemistry is vast, its potential only tapped.

There is no question that chemicals are needed in the preparation, preservation and use of food. Much progress has been made through research in the field of nutrition and the American public can take pride in the manner in which science and industry have handled the delicate problem.

The number of chemicals entering the food supply of the nation has increased tremendously in the past decade. More progress is to follow. Chemical substances are being introduced into the production, processing, storing, packaging and distribution of food at an ever increasing rate. There is hardly a food sold on the market today which has not had some chemical used in or on it at some stage between production and consumption.

In the past few years a large number of bills have been introduced dealing with chemicals in food—the so-called food additives. These bills had hearings but because there was difficulty in getting industry and the Food and Drug Administration to compromise their differences, the bills fell by the wayside.

I have introduced another bill on the subject of additives in food. This is the fourth such bill in the last three sessions of Congress. In my opinion many of the controversies in this complicated legislative procedure have been ironed out. I do not claim that the bill is perfect. It does represent many hours of study and conferences between industry, the Food and Drug Administration and myself. In my opinion it could act as a helpful vehicle for good, sound legislative procedure in governing the use of chemicals in the processing and handling of all food. It attempts to keep in mind two things: First, protect the public; second, to work out procedures between the Food and Drug Administration and industry that will bring this important and sensitive field into proper perspective. There must be a balance between those who are in the business of processing and developing and producing food. There must be a rather clear-cut line of demarcation as to how far the Food and Drug Administration may go in working out the proper regulations. The most important thing is the proper protection of the public.

In my opinion the present laws do not provide adequate safeguards to guarantee a food supply absolutely free of additives which might bring injury to the public health. The consuming public requires greater protection.

While industry has done a good job, we all know that in a tough economic world there is always someone ready to cut corners. That is why the public needs protection from those who might be less scrupulous than the vast majority of the food and chemical industry. The public needs protection, too, from mistaken ideas in food additives.

The several bills before the Committee on Interstate and Foreign Commerce now generally concede that a panel of experts can be helpful in giving advice on food additives, particularly when industry and the Department disagree.

In the bill I have just introduced, a change has been made in terminology. I have purposely called the additives food additives instead of chemical additives, in an effort to get away from a mistaken idea that all chemicals may be harmful. Undoubtedly some of the food additives are chemicals, but frequently the public becomes alarmed at the word and considers a chemical something in the nature of nitric acid, arsenic, or some other potentially dangerous substance.

Under the present laws, the Food and Drug Administration can wield arbitrary and unlimited authority capable of strangling any industry. It is also true that industry, under the current laws, is capable of thwarting the rules and regulations of the Food and Drug Administration.

Industry has the power to put an additive or chemical in food and notify the Department that it is being used and, if there is no negative answer from the Department, proceed to use the additive without limit.

The American people can be thankful that in this rapidly changing field of food technology that industry has been most cautious and diligent in protecting the consuming public. There has been what I consider very fine cooperation between the present Food and Drug Administrator and the industries. However, I believe both industry and the Food and Drug Administration realize that the present law is inadequate and that industry has outrun the present old procedure.

My bill attempts to protect long-used additives under the so-called grandfather clause. In other words, if some known chemical or other additive has been used without ill results over a long period of years, it is presumed to be not harmful.

There are now about 750 different kinds of food additives and chemicals being used in the production, processing, and packaging and handling of food. There is no question but what some of the additives find their way into the blood and food stream of the American people. Of these 750 additives there are probably 150 to 200 which have not been adequate tested or passed upon by the Food and Drug Administration. New food additives show up almost daily. One of the big fields just now being developed is that of the use of various isotopes in the preservation of food.

The bill I have introduced provides that in relation to any additive now being used on which there may be any question, the Administration may require that industry shall furnish sufficient and ample scientific evidence that the additive is not harmful before the use of such additive is continued. In other words, the bill provides that all chemicals and additives be adequately tested before such chemicals or other additives are permitted to enter the blood stream of the American people through food.

The bill seeks to strike a balance between industry and the Food and Drug Administration, always keeping in mind the paramount interest lies in the general public.

In a previous Congress I introduced a bill covering pesticides which is known as the Miller bill. The committee reported that bill favorably and it is now a law. It gives needed added protection to the public. It is based on sound principles.

I feel the same about the current bill. It tends to create a balance we have not had before.

It is my opinion that the horizons of tomorrow will show still further progress for the food and chemical industry. The scientists are uncovering the secrets of nature and helping us to weave a new fabric of life.

The interest in food and drug administration is countrywide and it is a subject that needs careful handling. We should do nothing which tends to make the public hysterical. We should approach the problem with an objective view.

We should have a law which will forbid untested chemicals or other additives to be introduced in food. We lack that protection now.

I believe the primary responsibility for evaluating the safety of new food additives should rest with an advisory committee, composed of scientists. Any firm or individual proposing to market a new food additive, after submitting a report on pretesting to the Food and Drug Administration may request the aid of the advisory committee.

The independent and impartial committee could act as a brake upon any inclination of the Administration to exercise arbitrary and unreasonable control over industry. The committee can also serve as an arbiter between industry and administration. The bill also provides for public hearing and the report of the advisory committee becomes a part of the record in the public hearings. The bill further provides for a judicial review either by industry or by the Department.

We all agree the public health is paramount. We all agree that the food industry has made magnificent progress

and should not be blocked by an unwise delegation of power and I think we also agree there should be a system of checks and balances which will give ample protection to the American people. With that in mind I submit this bill for your earnest consideration.

TV: In Defense of CBS

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article written by Jack Gould, as it appeared in the New York Times of June 6, 1957:

TV: IN DEFENSE OF CBS—REGRET EXPRESSED AT EISENHOWER REMARK ON INTERVIEW WITH KHRUSHCHEV

(By Jack Gould)

The suggestion by President Eisenhower that the Columbia Broadcasting System had been motivated by commercial considerations in televising an interview with Nikita S. Khrushchev, first secretary of the Communist Party in the Soviet Union, can only be regretted.

The television network displayed sound reportorial initiative in obtaining the exclusive interview and in no way violated the canons of responsible journalistic behavior. The broadcasting chain ill deserves White House reproval. In the television industry, so strongly given to anxiety and apprehension, the implied censure could have deleterious repercussions.

The President's observation came yesterday in response to a question at his press conference. He was asked whether he might not be missing a good opportunity to reach the Russian people by not asking for equal time on Soviet facilities to answer Mr. Khrushchev.

"Well, now," the President said, "let's take a look at this: A commercial firm in this country, trying to improve its own commercial standing, went to unusual effort to get someone that was, really made a unique performance in front of our people, and he could do that because this is a free country. Everybody could listen and the newspapers carried it in general, in the full text."

The President went on to say that somebody in the American Government would be glad to use the Russian facilities but only if the Soviet Union guaranteed that there would be no jamming no interference and no counter attractions to take people away from their radios.

The original presentation of the interview with Mr. Khrushchev was carried on a sustaining basis by the CBS network and without sponsorship. The only incidental financial gain to CBS has been the sale of the film for second showings by a number of independent stations; this income would not begin to meet the cost of the initial showing.

But on the larger issue of "a commercial firm trying to improve its own commercial standing" the President was hardly fair. The press from time immemorial has sought and obtained exclusive interviews with major world figures; The New York Times printed on May 11 an exclusive interview with Mr. Khrushchev. Yet when such interviews were obtained there was no Washington suggestion that the profit motive was a paramount consideration.

Merely because the impact and novelty of coast-to-coast television may be greater does not mean a double standard of judgment should be invoked. No one will dispute that the lion's share of theatrical television may be concerned with the improvement of someone's commercial standing, but when the medium behaves maturely and responsibly in the field of news it deserves appropriate recognition.

The distinction is of prime importance in television because of forces, real or imagined, that many militate against TV journalism. The networks and other owners of many stations are forced to live under the constant shadow of the Federal Communications Commisison. Not only are individual station licensees subject to renewal but also almost everything a network may do—changing affiliations or buying or selling an outlet—is subject to governmental review. At the moment there are multiple Federal investigations of television practices.

Rather than run the slighest risk of incurring Washington disapproval the world of TV often may simply avoid difficult or controversial subjects. In particular the last thing any broadcaster wants to do is tangle with the White House, regardless of the occupant's political affiliation. In this area there exists a degree of anticipatory censorship on the broadcaster's part.

The fainthearted in TV may well draw encouragement from the President's statement. Why dabble in journalistic controversy on a sustaining basis and court White House disapproval when situation comedy is ever so much safer and far more profitable? One hopes that the President will always feel free to speak out on any and all subjects but it is disheartening to see him impugn the purpose of journalistic initiative in a medium that needs ever so much more of it.

In another area, the President's observations on the use of broadcasting facilities also must invite reservations. In outlining the terms under which an American spokesman might speak over Russian facilities, he included a stipulation that there be no concurrent counterattractions that would take people away from the program.

The Khrushchev interview was carried on 105 television stations last Sunday, less than one-fourth the total in this country, and on 100 radio outlets, roughly one-thirtieth of the total. The Communist chief had to buck Zoo Parade, the Palm Beach Golf Tourney, baseball, movies, and disk jockeys. The idea of compelling a Russian to hear the American spokesman or nothing at all would seem at odds with democratic philosophy.

Mr. Speaker, I am in complete agreement with the distinguished columnist in his criticism of our President. If, instead of criticizing CBS for the public service it is rendering, the President directed the United States Information Agency to pattern its work after the public-service programs of our important radio and TV stations, we would have less to fear from the Communists.

The President has every right to express his opinion on any and every subject, as has every American citizen. It would be much smarter, however, if he merely said "No comment" when asked about matters concerning which he is uninformed. It would have been much better for the President to have informed himself about the matter and then to have directed his Secretary of State to request Mr. Khrushchev to permit the broadcasting throughout Russia of the views of high American Government public officials.

Declaration of Independence Flouted by Status of Forces Treaties

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. BOW. Mr. Speaker, the Girard case gives new timeliness to an excellent article published some time ago in Task Force, the newspaper of the Defenders of the American Constitution. I urge consideration of the fundamental principles discussed in the following article by Gordon E. Small:

DECLARATION OF INDEPENDENCE FLOUTED BY STATUS OF FORCES TREATIES—RIGHTS FOR WHICH OUR FOREFATHERS FOUGHT AND DIED ARE HEEDLESSLY GIVEN AWAY

(By Gordon E. Small)

A careful reading of the Declaration of Independence is suggested to those legislators responsible for the approval of the status-of-forces treaties.

The parallel between some of the wrongs detailed in the immortal Declaration, and the situation resulting from the treaties is illuminating—and startling to all patriotic Americans.

Even before the adoption of the Declaration, the First Continental Congress, meeting in Philadelphia in September of 1774, adopted a series of resolutions in an address to the Crown. The very first article of these resolutions was worded as follows:

"That they (the inhabitants of the English Colonies in North America) are entitled to life, liberty, and property, and they have never ceded to any sovereign power whatever, a right to dispose of either without their consent."

Comparing this forthright statement with the status-of-forces treaties, we find that the treaties have ceded to France, Japan, and other "sovereign powers" the right to dispose of the liberty of our servicemen (and their civilian components) without their consent, and in direct violation of the rights guaranteed to all Americans by our Constitution.

Article 5, of the same resolutions declared "That the respective Colonies are entitled to the common law of England and more especially to the great and inestimable privilege of being tried by their peers of the vicinage, according to the course of that law."

Under the status-of-forces treaties, "the great and inestimable privilege of being tried by their peers of the vicinage" has been abjectly surrendered. Instead, our servicemen are tried by foreign courts, under alien systems of justice, rather than "according to the course of that law"—the common law of their own land.

The Continental Congress met again in May of 1776, and on the following Fourth of July, our national birthday, issued the Declaration of Independence. Lest we forget, the Declaration contains the following pertinent and significant statements:

"He [the British Sovereign] has combined with others to subject us to a jurisdiction foreign to our Constitution and foreign to our laws * * *."

Could a better description of the status-of-forces treaties possibly be given than that "they subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws?"

The Declaration goes on to accuse the British Sovereign of "giving his consent to

their (the British Parliament) acts of pretended legislation:

"For depriving us in many cases, of the benefits of trial by jury;

"For transporting us beyond seas to be tried for pretended offenses;

"For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments;

"For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever."

Examining the effects of the status-of-forces treaties in the light of these grievances, what do we find?

Certainly our servicemen (and their civilian components) are "deprived of the benefits of trial by jury—by their 'peers of the vicinage'—as guaranteed by our Constitution.

Certainly they are "transported beyond seas," not, of course, by the British Sovereign, but by our own Government, and "tried by other governments for pretended (or real, it is immaterial) offenses."

Certainly the treaties "abolish our most valuable laws, and alter fundamentally the forms of our Government"—the Constitution of the United States.

Certainly the treaties "suspend the powers of our own legislatures and invest foreign governments with power to legislate for us" in cases involving our servicemen and others on duty abroad. (It should be noted that the State Department, in drafting these treaties, was careful to exclude its own personnel, over which we retain jurisdiction).

Every thoughtful American must surely ask himself, "Why should this be?" Why must our Government, under the cloak of treaty law, deliberately give away rights and privileges of American citizenship, the very rights for which our ancestors fought and died on the battlefields of Lexington, Saratoga, Yorktown, and other shrines of American Independence?

The only answer seems to lie in the assumption that our treatymakers deemed it necessary to appease the foreign nations signatory to the treaties for permitting us to maintain our troops in their countries so as to protect them from an aggressor.

Whenever the treaties have been discussed at hearings of congressional committees, or elsewhere the State Department puts forward the dubious defense that the treaties are "reciprocal," in that we, the United States, have jurisdiction over military personnel of those nations signatory to the treaties, who may be stationed in this country.

What sophistry is this? Are there any foreign troops stationed in the United States? If so, they are not here to protect us. When one compares the vast number of American boys, on duty in many countries all over the globe, with the infinitesimal number of foreign troops who may be in America, the reciprocal nature of the treaties seems rather ridiculous.

Why, it might also be asked, was it at all necessary to grant foreign nations jurisdiction of any kind over our military personnel? Is The Judge Advocate General's Department of the Army (and its corresponding number in the naval service) so inefficient that it could not be trusted to exercise proper supervision over crimes committed by our troops? American standards of justice have always been of the highest, and our military courts would undoubtedly be particularly careful to administer proper judgment in all cases of crimes committed against the citizenry of a friendly nation.

Let it again be emphasized that the Defenders of the American Constitution, in its long fight against the injustices of the status-of-forces treaties, does not, in any way seek to excuse or condone any criminal act, or ask that it go unpunished. General del Valle and Colonel Pomeroy, in their writings and testimony before congressional committees, have repeatedly made that point clear. The Defenders ask only that jurisdiction over our service men and their civilian components be restored to their own proper courts, as has been the case throughout all the years of our history as a nation, and as specifically provided for by our Constitution.

All American citizens—and nearly every family has a son, husband, or other dear one in the armed services today—should ask their Senators and Congressmen this question: "Are you willing to be counted as in favor of treaties which abandon the principles of the Declaration of Independence?" Tell them to demonstrate some of the spirit of our Founding Fathers, who pledged their lives, their fortunes, and their sacred honor that this Nation might become a reality, and wipe out these treaties, which, as Senator WELKER has said, "will forever be a black mark in the illustrious history of our Nation."

The machinery to dispense with these treaties is available in the resolutions introduced by Senator WELKER and Congressman Bow, which will be considered in the next session of the present Congress, convening in January 1956. Now is the time to bring the facts outlined in this article to the attention of your Representatives—tell them to uphold the precepts of the Declaration of Independence by voting to revoke the statute-of-forces treaties.

Crucial Moment for American Education

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. BOSCH. Mr. Speaker, H. R. 1 has been reported by the Committee on Education and Labor and is now before the Committee on Rules. No doubt it will be reported to the House in the very near future. Before this body considers this bill, I should like to call to the attention of my colleagues an excellent article on the subject by Richard Whalen.

Under leave to extend my remarks, I include the aforementioned article which appeared in the June 7, 1957, issue of U. S. A.

The article follows:

CRUCIAL MOMENT FOR AMERICAN EDUCATION

(By Richard Whalen)

Contrary to a widely held belief, a crisis does not exist in American education. But a crucial moment is approaching. It will come when timid public officials in Washington, D. C., override the objections of hardworking local school authorities and turn control of school curriculums and facilities over to a centralized educationist bureaucracy.

On that day—should it come—politics, not scholarly propriety, will determine educational policy in America.

The National Education Association is a main force in the drive to federalize education. With a membership of some 666,000 teachers and public school administrators, the NEA is a private organization mainly subsidized by private charitable foundations with tax-exempt money. While the rank-and-file members of NEA remain in their classrooms and offices, tending to the proper business of education, the NEA's well-heeled hierarchy goes a-politicking.

NEA lobbyists, with headquarters in Washington, D. C., are partial to playing the "numbers game." In recent months, they have marched on Congress, armed with statistics proving—so they claim—that an additional 14,000 classrooms are needed immediately in our Nation.

Statistics gathered by the United States Office of Education indicate that more than 28,000 classrooms are currently under construction, over and above those needed to house this year's enrollment gain. This figure was arrived at through consultation with school boards throughout the country which are planning, financing, and constructing schools in programs geared to local needs and conditions.

But NEA disputes the statistics gathered by the United States Office of Education and tries to bury them, and those persons who publicize them, under an avalanche of slick professional propaganda. An intended victim of NEA's policy of massive retaliation is the highly competent and respected United States Chamber of Commerce which strongly opposes Federal aid to education.

VOICES OF REASON

While the battle over it rages indecisively in an area of stratospheric nonsense on Capitol Hill, champions of local government in all 48 States have sought to bolster wavering legislators with the steely arguments of commonsense.

"It is infinitely more important," says the Public Expenditure Council of the State of Connecticut, "that we settle down to sound thinking on the values of local participation and local citizen control of our schools, and finance them with the resources within our States, than to chase our own tax dollars through the depreciating process of Federal bureaucracy and have them come back to us worth much less and accompanied by dictates on how we shall use them."

In the South, the editorial voice of the widely read Richmond News Leader, James Jackson Kilpatrick, writes:

"Localities are having difficulties in school construction for 1 reason and 1 reason only: And that is that the Federal Government is seizing so vast a proportion of the people's wealth that not enough remains at home for the people to do what the people might wish to do about their schools. * * *

"The answer is not to send back to the people millions of their own dollars; the answer is not to take so many dollars from the people in the first place."

Two important points should be understood by people discussing Federal aid to education:

1. There is no proven need for Federal assistance to local school construction;

2. Money for any program of Federal aid must come from the taxpayers in the States, who could use the funds more efficiently without having them pass through a central authority.

THE POWERFUL FEW

What does the National Education Association hope to achieve through its propaganda program for Federal aid?

Power.

Through its manipulation of propaganda symbols, such as slanted statistics, the NEA hopes to consolidate economic power over the Nation's schools in the hands of a few politically motivated educationists.

This is a damning indictment. But it is directed only at the self-proclaimed lobbyists in Washington, and not at the dedicated men and women who stay at home, mind their own educational business, and do their vital teaching or administrative job faithfully and well.

The NEA's lobby was established at the NEA annual convention early last summer in Portland, Oreg. It was part of a bold coun-

terattack by which educationalists sought to recoup the prestige they had lost at the discredited White House Conference on Education, held in December 1955. According to the New York Times, July 4, 1956, the NEA hierarchy engineered at the convention the creation of the greatest education lobby ever seen in this country prepared to mobilize local, State, and National educational organizations behind a concerted drive to influence Congress to support school legislation. In this drive, for a starter, Federal-aid bills were to be given top priority.

Dr. John Lester Buford, president of the NEA, admitted that lobbying is a new undertaking for the organization. At the White House conference, the NEA had engineered attendant's consent for Federal aid by using the antiparliamentary technique of group dynamics which is trickily designed to enforce minority will on the majority. At the convention, however, Dr. Buford abandoned new-fangled group dynamics for old-fashioned lobbying and declared "We don't mind being called lobbyists. We are lobbying for a good cause—for better schools."

With an annual budget of more than $3.8 million to spend, Dr. Buford and his associates in the upper echelons of NEA are in a most favorable financial position to mobilize a lot of lobbyists and an arsenal of weapons in support of the NEA's cause.

THE GUIDING LIGHTS

In its swank Washington headquarters, the NEA maintains a legislative commission which originates proposals for Federal intervention in education. The commission is supplemented by a division of legislation and Federal relations. A policy statement published in October 1956 by the NEA asserts that the commission and the division were the guiding lights behind the White House Conference, and "urges the Congress to carry out the mandate of the conference report and to enact legislation which will provide substantial Federal funds for emergency school construction purposes." Further, the policy statement declares:

"The National Education Association reaffirms its belief that the Federal Government has a shared responsibility with States and local communities to insure adequate educational opportunities for all."

Definition of terms is the necessary first step in all well-conducted debates. In a matter as important as the future of American education, the NEA should be required to lend substance to the shadowy propaganda terms it uses. Specifically, what does the NEA mean by "adequate"? And, more important, what did Dr. Buford have in mind when he spoke so knowingly of "better" schools and "a good cause"?

Does the NEA want more schools? Or could it possibly want better instruction in schools already existing?

Since the NEA has been the prime mover in that kind of social and progressive education which has been acknowledged by leading educational authorities to be the main cause of current scholastic deficiencies in our Nation, it is most unlikely that the NEA is concerned with restoring and improving the kind of basic education that made our Nation great. To scrap courses in social adjustment in favor of instituting courses of intensified training in reading, writing, and arithmetic would not be acceptable to many of the elder progressives dominating the NEA.

Consequently, the terms good and better and adequate must be thought of as quantitative words in the mouths of NEA educationists. In their mouths, these words are related to big, bigger, and biggest.

The facts of the NEA's political structure bear out such a definition of its terms. As currently operated, the NEA is a mass organization, with affiliates at each political level. Central authority is vested in the legislative commission and the division of legislation and Federal relations. Tactical operation is from the top down: from a planning core of political strategists to a mass of obedient doorbell ringers and placard wavers.

Busy citizens, grasping only the immediate importance of a complex situation, fall prey to the NEA's cry of emergency. The only thing that matters is that Johnny and Sally and their friends have a classroom which isn't overcrowded, and if the man with the NEA pamphlets and NEA ready answers says the Federal Government must provide that classroom, then—so be it.

TWO SOCIAL DEMOCRATS

Now that worried parents have been mobilized into platoons of willing agitators, the NEA must sponsor legislation for them to agitate for. At last year's NEA convention Dr. Buford spoke of the need to obtain powerful allies for the NEA program. Such allies have been found in Congress among the ranks of those whom columnist Holmes Alexander refers to as the Social Democrats.

Two "Social Democrats"—advocates of big government and federalization of everything in sight—have served the NEA faithfully in the current session of Congress. They are freshman Senator JOSEPH SILL CLARK of Pennsylvania and sophomoric Senator WAYNE MORSE of Oregon. These Senators have cosponsored two key bills on the NEA's legislative calendar—S. 1134 and S. 1237.

OVERPRIVILEGED IN FEDERAL POWER

What the NEA really wants is a "National Board of Education." This board, according to the NEA, "should be appointed for long overlapping terms by the President with the consent of the Senate, as an independent agency to administer the United States Office of Education."

There you have it. And that is not all. The NEA reaffirms its belief that education will best be served at the national level by an independent United States Office of Education under "a national board of education * * * [which would] * * * provide appropriate, nonpartisan, Federal leadership in meeting educational problems of nationwide concern."

The NEA concludes its brief blueprint for an educationist stronghold with the belief that "the Federal Government [should] establish conditions and provide funds adequate to employ educational leadership of the highest professional competence."

Who will decide on the professional competence of the men to fill these posts?

Why, the National Education Association, oldest and most respected professional educational group in the United States.

What, in brief, does the NEA want?

In a general sense, power.

Specifically, the NEA desires public acceptance of the idea of Federal aid to education and control over it. Aid to school construction is the opening wedge now being driven into the bulwark of traditional American public reluctance. After having been bribed with its own money, the docile public will—according to the NEA lobbyists—be willing to accept further encrdachments on local responsibility and individual initiative.

A crucial moment in American education is coming. Many citizens have fallen for NEA's propaganda and are clamoring for Federal aid in the school construction "emergency." Only a barrage of facts aimed at the sham front of this "emergency" can explode the false situation and lay bare the dubious political motives behind it.

In order that American education should remain in the hands of its proper local guardians, it might prove useful at this time to recall the wise advice of James Madison, who, in 1794, warned his fellow citizens against predatory bureaucrats. We should be on our guard, Madison said, against the bureaucrats' "old trick of turning every contingency into a resource for accumulating force."

Question on Kohler Strike Addressed to UAW President Walter P. Reuther at National Press Club, Washington, D. C., May 22, 1957, and His Reply

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. DINGELL. Mr. Speaker, recently I inserted into the RECORD a statement by Mr. Emil Mazey, an officer of the UAW–CIO, on the subject of the UAW strike against the Kohler Co. in Wisconsin. To further permit the people of this country to understand the union side of that controversy, I insert into the RECORD a question and answer between Walter P. Reuther, president of the UAW–CIO, at the National Press Club, and a member of that body when he appeared there:

QUESTION ON KOHLER STRIKE ADDRESSED TO UAW PRESIDENT WALTER P. REUTHER AT NATIONAL PRESS CLUB, WASHINGTON, D. C., MAY 22, 1957, AND HIS REPLY

Question: The Senate Rackets Committee has received letters from many members of your union protesting the spending of $13 million in union funds to maintain the strike against the Kohler Co. How do you justify this expenditure, and what do you propose to tell the Senate committee when it investigates this strike?

Mr. REUTHER. Well, I shall be most happy to appear before the Senate investigating committee any day of the week, and I will testify about my own personal financial matters, and any matter related to our union, including the Kohler strike.

It is true that we have spent many millions of dollars. We have not spent 13 million; we have spent roughly 10 million. For food and clothing and rent and shoes and medical care—to keep the brave people who want to enjoy a few of the rights and human dignities inside of American industry that millions of other workers enjoy.

The Kohler Corp.—and that's why we're prepared to discuss this any time and any place—bears the major share of moral responsibility. Because they refuse to accept the obligations that thousands and thousand of other industry groups have accepted. We're not trying to pioneer there. We have the choice of either fighting or surrendering. And we're spending this money because we choose not to surrender.

Before the strike occurred, when the contract expired, we asked the company to extend that contract on a day-to-day basis, hoping we could avoid a strike. The company refused. We asked the company to bargain; they would not bargain in good faith. They would not mediate, and they rejected every arbitration proposal.

The Governor of Wisconsin at that time: Gov. Walter Kohler, a nephew of Mr. Herbert Kohler, proposed arbitration. We accepted it. He was to designate the arbitrator. The company rejected it.

Secretary of Labor Mitchell proposed arbitration. We accepted; they rejected.

We proposed that President Eisenhower pick the arbitrator; they rejected it.

Why?

Because they are unprepared to test their position in the court of impartial judgment. Because they know they are wrong.

The strike up there is a revolt against the last remnants of industrial feudalism, people who think that when you hire a worker

you buy him body and soul. That's what this struggle is about.

I say the price of human freedom is the willingness to struggle against tyranny, whether it be under Hitler or under Stalin or under Mr. Herbert Kohler. And we're going to struggle until these workers get their measure of human freedom and human dignity in the Kohler works in Sheboygan, Wis.

Are Tax Cuts Inflationary?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Wall Street Journal of June 7, 1957:

ARE TAX CUTS INFLATIONARY?

Most of the economists who have been testifying about tax-cut prospects this week agree that the prospects are dim. This is also the view of Democratic Representative MILLS, chairman of the House-Senate subcommittee holding hearings on the subject.

The tax pessimism is based on two considerations. The budget surplus, both this fiscal year and next, is unlikely to be big enough to permit reductions. And inflationary pressures are still so strong that tax cuts next year would be inadvisable anyway.

The first assertion is all too probably current. Government spending is outrunning estimates for the fiscal year winding up the end of this month, and the same thing may happen in the new fiscal year; the Government may be lucky to keep out of the red. It is well that no one in the administration or Congress is seriously suggesting tax cuts on the basis of deficit financing.

It is the second proposition that is disturbing. The notion that tax rates should be maintained or raised in good times, even when the surplus is big enough to permit cuts, and lowered in times of business decline is an old and familiar one—the so-called compensatory budget theory. But its familiarity does not make it true. Are tax cuts in fact inflationary?

One trouble with the argument is that it assumes people are predictable. If the Government chops their taxes they will automatically go on a spending spree, bidding up the prices of goods and labor. But it ain't necessarily so. In an economy like ours, where people don't have to spend every cent on necessities, it is particularly unlikely to be so. People may save more instead of spending more, in which event the tax cuts can work out as a restraint on inflationary forces.

The Nation has undeniably prospered since the $7.4 billion tax reductions of 1954, but it would be hard to show that it has been on a buying binge; auto sales and home buying, for instance, are at something less than record levels. Those tax cuts spurred the economy; it is doubtful that they produced the present inflationary potential.

What may be more probable is that we are still feeling, to some extent, the inflationary effects of more than 20 years of almost uninterrupted deficit financing. That kind of printing press orgy, not tax cuts, is the prime cause of inflation. And the Eisenhower administration, to its credit, has not been inflating the money supply.

Another trouble with the argument that we can't have tax cuts because they are inflationary involves a misconception about spending. The theory is that tax cuts would put extra purchasing power in the hands of the people, which is true whether they exercise that power or not. But that doesn't mean the money is saved if the people are denied tax cuts; it is just spent by someone else, namely, the Federal Government. In practice, the Federal Government goes right on spending in good times as well as bad.

Finally there is a dubious moral tone to this "compensatory" fiscal notion. We take it to be self-evident that in a free society the Government has certain plain obligations such as to avoid depreciating the currency and to keep spending and taxes as low as possible. The compensatory theory skips this aspect entirely. Tax rates are to be juggled not on the basis of what is right, but in the attempt to manipulate the economy and hence the people.

The Congressmen and the economists—and the administration—are on sound ground when they say there shouldn't be tax cuts until the budget surplus outlook improves. But Congress should be making that outlook improve be greatly reducing spending, instead of worrying about inflationary tax cuts and compensatory theories.

Just give the people the chance, and they will do their own compensating far better than any government can do it for them.

Two Hundred and Twelfth Annual Feast of Roses Observed by the Tulpehocken Evangelical and Reformed Church Near Richland, Pa., June 9, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. VAN ZANDT. Mr. Speaker, one of the most historical religious observances in the Nation was held Sunday, June 9, 1957, by the Tulpehocken Evangelical and Reformed Church located near Richland, Pa., when the 212th red rose was tendered as annual rent to a descendant of Caspar and Katharine Wistar, who in 1745 conveyed 100 acres of land for use as church property. This annual feast of roses has been observed since that time without interruption.

This year's observance was of two-fold significance since it marked the date of the dedication of a modern church school building erected by the members of the Tulpehocken Evangelical and Reformed Church under the leadership of their very capable and energetic pastor, the Reverend J. Donald Backenstose.

It was my great privilege to participate in the annual feast-of-roses service, June 9, 1957, at which time I delivered the following message:

FEAST OF ROSES MESSAGE BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, JUNE 9, 1957, RICHLAND, PA.

It is a distinct honor to be invited to participate in this annual service commemorating the Feast of Roses which originated in 1745 when Caspar and Katharine Wistar conveyed 100 acres to this church.

During the succeeding years I am informed that a red rose has been tendered each year as annual rent and that since 1901 the Feast of Roses has been observed yearly without interruption.

The beautiful custom of presenting a white rose to the descendants of Caspar and Katharine Wistar was also inaugurated and has added to the solemnity of this annual service.

Today we are privileged in being able to witness the payment of the 212th red rose and the 55th white rose.

This year's Feast of Roses is of added significance since it marks the date of the dedication of the rose building.

This modern church school building is not only a credit to the loyal and faithful members of this congregation but also to your able and distinguished pastor, my good friend the Reverend J. Donald Backenstose.

Truly it may be said that the rose building is a fitting monument to the zeal and piety of the members of this church and their beloved pastor.

Above all it demonstrates their wholehearted cooperation in extending God's kingdom on earth.

Today we are forcibly reminded, through observance of the Feast of Roses, that there is a natural and age-old connection in man's mind between the rose and religion.

No one can look upon the beauty of roses in their varied forms and colors without an uplifting of the heart and mind.

Countless tales have come down to us through the ages associating the rose with the gods or attributing magical and supernatural qualities to roses.

Through the centuries Christianity has used the rose as a symbol of prayer and its thorns as a symbol of sacrifice and suffering.

One of the most constant features of the Christian cathedral is the rose window.

Roses have in all ages of Christianity been thought most suitable for the decoration of any part of a church.

We find them as wood carvings in the form of rose vines on the pews, as great rose flowers ornamenting pulpit or altar.

In Christian symbolism numerous Saints are known by a rose or roses.

They are portrayed in single or double form pink or gold or white or red on vine or bush or rose-tree.

Yes they are shown being held in the hand, worn in a wreath or showering through the air.

Roses, chief among flowers, are brought to decorate our churches and altars as tokens of our devotion and service to God.

The very crown and center of our religion is, of course, Christ himself.

The closer we approach to that center in Christian art and symbolism the more roses do we find.

Finally, we come to the very person of Christ himself symbolized as a red rose.

Realizing that the red rose stands for the suffering and the love and the triumph of Christ, one might think that there could be no comparable grandeur of religious meaning for the white rose.

However Christian symbolism has placed the white rose in a place equal in honor to the red.

Where the red rose means the suffering of martyrdom, the white rose means the virtue of innocence and purity.

Where the red rose shouts of triumph the white rose speaks softly of peace.

Where the red rose pulses with the humanity of Christ the white rose silently proclaims His divinity.

We who know and love roses are sure that what is termed in religious literature "The Odor of Sanctity" must be one of the many beautiful perfumes that we know in roses.

Christianity as well as other forms of world religions, and even ancient paganism associates holiness and virtue with roses.

It is, therefore, beautifully appropriate that this church annually should be scented with the perfume of roses.

This annual feast of roses is not alone a reminder of the debt of gratitude owed Caspar and Katharine Wistar.

It is likewise an occasion to voice our gratitude to Almighty God for our churches.

For truly they are the nation's first line of defense.

Through our churches we, as a nation, have been able to maintain a standard of honesty and decency without which the nation would not be worth saving nor would its citizenry care for any interest beyond their own selfish personal gratifications.

It is an accepted fact that a nation with strong moral convictions and a deep reverence for God is able through his divine grace to defend itself against all enemies, foreign and domestic.

Did you ever stop to realize that should our churches fall into decay and ruin America would become overwhelmingly pagan in a few years?

That fact should make an indelible impression on our minds and hearts and urge all of us to appreciate more fully the church as a spiritual powerhouse whose beacon of light and goodness encompasses the entire globe.

If we have a fuller appreciation of the indispensable position the church plays in our everyday lives, then, as individuals and as a nation, we will be better able to discharge our responsibility of actively supporting the church and all it is defending in the fields of moral and spiritual development.

Religious groups through the church are carrying the Gospel to the four corners of the earth and in so doing creating an atmosphere of confidence and good will that is of more value than costly armaments or diplomatic maneuvering which so often leads to meaningless peace pacts between the nations of the world.

Let us never forget America was built upon the church.

All of us are familiar with the picture depicting the pilgrims on their way to church carrying both Bibles and rifles.

There were many reasons why the New England pioneers might have remained near their primitive homes and worshiped under the sheltering trees with one eye on the prowling Indians.

The well-known painting, however, shows them—men, women, and children—trudging along the snow-piled forest path on their way to the rudely constructed meetinghouse their reverent hands had fashioned for divine worship.

The pilgrims on their way to church remind us, as these spiritual ancestors of ours fought for their very lives, that Sunday morning for them was not a time to catch up on sleep, not an opportunity to clear more needed land or plant crops, not a time to indulge in sports and amusements.

In spite of the hazards and the hardship of it, Sunday morning was a time to go to church.

The Pilgrims went, and by so doing they contributed their physical presence as a witness to their faith in God by which they lived.

It is a serious indictment against our generation that for literally millions of Americans church attendance is ignored.

With three global wars engulfing our Nation in the short span of 33 years, it is little wonder that there has been the growing realization that the church is the bulwark and arsenal of all that makes our Nation great.

Even the radio and television stations across the land signify this truth as they sandwich between commercials the devotional song called "Let's Go To Church Next Sunday Morning."

We profess to be a Christian Nation, but deserted churches give the lie to the creed we claim to profess.

When we remain away from church it does something to that fragile plant called reverence which needs watering at least once a week.

Surely there can be no question that unless we give regular expression to an emotion or conviction it will die or grow dim.

As we thank God for our churches, let us do it in church, and not from some reclining place as we deny our Creator 1 hour of worship on Sunday.

This annual Feast of Roses is, therefore, an opportune time to examine our own conscience and at the same time to keep in mind that in the Communist world churches of every denomination are being ruthlessly persecuted in the diabolical effort to destroy man's belief in God.

It is encouraging to know that religion in America today is a mighty and increasing force.

Statistics may sometimes seem hard to understand, or inconclusive, or dull, but today's religious statistics are as clear an indication of the way the wind blows as a million straws all blowing one way.

These statistics are as conclusive as the force of that wind and exciting as its impact.

In 1850, or 105 years after this church was established, only 16 percent of the population of America were church members. By 1900 the percentage had climbed, slowly and with setbacks, to 36 percent. Through the first half of the twentieth century the increase continued, up to 57 percent.

Recent figures show that approximately 61 percent of all Americans are now church members.

In actual numbers the American church membership has now for the first time passed the 100 million mark. In 1906, half a century ago, there were 209,266 churches of all denominations in the United States.

Though both the shift of population from the country to the city, and the increasing tendency to consolidate churches where possible, tended to reduce the total number of churches that number, after sinking to 199,302 in 1936, rose to 300,056 for 1954.

The result is that we now have not only more members in each congregation, but also more actual church buildings.

In 1955, 5,393 new church buildings were reported and the money spent on new construction during that year is said by the national council to constitute a new record.

The total financial contribution of members to their churches continued an upward trend, per capita contributions rising 7 percent in 1955, to reach the sum of $48.81 annually.

If money talks they are surely good words that we hear from that money.

Both the increase in church membership and the growing concern for the education and moral training of our youth are reflected in a 3.4 percent increase in Sunday School enrollments.

Newspapers and magazines are full of discussions of the religious boom.

Book publishers find that the sales of religious books are large and steadily increasing.

Political actions, reflecting both the popular feeling and the convictions of individuals in the Government, include the provision of the Prayer Room in the Capitol, the addition of the phrase "under God" to the pledge of allegiance, the issuance of a stamp bearing the words "in God we trust," the provision by law that the same motto is to appear on all our coins designed in the future, and most recently the adoption of the statement, "In God We Trust" as the official motto of the United States.

Besides the increase in church membership there is a remarkable increase in both the number of prayer groups and the number of members in established prayer groups.

In Government agencies, in businesses, in neighborhoods, it is becoming more and more the custom to meet occasionally to pray together and to conduct programs of speaking or reading or discussion on the subject of prayer.

In magazines and newspapers and in the public transportation vehicles, we have grown familiar with the advertisements urging people to attend the churches of their choice, to take their families to church, to go to Sunday School with their children, to pray together as families.

I am not sure how much effect this sort of advertising has, but I feel sure the advertising is itself the effect of an urge among all the American people to deepen their religious experience and to give tangible evidence of the faith that is in them.

Ministers and other theological thinkers have published many articles criticizing the current popularity of religion as superficial and tainted with self-interest.

But the very fact that such critical articles are published in great numbers shows that a deep and honest interest must be somewhere in the American public.

Surely those who are indulging in superficial emotionalism do not welcome searching criticism of their motives and it is farfetched to suppose that those who are dropping more money in the collection basket are doing it in the expectation of any financial or material return.

Some of the criticism too, it must be remarked, is more superficial than any of the religious manifestations toward which it is directed.

Of course there are superficial religious manifestations in America today. There always were such manifestations in this country and in every other country.

However, for perfectly practical reasons the superficial manifestations will become greater when it becomes more profitable for the hypocrites and self-servers to pretend to real religious feeling, and that is precisely when a real ground swell of religion is manifesting itself.

It is my opinion there is no complacency in the religion of America today.

We have the forward movement and the forward urge.

We are striving to bring our actions into closer accord with our professions of moral principle and to submit our individual good to the good of all.

There will always be those who will rest content with the system of morality expressed by the motto "Honesty is the best policy."

But I believe that America today and the world today need a heroic virtue reaching far beyond that feeble and petty sentiment.

We shall not hold our earth and sky together nor each individual of us keep his own soul and body together unless we adopt that heroic virtue expressed in the old saying, "Let justice be done though the heavens fall."

And we shall not save our individual souls if we consider it fashionable merely to be seen going to church.

We need the rock-ribbed faith of our forefathers, men and women with the faith of Caspar and Katharine Wistar, who helped to build this Nation under God and who never tired of constantly seeking His protection.

We should never forget that the atomic-hydrogen age in which we live had its birth when Almighty God first entrusted the secrets of the atom to our Nation.

Therefore, we owe Him not only our allegiance, but our constant prayers of thanks-

giving that this Nation was spared from the unhappy fate of Japan which became the testing ground for the devastating atomic attack in World War II.

Let us, during this annual feast of roses, resolve to make an earnest effort to stimulate interest in church membership, and above all, regular church attendance.

Let us, with our friends and loved ones, turn our thoughts more frequently to church, and by prayer and devotion acknowledge our utter dependence on the God who hath made and preserved us a nation.

Thus we will be doing more than thanking God for the church.

We will be conducting our spiritual lives in such an edifying manner that the church will thank God for our aid in its mission to extend the kingdom of God on earth.

Let us joyfully look forward to fulfilling our obligation to the church by regular attendance and as we enter its portals may our hearts be attuned to the true spirit of God enabling us to say in all sincerity, and from the innermost recesses of our hearts:

"Sweet hour of prayer! Sweet hour of prayer!
That calls us from a world of care,
And bids us at our Father's throne
Make all our wants and wishes known.

"In seasons of distress and grief
Our souls have often found relief,
And oft escaped the tempter's snare
By thy return sweet hour of prayer."

A Good Government Bond Market Outside Banks

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Economists National Committee on Monetary Policy, released July 27, 1953:

A GOOD GOVERNMENT BOND MARKET OUTSIDE BANKS

I

The United States Treasury is to be commended for its efforts to turn from banks to savers in the marketing of its securities since monetization of Federal debt by banks is an unsound procedure.

As the Treasury turns from banks to free and open markets and thus increases its demands for the use of people's savings, it is to be expected that the Government must pay interest rates substantially higher than those that prevailed when it financed itself in such high degree by selling its debt to banks in exchange for deposits and Federal Reserve notes.

Proof that the interest rates, at which the Treasury could borrow from banks, have been artificially low is revealed by the fact that the Treasury has been compelled to turn from savers to the banks in such high degree for loans at those rates.

The evils in such artificially maintained low interest rates are found in the consequences flowing from the fact that the Government frees itself from the pressure which savers should be able to exercise through interest rates determined in free competitive markets. Freed from the restraints of such interest rates, the Government is invited to borrow and to spend freely; the currency is expanded improperly since it is created against Federal debt; the purchasing power of the people's currency tends to decline; economic distortions are created by the artificially low interest rates and the defective qualities and excessive quantities of the Federal Reserve notes and deposits arising from the purchase of Federal debt by commercial banks. These economic distortions, if not effectively checked, tend to culminate in unhealthy boom, followed by business recession and depression.

To the extent that the United States Treasury is able to borrow and to fund and refund existing Federal debt by inducing savers to invest in its securities at prevailing rates in free open markets, it is able to return to proper and prudent methods of financing its needs and to avoid adding to the unfortunate consequences which have arisen and may be expected to flow from the practice of monetizing Federal debt unwisely pursued by our Government in recent years, particularly since 1941.

Officials of the Treasury who are now endeavoring to return to proper methods of Federal financing should have the support of all who desire correct administration of Federal fiscal affairs. The position of those who object to higher or rising interest rates, as the Treasury endeavors to turn from the commercial and Federal Reserve banks to savers, and who recommend a continuation of debt monetization at artificially low interest rates through banks, as did, for example, 21 Members of Congress in a resolution of May 11, 1953, is regrettable.

The Treasury should pursue the course of turning to savers rather than to banks for the loanable funds required at whatever rates prevail in free markets.

II

Both the Treasury and Federal Reserve authorities are to be commended for the progress being made in freeing the Federal Reserve System from domination by the Treasury and in substituting a program of maintaining an orderly Government securities market for one requiring that the Federal Reserve System maintain fixed and artificially high prices for such securities.

III

The problems of the Treasury could and should be lessened, the prospects of success in selling its securities to savers at relatively low rates of interest should be enhanced, and our people in general should be greatly benefited, if this Nation's currency were promptly made redeemable at the statutory rate of $35 per fine ounce of gold.

A people blessed with a redeemable currency and confident that the principal of, and interest on, Government bonds will be paid in currency redeemable in gold tend to purchase such securities at lower rates of return than those required to induce them to make such purchases when their currency is irredeemable. Nonbank investors in Government securities are not to be captured at relatively low rates of interest by the use of an irredeemable or depreciating currency.

This fact was clearly illustrated by the Treasury's experiences before and after resumption of specie payments on January 2, 1879, as revealed, for example, by John Sherman, Secretary of the Treasury, March 9, 1877–March 3, 1881, who observed in his Recollections of Forty Years in the House, Senate, and Cabinet (the Werner Co., New York and Chicago, 1895), volume II, page 702: "The immediate effect of resumption of specie payments was to advance the public credit, which made it possible to rapidly fund all the bonds of the United States then redeemable into bonds bearing 4 percent interest"—a rate much below pre-1879 rates in terms of an irredeemable currency.

From his page 705: "My published correspondence shows that with all the efforts and strength of the department it was impossible to keep up with the subscriptions for bonds pouring in from all parts of the United States and from Europe (after January 3, 1879)."

When the Treasury was borrowing from savers and banks during the period of irredeemable greenbacks, particularly during that part of the greenback period in which the Government distinguished between its promises to pay in coin or in lawful money other than coin, a common differential in terms offered or paid by the Government was 6 percent on bonds payable in coin as against 7.3 percent when payable in currency. (This differential is illustrated by the seven-thirties of 1864 and 1865, the five-twenties of 1865, the consols of 1865, 1867, and 1868—Rafael A. Bayley, The National Loans of the United States From July 4, 1776, to June 30, 1880, Government Printing Office, 1881, pp. 165–169; Robert A. Love, Federal Financing, Columbia University Press, New York, 1931, appendix, folders 5 and 6.)

The principle of higher interest rates for Government bonds payable in irredeemable currency as compared with those on the same class of bonds payable in coin or a redeemable currency was recognized by Congress when it passed the law of March 18, 1869, promising to redeem all United States securities in coin.

Writing of the consequences of passing the Act of March 18, 1869, which pledged the faith of the United States to the payment in coin or its equivalent of all the securities of the United States, except when other provision had been made in law authorizing the issue, Davis Rich Dewey observed in his Financial History of the United States (Longmans, Green & Co., New York, 1918), sixth edition, page 349: "The apprehension of investors was relieved, and refunding at lower rates of interest was greatly facilitated."

The handicaps under which a Government labors when it attempts to market its securities in terms of an irredeemable currency, as illustrated by our Treasury's attempts in 1864 to sell some of its bonds at a then relatively low interest rate of 5 percent, were commented upon in part as follows by Albert Sidney Bolles in his Financial History of the United States From 1861 to 1885 (D. Appleton & Co., New York, 1886), Book I, page 107: "The issue of paper money led many to distrust the Government and to hesitate in buying its bonds. If there had been nothing besides public securities for them to purchase, then the bonds would have been sold; the owners of wealth, however, could do numberless things with their accumulations. And in truth they did. The theory of watering the circulation in order to quicken investments in bonds was a fallacy of the gravest magniture, but one, unfortunately, which many persons cherished. The wider the departure of the Government from sound principles in issuing money, the greater was the distrust of thinking men, including a very large class of investors, and the less inclined were they to buy Government obligations. They prefered to speculate, to buy railroad bonds and stocks, real estate, mortgages, to build houses, factories, and the like."

The difficulties confronting our present Treasury officials in combating the problems arising from monetization of a huge volume of Federal debt at artificially low interest rates promise to be exceedingly great under the best of circumstances. These difficulties should be minimized as much as possible. The maximum benefits for the Treasury and Nation are to be obtained only if our people are able to enjoy the blessings of a redeem-

able currency and the Treasury is enabled to market its securities in terms of a redeemable currency. Congress should provide promptly for redeemability. Without its benefits, the Treasury may be forced to return to the banks for further monetization of the Federal debt. Our Government should profit by the lesson so clearly illustrated in 1879.

Waste and Confusion in Our Federal Government

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PILLION. Mr. Speaker, this is the first of a number of articles dealing with the problem of waste and confusion in our Federal Government which I am pleased to insert in the public interest. It is the story of how the bipartisan Hoover Commission attacked this problem.

These articles were written by Mr. Clarence Francis, National Chairman, Citizens Committee for the Hoover Report, and were published in a pamphlet entitled "The Coupler," by the Symington-Gould Corp., of Buffalo, N. Y.:

YOU CAN HELP STOP GOVERNMENT WASTE

YOUR STAKE IN EFFICIENT GOVERNMENT

To the average citizen the Federal Government was once a faraway thing, of no great concern to the individual. Today we live in the age of a big government whose every act affects our personal destinies.

* * * * *

Democrats and Republicans have long agreed on one thing: Big government must be kept within bounds. That is why every single Member of Congress voted for creation of the first Hoover Commission (in 1947 under the Truman administration) and the second Hoover Commission (in 1953 under President Eisenhower) to get the facts.

This is the story of the second Commission, headed by former President Herbert Hoover and including such outstanding citizens as James A. Farley and Joseph P. Kennedy; its 2-year, impartial study of every aspect of the Government; and its 3.3 million-word report to Congress showing ways of cutting out over $5 billion a year in Federal costs while actually improving governmental efficiency.

* * * * *

YOUR TAX BILL AND GOVERNMENT WASTE

Many Americans think their taxes are too high. But though taxes are felt most around April 15, they are even higher than the income tax returns show. All of us pay indirect or "hidden" taxes. We don't notice them, because they are included in the price of many of the things which we buy.

For example, 10 cents of each dollar spent to see a movie is tax money. The same goes for light bulbs, radio tubes, cameras, film, jewelry, luggage, telephone calls, sporting goods and many other items. A Federal tax is included in the price of gasoline and fuel oil. In fact, almost everything we buy is taxed because most manufacturers pay Federal taxes which are passed on in the prices of their products.

Let's take an average family of four. The head of this family, according to a recent study, earned $3,400 to $4,000 yearly. He paid about $300 in income taxes—and another $800 in hidden taxes. His total tax bill was nearly four times greater than he thought it was.

But this isn't all. The national debt of $274 billion is a very real debt for which we, as citizens, are responsible. This debt amounts to $7,000 per average American family today. The interest we pay on it is greater than the whole cost of running the Government 20 years ago.

Naturally, we must not forget that we all benefit from the Federal Government. Large sums must be spent for defense, health, highways, agriculture, and public works. None of us would want to cut out those things which the Federal Government can best do in the interest of all the people. Yet no one wants to pay for waste, overlapping, and confusion if such things can be found and corrected.

Behind the work of the Hoover Commission lies the right of the American citizen. You have not only the right but the duty to ask whether you are getting the full value of 100 cents for every dollar you pay in taxes.

HOOVER COMMISSION HAS THE ANSWER

No one person can find the answer to this question. The Federal Government is much too big and too complex.

The first Hoover Commission (1947–49) made many tax-saving findings. Total economies of over $7 billion have so far resulted from its work. Accordingly Congress, in 1953, unanimously created the second Commission. Some 19 research committees, or task forces, composed of over 200 voluntary experts, did the Commission's preliminary studies. To each of them Chairman Hoover gave these simple instructions:

"First get the facts. Both sides. No preconceptions. When you get all the facts, come up with whatever conclusions they induce."

GOVERNMENT WASTE FOUND

It didn't take the task forces very long to find waste and duplication. Here are some examples:

Found by the Hoover Commission:

The Army shipped 800,000 pounds of tomatoes from the west coast to the east coast at the same time that the Navy was shipping 775,000 pounds of tomatoes from the east coast to the west coast. (This is just like shipping 20 carloads of tomatoes from San Francisco to Sacramento by way of New York.)

A further find: The Army Signal Corps had an 8-year supply of flashlight batteries, which last 2 years. In a naval repair depot, a 128-year supply of simple gear drives was found. (What mail-order house or department store could stock comparable supplies and not face bankruptcy?)

Here are some more: The Government writes enough letters (1 billion a year, cost $1 per letter) to reach from here to Moscow. * * * Many Government agencies borrow millions of dollars at 3 percent and lend them at 2 percent. * * * Ping-pong balls shipped to Europe, dog food to Okinawa, and 25,000 pounds of cement to Bermuda by costly air transport. * * * Hospitals half empty while new hospitals rise nearby.

The complete list is much longer, but the point is clear. There's no doubt that Big Government, expanded tenfold in cost by two decades of depression, war, cold war, more war, and emergency, has been wasteful

What can be done about it? The next article will treat this question.

European Air Routes

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. BOW. Mr. Speaker, in my remarks in the House today, I pointed out some of the inconsistencies of policy re-

garding international air routes. It appears that the Dayton (Ohio) Daily News is aware of these problems, and has discussed them in an excellent editorial which I include herewith:

EUROPEAN AIR ROUTES

At a time when bargains can be struck with Britain under circumstances that give the United States a natural leverage, occasion should be taken to settle a case of unfair discrimination against an American airline.

Two years ago the Civil Aeronautics Board gave Trans World Airlines authority to close a gap between Frankfurt, Germany, and Zurich, Switzerland, that had marred its global route system. After CAB approval, however, the matter required diplomatic clearance. This the British Government has refused to give, although the United States State Department has pressed the matter from time to time, most recently at the Bermuda conference.

The Frankfurt dead end costs TWA heavily in revenues. Passengers on its world routes pay the price of inconvenience. The block improves the competitive position of British European Airways, government-owned, but it is an unfair, dog-in-the-manger type of competition.

The British have many more worthy and more important points at issue in negotiations with the United States. They should give up on this one which has so little to commend it by any fairminded way of thinking.

The Case of Sp3c. William S. Girard

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith the following article which appeared in the Christian Science Monitor:

THE CASE OF SP3C. WILLIAM S. GIRARD

(By Joseph C. Harsch)

WASHINGTON.—The case of Army Sp3c. William S. Girard provides almost a classic example of a situation where head and heart pull in opposite directions.

Every human emotion in the United States sides with the relatives of the soldier who are doing all within their power to extract him from the jurisdiction of the Japanese courts and return him to his home country for trial. Some 17,000 names are signed to the petition which was presented at the White House, and with little effort more thousands of signatures undoubtedly could be obtained.

But if you apply the head rather than the heart to the case, you will come out with a different conclusion about the merits.

First, there is no reason to think that he would receive a less fair trial in Japanese courts than in American courts. The Japanese will certainly lean over backward to be fair about the matter. Their pride and their emotions are also engaged. In effect, the outburst in the United States has questioned the quality of the Japanese judicial system. And every move made in Japan's courts will be subjected to the sharpest scrutiny. It is almost a foregone conclusion that his trial in a Japanese court would not end in a prison sentence. In a United States court it might.

Second, there is every reason of national United States interest to leave the trial to the Japanese courts regardless of the merits of the various arguments over the status-of-forces agreement with Japan.

The United States position in Japan has been shaken of late by many things—including United States resistance to the reopening of trade with China. The honeymoon period of that relationship has long since passed. Chauvinism has reappeared in Japan, and in the United States as well. Japanese foreign policy is pulling away from United States leading strings. It is to Washington's advantage to limit and restrain this tendency. The last thing in the world it wants is a cause célèbre which would produce a decisive break away from Washington in Tokyo and force the military withdrawal of the United States forces from Japan.

Had Washington insisted on its full legal rights under the agreement and insisted on repatriating Specialist Girard, the end result could all too easily have been such a decisive break, with a loss of military bases in Japan.

This is a case where the United States had everything to gain by leaning over backward even at the expense of the legal rights of the individual soldier. It may be bad for troop morale overseas to permit this soldier to be tried in a foreign court, but it would be worse for United States-Japanese relations to play the hand the other way.

Third, if the United States were to insist on its maximum legal rights and deny Japanese court jurisdiction, then Moscow and Peking would obtain a magnificent propaganda advantage. There is nothing those capitals relish more than an opportunity to paint the United States as an imperialist power which rides roughshod over the rights, interests, and feelings of its weaker allies. The repatriation of Specialist Girard over Japanese protest would give the Communists an argument in Japan which the USIA could not hope to wipe out with twice the money cut from its budget by Congress this year.

This is a conflict between national interest and national emotion with no easy resolution. National interest is on the side of the President. National emotion is on the side of the relatives and friends of Specialist Girard. And it is, of course, to be expected that antiadministration Senators and Representatives will take the side of national emotion and argue that no United States soldier should be expected to trust his freedom to the whims of a foreign court.

This, of course, is one test of the ability of the United States to fill the role of leader of a world coalition. It never could hope to fill that role over a long period of years if in cases like this it allowed its actions to be ruled by its heart rather than by its head.

There is more to the matter still. Americans hear much these days about whether they can trust the Soviets to be sincere about disarmament. Sincerity is a quality of human behavior, not a quality of government behavior. The function of a government is to serve the national interest. The United States can trust the Soviets to sign and keep any agreement which serves the interests of the Soviet Union. One doesn't ask rationally whether they are sincere about it. One asks whether it is possible to find a formula which serves the national interests of both countries.

The administration in Washington is paying a high price domestically for living up to the full spirit of its agreement with Japan. It does this not because it wants to, but because it serves the overall national interest to do so. If governments consulted only the heart and not the head there would be hardly any international agreements at all. The relationship with Japan would be ended, and Harold E. Stassen would be told to break off his arms-limitation talks with the Soviets.

The Electoral College Elects the President

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. RAINS. Mr. Speaker, one of the most important subjects pending before the Congress of the United States is the constitutional amendment which I introduced to provide for a change in the outdated and antiquated electoral college.

Hon. Ben F. Ray, one of Alabama's outstanding lawyers, has written a treatise on the subject of the Electoral College, which I commend to the careful reading and attention of every Member of Congress:

THE ELECTORAL COLLEGE ELECTS THE PRESIDENT

(By Ben F. Ray)

Independence has been defined as freedom from dependence; a spirit of self-reliance. This applies to an individual, a state, or a nation. In Congress, July 4, 1776, the Declaration of Independence was unanimously adopted. Among the principles enumerated in that profound document, Congress declared "governments are instituted among men deriving their just powers from the consent of the governed."

Since the end of World War II, a spirit of independence has slowly asserted itself in every State in the Union. It reached a high mark in the general election November 4, 1952. This is evident from the results of the election. Specific instances stand out here and there in the several States.

The early settlers came to our shores seeking freedom from tyranny. They refused to be bound except by their own consent. It was soon discovered that "consent of the governed" was more than a rule of conduct, but an American way of life.

Each colony stood aloof from the other. Trade barriers were often erected. Each colony asserted independence from the other. Soon the urge for independence from the mother country placed a burden too great for one colony to assume. Necessity dictated that the colonies join in a common cause. It was then they signed a Declaration of Independence and proclaimed that the "consent of the governed" should forever remain the hallmark of free men everywhere.

AN INDEPENDENT VOTER

No one may justly criticize an independent voter. In good faith, the independent voter acts in accord with the spirit of America. If for any reason a voter does not wish to be bound in a primary election or a party convention, no one may compel him to take part in a primary or convention.

There may be organized under the law any number of political parties. Each candidate for President must face the voters of the country with full knowledge that success in the general election will finally be measured in terms of amendment 12. This amendment should be taught in all the high schools and colleges in order that the young voter may understand why no President of the United States can be inaugurated in violation of this constitutional amendment which has been in effect since its adoption in 1804.

STATES RIGHTS

With freedom proclaimed and constitutional government established, each State in the Union maintained a jealous attitude toward the whole. Each was quick to assert its independence. It was natural for one State to resist encroachment by another State. Here was the birth of States rights soon to be guaranteed in the Bill or Rights.

After a long, historic struggle, States' rights ceased to be sectional. No one now challenges the principle of States rights, which recognizes the dual principle of national sovereignty while claiming the doctrine of States sovereignty. Experience leads us to hope the attitude of the several States toward each other shall ever assume a proper balance, and that there may always be national unity without uniformity or regimentation.

THE NATIONAL PARTY SYSTEM

Constitutional amendment 12 was adopted in 1804 and still stands as the fundamental law of the land. It provides the method of choosing a President of these United States. Any other method proposed would be contrary to the present Constitution. By this method, each State registers its influence through the electoral college which functions finally and openly in the presence of the House and Senate:

"The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President" (amendment 12).

A PRESIDENTIAL ELECTION

Each political party in the several States may select its own presidential electors, who are morally bound, when elected, to vote for the presidential candidate of the party. This rule of conduct has been followed for over a hundreds years and has been accepted as the unwritten law of the land. The Supreme Court of Alabama, in the opinion of the justices, April 1, 1948 (34 So. (2d) 598), had this to say:

"No one elected at the general election as an elector could function unless he belonged to some political party which had held a national convention and had a nominee for that office."

While this may be dictum, it should be read in the light of amendment 12, which requires a successful Presidential candidate to receive "a majority of the whole number of electors appointed." It also sheds light on the meaning of amendment 12, which further asserts "and if no person have such majority" in the electoral college, then there would be no election by the electoral college. In that event, "then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President."

It thus appears amendment 12 contains a fundamental principle of American political science, which requires the President of the United States to be selected by a majority of electors in the electoral college. Amendment 12 likewise makes it clear that the electoral college only considers 3 Presidential candidates; 1 must receive a majority, while the others receive a minority, of the electoral votes. A failure in this defeats the purpose of the electoral college and throws the election of a President of the United States into the House of Representatives. In that event, the Representatives in Congress are required to vote for "persons having the highest numbers, not exceeding three, on the list of those voted for as President." It is evident, therefore, that only national political parties can in anywise respond to the requirements laid in amendment 12. When this is considered and understood, it is clear majority rule is the life blood of democracy.

THE ELECTORAL COLLEGE

There are 531 electoral votes now in the electoral college. Since no candidate can be elected in the electoral college under amendment 12 with less than 266 electoral votes, it becomes clear that 266/265 is the symbol of majority rule guaranteed under amendment 12. Two hundred and sixty-six electoral votes represent the majority of the college. Two hundred and sixty-five electoral votes represent the minority of the college. If for any reason the majority of 266 electoral votes is reduced by a single electoral vote, there must exist three minorities in the college. In that event, the college fails to elect, and the Presidential election goes into the House of Representatives under amendment 12.

THE 12TH AMENDMENT

The electoral college was a part of the original Constitution adopted in 1789. In article II of that great document, it was provided that the elector voted for two candidates for President. The candidate receiving the highest vote (under majority rule) was named President. The second man receiving a majority vote was named Vice President. In the event no one was chosen, the election went into the House of Representatives where the five highest candidates on the ballot were considered. This method was changed in 1804 by the adoption of the 12th amendment which still stands unaltered.

THE LAMP OF EXPERIENCE

(a) The first election under the Constitution was a free-for-all. The highest man with a majority was the winner and the second highest became Vice President. There were several in the field against Washington, but he received more votes in the electoral college than all the rest in 1789 and in 1792. John Adams was Vice President 8 years under Washington.

(b) In 1796 Washington declined to run for a third term. There were several in the field. John Adams led, with Jefferson following, who became Vice President.

(c) In 1800 there were many candidates on the ticket. Jefferson tied with Burr. Each received 73 electoral votes. Adams was defeated. In the scramble in the House of Representatives, Jefferson was preferred as President, and Burr became his Vice President. This caused much friction during the term.

(d) In 1804 Burr became a candidate for Governor of the State of New York and was defeated. He was bitter against Hamilton and accused him of bringing about his defeat. This resulted in a duel between Hamilton and Burr. Hamilton was killed and Burr fled the country and was later tried for treason before Chief Justice Marshall, and was acquitted by a jury.

(e) All this brought about amendment 12, which was adopted in September 1804 while the presidential campaign was in progress. Jefferson was reelected that year.

(f) It, therefore, may be said that the wild scramble in the electoral college indirectly brought about the death of Hamilton and ultimately the destruction of Burr as a leader in American politics.

(g) Under amendment 12, the electoral college worked well until 1876. Hayes was the Republican candidate. Tilden was the Democratic candidate. Because of the unusual campaign, Louisiana, Florida, and South Carolina were unable to cast a vote. The result was that no candidate had a majority in the electoral college and the matter went into the House. A resolution was passed appointing a commission of 15, composed of 7 Democrats and 7 Republicans. The 14 decided to get an independent and, therefore, selected Justice Bradley from the Supreme Court to become the 15th man. Bradley voted with the Republican group, making a decision of 8 to 7 in favor of giving the 3 States to the Republican Party. The result was Hayes received 185 electoral votes while Tilden received 184. The result divided the country in a bitter conflict and no doubt laid the groundwork for Grover Cleveland in 1884 when he came forward as the first Democrat to be elected after the War Between the States.

(h) In 1916 Woodrow Wilson ran for reelection. His opponent was Justice Hughes, who resigned from the Supreme Court to make the race on the Republican ticket. The election was so close that it was not known until Friday night following the Tuesday election who would be elected. For 3 days the electoral votes stood, Wilson 265, Hughes 254. California had 12 votes and was unable to report. During that period the whole matter was hanging in a balance. Had the 12 votes gone to Hughes, he would have received 266 electoral votes, and Wilson 265. Had a split system been permitted under the Constitution, Woodrow Wilson no doubt would have been unknown to international history.

The 12th amendment favors no political party. There can be only two possible results obtained in a presidential election on account of the 12th amendment.

First, a President may be elected by a majority vote in the electoral college. With one exception, this has been the result in each presidential election since 1860.

Second, failure to elect a President in the electoral college, it follows the election must be referred to the House of Representatives, where only three candidates may be considered regardless of the number of candidates on the ballot.

By this method the voice of each sovereign State is heard on the rollcall in the halls of Congress each 4 years, although some States may speak the voice of a plurality, thereby supplying proof that no system yet devised may be said to be perfect.

Government in America by political parties, at first doomed by some prophets to failure, has succeeded. It has succeeded, as historians point out, largely because of the development of a strong two-party system; a temporary majority party and an honorable opposition party. By means of the two-party system, extreme views, competing interests, social and economic, sectional and political, have been resolved, adjusted and composed. Thereby the process of government has been carried on, with one exception, without conflict—a unique thing in the history of government.

BEN F. RAY.

Tax Relief for Sick and Disabled Citizens

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. ASHLEY. Mr. Speaker, I have today introduced two bills—H. R. 8093 and H. R. 8092—which seek to provide a measure of tax relief for certain of our sick and disabled citizens. The first bill logically supplements existing provisions of the Internal Revenue Act that allow deduction of medical expenses. It would grant a tax deduction for money spent for the institutional care of a disabled or sick dependent who requires continuous personal attention. Under the pro-

visions of my bill, a person would qualify as "disabled" only if he is unable "to engage in any substantially gainful activity by reason of any determinable physical or mental impairment which can be expected to be of indefinite or long-continued duration." In everyday practice, Mr. Speaker, this would allow the cost of rest-home or similar treatment and care to be deducted, for tax purposes—just as hospital expenses are deductible under the present law.

The second bill offers a very limited and very meritorious segment of our society an important deduction. As you know, the Veterans' Administration may furnish who have lost the use of their legs because of service-connected injuries, specially designed vehicles to facilitate their rehabilitation. Often, a veteran finds his redesigned auto a means of livelihood which he would otherwise be without. By allowing these veterans the right to deduct the cost of replacing such vehicles, Congress would again manifest its intention to assist their rehabilitation in every way possible. Certainly, there can be no question that this relief is both necessary and humane—or that the need for encouraging these men to better and more useful lives continues to be of paramount interest to society.

It had been my hope that the 85th Congress might be able to enact a broad tax relief bill benefiting all our citizens. However, as the prospect for a general tax cut diminishes, I feel that it has become all the more imperative for us to pass the legislation I have introduced today. Indeed, these two bills would grant only the minimum relief so long awaited by these most deserving citizens.

CBS Reply on Khrushchev Interview

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. ANFUSO. Mr. Speaker, in the CONGRESSIONAL RECORD of June 5, I listed a series of questions pertaining to the Khrushchev interview over the Columbia Broadcasting System on Sunday, June 2. My questions were addressed to Mr. Stuart Novins, who served as moderator for that program.

These questions subsequently came to the attention of Dr. Frank Stanton, president of CBS, who rightfully feels that since it concerns policy decisions of his organization the questions should be answered by management. I agree with him in the matter. I was, therefore, glad to receive a reply from Dr. Stanton answering my questions one by one.

Despite all recent efforts and maneuverings for an open exchange of views and opinions between our country and the Soviet Union, I frankly do not believe that the Russian leaders will ever accord us the same right of permitting our leaders to talk freely to the Russian people as we have accorded them in talking freely to our people.

This situation then becomes a one-way deal, where the Russian leaders utilize our facilities to spread their brand of Communist propaganda on the American people, but they will not permit us to tell our story of freedom and the American way of life to the Russian people. Is this a free exchange? Is it in the best interests of the United States to allow our enemies into our own backyard or into our home so that they can shout into our ears that some day our children or grandchildren will live under communism?

This is not a question of freedom of the press or freedom of reporting. We must protect these freedoms, as all other freedoms with which we are blessed, and not let our enemies snatch them away from us. We are dealing with a shrewd adversary who will stop at nothing; hence, we must be careful not to fall into his trap.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the reply from Dr. Stanton, of CBS, and I call it to the attention of all my colleagues:

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y., June 6, 1957.

The Honorable VICTOR L. ANFUSO,
House of Representatives,
Washington, D. C.

DEAR MR. ANFUSO: I have just seen your questions, as inserted in the CONGRESSIONAL RECORD of June 5, concerning the Khrushchev interview of last Sunday. You have addressed these questions to Stuart Novins, the program's moderator. But the policy decisions which led to our successful effort in obtaining the interview were those of management. I think, therefore, that I, as president of CBS, ought to give you this prompt reply. Let me take up your questions, one by one.

Question. "With whom did you clear the interview?"

Answer. Our job as free American journalists is to seek out and report the news. We cleared the interview with nobody. Obviously, we had to secure the help of officials of the U. S. S. R. in Washington, D. C., in making arrangements for the interview.

Question. "Did you submit to the State Department, the USIA, or the CIA the questions you were going to ask Mr. Khrushchev?"

Answer. No questions were submitted to anyone in advance. The State Department was informed of our plans to obtain such an interview.

Question. "And did you have any idea before the interview as to what the answers to your questions would be?"

Answer. None. As Americans, of course, informed of the inflexible nature of the Communist Party line, we could guess the position that a Russian official would probably take on issues such as we raised.

Question. "Did you prepare certain other questions for Mr. Khrushchev but which he told you in advance of the interview that he would not answer?"

Answer. No questions were submitted in advance to Mr. Khrushchev or to anybody else associated with the Russian Government. We did tell him, through intermediaries, of broad areas into which questions might fall—as we publicly announced on May 30, 1957.

Let me quote our description of these areas exactly as they were given to the Russian authorities:

"Anything personal guest would care to tell about himself, bearing in mind the American public knows little of Russia's leaders and would like to know much more; recent economic, agricultural, and cultural developments in U. S. S. R.; present and future trends in Russian political thought; aims of communism, its ideology, and ideologists; relative political and economic position of U. S. S. R. and United States of America now and 10 years from now; views on war, United States military aims; relations with Central European neighbors; views on German problem, present, future; possibility of disarmament and peaceful relations; relations with People's Republic of China and Far East; views on recent Middle East developments."

You will note that these areas were so broadly described as to give the panelists complete freedom to ask any questions they chose.

Question. "What did you expect to accomplish by this interview?"

Answer. We wanted to do what had never been done before—to get Mr. Khrushchev in front of our cameras and microphones in an unrehearsed interview, so that the American people could hear, see, and judge for themselves the nature of communism and the Communist leadership.

Question. "Did you expect to get a confession from the leader of world communism that the Communist system is bad?"

Answer. Hardly.

Question. "Or that the American people, who are 99.9 percent opposed to communism should obtain a better understanding of it in order to help bring the two peoples closer together?"

Answer. Our sole purpose was to let the American people get a good hard look at Mr. Khrushchev as he answered questions that any good reporter would like to put to him.

Question. "What Government officials, if any, assisted you in the preparation of your questions?"

Answer. We asked no help from Government officials in framing the questions, and we got none. As you can well imagine, our staff did a great deal of research in this whole area so as to get the most out of the few minutes that we were to have Mr. Khrushchev in front of our cameras and microphones. In this research, many people were helpful—including officials of the United States Government and other free-world experts on the U. S. S. R.

Question. "What, if anything, do you think was accomplished by the interview?"

Answer. It would be most difficult for anybody to make any comprehensive appraisal of the long-term accomplishment of the interview. I must say that its immediate effect has been most gratifying if we can judge from the overwhelming approval by the press of this country.

For example, the New York Times called the interview a "salutary event" and said "millions of our people had a chance to see Mr. Khrushchev in action and to form a judgment of him and his words." The New York Journal-American congratulated CBS on the interview and concluded that "anything that adds to knowledge of the nature of communism and its leaders is to our advantage." Time, the weekly news magazine, called it "the season's most extraordinary hour of broadcasting," and said that the interview "gave the United States its only firsthand sustained view of what manner of man runs the Communist Party of the U. S. S. R." The Baltimore Sun stated: "Khrushchev's interview on Face the Nation was mutually beneficial. It brought to millions of Americans a better understanding of Russia, and it afforded Russia's No. 1 man a rather sharp taste of the methods of free reporting in a country in which opinion is not controlled. • • • For Americans the interview brought no new or startling revelations to those who guide American foreign policy, but it did give millions of TV viewers an authoritative statement of the Russian position—a state-

ment from the highest source but in simple, direct terms. Any good and accurate reporting of Russian affairs and Russian thinking is valuable for all of us since in a free country we all have a share of responsibility for the foreign policy our Government follows. And this was good and accurate reporting at its best.

Question. "Why was there no answer from some responsible United States spokesman immediately following the interview with Mr. Khrushchev to point out certain flaws and inconsistencies in his remarks?"

Answer. Our first objective was to get Mr. Khrushchev on the record so that the American people could size him up for themselves.

Two days later, on June 4, we wired the White House Press Secretary that we would be most happy to make available our facilities to broadcast any comments the President might care to make on the Khrushchev interview. We made it clear that any such broadcast would be available simultaneously to all other radio and television networks.

Furthermore, in response to continued public interest in what happened last Sunday, CBS radio and CBS television will broadcast on Sunday, June 9 (3 to 4 p. m., e. d. t. on the television network, 10:05 to 11 p. m., e. d. t. on the radio network) an analysis of the Khrushchev interview. This program, Comment on Khrushchev, will consist of excerpts from the filmed interview analyzed by the following experts: George Meany, president, AFL-CIO; Dr. Philip E. Mosely, director of studies, Council on Foreign Relations; Harrison Salisbury, New York Times correspondent, formerly bureau chief in Moscow.

Question. "Do you believe that you could get Mr. Khrushchev to allow an American Government official—and I for one would be willing to undertake such a task—to be interviewed by Russian newspapermen under similar conditions and then have the interview broadcast over the air behind the Iron Curtain so that the people of Russia and the satellite countries could listen, too?"

Answer. It would be beyond our province to attempt any such arrangement with Mr. Khrushchev or the Russian Government. We are reporters, not Government diplomats.

Question. "Mr. Khrushchev said that the Russian Government had the right to jam or interfere with the radio broadcasts beamed to Russia because of the great love of music which the Russian people are supposed to have. How could they tell in advance that what we had to say would not be music to their ears unless they first heard it? In other words, why shouldn't they give us the same right we accord them of saying what we please, even though they may or may not agree with us?"

Answer. We certainly agree with you that they should do just that, but your question ought to be addressed to Mr. Khrushchev.

Question. "Finally, Mr. Novins, what I have said here is not intended as criticism of you and of the Columbia Broadcasting System. You have followed true and basic American principles that we are ready and willing at all times to listen to the opinion of others. Who was it that said, 'I disagree with what you say, but I will defend to the death your right to say it.' The question I would like to have you answer is this: Will the Soviet officials permit our citizens the same right to express their opinion to the Russian people?"

Answer. Your guess is as good as ours as to whether the U. S. S. R. officials will permit our citizens to express their opinion to the Russian people. From what we know of communism and Communist leaders, we think it extremely unlikely. We agree with the editorial comment of the New York Times that the broadcast of the Khrushchev interview "epitomizes the differences between a free country and a totalitarian country."

We believe that the people of America, if properly informed, are entirely capable of judging and deciding for themselves, and that it is a gross disservice to all of us to withhold or suppress evidence that can in any way help us all to arrive at the truth. It was in this belief that we labored so long and so hard—and in the end successfully—to get this face-to-face interview.

Sincerely yours,

FRANK STANTON,
President.

Water Resources in the District of Columbia

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith the welcoming address of Brig. Gen. Thomas A. Lane, Engineer Commissioner of the District of Columbia, to the 44th annual national convention of the National Rivers and Harbors Congress, held in Washington, D. C., May 17, 1957. This is a most interesting address and is as follows:

ADDRESS OF WELCOME, NATIONAL RIVERS AND HARBORS CONGRESS, MAYFLOWER HOTEL, MAY 17, 1957, BY BRIG. GEN. THOMAS A. LANE, ENGINEER COMMISSIONER, DISTRICT OF COLUMBIA

Congressman BROOKS, distinguished guests, ladies, and gentlemen, each year you come from all over the country to this annual meeting of the congress to renew your support of the great projects in which we are engaged for the preservation and enhancement of our magnificent physical heritage. You come also to renew old associations with kindred spirits who have so long devoted themselves to these vital programs. It is my great pleasure in behalf of the Board of Commissioners of the District of Columbia to welcome you to your National Capital and to extend to you our sincere wishes that your labors may be fruitful and your reunion may be joyous.

We who live in the District of Columbia share your deep concern about the programs for the development of our rivers and harbors, for the preservation and best use of the priceless water resources which they represent. We live on the banks of one of the great rivers of this country. In the past it has brought the commerce of the world to our door. It has provided our essential water supply. It has carried away the sewage wastes of our population. It has provided recreation for ourselves and our neighbors.

Today times are changing. The tremendous growth of the population of this metropolitan area has caused serious pollution of the river before adequate provision could be made to handle the population wastes. Today new plants which will correct these conditions are under construction in the District of Columbia and in neighboring communities. These projects are being prosecuted vigorously and at great cost to the taxpayers of these communities.

The port of Alexandria across the river was a leading port of the country in the early 19th century. Then it declined. Today, our neighbors are alerted to the potential of water transportation for this growing metropolitan area, and are making plans for exploitation of their very favorable position on the banks of the Potomac.

Along the Anacostia River, which used to be called the Eastern Branch of the Potomac, we have had some significant progress in the past year. A flood-control project has opened the river for some small boats up to Bladensburg, Md., while at the same time providing protection against the annual flooding in the Peace Cross area in northeast Washington and Maryland.

The projected population of the metropolitan area promises a crisis in the field of water supply in the not-too-distant future. Preliminary studies indicate that storage must be provided in the Potomac River in order to insure adequate municipal water supply for the metropolitan area in the years ahead. Recognizing this prospect, our citizens have petitioned Congress to provide to the Corps of Engineers the funds required for a review study of the comprehensive report on the Potomac River Basin. It is a matter of the most vital concern to us that these funds be appropriated this year. The time for action is now all too short.

I mention these local projects only to show you how deeply we, too, are involved in the problems which are the concern of this Congress. We appreciate your problems, and we extend to you our deep interest in your program. We count upon your assistance and support for these problems which beset the National Capital, and we say especially it is good to have all of you assembled once again in Washington. A most hearty welcome to you all.

Resolutions Adopted by the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. ROGERS of Florida. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was unanimously adopted by the 44th convention of the National Rivers and Harbors Congress held in Washington, D. C., recently.

The resolutions committee, of which I had the honor and pleasure of serving as chairman for the second time, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, made many constructive suggestions, proposed numerous changes in the draft of the resolutions presented to them, and reached agreement thereon.

The convention was attended by 446 registered delegates from 47 States, Alaska, Hawaii, Puerto Rico, the District of Columbia, and Guam, in addition to several hundred who failed to register, guests, visitors, representatives of the press, and so forth. Louisiana again sent the largest delegation, 38, being the home State of our president; Texas was next with 32; while Michigan was third with 25.

These delegates were from all sections of the country, representing both legisla-

tive and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations, and transportation interests; with memberships totaling several million.

We believe this unanimous expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 44TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 18, 1957

FOREWORD

The National Rivers and Harbors Congress this year is celebrating completion of its first half century of meetings in the National Capital. These meetings have afforded the opportunity for the membership to carry forward a program of assistance to the development of our national resources. We intend to continue these meetings from year to year so long as they are of benefit to such development. Quasi-official in nature, it includes in its membership leaders in Federal, State, and local affairs who are cognizant of the need for the conservation of our resources; the need for the control of floods in our river valleys; and the navigation needs of our Nation.

THE PRESIDENT'S MESSAGES

In his state-of-the-Union message the President of the United States pointed out the necessity for treating each of our rivers valleys as a whole. Piecemeal operations, he says, within each lesser drainage area can be self-defeating or, at the very least, needlessly expensive. Moreover, he points out that the domestic and industrial demands for water grow far more rapidly than does our population. His message is encouraging in that he finds that our natural resources are being conserved and improved more effectively. He lets it be known, however, that State and local entities, and private enterprise should be encouraged to participate in these projects. We agree that it should be a cooperative undertaking—Federal, State and local. This cooperative endeavor is expressed again in the President's Budget message. Here again we cannot disagree with the principals expressed.

These messages are encouraging and there is no denial that the interest expressed therein for the continued development of our natural resources behooves us all to lend a helping hand. The backlog of such projects is mounting year by year, but with a concerted effort by all we can keep pace with the mounting demands to the end that the proper development thereof will not be deterred.

MAINTENANCE OF WATERWAYS

This Congress has always been of the opinion that a waterway for transportation of vital commerce is no better than the annual maintenance afforded it. Quite often it seems that the cart gets before the horse. If traffic doesn't move on the waterway, maintenance is not warranted. If maintenance is not done, traffic can't move. We believe that maintenance programs should be carried out on all waterways if there is a reasonable prospect of use. We know that waterway users are cognizant of a large backlog of maintenance. We know too that Congress is cognizant of that backlog and has done something about it. We hope that attitude will continue to the end that commerce will not be delayed.

WATER SURVEY

We are impressed by the foresight expressed by a former Chief of Engineers and given impetus by the present Chief of Engineers with reference to the need for early studies to determine the nature and extent of our water supply problems.

We concur in their views that a full-scale study of these matters, utilizing the best talents of Federal, State, and local agencies are of primary importance to the future strength and development of our country. The time is past for a piecemeal approach to the problem. We believe H. R. 4783 introduced in the 85th Congress is a step in the right direction toward a solution. This legislation, if approved, would authorize the Chief of Engineers to survey areas of water supply shortages and to prepare reports and recommendations thereon with a view to the alleviation of shortages and to assure continued development of the Nation. We urge the passage of this legislation by the Federal Congress.

RECREATION BENEFITS

In the development of our natural resources the values accruing from recreation have not been overlooked. Millions of our citizens have found a new haven of recreation at the numerous reservoirs throughout the land for flood control, navigation, and related purposes. Heretofore this asset has not been evaluated formally as a benefit accruing to such projects. Pending legislation—Senate bill 1164 in particular—recognizes these assets and proposes that they be made an integral part of project planning. This proposal, if approved, would definitely permit the inclusion of such benefits along with other benefits and such inclusion would not contravene the major purposes of a project. We submit that this proposal is an ideal one and hope that the Congress of the United States enact it and that the President approve it.

TOLLS ON WATERWAYS

We reaffirm our longstanding opposition to the imposition of tolls on waterways. Such imposition of tolls is contrary to and incompatible with the historic free use of waterways for the flow of the Nation's commerce. Tolls imposed on waterways will spell the death knell to many small operators and cripple some of the larger ones. At best they would be an experiment and undoubtedly result in the deterioration of a valuable asset of the Nation. We can ill afford to gamble on the outcome.

RESEARCH IN WATER DEVELOPMENT

The pressure of a sharply rising population injects a growing element of urgency in the development of an adequate water supply. As demands upon the conventional sources of water become greater, the necessity of developing alternative sources of supply through scientific processes becomes more apparent.

Therefore it is urged that the various agencies of the Government intensify their research and engineering on saline water conversion, weather control, and like matters.

PANAMA CANAL

It is the sense of this Congress that consideration be given to the construction of a sea-level Panama Canal.

NAVIGATION REVIEW STUDIES

The United States Congress authorizes from time to time the United States Corps of Engineers to undertake reviews of navigation projects to determine the need for modifications or alterations in the channel dimensions or specifications to accommodate commerce. At the present time there are 356 such review studies that have been authorized by Congress, which have not been completed.

The National Rivers and Harbors Congress considers that the estimated review study backlog of $4,300,000, requires a level of appropriations that will permit a reasonably expeditious accomplishment of the review study program. This level should be the same as provided for in 1956 to wit: $1 million, to allow for approximately one-fourth of the total program to be accomplished within the next year. Further, a "feast or famine" system of appropriations does not lend itself to the establishment of an orderly program for carrying out the review studies that have been authorized by Congress. In order to build up an adequate staff of competent economists and engineers to carry out these studies and to develop an efficient program, it is necessary for the United States Army Corps of Engineers to have a constant level of appropriations.

We therefore urge the United States Congress to adopt a policy of providing a constant level of appropriations to carry out the review studies with adequate annual funds. We feel that this is a business-like way of approaching this problem and will result in economies and greater effectiveness in performing the job.

BENEFICIAL CONSUMPTIVE USE

The realization of full benefits from any multiple purpose river basin development program depends upon the equitable distribution of those benefits to all citizens within the basin.

The equitable distribution of those benefits requires that such projects be used for flood control, water supply, navigation, irrigation, fish and wildlife, recreation, and incidental hydroelectric power.

We recognize the foregoing uses of water resource projects, including the concept contained in the O'Mahoney, Millikin amendment to the Flood Control Act of 1944 (Public Law 534) which recognizes certain beneficial consumptive uses of waters arising in States wholly or partly west of the 98th principal meridian.

ENGINEER SHORTAGE

One of the factors causing delay of starts of authorized, feasible, and needed projects, and eventually the construction of those projects, is the fact that the Nation as a whole has a very serious shortage of trained engineers. To alleviate this situation, presently and in the future:

1. That consideration be given by Congress to suspend the "30 plus 5" law during the emergency to permit the retention within the Corps of Engineers, United States Army, of officers qualified for civil functions work or retained on a civilian basis;

2. Where neither civilian nor military engineers are available on water resources projects within the Corps of Engineers, that the Corps of Engineers be encouraged to continue with and further utilize to the maximum, engineering service of private engineers on a contractual basis; and

3. That in order that the planning and implementation of projects may be handled more expeditiously and efficiently, it is recommended that the Corps of Engineers be able, by compensation and working conditions, to successfully compete in the market for engineers and scientifically trained employees.

MAINTENANCE OF SMALL-BOAT HARBORS

The National Rivers and Harbors Congress has pleaded for many years for additional appropriations for maintenance of our harbors and waterways. It believes that our commercial harbors and waterways are vital to the economy of the country and should be properly maintained. However, the maintenance of harbors for small boats is often overlooked and this essential part of the navigation program has been neglected. Many of the small harbors along the rivers

of the United States and along the Atlantic, gulf, and Pacific coasts have shoaled to a point where they are no longer adequate for the traffic they serve. This traffic consists not only of recreational boats but of small commercial boats such as fishing craft. The Congress believes that these should not be allowed to fall into disrepair any more than the secondary road system should be allowed to deteriorate, and it feels that the maintenance of small-boat harbors bears the same relation to the maintenance of the larger commercial ports and waterways as does the secondary road system to the main highway network.

HURRICANE PROTECTION

The National Rivers and Harbors Congress last year pointed out its interest in the problem of observation and possible control of hurricanes. It notes that the Corps of Engineers has been carrying on a comprehensive study of hurricanes on the east coast with a view to developing works for protection and other measures which would assist in the prevention of damage. The first reports of the Corps of Engineers have recently been completed, recommending projects in the Narragansett Bay area. The works are novel in nature, in that they would control the flow of water from hurricanes and storms at the mouth of Narragansett Bay. The National Rivers and Harbors Congress believes that in view of the fact that this represents the first step in what might be a new field of protection against the elements, every effort should be made to expedite consideration of the report by the executive agencies and by the Congress of the United States.

THE RIVER AND HARBOR AND FLOOD CONTROL ACTS OF 1957

The pending river and harbor and flood-control bill (S. 497) is justifiably important legislation. Many worthy projects are proposed which have received the endorsement of the National Rivers and Harbors Congress. Of great importance is the fact that the legislation carries monetary increases for a number of basin plans which are approaching the limit of current authorizations. Should these basins not be given an increase it may well be that they will suffer a set back in construction progress.

Of great importance too is that section of the bill relating to water supply. Section 205 if approved should permit the development of a greatly needed asset in a manner which would not be a financial burden on many communities which do not now enjoy a plentiful water supply. In addition, this section would make storage available without reimbursement to increase low flows downstream. Recent events indicate the value of such low flow regulation. The National Rivers and Harbors Congress urges the Federal Congress to adopt the principles expressed in S. 497 by enactment of that legislation or by specific legislation to accomplish the same ends.

DELAYED PROJECTS

This Congress notes with great concern the increasing backlog of water resources projects which have been started but never completed because of insufficient appropriations. In spite of the tremendous amount of money which has been invested in these incompleted projects, they are presently not giving any return or any benefit whatsoever toward the development of our Nation.

Without questioning the necessity of providing money for water resources projects throughout the world, we feel that it is high time that first considerations should be given in spending the taxpayers' money on water resources projects in our own country. Completion of the projects already started will mean capital improvements which will materially add to the economy of the Nation.

These projects have been determined by proper agencies to be sound, needful, economically beneficial and justifiable; therefore, we recommend that they immediately be reactivated; appropriations made; and the projects brought to speedy completion. The moneys invested in these projects are thus not lost and the project areas as well as the Nation will begin to receive the benefits of the completed projects.

DEPTH OF NAVIGABLE CHANNELS

During the past 10 years there has been added to the merchant marine fleets many cargo vessels and tankers whose tonnage and draft exceed the channel depth of many important ports of the United States and the trend is toward even larger vessels.

During the recent Suez Canal crisis it was demonstrated that it was in the interest of national security and defense that our ports be provided with deeper channels.

The standardized depth of 34 feet for channels of deep-sea ports has now become obsolete.

The current harbor improvement program of the United States Army engineers should be reappraised in the light of this significant shipping development. It is obvious that harbor improvement estimates made for 18,000-ton vessels and considered adequate at the time, must be expanded and revised upward in anticipation of the supersized fleets of the 1960's and beyond.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

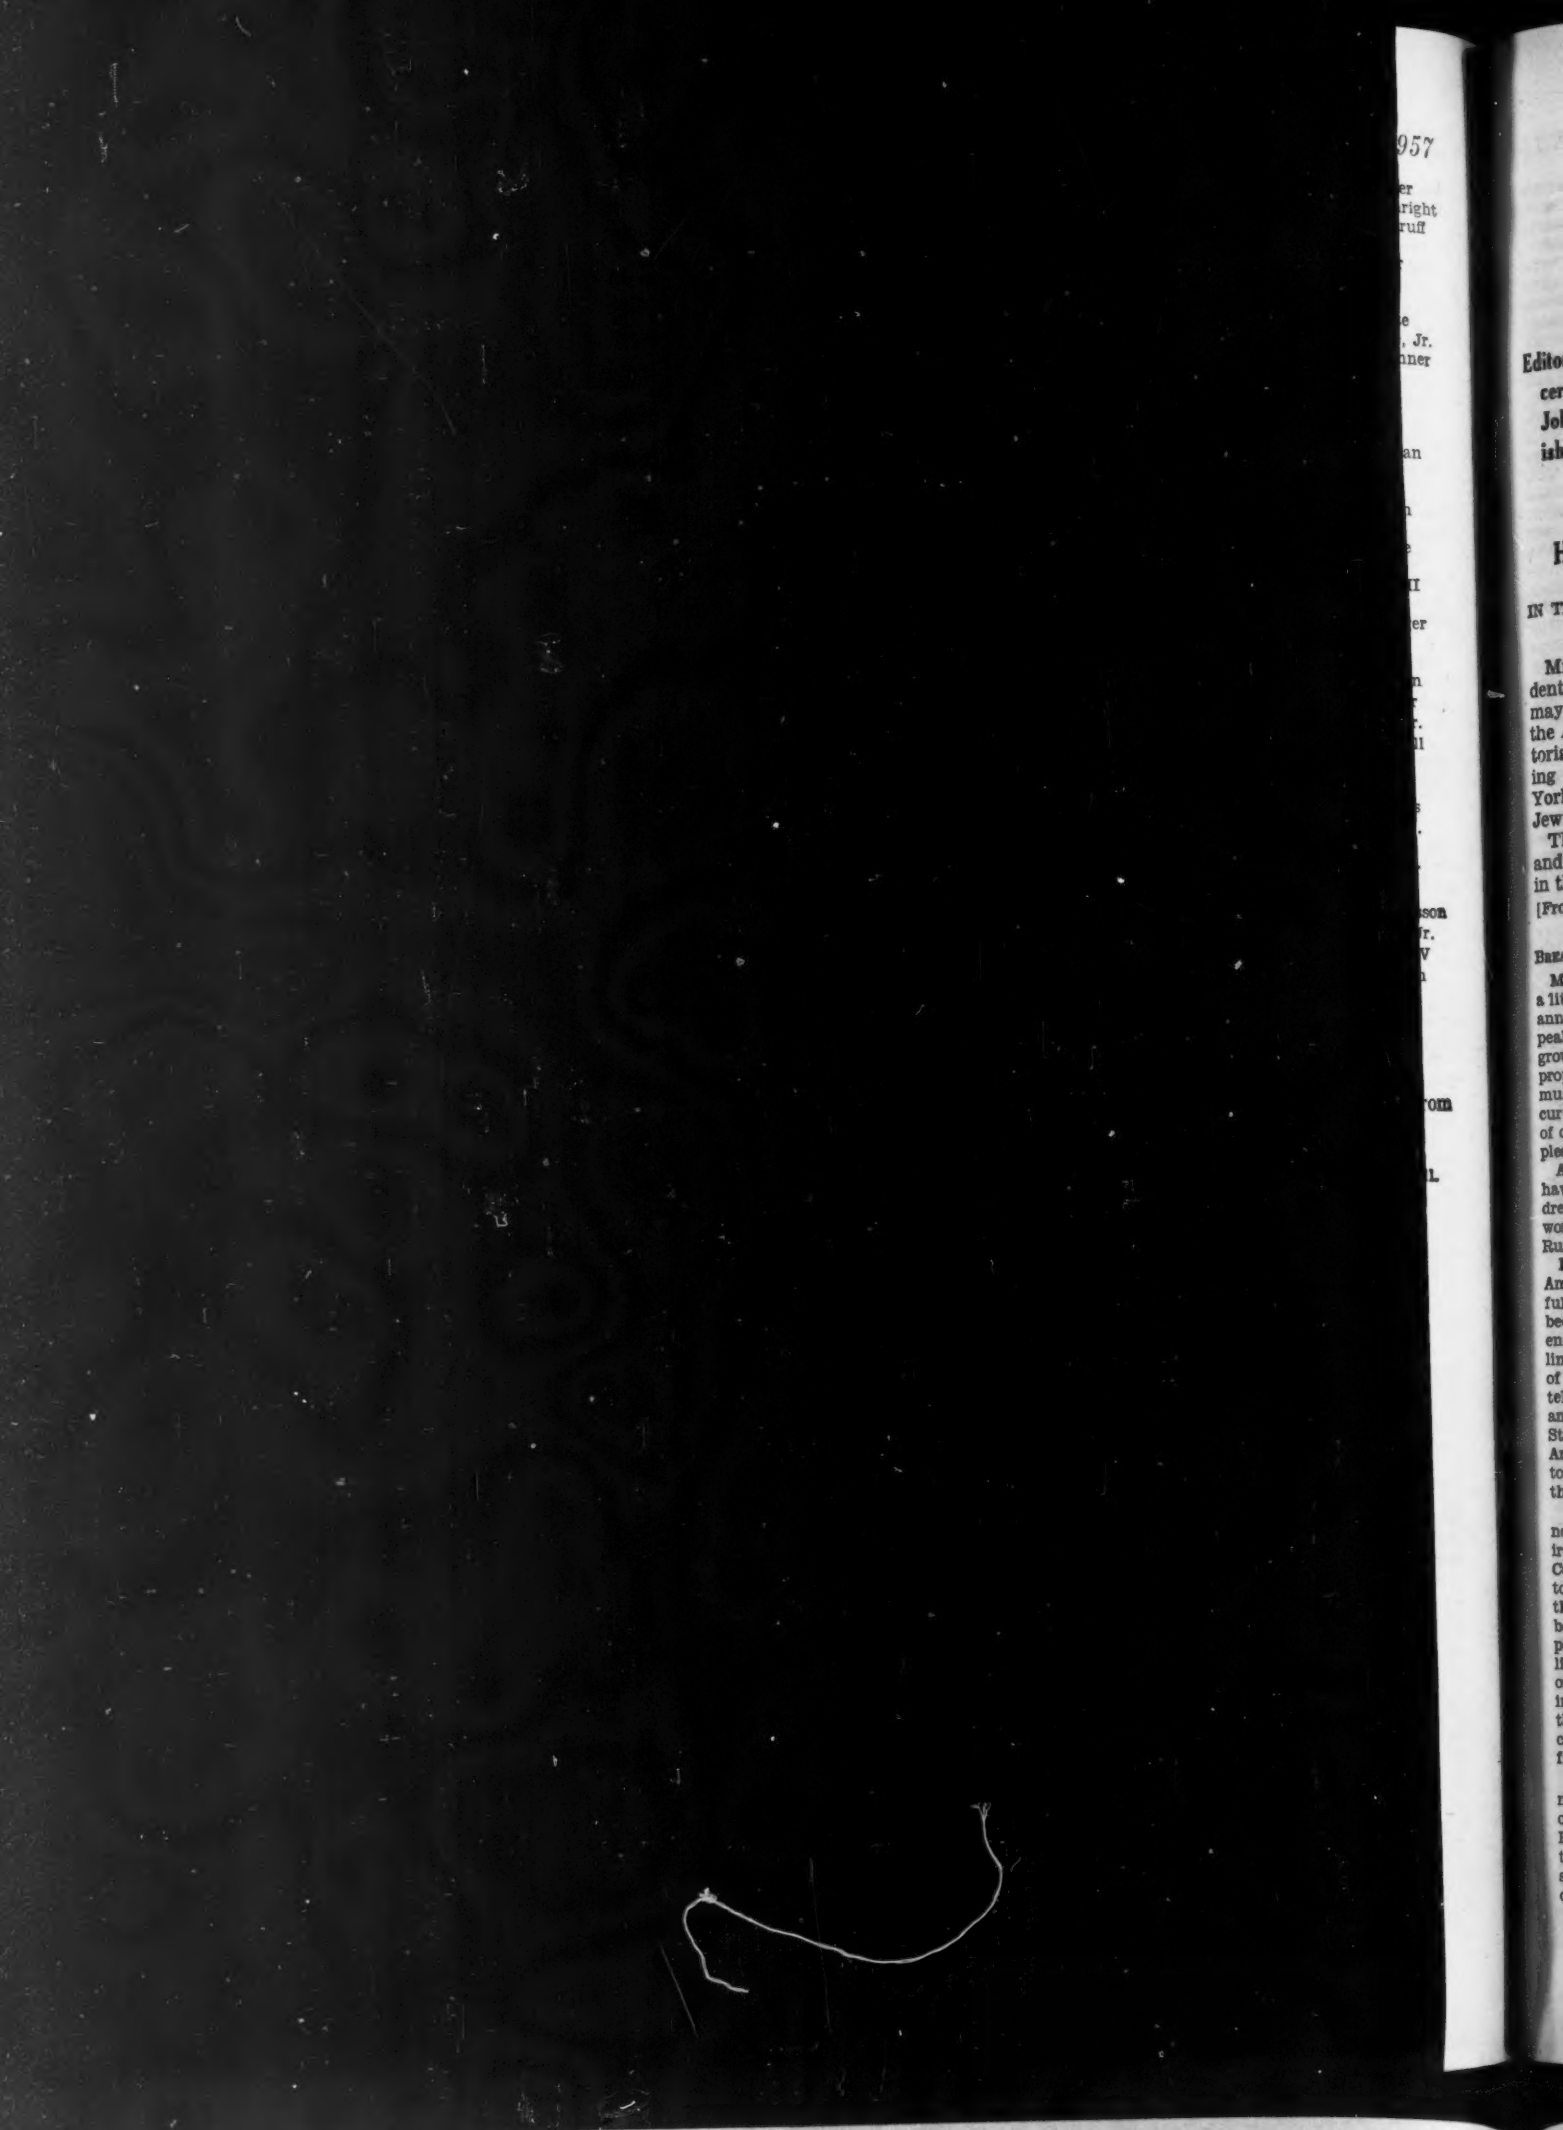
Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.



Appendix

Editorial and Newspaper Comment Concerning Address by Hon. Lyndon B. Johnson, of Texas, Before United Jewish Appeal

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that I may have the privilege of inserting in the Appendix of the RECORD certain editorial and newspaper comment concerning a speech which I delivered in New York on Saturday last before the United Jewish Appeal.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Kansas City Times of June 10, 1957]

BREAK THE IRON CURTAIN AND LET IDEAS FLOW

Maybe Senator LYNDON JOHNSON sounded a little idealistic in his New York talk to the annual conference of the United Jewish Appeal Saturday night. But it was idealism grounded in the common sense of a basic proposition: Our search for eventual peace must start with a policy calling for an "open curtain," a policy not only of "open skies but of open eyes, ears, and minds for all the peoples of the world."

A few years ago such a proposition might have been so much a part of the American dream that it would hardly have seemed worth restating. That was when Stalin's Russia had a monopoly on the Iron Curtain.

Plainly, Senator JOHNSON was talking to Americans who have themselves become fearful of a free exchange of ideas, a fear of becoming contaminated at least or influenced by the sinister con man of the Kremlin. One example is the substantial criticism of the Khrushchev TV interview for general telecasting in this country. Another example, not mentioned by Johnson, is the State Department's opposition to letting American reporters go to Red China. This, too, reflects a rather widespread feeling in this country.

Strangely, many Americans, but certainly not a majority, have become dependent on iron and bamboo curtains raised by their Communist enemies. The issue boils down to a question of trust in the good sense of the American people. Senator JOHNSON bases his approach on confidence in the people. He says, "I am not afraid to have them listen to Nikita Khrushchev or Karl Marx or Nicolai Lenin himself. They have the intelligence and independence to make up their own minds." To support this view he cites his own Democratic Party's heritage from the philosophy of Thomas Jefferson.

Starting with such confidence the Senate's majority leader calls for every effort in an all-out exchange of ideas or arguments. Let the President or some other high official ask for the right to a telecast in Russia. Let Russian labor leaders speak in this country on condition that American labor leaders speak to their people. And so, he hopes, the exchanges might continue until there would be no curtain to stop the flow of ideas which are the basic approach to any relaxing of world tensions.

If you share the confidence in American good sense you do not become alarmed by the fact that the Russians would sling a lot of propaganda in this country. This would simply require informed Americans to stand ready to expose Russian lies, to make sure that our public was fully informed. And the American people have had a long experience with separating truth from fancy in the speeches of some of their own politicians.

Frankly, we would be surprised if the Russians would have enough confidence in their system to permit a real flow of free world ideas into their country. They have to face a long record of failing to make communism stand up by any means except force of arms.

But JOHNSON was talking about a sound American, not a Russian, approach. If the Russians would not go along they would have to take the onus for continuing the Iron Curtain. As for the idealism in this approach we only suggest that it will be a sad day for America if it ever loses its native idealism in the search for eventual world peace.

[From the Manchester (England) Guardian of June 10, 1957]

UNITED STATES-RUSSIAN TV EXCHANGES—SENATOR JOHNSON CALLS FOR AN "OPEN CURTAIN"

(From Max Freedman)

WASHINGTON, June 9.—Senator LYNDON JOHNSON, the Democratic leader in the Senate, has described a first-step arms agreement as "the hope of all mankind," and has called for sustained American leadership in seeking an end to the current arms race with Russia with its threat of nuclear war.

At the same time he proposed that the United States and Russia should present their ideas on each other's television and radio networks once a week.

"I am calling for an open curtain," he said, "for full discussion of the immediate urgent problems facing our people. We should insist on the right to state our case on disarmament in detail to the Soviet people. We should have weekly appearances during this year on Soviet radio and television and we should offer similar facilities here. I am not talking of merely one reply to Khruschev by the President or some other official."

President Eisenhower told his news conference last week that "somebody in the Government," but not himself, would be glad to answer Mr. Khrushchev if the Russians would give full publicity to the American reply without jamming it in any way or interfering with it.

FIVE-POINT PLAN

Senator JOHNSON said the development of nuclear weapons and the forthcoming intercontinental ballistic missile had brought humanity a great deal closer to self-destruction than it was 10 years ago. The challenge of disarmament meant that action can and must be taken this year. The United States must initiate action on these objectives:

1. Controlled reduction of military forces by all countries.

2. A start on a mutual open skies foolproof inspection system.

3. A frank and open search for a method of suspending tests of the bigger nuclear weapons, under airtight conditions which would give full protection against violations.

4. A reduction of everyone's stockpile of nuclear weapons and means for delivery under copper-riveted methods of mutual inspection.

5. The key to ultimate hope: a worldwide agreement backed by absolute safeguards—that no nation will make any new fissionable materials for weapon purposes.

Mr. Chalmers Roberts, diplomatic correspondent of the Washington Post, points out that points 1, 2, and 5 of the Johnson program are known to be part of the Eisenhower program, and point 4 has been reported to be a part of the plan, though without public confirmation. The Senator's third point—a search for a way to suspend nuclear tests—was in line with his recently expressed alarm over the fallout problem. The administration has considered the idea of suspending the tests, though President Eisenhower last week linked abolition of tests with an all-out disarmament agreement, something which both American and Russian officials have presently given up even trying to negotiate.

[From the London Telegraph and Post of June 10, 1957]

OPEN CURTAIN RADIO TALKS IN UNITED STATES AND RUSSIA—SENATOR'S PLEA

NEW YORK.—Senator LYNDON JOHNSON, Democrat, Texas, suggested in a speech in New York last night that there ought to be an open curtain through which American leaders could state their political case to the Russians by radio and television. Russian leaders should enjoy reciprocal facilities.

The Senator had no fear that Americans would be influenced by Communist propaganda. He thought that when the Russian people knew the facts they would insist that an arms race, nuclear explosions, and intercontinental missiles should be banished.

He favored the idea of giving Soviet leaders television facilities in America every week of the year provided that in return American spokesmen were given similar opportunities to speak uncensored to all Russian peoples.

LABOR CHIEF DECLINES

Mr. George Meany, president of the American Federation of Labor-Congress of Industrial Organizations, withdrew from comments on Khrushchev television program today. He said he considered that the program would give further propaganda advantage to the Soviet leader.

The program involved a forum discussion of last Sunday's television statements by Mr. Khrushchev. Each of the participants was asked to select portions of Mr. Khrushchev's replies and base his comments on these statements. During the program the selected portions of the Soviet leader's remarks were rebroadcast.

[From the Houston Post of June 12, 1957]

SENATORS' PROPOSALS SHOULD HAVE GOOD EFFECT ON WORLD OPINION

Steps toward patching up the cold war, proposed by the Republican and Democratic leaders in the Senate, would be fine if Soviet Russia would accept them. So remote is that possibility, that the chief hope of results from the proposals lies in their publicity

effect, which will increase the moral pressure on Russia for disarmament.

Both Senators WILLIAM KNOWLAND and LYNDON JOHNSON got the ideas for their suggestions from Soviet Boss Khrushchev's recent filmed interview, broadcast in the United States. Khrushchev suggested as a first step toward disarmament that Russia withdraw the Red troops from the satellite countries of Eastern Europe, and the United States pull its forces out of Western Europe. Senator KNOWLAND'S counter-proposal is that the Soviets take their troops out of Hungary, and in return the United States would agree that Norway become a member of the Baltic bloc of neutral nations.

Well, this plan would not be as one-sided in favor of the West as Khrushchev's proposal to pull the Red Army across the satellite borders while we pull ours across the Atlantic. But the Kremlin's answer to KNOWLAND, if it makes any answer, is obvious: "We suggested a mutual withdrawal of troops; you suggest that Russian troops be withdrawn while the American troops remain."

Senator JOHNSON'S proposal that the United States and Soviet Russia present their ideas on each other's television and radio networks once a week is good western publicity. It puts the Soviets on the spot; we gave them a full hearing; now how about a fair exchange, regularly?

Even while Khrushchev was spouting his sweet talk for the American TV audience, the Russians no doubt were jamming American radio information broadcasts beamed to Russia. And they undoubtedly will continue to do so.

In order to accept Senator JOHNSON'S suggestion, they would have to reverse the basic Iron Curtain policy of insulating the Russian people against the truth from outside. This policy is deemed necessary to keep the people from disbelieving Soviet lies and becoming too discontented with their hard lot. Nevertheless, the Senators' proposals should have a good effect on world opinion.

[From the Winston-Salem Journal of June 13, 1957]

AN OPEN ELECTRONIC CURTAIN

Senator LYNDON JOHNSON'S proposal that the people of the United States and Russia speak to each other regularly by radio and television deserves the serious consideration it's beginning to get.

According to his plan, the United States and Russia would agree to an open curtain. Spokesmen for the United States would be given use of Sovietwide, uncensored radio and television facilities to state our case for disarmament directly to the Russian people. By the same token, the Russians would be given equal time and opportunity to state their case to the American people.

Such a plan would, of course, subject the American people to some stout doses of Communist propaganda. We would, in effect, be handing Khrushchev and company a platform on a silver platter. And there may be some who would fear that such propaganda might work its wiles on American listeners.

But the Russian leaders certainly would have the same fears—more of them, in fact, since the Soviets traditionally take a dim view of freedom of speech. They'd have reason to be apprehensive over the capitalistic influence our spokesmen might have on the erstwhile protected average Russian.

That, however, would be the risk the opposing ideologies would have to take. Senator JOHNSON'S plan undoubtedly would open up a battle of ideas. But it might be said that if either communism or capitalism is worth its salt, its leaders should be wholly confident that it would not be torn down by the words of the other. And it might be said further that in this very battle of ideas there might be prevented some future battle of bombs.

Communication has long been considered one of the keys to understanding. When you can see and hear another person and let him see and hear you, the chance of understanding each other becomes immeasurably greater. That has already been proved among the nations of the world. Certainly, our athletes, musicians and entertainers who have made goodwill visits to other countries have accomplished their missions—and vice versa. So has the free exchange of tourists.

Senator JOHNSON'S plan for the people of the United States and Russia to talk to each other by radio and television would but multiply by millions of times these personal contacts. For radio and television are the next best thing to face-to-face encounter. Electronics, if properly used, could bring the populations of the two parts of a divided world into contact with each other. And brought together, they just might reach the sort of understanding that has not come through diplomatic note and conference table. It's worth a try anyway.

Address by Hon. Carl T. Curtis, of Nebraska, to the National Association of Manufacturers

---

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, June 14, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Nebraska [Mr. CURTIS] at a luncheon meeting of the National Association of Manufacturers, at Detroit, Mich., on June 12, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LABOR-MANAGEMENT INVESTIGATION REMARKS OF SENATOR CARL T. CURTIS AT NOON LUNCHEON, NATIONAL ASSOCIATION OF MANUFACTURERS, AT DETROIT, MICH., JUNE 12, 1957

When the Senate of the United States created the Select Committee on Improper Activities in the Field of Labor and Management they gave to that committee a broad, important, and direct mandate that calls for an extensive investigation in the entire field. The resolution which created that committee carried the following language: "To conduct an investigation and study of the extent to which criminal or other improper practices or activities are, or have been engaged in in the field of labor-management relations or in groups or organizations of employees or employers to the detriment of the interests of the public, employers, or employees."

That committee has made an excellent start. As a Senator who has just recently become a member of the committee, and who was not in on its early deliberations, I can, with propriety, praise the work that has been done. Senator JOHN MCCLELLAN, of Arkansas, is an able, fair, and fearless chairman. He is deserving of the support of all. The entire committee is serving with diligence and loyalty.

I urge patience for the task is difficult and complex. Weeks and months of tedious effort on the part of the committee staff are essential to a complete and fair presentation of evidence in public sessions.

The committee began with an investigation of the misuse of the funds belonging to the union members. It has been revealed that the rank and file of the union members are without power to correct the financial problems that exist in their union. They apparently do not even have access to information concerning all the transactions. I shall not take time to reiterate all the evidence taken by the committee. The misuse of funds is not the only evil and perhaps not the greatest.

It appears that this committee will have a lot of work to do. Reports of violence such as beatings, fires, dynamiting and shootings have come in from many of our major cities. Only last week, a small-business man in the city of New York, who operates a bakery, testified under oath concerning the threats that were made to his supplier of eggs. The farmer reported that certain unknown individuals crossed the State line from New York to Pennsylvania and informed him that if he sold any more eggs to that bakery they would burn his farm. Likewise, the committee received testimony of the beating of a 14-year-old boy in Los Angeles by two thugs, one of them using a blackjack. The union boss brazenly stated in his testimony that he heard about the beating, that he did nothing toward investigating it, that the beating was a problem for the police. It is hard to believe that here in our America a man in a position of such power and responsibility as that union boss would express this callous attitude toward children.

Among reports of shootings reaching our committee is one case where the victim was a mere baby. Other reports indicate that a goon was transported across a State line to engage in a beating that resulted in death and the accused has not been returned to be brought to trial. Speaking for myself only, I cannot see how our responsibility to the Senate of the United States and to the public can be fulfilled unless we make a thorough investigation of such violence. Violence begets violence and both sides should be investigated.

When the Taft-Hartley law was passed the Congress made it unlawful to apply pressure against employees of a third concern who was not party to an industrial dispute. Time and experience have proved that we did not make the law broad enough. Today there is a practice carried on in all parts of the country of applying pressure on neutral employers. This is known as the secondary boycott.

I want to tell you about a small business located in a county seat town of about 2,500 people in my home State of Nebraska. The Coffey Transfer Co. had been in business for 26 years and it employed 27 drivers. On August 25, 1955, the transfer company received a demand that they compel their 27 drivers to join the teamsters union. The drivers didn't want to join. I will not take time to enumerate the legal moves and the red tape that followed. It took 5 months to hold an election of 27 drivers. When the election was held, the teamsters union did not receive the vote of a single driver.

However, in the meantime, a secondary boycott was applied to the Coffey Transfer. Other carriers were prevented from turning over freight to Coffey. Without freight to haul no business could be transacted. As a result, 1 month before the teamsters lost their election, Coffey Transfer went out of business. Twenty-seven drivers had to look for employment elsewhere.

I could recite a long list of Nebraska cases that I personally know about. I want to mention a few reports of secondary boycotts that have come to me from other places.

In New York City a new weekly newspaper, the New York Sunday Graphic, was boycotted out of business before it could get out of the press room. Why? Because the editor

did not obtain advance permission from a circulation union that he could go into business.

Also in New York, folks who owned Royal typewriters were picketed if they attempted to have the typewriters repaired while the union at the Royal Co. was on strike against the firm.

In Akron, Ohio, the Burt Manufacturing Co., has a certified union, men who are members of the AFL–CIO Steelworkers. But the AFL–CIO Sheet Metal Workers refuse to install Burt ventilators because they do not make the ventilators. Architects, contractors and subcontractors are notified that if they use Burt products there will be trouble on the job site.

The Benjamin Electric Company of Des Plaines, Ill., reports that although 80 percent of its employees are union members, their products cannot be sold in St. Louis and several other cities because the company refuses to apply the union's label to their product. The company's merchandise is kept off the market by a threat of a secondary boycott.

In St. Louis, Swift & Co.'s products were kept from meat market counters because of a secondary boycott by the meat-cutter's union. The union insisted that Swift salesmen join it.

In Newcastle County, Del., the construction of an airport was held up nearly 5 months because the county gave the electrical work to the lowest bidding contractor. It happened his employees chose to remain outside of the International Brotherhood of Electrical Workers.

As one member of the select committee, I shall urge that an investigation be made of secondary boycotts. I cannot see how we can carry out the instructions that have been given to us without so doing.

About a half century ago, the Congress made it unlawful for corporations to make political contributions. The debates of that time reveal that one of the motivating reasons for such legislation was the protection of the rights of stockholders. It was determined that a stockholder of a corporation should not have his money used by its officers to support candidates and issues in which he did not believe. There was, of course, the additional factor of the power of the corporations and the misuse of that power. Today, 50 years later, we find the need for making effective the prohibition of the use by union leaders of the money belonging to the rank and file of the workers to support candidates and issues in which many of those workers do not believe. Likewise, there is also the factor of the misuse of such power and influence.

The political activities of unions is not a partisan question. It is a concern to both the Democrat and Republican Parties. The basic freedom of the workers it at stake. When the Congress authorized compulsory unionism, it was never intended that that should carry with it compulsory party membership. There is evidence on every hand, not only of the spending of tremendous sums of money belonging to the workers, but of the use of manpower in both primaries and general elections. These practices ought to be looked into. Let the facts speak for themselves. If there are no improper practices that fact should be determined. The responsibility of the select committee cannot be met unless we do investigate these political activities including not only money contributions and the use of manpower, but the question of whether or not intimidation and violence has been used in seizing political power. We owe it to the workers of the country to study these charges and to let the public have the facts.

It is too early to suggest what remedies ought to be applied or what laws ought to be enacted. We need to examine and reexamine the basic causes of whatever improper practices are shown to exist. It may well be that long and complicated laws are not the answer—the answer may be found in some simple and direct changes in the law.

We must never lose faith in the integrity and fairness of the rank and file of all people. When the facts are fairly and completely presented a proper solution will be reached. The basic freedoms of the individual workers must be preserved. The rights of the worker to know what is going on in his union, to be able to control the finances of his union, and to make the officers of the union the servants of the members and not their masters, are basic American rights. The question should be asked, "Should a worker be compelled to lose his job if he withdraws from the union as a protest to thievery and mismanagement of his funds, or to protest acts of violence, or to protest the use of his money by the union leaders to defeat his own political convictions?"

All sides and all parties must be treated alike. Neither side is entitled to special immunities. One of the basic cornerstones of our prized American system is equal treatment under law. Within such a framework we can and will find the just and fair answers to the problems that we face in the field of labor and management.

Who Benefits From Capitalism?

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who Benefits From Capitalism? from the New York Herald Tribune of June 4, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO BENEFITS FROM CAPITALISM?

In his television interview last Sunday, Nikita Khrushchev, First Secretary of the Communist party in the Soviet Union, said, "We look upon the capitalist society as slavery, and we think that the peoples living under a capitalist system are living under capitalist slavery." This is derived, of course, from the system which Karl Marx inculcated in Das Kapital, published in 1867. But this year is 1957, some 90 years later. What has occurred in the meantime?

In the Soviet Union, as a result of the Communist revolution, the people theoretically own everything—the factories, the farms, the stores, the means of communication, and these are used, again theoretically, for the good of the entire citizenry. But do the people derive any benefits from this ownership other than a shortage of consumer goods, increased taxation or forced subscriptions to government bond issues, a shortage of housing, and a surplus of bureaucratic administrators? Certainly they do not gain anything from their collective ownership either in terms of profits or in terms of products which they can buy. Everything goes into heavy industry and armaments.

In the United States, in the meanwhile, a panel of business and labor leaders has concluded that our system of the people's capitalism has come closest to the avowed Socialist goal of providing abundance for a classless society. The panelists, who met at Yale University last November, decided that the people's capitalism has flourished here because the people, by the use of their money, have a decisive influence upon what is to be produced. But another equally important point is that the workers themselves, in many cases, share in the ownership of the factories in which they work and thus, through dividends, share in the profits, something which has yet to happen in the U. S. S. R.

For example, of the 27,000 employees of the Esso Standard Oil Co., more than 20,000 are stockholders in the parent company, Standard Oil Co. (New Jersey). The average holding is 95 shares with an annual dividend return of $200. Unlike the Soviet workers, they make a profit on what they produce and have no trouble buying gasoline for their automobiles. The same is true of many other large corporations which encourage stock purchases by their employees. If they share in the profits earned by their labor, if this system permits them to purchase easily not only the necessities but also additional luxuries, can it be called slavery? Certainly not in comparison with the so-called Socialist system of Soviet Russia, with its low real wages, its shortage of goods, its long working hours. No wonder we do not understand what Mr. Khrushchev calls the progressive nature of the Socialist society.

The Declining Strength of Socialism in the Modern World

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. JOHNSON of Texas. Mr. President, Roscoe Drummond, the distinguished journalist and commentator, sums up this morning the declining strength of socialism in the modern world,.

With his customary care and precision, he traces the factors which have led to increasing disillusionment with collectivist philosophies. He concludes that whatever it may be "socialism is not the wave of the future."

I ask unanimous consent that his column, carried in the New York Herald Tribune, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 14, 1957]

IS SOCIALISM THE WAVE OF THE FUTURE?

(By Roscoe Drummond)

WASHINGTON.—President Eisenhower was overly cautious at his recent press conference when he was replying to the prediction—from Moscow, of course—that the United States would be a Socialist country in 50 years.

The President confined himself to one generalization and to one short-term forecast. He noted that the pressures to accept large-scale Government control of our economy for some quick advantage have always been present in the United States, but have never prevailed. He predicted that any effort to socialize America would be up against a

terrible battle during the next 3½ years of his administration.

Now, obviously no one can say for sure what future American voters will do; they can do anything they want and conceivably they could be taken in by some crisis-panacea that could end up in a form of socialism they didn't expect and didn't want.

But the reason it seemed to me the President was excessively cautious is that the trend away from Socialist ideology and Socialist measures in many parts of the free world and in the satellite world has been marked in recent years.

What is significant is that socialism has not been working well where it has been tried and that competitive, private enterprise has been working outstandingly well where it has prevailed.

Here is some of the evidence that socialism is losing support and that competitive, private enterprise is gaining support:

In the United States one of the most respected and articulate Socialist thinkers, Norman Thomas, many times his party's presidential candidate, is no longer advocating all-out socialism. He has warned against the dangers of all-powerful, centralized government and he has come to view with new respect the substantially well-distributed high standard of living which capitalism is producing.

In Britain the nationalization of industry has been halted and the steel industry turned back to private ownership.

Of all the war-stricken nations West Germany has made the most signal and sustained recovery. It offers to all its neighbors in Europe an example of what a competitive, free enterprise economy can do for the prosperity of a nation and the welfare of its workers.

The prosperity of the West German Republic has been exerting a powerful impact upon German politics and upon the economic philosophy of the German labor movement which in the years following the Weimar Republic was largely socialist in its outlook.

But today the Social Democratic Party, whose principal support comes from German workers, has very largely turned from its long-held prosocialist desire to nationalize German industry.

Two factors have greatly influenced the thinking of the German labor leaders. One is the positive accomplishments of competitive enterprise in the reconstruction of Germany. The other is the poor showing of nationalized industry in Britain which has disenchanted many German as well as British Socialists.

When I was in Bonn last, Erich Ollenhauer, chairman of the Social Democratic Party and Chancellor Adenauer's principal opponent in the September elections, told me that his party rejects nationalization as a practical measure.

There are numerous signs behind the Iron Curtain that socialism is not working well. The Hungarian workers didn't think it was. Tito stopped trying to communize the farmers and the Polish regime has dismantled 8,000 collective farms.

The fact that the United States and West Germany are two of the most productive and prosperous nations in the world is not accidental. Other countries have great natural resources and a skilled labor force. But in the United States and West Germany a competitive, private economy, free from nationalized industry and inhibiting controls, is using its resources and its skills to the great boon of both labor and ownership.

On the record I would say that socialism is not the wave of the future.

Grassroots Sentiment on Taxes, Education, and National Defense

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. CARLSON. Mr. President, I have received from Mr. Fred F. Kopke, of Hutchinson, Kans., a splendid statement entitled "From the Grassroots to the Congress of the United States." I commend it to the Members of the Senate.

I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FROM THE GRASSROOTS TO THE CONGRESS OF THE UNITED STATES

(By Fred F. Kopke)

I do not know the net worth of the United States of America but I suppose that 10 or 15 times the national income, less the public and private debt, would be somewhere near the national net worth. A few people seem to think that they should continue to enjoy a huge income resulting from our tremendous business and industrial growth and at the same time they insist on reduced taxes in spite of their increased demands for Federal aid plus increased Federal contributions to local needs. The truth is that the Federal debt in relation to national income has been reduced during the Eisenhower administration without any substantial increase in the cost of living. The national debt today stands at about 76 percent of the 1957 national income as compared with 136 percent of the national income during the last years of the Truman administration.

Taxes for the low income large family groups as compared with their income are moderate as they should be. Those with larger incomes should know by this time that income and estate taxes must continue to claim a share of their growing incomes and capital gains. This great and growing America is not busted. Business is good. Labor is fully employed. Retail sales reflecting the movement of merchandise into consuming channels is at high levels, indicating a continuation of full emeployment in industry. A few tired old men in and out of Congress are crying that businessmen and investors are so discouraged by high taxes that they will not continue in their efforts to improve their service. Here are the facts: Business leaders and investors are optimistic. Proof of this is found in the fact that since 1946 they have invested about $268 billion in expanding their production and distribution facilities and the trend is continuing at record levels through 1957.

National defense to protect this free and beautiful land from an international Communist dictatorship is worth whatever it costs.

Personal liquid assets after deducting personal debts now amount to about $134 billion dollars or around 50 percent of the Federal debt. What is needed now is less bellyachers who have lost faith in the future growth of America.

I believe that income taxes based on ability to pay is fair. It is my impression that on a nation-wide basis billions of dollars of liquid assets escape local taxation and that billions of dollars of local inventories and real estate are undervalued for local taxation because local tax authorities and assessors, honest as they are, do not have the experienced personnel such as is employed by the Federal Revenue Service. There has always been waste in Government at all levels. This is the price we pay for our form of Government—the best in the world.

The education of our children is our most important job, and I believe that the time has arrived for some Federal Aid to Education. Constructive criticism is always in order. President Eisenhower may not know everything, but he is a friend of labor and of private enterprise and during his administration the country has enjoyed full employment and prosperity without war. I am willing to pay increased taxes to help bring better education to the youth of America and to maintain an adequate defense.

Storage of Natural Gas

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. MARTIN of Pennsylvania. Mr. President, Mr. Arthur R. Friedman, financial editor of the Pittsburgh Post-Gazette has an interesting article on the storage pools for natural gas. We have made great strides in the better methods of the production of natural gas, and its storage is another step forward for the benefit of the consumer. Western Pennsylvania has been producing gas for almost three-quarters of a century, and we are now producing more than we did 30 years ago. I ask unanimous consent that Mr. Friedman's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORAGE POOLS READYING BIG WINTER GAS SUPPLY—PENNSYLVANIA HAS THE LARGEST CAPACITY OF ANY STATE TO STORE NEEDED FUEL

(By Arthur R. Friedman)

The public may be thinking of the pleasures of warm weather but the gas man is wondering about his supply for next winter.

The latter's worries aren't what they used to be and the gas storage pools (underground reservoirs into which gas is pumped in the off-season) are largely responsible.

The number of gas customers is still growing, however, and more storage pools are coming into existence. The tristate district will get additional ones this year.

Peak day gas requirements (on extremely low temperature days) are met only through supplementing the daily transmission rate from primary gas fields with fuel that comes from re-utilized underground storage.

Consolidated Natural Gas Company, one of the large suppliers of gas in the tristate area, utilized storage gas to the extent of 28 percent of total customer requirements throughout the heating season in 1956. On the peak days this jumped to 48 percent.

It is no accident that the tristate district has the largest capacity to store gas in the Nation.

This was once a prolific gas-producing area and those fields come in mighty handy now. The Pennsylvania pools can hold more Southwestern gas than any other State in the Nation while Ohio has only slightly less storage capacity. West Virginia is the third largest storage State.

Pennsylvania's underground reservoirs can hold 392 billion cubic feet of natural gas.

Ohio has a capacity of 361 billion cubic feet, and West Virginia 283 billion cubic feet.

The Oakford pool in Westmoreland County (capacity 105 billion cubic feet) is Pennsylvania's largest pool but it isn't as large as the Stark-Summit pool in Stark and Summit County, Ohio, rated at 148 billion cubic feet.

Deportation of Hungarian Refugees

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the June 12 issue of the Washington Post and Times Herald entitled "Three Hungarians Without Jobs Want To Go Home," and also a followup editorial from a later issue of the same newspaper on this subject.

I wish to state that a deportation hearing was scheduled in St. Paul for today, June 14. Because of possible unfavorable international implications which could grow out of this, I requested a delay of 2 weeks in these hearings, while this case can be further investigated and more facts accumulated from Canada.

I am happy to say that General Swing, Director of the Immigration and Naturalization Service, has granted this request.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

THREE HUNGARIANS WITHOUT JOBS WANT TO GO HOME

MARSHALL, MINN., June 11.—Three Hungarian refugees, penniless and homesick, waited in a jail cell today for the Government to decide where they go next.

After two months on the open road, traveling from Alberta, Canada, through the Dakotas to western Minnesota, the Hungarians said they want to go home.

Home is the country they left last fall when Communist guns crushed a revolution which the three said they took part in.

"No working, no working," mumbled the oldest of the three, a frail, graying man of about 45 who said he had been a machinist in Budapest.

They had a roof over their heads only 3 nights in the 2 months, he said.

The three were arrested Sunday after making a U-turn in their second-hand car. Their auto clipped another car, bringing police to the scene.

They are being held on a technical charge of vagrancy. The Department of Immigration and Naturalization is sending a representative to look into the case.

Police found themselves in a dilemma. They were sympathetic, but also eager to get the three referred to someone in authority who knows what to do.

The Hungarians—the machinist, his son 17, and a friend—asked police to withhold their names.

Using an English-Hungarian dictionary to communicate, they insisted they cannot go on living in Canada or the United States.

They said they fled to Austria when the Communists regained control in Hungary and later found themselves in Dover, England. The machinist asked that they be sent to New York, where he has relatives, but was told no more Hungarians were being sent to the United States at that time.

They were shipped to Alberta where they found sporadic employment on farms.

They quit in disgust, the machinist said, after he and his son were given total wages of $12 for 3½ days of work.

His intention when he came to the United States was to raise enough money to bring his wife over, the father said.

"Now we want to go home," he said, "no working, no working."

HUNGARIAN FOLLOWUP

The wave of American sentiment that greeted the Hungarian refugees has subsided and now the newcomers are facing the long, difficult ordeal of integrating into a strange culture. A movement to help in this has been started in Washington by a joint committee of the 18 organizations sponsoring refugees in this community. Protestant, Catholic, and Jewish organizations have united in a program which has included a welcoming party for the newcomers and compilation of a guide in both Hungarian and English telling where needed services can be obtained. Small singing and language-study groups and other informal get-togethers will be held to help the refugees meet each other.

It is hoped similar projects will get underway in other large cities. Helping in the integration of the new Hungarian citizens is not only an expression of the American tradition of hospitality to newcomers but also a tangible contribution to American diplomacy.

Chance for Health Chief Need of Aged

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. NEUBERGER. Mr. President, one of the most important internal problems facing our country today is that of providing proper care for the aged. In the Washington Post and Times Herald of June 13, Malvina Lindsay pointed out that today there are 14 million people over 65 years of age living in the United States, most of them unemployed and living on small incomes. Many of them suffer from chronic disease, but cannot afford proper medical treatment. Those struck by sudden illness must often depend upon charity or public care. Because Miss Lindsay's column so cogently outlines the serious health problems faced by our older citizens, I ask unanimous consent that it be printed in the RECORD for the information of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHANCE FOR HEALTH CHIEF NEED OF AGED
(By Malvina Lindsay)

This Congress apparently intends to ignore the No 1 problem facing the Nation's growing number of senior citizens; namely, how they can pay for the health care they need.

The increase of chronic disease, found largely among older persons, was emphasized at last week's meeting of the American Medical Association in New York. It was reported that more than half the clinical part of western medical practice was now concerned with health problems of the middle-aged and elderly.

How do the 14 million people of this country past 65, most of whom are unemployed and living on small incomes, meet the cost of such treatment? Only about one-third of these are covered with any kind of health insurance. Most companies do not sell individual health insurance to persons past 60, or if they do, premiums are excessively high and benefits greatly curtailed.

Part of the chronically ill older population gets charitable or public care. But there is a large segment that must meet medical expenses out of small fixed incomes constantly being shrunk by inflation.

Dr. Wilma Donahue, chairman of the division of Gerontology of the Institute for Human Adjustment of the University of Michigan says that many old people neglect chronic illness (with greater cost later), others obtain medical care by sacrificing other essentials of heathful living, or turn to relatives for help.

She believes the mounting number of admissions of older patients to mental hospitals is one evidence of the effects of worry and lack of preventive and restorative medical care of this group. Many of the elderly and even middle-aged today are beset by fears of becoming ill and not being able to pay for medical care. This insecurity, believes Dr. Donahue, is the basis for what is called "widow's disease," in which an older woman becomes obsessed with the fear that her money won't last until the end of her life.

These fears also cause many of the elderly to lead cheese-paring lives, neglecting nutrition and other elements of health, hoarding what funds they have and keeping them out of circulation.

Health insurance that the retired can pay for is more essential to them than any expansion of social security benefits. It would also save society money in the long run since preventive medical measures would make unnecessary much of the prolonged expensive custodial care of older persons.

Insurance companies are making studies and experiments in the field of health insurance for the retired, but are up against the problem of providing such insurance without at the same time raising rates for all groups.

Attachment of health insurance to social security was recommended by a commission set up by the Pennsylvania Medical Society to study the problem. In this the citizen, during his earning years, would buy health insurance with the usual commercial carrier, and at the same time pay a small increase in social security to cover health benefits during his after 65, retired period.

Some help from the Federal Government to meet this need seems essential. Dr. Joseph W. Still, research psychologist at the George Washington University School of Medicine, who has studied the needs of the retired, suggests a plan that would avoid increase of Federal administrative machinery.

He would have Congress provide a fund to reimburse private insurance companies for excess costs of insuring those past 65. Then the companies would be free to sell insurance to customers regardless of age, but would base rates on the average costs of providing insurance for those under 65.

This would leave the major administrative machinery to the insurance companies and the medical profession. It would provide medical care for the elderly at a price they could afford. It would end the present wasteful system whereby minor disabilities of the aged are neglected until they become major ones.

Federal Traineeships for Nurses

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an excellent article dealing with Federal traineeships for nurses. The article was written by Miss Ruth Boyer Scott, formerly of Seattle, Wash., and an accomplished magazine writer. It was first printed in the May edition of the National Business Woman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROBLEM OF DEGREE?

(By Ruth Boyer Scott)

"The key to improving nursing care of patients," according to this country's only woman general, Asst. Surg. Gen. Lucile P. Leone, "is more good teachers for schools of nursing and more good administrators for hospital and public-health nursing services." Mrs. Leone speaks as the chief nurse officer of the United States Public Health Service, which administers the professional nurse traineeship program approved by Congress last year.

The present shortage of trained women leaders for administrative, supervisory and teaching posts in the nursing profession is a cause for anxiety, but the traineeship program which provides financial help to graduate nurses seeking advanced training is proving to be a partial answer to the problem.

Congress authorized $2 million which was awarded to 56 nursing schools to support about 580 traineeships. One million dollars was also voted to provide traineeships for professional public-health personnel.

The United States Public Health Service estimates that in January 1956 there were 430,000 professional nurses employed in the United States. Of these, about 1 in every 11 holds an administrative, supervisory, teaching, or advanced technical position.

The 1 in 11 is the woman who runs the show. It is she who is responsible for efficient organization of nursing care, for guiding beginning nurses and instructing girls in schools of nursing. Not only are such top nurses needed in adequate numbers, but the quality of their academic preparation is extremely important. The fact is that in some cases this preparation is limited.

The following table contains some surprises:

	Number employed 1955	Percent holding degrees
Teachers	10,000	55
Supervisors	23,000	20
Administrators	10,000	50

Nursing Outlook pointed out in 1956 that "Undoubtedly, there are nurses who, from long years of experience, have gained competence in their positions as administrators of nursing service or teachers of nursing. However, in view of the pressing and immediate demands for large numbers of such personnel, this trial-and-error method of self-preparation is patently impracticable and uneconomic." We need to give more nurses more formal instruction.

Take the case of supervisors. There are about 20,000 to 25,000 nurses holding supervisory posts, only 20 percent of whom now have an academic degree. As the National League for Nursing and other groups point out, it is obvious that many of these women need advanced college training to help them more adequately to handle their responsibilities. With attrition in the field estimated conservatively at 4 percent, 1,000 supervisors are needed each year as replacements. Add to this the demands of an expanding hospital system, and the minimum annual increment of college trained supervisors and supervisor-instructors needed in this country runs to several thousands. Yet last year the number of nurses receiving degrees was less than 250.

Again take the example of nurse-teachers. In December 1955, Mrs. Leone wrote, "It is estimated that there are about 10,000 nurse faculty members in our 1,140 schools of nursing with approximately 107,600 students. Placing attrition from the nurse faculty group at 4 percent annually, a conservative estimate, the number of new teachers needed merely to maintain the present supply is 400 yearly. * * * To make up our current deficiencies and to prepare gradually for the increased enrollment, we should graduate approximately 1,300 teachers annually for the next 10 years."

In 1955, there were only 1,067 nurses graduated from courses preparing them for advanced positions of all types, and many of these were not in the category of fresh personnel, but were nurses already employed as administrators, supervisors, and teachers.

Obviously, college costs money. Full-time graduate study presents a formidable financial problem to most nurses, with the result that many can go to school only part time. In the fall of 1955, 69 percent of those enrolled in graduate nurse programs of this type were part-time students.

Nursing Outlook says, "For some young nurses who have had little employment experience, a combination of learning and earning activities may be educationally desirable. For many nurses, however, part-time, or spasmodic study is dictated by financial rather than educational needs and has the effect of delaying the time when they can make their most effective contributions to nursing."

The stories of two nurses illustrate better than statistics the problems of graduate nurses seeking higher education.

The first earned her master's degree before Federal traineeships were voted, the other is a present trainee.

Doris Smith Suddarth graduated in 1945 from a 3-year nursing diploma program at the Washington Sanitarium and Hospital in Takoma Park, Md. Like many nurses, she had completed a year of college before starting her nurses' training. From the beginning Mrs. Suddarth knew she wanted both her bachelor's and master's degrees, but it was 4 years after graduation before she returned to college. Then she had to continue working.

She carried a full college schedule and at night nursed much of the time from 3 until 11 o'clock. Her load was heavy. Days and nights dragged by, but fortunately, because Mrs. Suddarth is blessed with unusual strength and singleness of purpose, she came through with good health and a degree of bachelor of science in nursing education.

Immediately she was assigned as an instructor in the school of nursing of the Alexandria Hospital in Viriginia, but, still not satisfied with her own preparation, she started some part-time classes in adult education.

Mrs. Suddarth foresaw a prolonged period of study by part-time methods before she would have her master's degree. However, even before the Federal traineeship program, some scholarships were available. She applied for one. Sources of this help are chiefly service clubs, churches, nursing organizations and similar public-spirited groups. Mrs. Suddarth accepted a $500 scholarship from the Virginia State Nurses' Association which enabled her to study full time to complete her master's degree.

Thinking back on the first difficult years, Mrs. Suddarth says, "I'd still want to go through with it, if I had it to do over. I only wish more nurses could and would go back to school."

Just under 10 years ago, Anna Marie Keenan graduated from St. Joseph's Hospital School of Nursing in Pittsburgh, Pa. After a year of staff nursing, she decided she wanted to teach nurses, and needed to earn her bachelor's degree just as fast as possible.

That wasn't too fast, for beyond receiving her room and meals at home with her parents she had to earn her other expenses. For 3 years she concentrated on part-time nursing and part-time study at Duquesne University. Typically, she nursed four 8-hour nights a week in the delivery room and full time during summer vacations.

"When I look back on those years of combined work and college, I don't think I'd have the courage and strength to go through with it again," Miss Keenan says. "But at the time, I didn't worry; I just kept working and studying."

By 1955, after teaching basic science and helping with clinical instruction including some medical-surgical nursing courses, Miss Keenan decided she needed her master's degree.

In July of 1956, she made her first visit to Catholic University in Washington, D. C., to discuss her plan to nurse full time and carry as many studies as were allowed a full-time nurse. "It looked as if it would take me 3 years or more to work my master's degree through," Miss Keenan remembers.

Fortunately for her, in the same month Congress passed the 3-year traineeship bill, and in the closing session hours, July 27, passed the necessary supplemental appropriation bill for the first year.

The United States Public Health Service rushed the paperwork so that nurses could apply for the fall semester, and Miss Keenan was among the first to apply. In the latter part of August, she heard that she was granted a United States Public Health Service traineeship from the funds voted by Congress.

"Every time a letter came to me with the Catholic University return address, I thought it would tell me there was some mistake, and I wasn't getting the traineeship," Miss Keenan said. "After working so hard for my bachelor's degree, I really couldn't believe at first that I was awarded this traineeship."

The traineeship pays all college fees, and gives her a monthly stipend of $250 which enables her to live a normal student life. No longer does she struggle to prop her eyes open and keep her mind alert after working a whole night in a busy hospital ward.

"It's heaven," she says, "not to worry about how I will pay my tuition, not to have to scrape and scrimp on food and clothing and recreation. I just think it's too bad there aren't more such traineeships for graduate nurses."

"The story of these two girls and others like them," observes Miss Ruth Freeman, president of the National League for Nursing,

"demonstrates what can be done when the professions and an informed public work together. However, it is still not possible for every nurse who wants and needs assistance in preparing for teaching and supervisory and public health positions to get it. The help of local voluntary and Government groups, of the allied professions and foundations and of the general public is still needed to provide additional scholarship funds and to support continued governmental aid. Only with this widespread cooperation can we move more rapidly toward better nursing care for all."

Conditions in Poland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent declaration by Cardinal Wyszynski to representatives of Americans of Polish origin, which gives a valuable insight into the situation in Poland.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

People in your press are also wondering whether help should be offered to Poland or not. When you look at your child, which is sick, do you stop to think whether you should help it or not? When you see your mother in distress do you pause to think it over, to consider whether it would be politically advisable for you to help her? Dearest children: Do not commit this terrible mistake of refusing, for various political fancies, of refusing assistance, bread and kindness to those, who are in such great need of assistance, bread, and kindness.

And in this respect, my attitude may be very individual and different, but full of conviction and full of truth, as I trust and understand it. We stay here, and we want to stay here. We know the needs of the nation and we appeal for help for this nation. We beg—perhaps we sometimes do it in a manner highly humiliating to us; perhaps it is not correct to lower oneself to such an extent, to beg as humbly as that, for fear of endangering one's dignity. Let the politicians defend the prestige of the nation. Let them defend their dignity as statesmen. It is sometimes their duty not to go beyond the bounds of national dignity.

But I am not a politician nor a statesman. I am simply a child of my nation, and if the good of that nation demands that I humble myself, why then I shall humble myself regardless of all "raison d'etat," of all political considerations. My policy in the first place is to feed the hungry, to clothe the naked, to give the poor a roof overhead. And let anyone, whoever and wherever he may be, judge me as he pleases, it is of no importance to me in this case. I am doing my duty. And so I say: Tell your sisters, tell your countrywomen, tell your daughters, tell your husbands that the primate of Poland on his knees—because it is not his duty to fight for his dignity—that he is begging you for help for the hungry, for the naked, for the sick, of whom there are very, very many in our land, and for the homeless.

It is none of our fault that every 10 or 20 years Poland is swept by a tempest of war which tears every stone from the heart of Polish soil, destroying the foundations of everything we have built. You have seen Warsaw, with what terrible toll it is being built. This is being built often at the price of hunger, at the price of some sacrificed pleasure, at the price perhaps of some rag to protect those who are at the mercy of cold. But it is being built all the same because it must be built, because we cannot live under the open sky, although God is so good, and when various nations constantly destroy our home, all we can do is to rebuild it and this we do calmly and with patience, and we shall continue to do so.

Federal Salaries

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article written by that outstanding Federal employee leader, William C. Doherty, president of the AFL–CIO National Association of Letter Carriers.

This article, entitled "Many Talk, Few Act on United States Pay," appeared in the Washington Daily News as a substitute for the column usually written by the capable John Cramer.

I wish every Federal employee would read and digest this fine statement. It does much more than advance and emphasize the need for a pay raise. It demonstrates that in unity there is strength, and that when organized strength is guided by wise hands, an ever brighter future is within reach.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of June 7, 1957]

MANY TALK, FEW ACT ON UNITED STATES PAY

(By William C. Doherty)

The writer is indebted to John Cramer, regular editor of "9 to 4:30," for the opportunity to comment briefly on the general subject of Government wages.

Like the weather, a great many people can be found in Government who will talk about the inadequacy of their salaries but all too few do anything about it. That is, do anything about it in an organized manner. As a result a potent voice in making known the economic needs of those who are employed by Uncle Sam is left with empty coffee cups in Government cafeterias and in the halls of our various Federal buildings. Thus talk is cheap and too often is the prevailing Government wage structure inadequate.

CONDITIONS

One of the conditions of our employment is that we must look to the Congress for improvements in wages. Just as it would be patently unfair to make a wholesale indictment of congressional fairness in wage considerations, at the same time it is honest to say that Congress seldom acts without considerable prodding from the organized employees.

In the area served by the News there are thousands of employees who need no reminder that Government wages are substandard. The impact of high prices is noticeably felt in a community like Washington. Yet this inability to cope with prices is not peculiar to those located in this area. The same pattern can be found wherever there is a Federal civilian establishment.

This suggestion has been tested by means of an economic survey conducted by the organization I have the honor to represent. Letter carriers in communities all over the United States were polled, with the result that we are now preparing to transmit these findings to Congress.

OUTSIDE WORK

Among other things, this survey developed data to show that between 45 and 55 percent are obliged to seek outside employment. The figure would be higher if extra-work opportunities were available to all who need supplemental income. In terms of average weekly hours worked at a second job, the national figure is approximately 15 hours. It is not necessary to point out that fatigue from overwork reduces the efficiency of these workers both in the post office and on their second job.

More alarming are the figures for working wives. For the reports thus far tabulated, approximately 37 percent of letter-carrier wives find it necessary to seek supplemental income. Many, if not most of these working wives, have school-age children who are deprived of a normal home environment at a period in their young lives when they most need parental care and supervision.

Organizations representing Federal employees have long contended that Government pay systems unduly delay in responding to changes in the general economy and the standard of living enjoyed by other workers. It is generally a question of too little and much too late to do any real good.

For example, during the time when the present postal-pay system was under consideration, we were able to point out that only twice in a 15-year span were letter-carrier wages on a par or above living costs. In the other 13 years wages were from 2 to 32 percent below prices. Unless wages are reasonably comparable all the time to prices it does little good to approve adjustments every 3 or 4 years, and then only in half measure. Employees must either forego certain accepted standards of living or go into debt to make ends meet. Either way the damage is a long time in being repaired.

PROBLEMS

Inadequate compensation levels also result in costly personnel turnover. At the same time a recruitment problem develops. While no precise guide has been advanced to determine the cost of recruiting and training a new employee, it has been suggested by competent postal officials that it costs between $200 and $300 per employee, exclusive of wages paid.

On the basis of this estimate, consider the waste of public funds in 1 or 2 examples recently brought to our attention. In Minneapolis, over a period of 52 weeks, 53 civil-service examinations were held for postal employment. A total of only 1,353 qualified for appointment; 526 accepted jobs but 320 resigned within their first year.

In a 40-day period in the Los Angeles area, the post office hired 300 persons but lost 329 via resignations.

The lure of attrative industrial wages is most evident in the more populated areas. However, it is in these same areas that the bulk of postal employees serve. The postmaster at Hammond, Ind., states that he cannot keep experienced employees or hire new men. Why? Nearby factories and shops are paying better wages, providing more attractive fringe benefits and offering greater security in retirement.

It was pointed out that a postal employee after 15 years earns $2.12 per hour. In com-

parison, the average industrial pay in the same area is $2.17 per hour, with the union agreement, including accident and sickness payment increases, a choice of 2 life insurance plans, a minimum pension of $120 a month after 15 to 25 years of service and vacation benefits nearly comparable to the Government program.

The much-discussed Cordiner Committee report had this to say about fringe benefits and Government employment in general:

"The Federal Government has lost the advantage it once enjoyed in the area of fringe benefits. In brief, the magnet of interesting work and public service is no longer strong enough to overcome the pull of higher salaries in non-Federal employment."

In defining what are fair salary criteria, this same survey put a finger on the most glaring weakness of present Federal salary systems: "Employees," it stated, "must receive sufficient compensation to enable them to establish and maintain a standard of living which will allow them to discharge their responsibilities to their families and to their employers."

This is the traditional American concept of paying the laborer his just hire. Why, why, we might ask, is the Government so reluctant to measure up to that simple concept?

Constitution and the Girard Case

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Constantine Brown which appeared in the Washington Evening Star on Friday, June 14, 1957.

Mr. Brown's column, entitled "Constitution and the Girard Case," raises some very thoughtful questions on this entire incident.

According to Mr. Brown, the State Department declared that the decision to turn Girard over to a Japanese court was "a political decision not subject to judicial review."

It occurs to me that a few years ago a madman named Adolph Hitler made a "political decision not subject to judicial review" which sent hundreds of thousands of Jewish people to the gas chambers of Germany's concentration camps.

I commend this article by Mr. Brown to my colleagues attention.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTITUTION AND THE GIRARD CASE—RULING ON SOLDIER IN JAPAN SEEN LIKELY TO INVOLVE VITAL QUESTIONS OF RIGHTS

(By Constantine Brown)

United States District Court Judge Joseph C. McGarraghy will issue here soon a decision in regard to Army Sp3c. William Girard which may involve constitutional questions of the utmost importance to all American citizens.

The status of forces agreements and the executive agreements implementing them seem to clearly provide that American soldiers stationed in foreign countries who commit crimes while on duty will be tried by United States court-martial. Crimes committed while off duty will be tried by courts of the country in which the men are stationed.

Americans who have served in the Armed Forces know that under military regulations there are only three categories: On duty, off duty, and hospitalized.

Though the Girard record in the killing of a Japanese woman at a firing range has not been fully revealed, there seems to be no question that this soldier was on duty. Whether or not he carried out this duty properly is a matter of fact to be determined by a court after hearing all the evidence. The question involved in the present controversy resolves around which court should try him to determine the fact—the Japanese court or the American court-martial.

Many Senators who are following the Girard case with understandable interest, not only because it involves the preservation of civil liberties in this country but also because of the avalanche of mail from their constituents, are surprised at some astounding statements made by the representatives of the Defense, Justice, and State Departments.

One Defense Department official stated that although Girard was on duty he conducted himself in such a fashion that he could not be considered on duty. This is regarded by these legislators as a bizarre and new concept which if carried to its logical conclusion could rewrite many of the lawbooks of this country.

In pleading the case of the Government before the Federal court in Washington, United States Attorney Oliver Gasch asked for as speedy a ruling as possible so that we can look other nations in the eye and not be accused of reneging on our obligations. This statement is not convincing to many who believe it to be more important that the United States not be guilty of reneging on its obligations to one of its citizens.

The State Department, through an unnamed spokesman, has said that the Girard case was "a political decision not subject to judicial review." In many congressional quarters, this statement is regarded as ominous. Under our form of Government our citizens have certain constitutional guaranties. Our civil and criminal code is based upon the Anglo-Saxon common law which provides for bail and public trials by jury. It gives protection against self-incrimination and guarantees trial in the jurisdiction where the alleged offense was committed. It prohibits cruel and unusual punishment—such as cutting off the right hand of a thief, as the Koranic law provides in Arabia. It guarantees right of counsel, the right to call witnesses, who are punished in case of false testimony, the right of habeas corpus, right of appeal, protection against unreasonable search, freedom of assembly, and protection against double jeopardy, to mention but a few. In short, we are a Nation of laws, not of men.

Many responsible Americans will not accept the principle that the constitutional guaranties of an American citizen can be given away by a "political" decision made by a Government official, without the decision being subjected to judicial review.

If the constitutional guaranties of Americans can be eliminated by "political decisions" not subject to judicial review, it could be argued that we do not in fact have the constitutional guaranties which we have claimed from the beginning of this Nation.

The implication in the State Department's declaration is that its "political decision" transcends the Constitution of the United States. This, at least, is the interpretation of those in Congress who have followed the matter closely.

What began, therefore, as an isolated incident in Japan may eventually become a constitutional question of the greatest importance, possibly resulting in an opinion by the Supreme Court. Those high officials who believed that this episode could be quietly hushed up underestimated the deep convictions of millions of Americans that individual liberties of America's most humble citizen transcend the power and majesty of the state.

The Civil Rights Issue

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. SCOTT. Mr. President, I ask unanimous consent that an editorial appearing in the Thursday, June 13, 1957, edition of the Gastonia Gazette be printed in the Appendix of the RECORD.

The editorial, which comes from one of North Carolina's pioneer and most outstanding newspapers, discusses in a down-to-earth manner the civil rights issue and an address on the subject delivered by a distinguished Member of the House of Representatives from North Carolina, the Honorable BASIL WHITENER.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS ISSUE

Protection of civil rights of persons within the jurisdiction of the United States has turned into a sharp difference of opinion which has become known as the civil rights issue.

When any issue gets heated, the usual procedure is for the politicians to hop on it and introduce bills to remedy what they look upon as an intolerable situation.

This civil rights fight seems to be aimed at the South, as Congressman BASIL WHITENER pointed out recently in an address on the floor of the House.

Mr. WHITENER called attention to the fact that President Eisenhower and Attorney General Brownell have termed the legislation necessary if the citizenship of this Nation is to enjoy full civil rights.

Mr. WHITENER got right to the point when he selected Gastonia as a fine example of good race relations.

Negro schoolteachers, Mr. WHITENER pointed out, are paid salaries on a schedule which results in the average Negro schoolteacher in North Carolina earning higher compensation for their services than is earned by the average white schoolteacher.

He also called attention to the fact that Negroes have served on the State Board of Education—the governing body for the educational program provided by the State of North Carolina.

That North Carolina treats the Negro fairly is obvious to those who are familiar with the situation. Mr. WHITENER pointed out that one member of the Negro race is now serving his fourth term on the Gastonia City Council and has in the past served as treasurer of the city, being elected by his white colleagues to this post.

Race relations and civil rights are not matters that call for Federal legislation.

They are matters to be worked out—and that have been worked out to the apparent satisfaction of people of both races—in the South as well as elsewhere in the Nation.

Scanning Mr. WHITENER'S address on the civil rights issue, it is our conclusion that he stated the issue concisely and effectively. Few persons could have done better, because this district's Congressman, from his former position as solicitor, is entirely familiar with his subject.

Freedom of Expression in a Democratic Society

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Most Reverend Bernard J. Sheil, D. D., auxiliary bishop of Chicago, before the Chicago Bar Association on June 6, 1957. Bishop Sheil, who is well known to many of you as a courageous and outspoken member of the clergy, has devoted his life not only to the realm of his own religion, but to a greater concern for those basic human freedoms on which democracy is based. He is perhaps best known as the founder of the Catholic Youth Organization, and in his own city of Chicago, for many educational and sociological endeavors. I feel that the important message in his address deserves wide distribution, and include it in the RECORD, as follows:

ADDRESS BY THE MOST REVEREND BERNARD J. SHEIL, D. D., AUXILIARY BISHOP OF CHICAGO, THE CHICAGO BAR ASSOCIATION, JUNE 6, 1957

Any attempt to appraise an historical period, so marked by change and contrast, as is ours, is difficult and dangerous. Difficult, because of the complexity of the problems it presents; dangerous, because of the temptation to oversimplify and thus falsify. Yet, if we are to understand our age, if we are to seek possible remedies for its multiple confusion, it is required that we try to isolate the issue which underlies the surface symptoms and conflicts. We must force our mind away from the tangential and back to the center of contemporary disorder.

From ample evidence, most of it bewildering and much of it shocking to the spirit of man, it is clear that the root problem in the modern world is that of human freedom. Through a startling but sufficiently foreshadowed twist of history, we are being forced to defend, and possibly in the future even by violent means, the foundational premise on which our western civilization and culture have been built

The threat to this freedom demands a defense that goes beyond any ring of fortresses. For the threat is more powerful than military force. It is more subtle than the maneuvers of politics. For it has the ability to invade the human spirit and to place therein the seed of decay and destruction. Once the truth of human freedom is questioned or attacked, the way lies open to tyranny and despotism. Once man's freedom is touched by agnostic hands, he becomes, not the maker of history, but the blind and servile instrument of power.

Let us have no illusions about the final aim of totalitarianism. Let us not be distracted by its secondary goals. It has one acknowledged objective, namely, total control of the processes of history. It seeks to write history in terms of a humanism that is essentially inhuman. This is one reason that it is immoral and irreligious. This is why it attacks human freedom as an outmoded and decadent obstacle to its historical ambitions.

We are sufficiently alert to the external threat to our fredom. I am not quite sure that we are aware of the internal dangers. These are they that lurk at the center of some of the means that are proposed or that are currently employed to ward off the threat. For, one of the shadowy subtleties of the totalitarian dogma is its power to insinuate itself into the measures of defense against it, and to turn them into unwilling, even unconscious, allies. To defeat this dogma through a suppression of human freedom would be a Pyrrhic victory of evil consequences. It would be an historical irony that might well make cynicism the accepted philosophy of the future.

It is important, therefore, that we examine closely and critically our political weapons against totalitarianism. Only by so doing shall be be able to detect, if present, the virus we are pledged to repulse.

It is neither possible nor necessary to examine all the agencies we use in protecting our concept of freedom in a democratic society. It shall be more rewarding, perhaps, to test the current political climate of America. Admittedly, this will not give us a formal and detailed program of means. Nor do we seek anything as concrete as this. Rather, we shall attempt to grasp the mental and emotional mood of America, as this reflects our attitude toward human freedom.

There is no necessity to apologize for this apparently unscholarly procedure. Very often, as history so generously witnesses, it is more important to know intuitively the temper of a time, rather than the specific events and facts which shape its texture.

If this be true, then we are justified in saying that the present climate of America is not a completely healthy one either for the defense or, more importantly, for the development of human freedom. Sensitive people may detect, or rather feel, a growing atmosphere of suspicion, tinged with uncertainty. There is the feeling that one's thoughts and actions are being subtly subjected to judgment and interpretation by self-appointed guardians of liberty. Such sentiments of self-doubt are disastrous to democracy. The doubt of one's genuine devotion to the cause of human freedom leads to a disintegrating insecurity. This is the exact psychological moment at which arises the temptation to seek secureness by surrender to a party, a group, or a leader.

Such abdication of personal freedom and responsibility remains a persistent lure in an age of anxiety, tension and nostalgia. It has merited a study by the eminent psychologist, Eric Fromm, who has given to his work the significant title, Escape From Freedom. It finds an echo in the words of Mr. D. H. Lawrence. In one of his short stories he writes: "At a certain moment the men who are really living will come beseeching to put their lives into the hands of the greater men among them, beseeching the greater men to take the sacred responsibility of power * * * but my chosen aristocrat would say to those who chose him: if you choose me, you give up forever your right to judge me. If you have truly chosen to follow me, you have thereby rejected all your right to criticize me. You can no longer either approve or disapprove of me. You have performed the sacred act of choice. Henceforth you can only obey." These words require no comment. They will stand as a permanent warning to those dedicated to democracy.

I would like to add one further thought. Freedom is not preserved by curtailing it, any more than is an animal's life by eating its own tail. The picture of an America furtively glancing over its broad shoulder, for fear of being followed or spied upon, has no place in our national gallery.

One conductor of this feeling of uncertainty in America today is periodic upsurge of anti-intellectualism. It has many disguises, not scorning even religious ones. It uses the mask of piety and patriotism. It seeks the accolade of virtue through a highly publicised defense of what it names, but does not define, as the American way of life. There is justified suspicion that this way of life has a highly personal connotation.

In despite of its posturings, it remains to the discerning eye precisely what it is, a resentful instability which springs from a deep fear of change, fear too that its own privileged position may become the victim of that uncertainty which in inherent in life itself. On its ideological level, and this may accurately be called its lower level, this hatred of intellectuality is a crude merchandising of the philosophy of guttersnipism, a perverted form of snobbery. Its simplified gospel proclaims that only low-brows possess the faith and the virtue requisite for entrance into the kingdom of mediocrity.

The forays of the proponents of this un-American doctrine, of the gay illiterates, into the traditionally dignified precincts of higher education have an air of the grotesque. Their campus capers, conducted to the cries of fifth amendment intellectuals, have made American education a disturbing spectacle to the peoples of the world. Let us not forget that many of these people have shed their blood in testimony to their belief that freedom and education are inseparable; that one can not long survive without the other. If there be doubt of this, then I refer these vociferous anti-intellectuals to the recent tragic happenings in Hungary. There they shall find pathetic evidence that intellectuals not only talk about truth. They are capable of dying for it, and in heroic fashion.

If doubt of this still persists, then I recommend reading the luminous pages of early American history. There in the lives of men like Franklin, John Adams and Jefferson, shines forth the truth that education and freedom are but sides of the same coin. For these men, intellectuality was not a mark of secret immorality. It was one of the respected goals of life. Furthermore, and more pertinent to our purpose, they believed it to be an indispensable qualification for political leadership. Their passion for knowledge as the gateway to wisdom was one of the unifying fibers of their very being. The daily examination of ideas, including those opposed to their own, paralleled the daily examination of conscience. They were dedicated, even insatiable, egg-heads.

Naturally, they were subjected to attack and criticism by those who identified the new, the different, the strange with the dangerous and the subversive. For, the hater of ideas, the opponent of progressive change, is a perennial member of any historical cast of characters. The scene may shift, the costumes may vary, but the mentality and the performance remain much the same.

There is little doubt that did these men live today, they would be held suspect by some of their fellow Americans. Perhaps, they would even be submitted to investigation by one or other of our proliferating congressional committees. I must admit that the imagination leaps at the though of John Adams, that doughty intellectual, engaged in verbal conflict with certain Members of Congress who shall remain nameless.

Under the circumstances, the best we can do is to remind ourselves that even congressional investigating committees derive their authority and power, as do all agencies of our Government, from the people. There is neither provision nor place in America for politically autonomous elites. Nor to my knowledge is there any directive in our Constitution that provides that the chairman of any committee becames simultaneously a monitor, a prosecutor, a judge, and a one-man jury. There is evidence, however, based on some recent performances that some of these chairmen manifest symptoms of congenital infallibility, a most dangerous malady in a democracy.

But the harassment of intellectuals, that is of people who think differently from them, is not the real objective of self-appointed tribunes, charged with the protection of truth and virtue. Their aim rather is to attempt to force others to conform to their arbitrary concept of democracy. Obsessed

with a rage for uniformity, which they mistake for unity, they identify security with conformity. They fail to see that such an identification goes contrary to the essence of democracy, which is precisely intellectual and political nonconformity.

Democracy, in its genesis and growth, is a free and flexible human venture. It is not a rigid political dogma. It is not a guarantee against the uncertainties and insecurities of life. It is not static, but viable. Even at the risk of being called Hegelian, I would say that democracy never completely is; it only constantly becomes.

Thus, any attempt on the part of elected representatives, or of voluntary organizations, to stifle the free expression and the free discussion of individual ideas, no matter how unpopular these may be, is a direct attack on the concept of democracy as understood in the framework of American political thought. Those who laid the legal groundwork of our Republic, being solid intellectuals, were sharply aware of the danger of such despotic action. This is the reason that the very first amendment to the Constitution declares that Congress shall "make no law abridging the freedom of speech."

The same document makes no mention of freedom of thought. This was taken for granted. Freedom of thought to the minds of our early intellectuals was an unquestionable human right. They wasted neither time nor words on stressing the obvious. Anything resembling brain washing, even of the indirect type, would have appeared to them as an unspeakable perversity. Unfortunately, some of their political heirs lack their moral delicacy.

Shocking as it may be to us, there is danger that the fallacy of guilt by association is becoming an accepted principal of procedure in our political life. I think it is the most politically disruptive, the most morally subversive, and the most potentially destructive idea that our age of suspicion has thus far produced. It is a moral and political heresy which strikes at the root of human integrity. It is a sinister invasion of the soul of man, that unique spiritual entity, where thought and freedom dwell, where the person weaves his individual destiny, where God himself pauses at the threshold.

The use of this pernicious principle is an attempt to judge the content of a man's mind and the object of his will solely from external circumstances. Scientifically, it is a denial of every sound finding of modern psychology. Ethically, it is the expression of a smug moralism that perverts true morality. It is a modern echo of the ancient pharisaical charge that Christ was a sinner and a publican, because He consorted with them. On this debauched morality Christ poured His most sarcastic and ironical language, in which white sepulchers remains the key symbol.

The theory of guilt by association has a personal relevance for you who are present today. All of you are interested or engaged in the work of law courts. Many are criminal lawyers. Because of this, you too are often touched by the shadow of distrust. The legal and moral relationship existing between client and lawyer is frequently interpreted in the light of this false theory. In the morally twisted mind there frequently lurks the suspicion that the accused and the defender somehow share in the alleged guilt.

Ignored is the fact that it is the sworn duty of your profession to surround the accused with every possible legal and moral protection. To be charged, even formally, with a crime is not to be declared legally a criminal. Our society provides the only link capable of joining these two ideas into one valid proposition. And the link is the structure, practice, and the philosophy of our common law. Furthermore, the link is to be forged, not by the opinion of individuals, nor by common consent of the citizenry, but solely by the judgment of the court.

Hence, the absolute necessity for law, for lawyers, for duly established courts in any society that pretends to an acceptance of moral order and political justice. Hence too, the persistent effort of every real or pseudo-totalitarianism to control, subvert, or destroy the concept of law which provides the right of sanctuary to the free human person. If this security of the law were absent, then truly we would all be, in the phrase of Franz Kafka, "citizens of falsehood."

As lawyers and fellow Americans, you will agree that any behavior which draws its motivation from the cant of anti-intellectualism, the desire for enforced conformity of thought or action, or the false morality of suspicion and guilt by association is ultimately destructive of the democratic ideal. I remind you again that there is a type of exaggerated moralism which is just as dangerous to sound morality as is its more widely advertised counterpart, amoralism. Both lead to the same kind of moral cynicism.

It is this hypermoralism, parading in the robes of pious patriotism, which is creating in our country a political climate detrimental to the healthy growth of human freedom.

This is my conviction. It is the sole reason that I, a churchman, hold it not only a privilege but a duty to discuss with you the urgent question of human freedom and the law. I do so, because the topic, although apparently secular and political, is fundamentally a moral one. Human freedom is a reflection of divine freedom, playing upon the mind and will and heart of man. Human law is one strand in the immense tapestry of divine law. Both are creations of God. Both are natural defenses of the citadel of human integrity. We have the right and the responsibility to protect both freedom and the law not only against the attack of known external enemies but, what is of pressing importance today, against the subtle threat of those who, posing as their guardians, unwittingly perhaps undermine both freedom and law.

It is sufficiently evident that anyone who questions the easy assumptions, the ubiquitous slogans, or the surface pieties of contemporary life in America shall likely be labeled a critic, a pessimist, or, God help us, an intellectual. The last term, of course, is the modern synonym for a suspect mentality. It is a concise example of the decadence of both thought and language. More to the point, it is also the last weapon in the verbal armory of the embattled illiterate. It is an epithet which reveals the subconscious insecurity of the beleaguered mediocrity, who strangely enough often assumes the position and role of leader. His harassed cry merely indicates that he is making the painful but therapeutic discovery that his obsessive concern with secondary problems is no remedy for the major ones. It is but further evidence for the theory that riding in several directions at once may be an indication of equine versatility, but not necessarily of leadership. Finally, and what is of more importance, it is an admission that his simplistic solutions are not pertinent to the complexities of the modern world; that his madly coherent scheme of moralism which neatly but naively divides things and people into rigid categories of true and false, black and white, good and evil, is tottering on the abyss of reality.

It is well for all of us to remember that history, both secular and ecclesiastical, gives much documentary evidence that wishful thinking is never an efficient substitute for intelligent contemplation of the real world, its inhabitants and their deep problems; that shutting one's eyes to an urgent situation is no guaranty of its disappearance.

However, to any thoughtful person who lives in this period of history, which has been well called "the age of cemeteries", and which has created what Albert Camus strikingly names "the lyricism of the prison cell," to such a person the problem of human freedom remains central. For him human freedom is a mysterious gift that only a divine delicacy could confer on man. Like every spiritual good it possesses the paradoxial power to increase itself by sharing with others. Passive gratitude is a response worthy, neither of the Divine Giver, nor of the human recipient. Rather, it demands of us a vigilant awareness of its value and a dedicated defense of its life against all who seek to weaken it in the name either of piety or patriotism.

Pastepot Lobbyists Gum Billboard Bill

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, June 14, 1957

Mr. NEUBERGER. Mr. President, today's Washington Post and Times Herald carries an able article by Mr. Marquis W. Childs entitled "Pastepot Lobbyists Gum Billboard Bill." Mr. Childs discusses the activities of lobbyists representing groups in opposition to my bill, S. 963, for the control of billboard advertising along the new Interstate Highway System. Many persons have written to me asking why truly rigorous effective signboard control legislation is not enacted by Congress to preserve the beauty of these roads, which will be constructed largely by taxes paid by the motorists who will use them. I believe Mr. Childs' June 14 column provides the answer, and I ask unanimous consent that excerpts from it be printed in the RECORD at this point.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PASTEPOT LOBBYISTS GUM BILLBOARD BILL

(By Marquis Childs)

More polite, more discreet, far more subtle, the power of organized lobbies is nevertheless more pervasive in this session of Congress than it has been for many years. And it is nowhere better illustrated than in the measure to keep billboards off the transcontinental highways to be paid for by the Federal Government with up to $40 billion of the taxpayers' money.

Behind the bill sponsored by Senator RICHARD NEUBERGER, of Oregon, there is unquestionably wide popular support. But it is not brought to any effective focus to influence Members of Congress who might want to vote for the measure to protect scenic beauty along the highways.

In contrast, the lobbies of big business and big labor have quietly and shrewdly employed the old, trustworthy blocking tactic with individual Senators. It is an increasingly familiar pattern—the way in which the interests of big labor and big industry coincide for their own profit.

The billboard bill that will finally reach the Senate floor has been so watered down as to be scarcely recognizable. Of the emasculated version, NEUBERGER said ruefully, when it was approved by the subcommittee,

that it reminded him of Abraham Lincoln's description of a weak measure before Congress—homeopathic soup made by boiling the shadow of a pigeon that had starved to death.

It does provide that the Secretary of Commerce can enter into an agreement with any State to keep signs off a Federal highway project or any part of such a project. As a reward, the compensation to the State from the Federal Government shall be 90.75 percent of the total cost of the project instead of the standard rate of 90 percent.

This may be sufficient bait to keep some of the more scenic stretches free of billboards. But even here the power of the lobby should not be underestimated.

On the business side, the soft drink, liquor, oil, and gas interests have been most active.

* * * * *

On the labor side, the quiet work done by lobbyists for the building trades, primarily the carpenters, the electrical workers, and the sign painters, has put off some who otherwise would have supported the prohibition on billboards.

* * * * *

The reply of the proponents was that the greatly increased tourist traffic from the new highways, and particularly if they had notable scenic value, would more than make up for any loss of jobs.

But the most potent lobby is the outdoor advertising industry itself. Their spokesmen make the case that outdoor advertising is, dollar for dollar, the cheapest kind of advertising in the world. And they present considerable documentation to sustain that case, although they do not go so far as to point out that they get their medium virtually for nothing.

A newspaper, a magazine, a radio, or a television station, as those favoring the billboard ban pointed out, must go to great cost to win an audience. But once the highway is built a billboard can be put down on the crest of a hill at very little cost and every motorist must see it unless he wishes to risk destruction by closing his eyes. This is a vast captive audience.

Surprising is the fact that so little effective support of the proposed ban has come from the tourist industry in this country.

An increasing share of the traveling American's dollar is going overseas, and one reason may well be that in most European countries road signs are forbidden and natural beauty has wherever possible been preserved. The prospect of driving from coast to coast along a highway fenced in by advertisments is not exactly alluring.

Statement of Frazar B. Wilde, Chairman, Research and Policy Committee, Committee for Economic Development

---

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. CRETELLA. Mr. Speaker, I submit to my colleagues the statement made by Mr. Frazar B. Wilde, Chairman of the Research and Policy Committee for Economic Development, before the Subcommittee on Fiscal Policy, Joint Economic Committee, on June 7, 1957.

It is indeed a very illuminating, educational, and instructive statement, and I trust that my colleagues will find the time to read it. Mr. Wilde has given unstintingly of his time and effort to the many problems confronting the Federal Government, and speaks with genuine sincerity and authority.

The statement follows:

STATEMENT OF FRAZAR B. WILDE, CHAIRMAN, RESEARCH AND POLICY COMMITTEE,[1] COMMITTEE FOR ECONOMIC DEVELOPMENT

I am Frazar B. Wilde, president of Connecticut General Life Insurance Co., and chairman of the Research and Policy Committee of the CED. I appear here today at your invitation to present the views of CED's Research and Policy Committee.

We are asked to discuss the current expenditure and tax policy of the Federal Government. Three weeks ago our committee issued a policy statement on this subject, copies of which have been supplied to members of your subcommittee and which I would like to have considered as part of my testimony. I shall not attempt in the short time at my disposal this morning to rehearse the arguments and recommendations of that statement. Basically our position is a simple one:

First, expenditures should be reduced;

Second, taxes should be reduced as soon as it is clear that this can be done while leaving a moderate cash budget surplus under present economic conditions.

Whether taxes can be reduced in this session of Congress cannot be told until more action has been taken on appropriations and until the effects of those actions upon expenditures have been appraised. We certainly hope that sufficient reduction in authorized expenditures will be made so that tax reduction on a sound basis will not be delayed.

These recommendations are not based on a forecast that we will or will not have inflation or deflation this year or next. They are not offered as short-term offsets to cyclical fluctuations in the economy. They are advanced as urgent steps in the proper long-run direction, to be taken promptly.

Our recommendations are not addressed to shoring up or restraining particular sectors of our economy that may be particularly weak or particularly booming. In an economy where production is continuously being adapted to the needs of consumers and investors there are always some industries and areas that are rising and others that are declining. This is not inconsistent with general prosperity and does not call for remedial action by Government. Attempts by Government to remedy the special problems of particular sectors do not make for a healthy economy. They are more likely to consign a sector of the economy to permanent dependence on a government crutch.

WHY REDUCE EXPENDITURES?

In popular cartoons the budget-cutter is often pictured as a little, shortsighted, narrowminded man brandishing an ax in a reckless attempt to cut the Government back to the size of 1890. The budget issue is described as an issue between outmoded financial dogmas and modern human and national needs.

For myself and for the CED I want to disclaim this caricature and deny that this is the true issue. In a series of policy statements issued in the past 15 years CED has demonstrated its awareness of national needs and Government responsibilities in the 20th century. Precisely because we are concerned with the second half of the 20th century we in the CED are alarmed by a trend of rapidly rising Federal expenditure that has gone on through peace and war, through depression, prosperity and inflation, through Democratic and Republican administrations. We believe that this trend is dangerous to the efficient, dynamic, decentralized and free society upon which we must rely to meet the needs and aspirations of the American people.

We have in this country a highly effective society for meeting national needs. This society includes the private economy, voluntary associations of all kinds, State and local governments and the Federal Government. It is not a denial of the existence of needs to say that they should not be met by Federal spending. It is a denial that every problem, every need, every felt want is best met by Federal spending. It is a plea for maximum reliance upon the other elements of our society.

There are strong arguments for keeping reliance upon Federal spending to a minimum. Spending decisions will be more economical and efficient if they are made directly by the people who pay the bills. The economy will grow more rapidly if the investment of savings must meet the test of profitability in a competitive market. The freedom of the individual will be more assured the more limited is the size and power of the central government. Last but not least, we can help avoid inflationary pressures by holding down the size of the national budget.

The unfairness with which the burden of Government spending is distributed among the people is not fully recognized. I do not refer here simply to the nominal distribution of taxation, which is bad enough. But the legal imposition of taxes does not determine the final allocation of the burden. Individuals and businesses differ greatly in their ability to escape the burden by passing it on in higher wages and prices. Those with weakest bargaining and market power pay not only their own taxes but also the taxes of others, in the form of reduced real incomes. The inflation we have been experiencing has been partly, in my opinion, a process of passing on the costs of Government. This is especially likely to be true when Government programs, like parts of the defense program, are pushed with a speed that is bound to be inflationary.

These arguments obviously do not rule out all Federal expenditure. There are functions that only the Federal Government can perform, and today these are large and expensive functions. But every Federal function and expenditure must be rigorously and critically examined in the light of these strong arguments. This has not been done. Introduction of new programs and expansion of old ones has been accepted as a matter of course, as a remedy for every real or fancied ill. Programs have been adopted without knowledge of their ultimate cost and scale. Various programs have been advanced by the influence of particular groups that have special interests in them. And the whole process of increased spending has been facilitated by the automatic increase in tax revenues from our growing economy, which has permitted larger expenditures to be financed by higher tax rates.

As a practical matter, the way the democratic process functions at the present time, there is no adequate balancing force to the aggressive demands of well-organized groups.

I am not at all impressed by the argument that because our economy is growing we need or should have larger Federal expenditures. This argument is probably valid for some objects of expenditure, such as roads. But it is certainly not true of many other expenditures. In fact, one would expect that as people become more prosperous, the need for many government expenditures would

---

[1] The Committee for Economic Development is a private, nonpolitical organization of businessmen formed to study and report on the problems of achieving and maintaining a high level of employment and production within a free economy. Its Research and Policy Committee issues from time to time statements on national policy containing recommendations for action which, in the committee's judgment, will contribute to maintaining productive employment and a rising standard of living.

decline. Rising private incomes and employment opportunities should enable us to spend less on such things as aid to agriculture, housing subsidies, and public assistance. But we don't. We used to be told that the Federal Government had to spend large sums because the private economy was not working well and because people were poor. Now it appears that we must spend even larger sums because the economy is thriving.

In any case, the point is not whether total Federal expenditures are now a large or small proportion of the gross national product than they were in some earlier year. The point is whether all the particular expenditures that are proposed are necessary. We believe that many of them are not.

HOW TO CUT THE BUDGET

Every item in the Federal budget should be tested by six questions:

1. Is there a real need?
2. Must the need be met by government?
3. Must the need be met by Federal Government?
4. Does Federal spending meet the need?
5. Is the Federal spending program efficient?
6. Must the spending be done now?

In our policy statement we consider a number of major programs and suggest reasons for believing that they do not fully meet these tests. For example, we question whether the mortgage purchase program is meeting a need that must be met by Government. We suggest that Federal grants for public assistance have exceeded the proper responsibilities of the Federal Government. We point to the failure of Federal spending for aid to agriculture to solve the basic farm problem. The agricultural program has been self-defeating because it is too large and it has demonstrated that it fails to meet the practical problems of agriculture in a free society. We question whether our defense program is efficient, either in the sense of the suitability of our plans to our requirement or in the sense of the economy with which the plans are executed. We recommend that some of the proposed public work projects should be deferred or even eliminated.

We do not favor a meat-ax approach to budget cutting. Some functions are vital and should not be cut. Some may need expansion. The meat ax is an instrument of despair, and only justified if it is impossible to get the information and cooperation needed for a discriminating cut.

Cutting and controlling the budget requires cutting and controlling programs. Something can be done, always, by increasing efficiency. But basically we must get at the number and kinds of things the Government does and the scale on which it does them. This is not going to be easy. There is nothing in the budget that somebody doesn't want.

In this connection one of the major changes which the Congress needs to adopt is the item veto. Any program which meets the test of real need is not likely to suffer an item veto and, if it did, it could be passed over the veto.

Fiscal year 1958 will begin in 23 days. It is not realistic to expect that all the program changes necessary to reduce the budget can be made in time to affect 1958 expenditures. Moreover there are outstanding program commitments, as in the case of farm-price supports, that limit the possibility of reductions in 1958.

Nevertheless there are cuts that can be made for 1958, and steps can be taken now that will hold down expenditures in subsequent years. I have attached to this statement a table listing cuts in fiscal year 1958 nondefense cash expenditures amounting to almost $2 billion. These cuts are consistent with the general principles listed by CED in its recent policy statement, but I want to emphasize that the specific suggestions reflect only my personal views. Although the table does not specify reductions in the defense budget, I am confident that economies, possibly of the order of $1 billion, could also be achieved there.

If such cuts were made they would permit enactment of a moderate tax cut to take effect at the beginning of 1958. They would raise the prospective 1958 cash surplus to over $5 billion and would give promise of a continued surplus in later years.

HOW TO REFORM THE TAX SYSTEM

One of the main purposes of budget reduction, of course, is to permit tax reduction and reform. I want to stress the reform part of reduction and reform. All tax reductions are good, but some are much better than others. And some tax reform can be achieved, if the need is sufficiently understood, without overall tax reduction, by reducing some taxes and increasing others.

In our recently issued policy statement we indicated what we considered the most needed steps in Federal tax reform. These include:

1. Reduce high individual income tax rates.
2. Eliminate or reduce special tax treatment now provided for certain kinds of income. (The special preferences and high individual income tax rates are not only basically immoral and unfair, but they are increasingly contributing to tax immorality and other bad ethical practices.)
3. Integrate corporate and individual income taxation more satisfactorily.
4. Reduce discrimination in Federal excise taxation.

The purpose of our recent statement was only in part to urge the particular set of tax reforms that CED recommends. The most important thing is that our tax system be thought through in terms of its long-run effects. I am not so naive as to think that tax policy can ever be entirely nonpolitical. Politics will always be a strong element in the combination of forces that produces tax policy. But we believe that it is possible to increase the influence of economics and ethics in the mixture.

This subcommittee, with Congressman MILLS as chairman, has made a valuable contribution to a higher level of tax thinking in this country. CED proposes a further step. We recommend that the Joint Committee on Internal Revenue Taxation, which includes the ranking members of the tax-writing committees, should set up an advisory committee. This committee should be representative of business, labor, agriculture and consumers' groups. It should study the Federal tax system fundamentally and comprehensively and report to the joint committee.

One of the great obstacles to tax reform in this country is the wide and persistent divergence of views. Hearings are held. People come and state their traditional positions. And in the end no one has changed his mind and we are no closer to agreement. One virtue of the committee we recommend is that it would require people of different backgrounds to sit down together, try to find their area of agreement, widen that area if possible and identify the sources of their disagreement.

We are now confronted with a Federal budget which has grown enormously without critical examination or any attempt at overall coordination. We have tended to accept it on the basis that it was either the result of past wars or necessary to prevent new ones. Realistic consideration of the budget shows that we are excusing ourselves and are not facing issues squarely.

The present Federal tax system has grown up in much the same way. It was based upon war needs and it was not expected that it would be continued either at the present levels or in the present form. The combination of high expenditures and unhealthy tax structure is one of the most vital problems facing the Nation. If we are to enjoy increased growth and improved standards of living, which we all want, we must examine our fiscal situation with complete courage and a minimum of political bias. The present deplorable inflationary situation arises partly from governmental policy. It is already an intolerable burden and a threat to the future. If the present interest on the part of the public and Congress over the budget continues, we may be on the track to correcting our major evils. If we do, it will be a turning point in our history and a victory for all of us.

Suggestions for cutting nondefense expenditures in fiscal year 1958

[Dollar amounts in millions]

Program	Amount of reduction	Remarks
FNMA secondary mortgage purchase program.	500	This program was intended to alleviate temporary shortages of mortgages, not to insulate the mortgage market from general monetary policy. The proposed cut would reduce FNMA purchases under this program to the 1956 level. There would be little need for additional Federal funds if Federal agencies that insure and guarantee mortgages were given the authority to meet the mortgage rates prevailing in the market place.
Postponement of public works construction.	450	This would cut in half the projected increase in Federal construction (other than highways) between fiscal years 1957 and 1958. A slowing down of Federal construction is desirable so long as the demands for nongovernmental needs remain high.
Agricultural conservation service.	200	This program in effect shares with the farmers the cost of many current outlays for crop cultivation. By encouraging farmers to increase production, this program is actually in conflict with other agricultural programs, like the conservation reserve and the soil bank, which are intended to promote a reduction of farm production. Elimination of this program would not have any effect on the soil conservation program, which was designed as a long-run conservation measure. In addition to this step, the permissible price support levels should be lowered for future crops—but such action would have little effect on the fiscal 1958 budget.
Improvement of airways facilities.	200	A system of user charges should be developed to pay for the estimated increase in expenditures between fiscal years 1956 and 1958 for the improvement of airway facilities. This is consistent with a recommendation made by the President in the budget message and repeated in his letter to the Speaker dated April 18, 1957.
Federal aid for school construction.	185	This is a proposed Federal program which will eventually cost at least $2,000,000,000. CED has not studied the evidence sufficiently to determine whether there is need for Federal aid in this area. It is my personal opinion that this program should be deferred and restudied.
Stockpiling and other mineral purchase programs.	175	Current plans call for purchases of minerals amounting to $350,000,000 in fiscal year 1958. Much of the program has little defense justification but has become a means of price support.

Suggestions for cutting nondefense expenditures in fiscal year 1958—Continued

[Dollar amounts in millions]

Program	Amount of reduction	Remarks
Veterans benefits	100	This would eliminate the proposed increase for implementing the Bradley Commission recommendations. The necessary reforms to improve the equity of veterans payments should be financed by lowering excessive payments for non-service-connected illnesses and disabilities.
Federal aid for the construction of waste treatment facilities.	60	This is a program for Federal aid in an area which should be reserved entirely to the local and/or State governments, since sewage disposal is a local problem.
Area assistance	10	This program, which is intended to assist depressed areas, should not be financed with Federal funds. Although estimated expenditures in the fiscal year are small, this is the type of program that is likely to become very large once it is permanently established.
Total estimated reduction in cash expenditures in fiscal year 1958.	1,910	

A Pay Raise Is Mandatory for Underpaid Postal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include my statement of today before the House Committee on Post Office and Civil Service in support of H. R. 2474, the Morrison bill to provide an increase in salaries for employees of the United States Post Office Department.

The statement follows:

A PAY RAISE IS MANDATORY FOR UNDERPAID POSTAL EMPLOYEES

(Statement for House Committee on Post Office and Civil Service, in support of H. R. 2474, the Morrison bill to provide an increase in salaries for employees of the United States Post Office Department, June 14, 1957)

Mr. Chairman, postal employees cannot strike in an effort to win a living wage from their employer, the United States Government.

But they can resign to secure better paying jobs in private industry, as they are doing in larger numbers, not because they wish to, but because they are forced to by the inexorable operation of economic facts.

The tight-fisted attitude of the Government toward its own employees, and its stubborn refusal to help them in their economic predicament, is endangering the functioning of the most important civil agency of the Government upon which all business and all citizens rely.

There is a very real possibility of curtailment in mail service by July 1, unless we rid ourselves of certain comfortable illusions that have carried over from the past, but simply cannot be maintained in the light of present facts.

Not the least of these is the constantly deteriorating position of postal workers who cannot support their families on their "mark time" salaries, that decline in purchasing power as the cost of living edges over * * * upward.

Nearly half of our postal workers are compelled to take outside jobs to supplement their regular salaries, in order to make both ends meet.

And the turnover of employees has reached an alarming stage. False economy that denies them a living wage is forcing experienced employees out of the service, to be replaced by new men who must be trained at expense to the Government. The result of this short-sighted policy is waste and extravagance that could have been avoided in the first place, by paying adequate salaries.

The Post Office Department has been kicked around for generations, but the time for playing games with it is running out. If we expect good service, we must pay for it. You cannot expect skilled employees to stay with the Department when they can get much better pay in private industry. No amount of subtlety, or delay, or rationalization, can get around that fact.

Take this situation that happened in my own district. A little more than a month ago, three new employees were appointed to the postal service in one of the cities. Two of the three have already quit. Just a few weeks' work was enough to convince them that the pays, in relation to the split hours that they worked, were not good enough in this year 1957. They both secured better jobs in private industry.

The cost of living has gone up for the eighth straight month.

But the postal employees have received only one pay raise since 1951.

The Post Office Department is not a discretionary or a luxury service, to be expanded or contracted at will. It is absolutely essential to industry, business, and the needs of private communication.

As the President noted in this year's budget message, there has been an increase of 11 percent in the volume of mail handled in the past 4 years, with only a 3-percent increase in personnel. But the postal workers have not shared in this increased productivity. There is reason to believe that some of the users have profited at their expense, and have not been paying for the service that they are getting.

Even these special interests dare not challenge the fact that the postal workers deserve an increse, and a substantial one at that, for the ground they have lost since 1939.

The shrinking purchasing power of their salaries, as compared with the gains made by workers in private industry, inevitably leads to a weakening of morale, a lessening of efficiency, and wholesale resignations.

Are we going to play political hide-and-seek with this issue until it results in a breakdown of the postal service? The consequences of such a crisis would cause irreparable harm, and would eventually cost many times the amount of the contemplated pay increase.

Even the Cordiner report (Defense Advisory Committee on Professional and Technical Compensation) headed by a distinguished leader of industry, after analyzing the impact of inadequate Federal and postal salaries, stated that: "The net effect is a progressive lowering of the level of competence of the Department's civilian work force." Concerning the Government's moral obligation to pay adequate salaries, it found that: "Employees must receive sufficient compensation to enable them to establish and maintain a standard of living which will allow them to discharge their responsibilities to their families and to their employers."

Since 1939, postal workers have received pay increases of 103.8 percent.

The 10 highest representative groups in private industry have gone up 275 percent.

The middle 11 representative groups in private industry have enjoyed wage increases of 239 percent.

The lowest 11 representative groups in private industry show a 188 percent increase.

Or, from another point of reference, the average postal worker's net spendable pay after all deductions for taxes, social security, and so forth, is 88 percent above 1939. The BLS cost of living index stands at 98.3 percent above 1939. This means a 15 percent reduction in net spendable income (or buying power) for postal workers since 1939. The only people with a lower average weekly wage today, are those in sweatshop or depression type industries.

We are fighting a losing battle in trying to recruit competent people to work as carriers or clerks at $1.82 per hour when they can secure anywhere from 20 to 45 cents more per hour in private industry without prior skill or training.

The Cordiner Committee has described Federal salaries as second rate. That is what the Post Office Department will become, if we ignore the necessity of upgrading salary levels to the realities of 1957, instead of keeping them forever below the average paid to workers in private industry.

The warning signals are flashing from all directions.

Young men laugh when we advise them to seek permanent employment in the postal service.

"For peanuts?" they mock.

The assistant postmaster at Wichita, Kans., said: "The shortage of clerks and carriers in the Wichita post office is growing more acute. * * * In the last 3 or 4 months the post office has been unable to obtain enough personnel to fill vacancies."

In New York City they had to take unprecedented action. For the first time in history, the United States Civil Service Commission opened continuous filing for clerk-carrier positions in the post office.

Mr. James P. Googe, the regional director of the second United States civil-service region, admitted that: "Postmasters frequently reported increasing difficulty in securing enough eligibles to fill substitute clerk and substitute city carrier vacancies. In some areas, high wage scales and fringe benefits offered by private industry make it almost impossible to fill positions in the local post office."

The salary crisis in the postal service must be faced and solved, without equivocation.

I believe that H. R. 2474, by raising postal salaries to a level consistent with modern standards, will restore the morale of our indispensable civil servants, and enable the Post Office Department to fulfill those responsibilities that are vital to every person and to every economic enterprise in the Nation.

A raise of at least $500 per employee at this session is the irreducible minimum.

Otherwise, we shall risk a serious deterioration in the quality of the personnel * * * who are essential to the functioning of Government and private enterprise.

This pay raise for postal workers is long overdue.

It's Father's Day and That Means the Day for Wembley Ties

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. HÉBERT. Mr. Speaker, Sunday is Father's Day and once again every Member of the House and Senate, the President of the United States, his administrative assistants, the attachés of the House and, this year for the first time, the pages of the House, will wear a Wembley tie.

It was 3 years ago that my friends, Sam and Emanuel Pulitzer, the creators of Wembley ties and the world's largest manufacturer of men's neckwear, asked me to distribute to the Members of the House and Senate a tie for Father's Day. So widespread was the acceptance and reaction to the presentation that the Pulitzer brothers announced they would like to do a repeat performance the next year and for as many years as possible. This year it is the third go round and with bigger and better coverage. Today, 1,500 Wembley ties are being distributed on Capitol Hill.

Now, perhaps it seems a bit strange for some who are not fathers to get a Father's Day gift but there is justification for each one of you.

Now, for instance, take the case of Speaker SAM RAYBURN, one of Washington's most famous bachelors. In truth Speaker RAYBURN is the "father" of 435 problem children, not the least among whom is me. I know I am a headache to him more times than either of us would like to have it so but I share the mutual admiration and respect for Speaker RAYBURN of his 434 other "kids" in the House. He deserves recognition on Father's Day.

And now how about the distaff side of the House—those female of the species who each session seem to increase more and more. Of course they really can't be fathers but certainly they are the daughters of fathers and what better justification would there be to get a Wembley tie for Father's Day. One thing for sure, the ties, while not worn by the ladies—God bless them—will find their way around the neck of either a current father or a hopeful.

And then there are the pages in the House. Father? No. But each one is the father of tomorrow, so as future fathers they most certainly do deserve to share in the wearing of a Wembley tie so they will get accustomed to such choice neckwear.

The following letter was enclosed with each tie which perhaps tells the story as well as it can be related:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 12, 1957.

DEAR FRIEND: Sunday is Father's Day and that man is here again.

My friends Samuel and Emanuel Pulitzer, owners of Wembley Ties, the world's largest manufacturer of neckwear (and from New Orleans, of course) have again asked me to remember my colleagues in the Congress, the attachés of the House, and my personal friends in the radio and press galleries, on Father's Day.

This Father's Day remembrance is getting to be a habit and one which I know you hope will continue. It is the third consecutive year Wembley ties have been distributed, and I hope you like this year's selection as well as you did the others.

It is my wish this Father's Day tie matches your individuality and personality. If it doesn't then swap it because the Pulitzers and myself want each of you to be absolutely happy and satisfied with your New Orleans manufactured Wembley tie.

From New Orleans it has got to be right.

Best wishes to you.

F. EDW. HÉBERT.

Balanced Flood Control Essential

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. EDMONDSON. Mr. Speaker, recently I reported to the House on the tremendous flood damage in Oklahoma and Texas during recent floods. At that time I pointed out that estimates indicated that existing Army engineer flood-control projects in thesee two States prevented approximately $118 million in damages, and also brought out the tragic fact that an additional $50 million of more than $150 million suffered in damages would have been prevented if presently authorized projects had been built.

In the interest of giving the Congress a complete picture in connection with these recent floods, I am inserting in the RECORD an article by Jack Putman, farm editor of the Tulsa Daily World, which appeared in that newspaper on June 10, 1957. This article describes the vitally important work of the Soil Conservation Service in its watershed protection and flood prevention work.

This excellent article adds to the evidence that we need a balanced program of flood prevention and water resources development which will utilize all existing programs including projects by the Army engineers, the Bureau of Reclamation, and the Soil Conservation Service. Only by uniting behind a balanced program can this country look forward to prevention of flood devastation and to the full development of water conservation which will provide future generations an abundant water supply, a rich and bountiful soil, and a strong industrial structure.

The article follows:

SCS OFFICIAL CITES DAMAGE FROM FLOODS

(By Jack Putman)

Flood damage on 14 creek watersheds on the Washita River would have been reduced 71 percent if a complete upstream flood-prevention plan had been in effect during the recent death-dealing floods.

That is the opinion expressed by Jack Adair, assistant State conservationist in charge of flood-prevention planning for the Soil Conservation Service, after making a survey of flood damage on 14 Washita River tributary watersheds between Chickasha and Sulphur.

The area surveyed by Adir covered 963,178 acres where 9 inches of rain fell in a 24-hour period May 17–18 over large areas of the 14 watersheds. The downpour exceeded a 100-year frequency in intensity and amount, Adair said.

THIRTEEN INCHES IN APRIL

To add to the trouble, up to 13 inches of rain had fallen during April prior to the May 14 storm. Adair said the total area flooded on the 14 creek watersheds amounted to 35,567 acres. Depth of flooding ranged up to 5 feet. Water in some of the smaller creeks was the highest ever known.

Upstream flood-prevention dams had been installed on only 3 creeks of the 14—Owl, Chigley Sandy, and Wayne—and Adir said that if they had not been there, an additional 4,909 acres would have been flooded.

The flood destroyed rich crop and pasture land, highways, roads, railroads, and levees. Parts of towns of Alex and Lindsay were inundated by small creeks. Some 40 blocks in Pauls Valley were evacuated.

ONE MILLION FIVE HUNDRED THOUSAND DOLLAR DAMAGES

Adair estimated that the monetary damage alone from the storm would have exceeded $1,500,000 on the 14 watersheds had no flood-prevention works been in place at the time.

On the other hand, if a complete flood-prevention program had been in effect on the watersheds, the damage in the tributary area of the Washita would have been reduced to $438,300, a reduction of 71 percent.

With a complete flood prevention program installed, having 55 percent of the area behind structures, 112,572 acre-feet of runoff water would have been retarded, he said.

Adair said that damage on the main stem of the Washita had not been appraised, but "it can be seen that a complete upstream flood prevention program would have reduced main-stem damages significantly."

CREEKS COMPARED

Turning to a comparison of creeks where one had an upstream flood prevention plan and the others did not. Adair pointed out the differences.

Rush Creek, with a 47-mile-long, 8-mile-wide watershed, was deluged with heady thunderstorms during the 2-day period. It has no protection from floods.

Adair's survey showed 1,000 acres damaged by scour, another 2,300 acres damaged by sediment and 3,300 acres damaged by flooding. Sections of creek bank, ranging from 5 to 30 feet in length, sloughed off and fell into the channel along its entire length.

He said 64 acres of fertile bottomland were destroyed and reduced to sediment "which ended up in Lake Texoma," while 30-foot-wide sections of the channel bank were ripped out for distances of 1,000 feet. Three pipeline bridges were left dangling, bridges were damaged or destroyed, fences were destroyed and livestock drowned.

SEDIMENT ESTIMATED

Adair estimated that 2,300 acre-feet of sediment, 1,200 acre-feet of this from bank cutting alone, spilled out into the Washita River to do damage to the main stem and finally a large portion of it to be carried downstream to Lake Texoma.

The total monetary damages from flooding on Rush Creek was estimated at $282,000 to crop and pasture land alone. "With a planned flood reduction program installed and in full operation, the bottomland flooded would have been reduced to 660 acres and the monetary damage reduced 86 percent to about $40,000," the SCS official said.

On Criner Creek, also unprotected, 4,200 acres of the 4,904-acre floodplain were inundated by run-off from the storm. On Finn Creek, unprotected, flood water washed out 7 major bridges, approaches to 15 county

bridges washed out, gravel from State highway and farm to market roads washed into cultivated fields. Sediment ranging from 6 inches to 2 feet in depth was dumped on 510 acres of bottom.

PLAN COMPLETED

It was a different story, however, on Chigley Sandy Creek where a flood-prevention plan has recently been completed. The 14 floodwater retarding structures were in place on the 29,349-acre watershed when the rains came.

Adair said 46 percent of the drainage area in the watershed is routed through the flood-prevention structures, and with the watershed completely saturated, the reservoirs have a capacity to hold 4.5 inches of runoff from the watershed.

During the 2-day rain these reservoirs on Chigley Sandy filled to a point where they began discharging water through their emergency spillways. The rain ranged from 4.3 inches to 9.2 inches during a 36-hour period.

"It is estimated that a rain of this magnitude would have flooded the entire floodplain of 3,786 acres to depths of up to 4 feet—without the structures," Adair said. "Local residents claimed that similar storms in the past had flooded the valley from 'hill to hill.'

ONLY 100 ACRES HURT

"Damages would have amounted to $28,500, of which $21,500 would have been to crops and pastures."

But as it was, only 100 acres below the structures were actually flooded, Adair said. Total damages amounted to only $3,800.

"Although runoff from this storm was greater than from a 25-year density storm, the completed upstream flood-prevention program prevented 85 percent of the damage which would have occurred," he added.

Adair said that similar stories are true of other upstream flood-prevention projects on other creeks in the State which include Double Creek, Sandstone, Beaver Dam, Big Kiowa, Owl, Sergeant Major, and Barnitz Creeks.

While Adair's survey showed tremendous damage, the greatest loss of all—top soil—wasn't even mentioned. That loss cannot be measured.

The Summerfield Strike

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 14, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Wallace J. Legge, the very competent official of the National Postal Transport Association, published in that organization's monthly organ.

This editorial, entitled "The Summerfield Strike," is a very clear description of the recent money problems of the Postal Department. It is well written, factual, and to the point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SUMMERFIELD STRIKE

(By Wallace J. Legge)

For the first time in the history of the United States, a Postmaster General has gone on strike against the American people. On April 13, 1957, the mail did not go through, and public attention was focused on the conflict between the Post Office Department and the Congress. It is easy to understand the progression of events, but it is difficult to understand why the strike was called.

THE POSITION OF CONGRESS

Under the Constitution, no money can be appropriated except by an act of Congress. In 1950 Congress put teeth in the antideficiency law. The law requires that apportionments be made by quarters, so there will not be a deficiency at the end of the year. For the present fiscal year, Congress appropriated more money for the operation of the Post Office Department than the Postmaster General originally requested.

In December 1956, the Post Office Department began to take money apportioned to the third and fourth quarters and use it in the second quarter. The Department should have asked for additional funds for the second and third quarters, but Congress did not receive a request for a deficiency appropriation until March 12, 1957.

The Postmaster General had advised members of the House Appropriations Committee in January 1957, that he intended to request supplemental funds. However, the Director of the Budget indicated that he had not decided to permit the Post Office Department to request the deficiency appropriation. The House Appropriations Committee assured the Postmaster General that he would be given an immediate hearing, if he submitted his request. When the request finally did reach the committee, the Postmaster General asked for a postponement of the hearings.

The Postmaster General did not give Congress sufficient notice that he was running into financial difficulty. When the House Appropriations Committee received the request for a deficiency appropriation, a subcommittee promptly notified the Postmaster General that it would allow $17 million, and when the full committee met, the amount was increased to $41 million.

The Postmaster General had almost half a billion dollars in funds when he arbitrarily, and in contravention of the duties of his office, discontinued services customarily provided by the Post Office Department. The inconvenience to the public was unnecessary and due exclusively to the determination of the Postmaster General to show Congress who was boss.

The Postmaster General's violation of the spirit of the antideficiency law was deliberate. Thus, a fundamental question arises. Shall Congress retain its constitutional right of financial control over the Post Office Department, or shall the management of the Post Office Department control the Congress?

THE POSITION OF THE POST OFFICE DEPARTMENT

The budget of the Post Office Department is prepared 12 months in advance of the beginning of the fiscal year. The Department must estimate the volume of mail anticipated 18 months before the year begins.

The volume of mail is beyond the control of the Department, and if the volume increases beyond expectations, services must still be provided. In fiscal year 1957, the volume of mail increased three-quarters of a billion pieces beyond the Department estimates, and consequently, increased the costs of operation. The increased revenue resulting from the increased business could not be used for postal operations. All revenues go directly to the United States Treasury. The Post Office Department can only use the funds appropriated by Congress.

The Post Office Department entered the last quarter needing $47 million in additional funds to continue operations throughout the fiscal year. The curtailment of service on April 13 was necessary because of the antideficiency law. The Department was faced with a difficult decision. They could either curtail service for the remainder of the fiscal year, or cease operations entirely during the last 2 weeks of the year.

During the past 20 years, the Congress provided supplemental funds beyond original budgets in all except 3 years. In 1953, 1954, and 1955, the Post Office Department returned $235 million of unspent money to the Treasury out of funds appropriated by the Congress.

The increased volume and increased costs made necessary a deficiency appropriation this year. As Congress had not appropriated the necessary funds at the beginning of the last quarter of the fiscal year, the curtailment was mandatory.

THE POSITION OF THE POSTAL UNIONS

The postal unions were caught in a difficult situation not of their own making. It was recognized that to become active in behalf of the deficiency appropriation might be interpreted by Members of Congress and union members as taking the side of the Postmaster General.

The heart of the problem, insofar as the postal unions were concerned, was the threat to substitutes in the postal service. If the deficiency appropriation had not been granted, substitute employees faced 3 months of unemployment. Recognizing their responsibility to substitute members, the leaders of the postal unions worked effectively to obtain the $41 million appropriated to continue postal operations.

The postal leaders not only contacted individual Members of Congress, but also called at the White House to seek Presidential assistance. In so doing, they were motivated by their duty to protect substitutes in the postal service and to insure some semblance of postal service for the people of the United States.

SUMMATION

Obviously, either the Post Office Department or the Bureau of the Budget violated the antideficiency law. However, we doubt that the violation was deliberate. The Director of the Budget has revealed that he was under the misconception that the increased postal revenues could be used for operating the postal establishment. For that reason, the Bureau of the Budget procrastinated on the Post Office Department's request to apply for additional funds.

The Congress should not bear the responsibility for an administrative error. In the past Congress has approved deficiency appropriations for the Post Office Department, and there is no reason to believe they would have acted differently in this instance if their prerogatives had been recognized.

The climax of the affair was brought about by short tempers and arrogant behavior. Despite the fact that Postmaster General Summerfield has been in Washington for more than 4 years, he has not learned that good relations with Congress can be attained only through mutual respect. In seeking additional funds, he threatened rather than cajoled.

The Summerfield strike was unnecessary and ill advised. It was unnecessary because the Post Office Department still had nearly a half billion dollars in the till when the strike was called. It was unnecessary because the Postmaster General had been given congressional and presidential assurance that he would receive $41 million in additional funds.

The results of the strike were chaos, unnecessary expense, and denial of service to postal patrons throughout the United States. During a period of heavy income tax and Easter mailing, mails piled up in post offices throughout the country.

The Syracuse Post Standard reports that all rural mail carriers reported for work as usual, April 13, drew their regular pay, but delivered no mail. In Onondaga County, there was a savings of $162 and an estimated 14,400 rural families went without mail.

Watertown, N. Y., apparently saved $16.74 as 1,600 rural families received no mail.

Ithaca, N. Y., reportedly effected a $21.06 saving, while 2,180 rural residents received no mail service.

Undoubtedly, Postmaster Summerfield has made his mark in United States postal history. Every Postmaster General since Benjamin Franklin has tried to maintain the tradition "the mail must go through." Future historians will record Mr. Summerfield as the Postmaster General who would not permit the mail to go through.

It is not pleasant to be faced with the fact that one man can arbitrarily upset the tradition of 182 years.

Michigan's Tax Policies

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, my Republican colleagues from Michigan have recently been quoting certain figures on taxes and their effect on industry in Michigan. Their statements have not reflected the true picture of the situation. In order to set the record straight, I should like to present the following.

Of course, the Governor can hardly be blamed for the mergers of Packard with Studebaker and Hudson with Nash which threw many people out of work. Such mergers for economic reasons have been occurring more and more during recent years throughout the country and are primarily due to the fact that the smaller companies cannot compete with larger concerns so in order to survive they combine. It is grossly unfair to point an accusing finger at the Michigan tax system as the reason for industry leaving the State. Further, as you will note from the following two articles, more industries have been moving into Michigan than have been moving out:

GOVERNOR WILLIAMS' WEEKLY COLUMN FOR THE WEEK BEGINNING MAY 26, 1957

(By G. Mennen Williams, Governor of Michigan)

LANSING.—Some new figures have just been compiled at my request by the Department of Economic Development, which completely demolish the claim that business has been leaving Michigan.

These figures show that in the 5 years from 1952 to 1956, Michigan had a net gain of more than 150,000 jobs from the movement of industry.

These are the first trustworthy statistics on this question which have come to light in all the recent commotion about an alleged "exodus of business" from our State. I believe they are just about as close as you can get to the truth, bearing in mind that there are some borderline cases which could be counted either way.

THREE TO ONE

The Economic Development figures show that the companies moving into Michigan outnumbered those who left Michigan by about 3 to 1.

In the 5-year period, 35 plants moved out of the State for a variety of business reasons, with a loss of 5,369 jobs. In the same period 104 plants moved into Michigan, with 12,535 new jobs.

Also, in the same period, companies already operating in the State established new plant facilities here equivalent to 143,060 new jobs.

By adding and subtracting these figures, we get a net gain of 150,226 jobs.

That is what some of the daily papers have been calling a business "flight" from Michigan.

AUTO PLANTS

There has unquestionably been a decentralization of the automobile industry as the big companies build branch plants closer to regional markets. There has also been a marked trend toward merger and monopoly in the auto industry, with consequent loss of jobs in all the independent auto plants.

This trend has nothing to do with State taxes. Such plants as Packard Kaiser-Frazer, and Hudson, which did not move away from Michigan but for all practical purposes went out of business, are not included in the above computation. Only plants which actually moved in or actually moved out and continued in business are counted.

OHIO AND INDIANA

It is noteworthy that in the list of 104 plants which moved into Michigan, 10 came here from Ohio and 13 from Indiana. These are two great neighbor States which have been pictured as industrial tax-free paradises, into which Michigan business was flocking as fast as it could pull stakes.

Maybe part of the answer lies in some facts which I discovered last week when I checked into the Indiana tax structure. A little over 50 percent of that State's total revenues are obtained from something called a "gross income tax." This is a tax on everything taken in by individuals and business firms, whether in return for goods sold, or services rendered, or in the form of wages and salaries.

It is really a pyramided sales tax on top of an income tax. Everybody passes it along to the next fellow, until it gets down to the consumer, the wage and salary earner, the small-business man, and the farmer.

These groups, being low men on the Indiana totem pole, have nobody to pass the tax along to, and consequently they pay the great bulk of it, either directly or in higher prices.

Inequitable as Michigan's tax structure is, I don't think the people of Michigan would put up with that type of taxation for very long.

The last session of the Indiana Legislature raised this tax by about 50 percent, and provided that it must be withheld from the wages of the little fellows so they'll be sure to pay it.

The pasture on the other side of the fence always looks greener—but seldom is.

TAXES AND BUSINESS—THE DEMOCRATIC BUSINESS AND PROFESSIONAL COMMITTEE NEWSLETTER

The release to the press of Governor Williams' comments on the University of Michigan publication, Taxes and Plant Location in Michigan, stirred up a burst of angry replies from Republican legislators. The study, published by the University's School of Business Administration, completely explodes the myth long fostered by the Republican Party, that industry is leaving, or may leave, the State because of taxes. This was followed by a lead story in the Detroit Free Press of April 28 with a long report, replete with tables and quotations from auto industry executives, purporting to show that "taxes are driving business out of Michigan." Some of the statements in the story, said Representative Sallade, Ann Arbor Republican, "may have created irreparable damages to any hope for increase in industrial development here," an opinion with which we heartily agree. A massive propaganda job has been undertaken through chamber of commerce groups, the Michigan Manufacturers' Association by direct statements by spokesmen for these corporations, and by statements from Republican party leaders. In order that members of the Democratic Business and Professional Committee may have the facts, their newsletter wishes to give them the full story behind the headlines.

WHAT IS THE MICHIGAN REPORT?

The study released by the university is one of a series related to problems of plant location in the State of Michigan. It was prepared by the Michigan executive study group, a team of selected business executives and faculty members, financed largely by the Committee for Economic Development and the Fund for Adult Education. No member of the Williams administration is connected in any way with either the executive study group or its financing agencies.

The report, written by Prof. John A. Larson of Northwestern University, is, according to its foreword, "based on the composite views of the author and panel members." Listed as panel members are Albert Perlin of J. L. Hudson; R. E. Klare of Federal Mogul Corporation; G. L. Sawyer of Michigan Consolidated Gas; J. T. Maunders of Bohn Aluminum; and Keith Engel, C. P. A., of Touche, Nevin, Bailey, and Stuart.

WHAT DOES THE REPORT SAY?

Covering some 50 pages, the report is a documented study of the relationships between industrial plant location in Michigan and State and local taxes. Specifically, it answers several charges frequently made over the past 10 years by the Republicans—you have heard them many times. Would a cut in business taxes mean rapid industrial prosperity for Michigan? The report says "No." "Any reduction in taxes," the report states (p. 32), "would reduce State and local services, and little evidence exists that this would be regained in the form of new industries and new jobs." Would a reduction of business taxes lure new industries to Michigan from other States? The report says "No." "Practically speaking," the report states (p. 49), "there is no evidence that a cut in State and local taxes, even a very drastic one, would materially improve the State's competitive position."

HAVE TAXES DRIVEN BUSINESS AWAY?

You probably remember the solemn Republican campaign warning that a victory for the Democrats would leave Michigan a desolate waste of empty factories and breadlines. You probably remember too the notoriously slanted Michigan Manufacturers' Association poll of 1956, which purportedly showed how the State's industries were about to depart in droves. The university report nails these charges to the wall. And as for taxation driving business away, the report concludes (p. 48):

"Taxation as a factor in industrial location is rarely of primary importance. This does not mean that for certain decisions the impact of State and local taxes can be ignored, but rarely will this factor alone be the deciding issue in a location decision. * * * It is particularly clear that at the State level, no clear relationship between tax burdens and industrial growth can be shown."

A similar study made in Wisconsin by the University of Wisconsin School of Commerce, released April 29, 1957, comes to the same conclusion—that business firms "consider State and local taxes as the least important factor in locating a plant."

THE TRUTH OF THE MATTER

Apparently frightened by the conclusions of their own study, some members of the executive study group panel have since claimed that the report was unauthorized, incomplete, or preliminary. Yet the fact is that the report was copyrighted, bound, published, and distributed in April 1957

with a foreword written by the dean of the School of Business Administration at the University of Michigan. Exactly what is preliminary or incomplete about it still remains to be explained. The neatest trick of all, however, belongs to Republican Representative Vah Peursem, who is able to quote sentences from the report that no one else has been able to to find in it. The truth is, as Governor Williams has stated, that "this study, made by the best experts we have, utterly demolishes the claim that business is driven out of Michigan by the State's taxation policies."

LET'S CLEAR THE AIR

There is no doubt that the Republicans will continue to put up a smokescreen of claims in defense of one of their favorite campaign fables. Members of the Democratic Business and Professional Committee can perform a valuable service in getting the real facts across to citizens in their own communities. The facts are simply these:

THE FREE PRESS STORY

The report published by the Free Press, widely reprinted in part, is apparently based on a study made in 1956 by the Pennsylvania Economy League of Pittsburgh. A complete analysis of this study shows some interesting things which do not appear in the Free Press story. A summary table (p. 17), for example, shows that Michigan collects slightly less taxes than Pennsylvania, slightly more than Ohio, and about three-fifths of what New York does. Out of each $10 of the State's general total revenue, these States collect corporate taxes as follows:

New York	$2.33
Pennsylvania	1.75
California	1.50
Massachusetts	.80
Michigan	.78
Ohio	.13

However, out of each $10 collected in general taxes, Pennsylvania collects $2.88 in sales taxes, New York $4.25, California $5.44, Ohio $2.62, and Michigan $1.65. In other words, Ohio taxes corporations 65 cents less but collects nearly a dollar more in sales taxes from the consumer than Michigan. This is easier on corporations, true, but a lot harder on the consumer.

IS BUSINESS LEAVING MICHIGAN?

Dan Gerber, prominent Fremont businessman and industrialist, said in the Detroit Times of February 10, 1957, that claims that businesses are leaving Michigan are pure nonsense. "There is no trend of industry leaving Michigan," he continued. "In fact, there is a trend in the opposite direction. * * * We are moving ahead. Not only in the in-and-out column, but in expansion of existing industry." Figures from the Economic Development Commission bear this out. From 1954 to 1956, 21 plants left the State, and 66 moved in, creating approximately 100,000 new jobs. Since 1947 Michigan has gained 2,919 new industries in 20 major industry groups. The Free Press itself reported in August 1956 that Detroit Board of Commerce figures showed a consistent industrial increase, remarking that Detroit's industrial growth is zipping along at a rate faster than most of the Nation. A committee of the Michigan Society of Industrial Realtors, as reported in the Muskegon Chronicle as late as November 1956 concluded that "It is not this committee's impression that industry is leaving Michigan faster than it is coming in. Our observation is quite the contrary."

WHAT ARE TAXES FOR?

We have a million more people in Michigan than we had in 1950. Michigan is the fastest-growing State in the central region and one of the fastest-growing in the Nation. It is self-evident that new tax revenue must be found if State services are to keep pace with the growth in Michigan's population and increased costs, general throughout the economy. New tax revenue must be found, particularly to provide for expansion of colleges and universities to accommodate the tidal wave of enrollments and to supplement school-aid funds to provide adequate schools and staffs in our primary and secondary schools. Further great needs in the area of retarded children, mental health, conservation programs, traffic programs, and many other areas of State services likewise will require new revenues. The question is not whether new revenues are needed. The question is who is to pay what share of the revenues, in the most just and equitable fashion.

WHERE CAN TAXES COME FROM?

At the present time, 6.5 percent of Michigan's revenue comes from the corporation franchise tax, 14.3 percent from the gas tax, 4.5 percent from the liquor tax, 2.9 percent from cigarettes, and 33.7 percent from sales taxes, with the rest from inheritance, motor vehicle, and other miscellaneous taxes. In other words, 55.4 percent of all revenue come directly from the consumer. To obtain increased revenue, Michigan must do one or more of several things. It can collect a personal income tax. It can raise the sales tax. It can increase or levy more taxes on beer, cigarettes, soft drinks, hotel and motel rooms, and other nuisance taxes. Every one of these increases the direct tax on the consumer. And please note. Four Republican Senators (Nichols of Jackson, Andrews of Hillman, Francis of Midland, and Stephens of Scottsville) have already proposed a one-cent increase in the sales tax, the tax that hits hardest those least able to pay.

THE DEMOCRATIC PROPOSAL

The request from State agencies to Governor Williams for next year's budget totalled $525 millions. Before Governor Williams submitted his budget request to the Legislature, he carefully pruned all requests to the bare minimum needed to provide the services that the citizens of Michigan want and need. In order to gain the increased revenue necessary to finance these services, Governor Williams has proposed a three-part tax program. First, eliminate the present corporation franchise tax based on net worth, which corporations must pay whether they show a profit or not. This is only fair. Second, raise exemptions under the Business Activities Tax to exempt about 25,000 small enterprises. This, too, is only fair to small business. Third, impose a corporation profits tax of 6 percent—paid only when the corporation shows a profit. Since this tax would be deductible from corporation Federal taxes, a corporation profits tax only recaptures for Michigan a portion of those taxes that go elsewhere, and provides a deductible item for Michigan corporations. If the first part of this program is adopted, Michigan will lose $52.5 millions. If the second part is adopted, Michigan will lose $3.5 millions. However, if the third part is adopted, Michigan gains $132 millions, or a net gain of $76 millions—which balances the budget requests submitted by the Governor.

THE PRESENT PROBLEM

The verdict of the people in recent State elections should give fair warning to the Republican party that people are not deceived by Republican propaganda, nor by dire warnings of disaster. The Governor's tax program contains the solution to Michigan's financial future, and no one should be misled by newspaper stories, cries of Republic legislators about "holding the line," or scare stories about industrial departures. Members of the Business and Professional Committee can do much to clear the air by knowing the facts, and by letting others know them.

Warns Russ Capitalize on H-Bomb Views of Scientists, Even Pope Pius

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a radio talk by that well-known newsman and commentator, Mr. Walter Trohan, chief of the Chicago Tribune Bureau. He calls attention to the propaganda against the H-bomb which appears inspired by Communist propaganda. His radio talk follows:

WARNS RUSS CAPITALIZE ON H-BOMB VIEWS OF SCIENTISTS, EVEN POPE PIUS

(By Walter Trohan)

WASHINGTON, June 6.—For some weeks a tremendous campaign has been underway to strike fear of the aftereffects of nuclear fission in the hearts of the American people so that they will demand an end to H-bomb, A-bomb, and any possible new fission weapon developments. A similar campaign 2 years back did not get off the ground. In those 2 years the persons pushing the campaign seem to have learned a great deal and prepared even more in their goal for disarming America. Strong suspicions have been voiced in Congress that the campaign is part of the Communist conspiracy to dominate the world.

If this is true, then this calculated hysteria could spell the doom of America by stripping her of the one deterrent to Communist conquest of Europe, the Middle East, and in short, the world.

It must be recognized that the world would be a better place if man did not have the power of destroying himself and was not constantly perfecting it. An end to nuclear weapons under the right circumstances is devoutly to be wished.

Many good people are sincerely calling for an end to H-bomb tests. Unfortunately they are being guided and exploited by Communists. Recently the Daily Worker, the official organ of the Communist Party, had a picture of Pope Pius XII with a story of his appeal to mankind to stop the race to what could be atomic destruction.

HISTORY CASTS DOUBT RUSS WOULD HONOR FACT

This is an odd twist. Here is the party that would destroy all religion quoting one of the world's leeading churchmen to further the Kremlin line.

Suppose we should end H-bomb tests. How can we be certain that a nation that has broken almost every treaty will abide by an atomic limitation treaty? How can we trust the word of men whose oaths have no moral isgnificance? ?

A naval expert says the Russians have upwards of 300 submarines, some spotted at times near the American coast. Suppose the Soviet Ambassador appeared at our State Department to announce that his country had 300 or 600 submarines off America's coast and was prepared to launch a missile attack, which would wipe out most of our cities. He would warn that the slightest overt action would trigger an immediate attack. What would an American president do?

The Soviet Ambassador might pose such a question at the State Department tomorrow, and with dire consequences. But it is much more likely that the Russians would

first seek to disarm this Nation in nuclear weapons.

NATION'S VOTE FAILS TO SQUELCH PROPOSAL

In our presidential campaign, one of the candidates advocated an end to H-bomb tests. This candidate was defeated. Now this proposal is revived stronger than ever.

Congress is seeking to assess the situation. Scientists have come before Congress to warn that radiation from H-tests threatens future generations of mankind. Not all scientists are agreed on this, but it is strange that those who do agree have been paraded before Congress. Hysteria, it would seem, it being cultivated deliberately. As far as we can learn no such hysteria is being built up in Russia on Soviet tests.

The situation was aptly summed up by Willard F. Libby, Atomic Energy Commissioner, who told the Congressmen the basic choice is: Run the very small risk from radioactive fallout or risk annihilation by an enemy. There doesn't seem to be much of a choice.

Libby said the extra radiation from fallout is only a small fraction of the dosage we receive from our own bodies, our surroundings, cosmic rays, and X-ray doses taken by many individuals.

OUR LEADERS TAKE TO ACTING STRANGELY

In Congress, Representative LAWRENCE H. SMITH (Republican, Wisconsin), warned that Communists are using great humanitarians and the great men of peace of our day as tools of their propaganda. He said that although Communists denounce guilt by association, they are seeking to attain respectability by association.

It is strange that one day our leaders, including Mr. Eisenhower, are warning us that we cannot trust communism and the next day they appear to be seeking to come to an agreement with them on nuclear weapons. Many Americans wonder whether we are playing into the hands of Communists.

We can be sure the Communists are not humanitarians. They are not interested in protecting humanity as such from any danger of radioactivity. Under the guise of virtue, we can be sure, the Communists are seeking to rob us of the power and strength of our defense—the nuclear weapons which are guarding our freedom—so they can strip us and all the world of freedom and justice and liberty. This was their goal at the beginning, it is their goal now, and it will be their goal as long as there is communism.

It is time that Americans gave solemn thought to the question of disarming ourselves as long as the threat of communism continues. If the Communists were to ask us to give up God we would not do so. Why should we surrender the weapons that enable us to keep His blessings?

Too Many Americans in Formosa

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SCRIVNER. Mr. Speaker, one of the causes of our troubles in the Far East is that there are just too many Americans, military and civilian, in those countries.

In a recent weekly newsletter, I commented on the Formosa riot, as follows:

The riot and raid on the American Embassy in Formosa came as a surprising shock.

In the first place, while Chinese, as I have observed, are a most curious and voluble people, violence is not a usual characteristic.

Perhaps we, as Americans, are not without fault. Orientals are proud people. We are proud, too. Orientals set a great value on face—or pride—the position they may occupy in the opinion of the friends and neighbors. Humiliation carries loss of face.

The wife of the Chinese, an American sergeant killed, had suffered a loss. Had some American officer visited her, expressed sorrow over the incident, made an offer of retribution, perhaps as much as $1,000 American, perhaps the aftermath of the trial—the raid—would not have happened. Another incident, adding fuel to the fire, was the demonstration of Americans at the trial—the shouts and handclapping—when the verdict of not guilty was announced. To the Chinese present this was further injury.

Even so, had this been the only incident, the raid would not have happened but for other events. The widow probably would not have picketed our Embassy. Crowds of curious Chinese would not have gathered to see what was going on—and some overzealous hot-head could not have stirred up the crowd over this lone incident.

The last time I was in Formosa we had about 500 Americans there. Military men for the most part—living in the hills with Chinese troops at work on their job of making good soldiers of the Chinese troops—which they did. No families—no big American cars. Reports show now right at 10,000 Americans on that small island.

Streets and roads in Formosa are narrow and winding. Heavy hauling is by means of clumsy carts drawn by oxen, or water buffalo. Lighter travel is by bicycle or pedicabs—rickshas with bicycle attachments. Even the wealthiest Chinese travel this way, which is all too slow for the impatient, speed-loving Americans, who with their big cars, shipped to Formosa at Uncle Sam's expense, want to be on their way. Horns honk, brakes squeal, drivers shout, and they move rather recklessly through these narrow ways, scattering pedestrians and cyclists to each side. Repeat such incidents day in and day out, not only in China, but around the world, and it is a little easier to understand some of the bitterness and enmity.

Americans overseas live better, have more than many of the wealthiest natives. We bid up the prices, bringing inflation, which makes it harder and harder for the natives to meet their daily needs. We look down our noses at them as being backward—brag about what we have and the way we do things in the United States. We pay little heed to the history or customs of the nations where we are guests, not victorious conquering troops.

If we, as Americans, would conduct ourselves in these countries, as we would if we were guests in someone's home, being courteous and considerate, many of these little irritations which piled one on the other, finally reaching the breaking point, incidents such as the one in Formosa could be avoided.

Transportation Cost of First-Class Mail

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, for many years I have questioned the practicality of using aircraft for the transportation of first-class mail. I have felt that the benefits derived from the delivery of first-class mail by air were overemphasized and that in reality it contributed to much delay and improper handling.

I personally believe that Congress should consider this whole problem area to ascertain whether first-class mail would be more efficiently transported by rail, which appears to be more practical, less expensive, and more regular, or by aircraft which has a higher operating cost and encounters schedule difficulties.

I submit for the RECORD a letter which I have received from Mr. Paul A. Nagle, president, National Postal Transport Association, regarding cost ascertainment as it applies to railway distribution.

NATIONAL POSTAL
TRANSPORT ASSOCIATION,
Washington, D. C., April 23, 1957.

Hon. JOHN LESINSKI,
House of Representatives,
Washington, D. C.

MY DEAR MR. LESINSKI: During your questioning of Deputy Postmaster General Stans, in regard to the 3-cent flying experiment, you were told that, "Distribution in railway cars is a rather expensive operation; it not only involves circumstances which are less efficient for the distribution clerks, but it involves a travel allowance for the clerk doing the work."

The postage-rate hearings threw rather basic doubt upon the validity of certain cost-ascertainment procedures. Perhaps the least defensible type of cost-ascertainment procedure is that by which the Post Office Department determines the square-foot cost of distributing space in railway-post-office cars.

Cost-ascertainment procedures, for example, credit a 60-foot railway-post-office car with transportation capacity for only 191 sacks. The actual number of sacks transported in a railway-post-office car is almost invariably far greater than the rated capacity.

Shortly after the inauguration of the 3-cent flying experiment, the National Postal Transport Association conducted a study of 6 percent of the daily railway-post-office mileage in the country. The result of the study indicated that, in most instances, distribution in transit in railway-post-office cars is the most economical and efficient mode of distributing and transporting mail. By contrast, cost-ascertainment procedures indicate distributing space in railway-post-office cars to be most expensive and, according to the testimony of Mr. Stans, the operation is inefficient.

The reason for the inaccuracies in cost-ascertainment procedures is that no credit is given for the number of sacks or pouches taken into a railway post office car and actually distributed. The Post Office Department maintains that this type of credit is given in a statement appearing on page 364 of the Treasury Post Office appropriations hearings for 1955, as follows:

"Cost-ascertainment instructions provide that on all test railway post office runs the maximum number of bags and outside parcels handled as storage mail at any one time within the limits of the authorization while distribution is in progress be reported. The bags and sacks are converted to the equivalent linear feet and are multiplied separately for each type of railway post office authorization by the annual miles of authorization to determine annual linear-foot miles for storage mails in all railway post office service. The total annual expense for railway post office service for each type of authorization

is apportioned to storage and distribution space on the relationship of these developed annual linear-foot miles of storage space to total authorized linear-foot miles of space. Thus, the amount allocated for storage service varies with the space used and is in the proportion of storage space to all other space in the car.

"The expense developed for distribution space is subdivided to letter mails, paper mails, and registered mails on the basis of percentages for each of these distribution areas developed from car diagrams. Letter and paper mail expense is then apportioned to classes of mail on the basis of tests of the actual mails handled within each type of space. This method appears accurate and adequate for cost-ascertainment purposes.

The Post Office Department continues in the same statement with a comment that, "It would be desirable for special studies and other purposes to state what portion of distribution space * * * is utilized for transportation separately from actual distribution facility."

The Post Office Department continues with the true statement that the position of the National Postal Transport Association "indicates the possibility of cost ascertainment assigning as a transportation expense the letter, paper, and pouch separations in a railway post office car on the theory that, as distribution progresses, these separations will gradually be filled and would amount to a certain sack volume. The assignment of this space to transportation on any such basis appears to lack any degree of exactitude. We are not here proposing to argue on the matter of any "degree of exactitude" for statistical purposes. Rather, we seek to point out that the cost-ascertainment bureau concedes that no ratio has been developed for determining the value of mail transported in the distributing portion of railway post office cars. Since this is true, then it must follow that statement reflecting upon the degree of efficiency of crews in railway post office cars are themselves based upon presumptions rather than upon "exactitude."

Sincerely yours,

PAUL A. NAGLE,
President.

Foreign Aid Trend

EXTENSION OF REMARKS
OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SHEEHAN. Mr. Speaker, in the very near future we will be considering the foreign aid bills in the House of Representatives and the individual Members of Congress will have to be thinking of their position on this matter.

Mr. George Todt, editorial columnist of the Valley Times of North Hollywood, Calif., recently had two columns concerning foreign aid which were most interesting.

These columns of June 1 and June 3, respectively, are as follows:

[From the North Hollywood (Calif.) Valley Times of June 1, 1957]

THAT ANTI-FOREIGN AID TREND

(By George Todt)

"Failure is more frequently from want of energy than want of capital" (Daniel Webster).

One of today's biggest rhubarbs in the Nation's Capital concerns the question of foreign aid to our far-flung military allies around the globe.

That the people are disenchanted with it can hardly be denied. Congressional mail is running pretty much three to one against is at the present time. And mail talks.

On the other hand, the administration is trying to hold the line, as have the administrations which preceded it, on the question of aid to other countries not our own. Only this time, it is much harder. The reason? The public was sold on the program in years past—but not now.

What our people are witnessing today is something which has been slow in coming, but has been readily predicted by students of human nature for a long time. We are simply reaping resentment from those to whom we have extended an over-helping hand. It's something akin to the poor little rich boy who tries to buy friendship from his schoolmates by treating them on every occasion. They soon learn to despise him. He should play hard to get.

The attitude many global peoples have taken by this time is not that we are out to help them—as indeed the American taxpayer rightfully views the transaction—but that somehow we are forced into such arrangements in order to protect ourselves from the Russian threat. They seem to have completely overlooked the fact that if this may be true today—we got into such a vulnerable position simply through guaranteeing their liberties from the Reds in the first place. But all this now appears to be so much water under the bridge to others.

It is time our allies woke up from their self-inspired dreams of over-importance which have caused at least some of them to become ensnared in a do-nothing complex which now seems hard to shake off. And it is also up to our national leaders to be firm with allies of ours who seem unwilling to carry their full share of the load and insist that they do so. A mealy-mouthed attitude in this instance by America is clearly the wrong approach.

Winston Churchill was considered the man of the hour in Great Britain because he saved that nation in her time of greatest need. I consider Mr. Churchill a great Englishman—one whom I respect mightily—because he always placed his country's welfare above that of any other. That is just exactly what he should have done. That is what his people were paying him to do. He did it loyally and faithfully—with performance, not words. His loyalty to his own people now establishes him as great in this reporter's book, as well as many others, of course. But I think Mr. Churchill's tremendous loyalty to his own people ought to serve as the criterion of what really constitutes great leadership anywhere.

In our own case at home, our leaders in the past—Democrat and Republican—have always seemed overawed by their counterparts on tht world stage. They have tacitly accepted the role of junior partners in the grand alliance—whether consciously or subconsciously—and we have been led around by the nose. It is time for a change. We pay the freight. We ought to call the tune. It is as simple as that.

I have scolded our British and French allies in the past for not doing their share in the mutual security arrangements in which they, as well as we, play so important a part. Let me make it crystal clear that I have not done so because of anything except friendship for these two still-great nations. I like them both better than anyone except my own people. Nor am I alergic to good allies outside our borders; I think they can be useful in the overall "big picture." In fact, I want us to have strong allies—not drift apart from them.

But the test of our future relations with all our allies must be based on effective performance between them and us in the years ahead of us. The American people believe now that they have been imposed upon to a very large extent. We question the wisdom of carrying anyone who will not produce for the mutual security of us all. We don't want the British to throw in the sponge and go home. They don't want the French fighting unhappy colonial wars with our wherewithal while the barriers against the Soviets are almost down. We despise our allies' trading in blood money with the enemy behind the Iron Curtain.

It is up to our leaders to explain this forcefully and with determination to our friends abroad. We want them with us, of course. But we also want them to play ball with us.

[From the North Hollywood (Calif.) Valley Times of June 3, 1957]

UNITED STATES SURPRISED AT BRITISH ON CHINA

(By George Todt)

"Et tu Brute! (You too, Brutus!)" (Shakespeare, Julius Caesar, act III, scene 2).

So the State Department is "most disappointed" at the action of our closest ally, Great Britain, in openly defying us and proceeding with a plan of practically unrestricted trade with Communist China? Well, what did Blair House expect? This is no surprise, or is it?

Actually, this selfish unilateral action on the part of John Bull at our taxpayers' expense—certainly in the long run—is simply the result of our own weakness. Or rather that of our leaders in both parties who didn't have the nerve to lower the boom on the British when they acted like spoiled brats recently and informed us that they were tired of carrying their share of the load in our so-called mutual security arrangement. They proceeded to nominate us to fill the gap they left in Western defenses and then gave themselves a tax cut. Astoundingly enough, no voices of protest were raised in Washington.
